A mechanical movement comprising a driven shaft provided with a bevel pinion, means for driving said shaft comprising a bevel gear cooperating with said pinion, a gear shaft secured to said bevel gear, a bearing in which said shaft rotates, a sprocket wheel secured to said shaft, a pair of pedals rotatably mounted on an axis substantially parallel to said gear shaft, a sprocket wheel non-rotatably connected to said pedals, a sprocket chain connected to said sprocket wheels, a gear pinion connected to said gear shaft and longitudinally movable thereon, a gear wheel operatively connected with said pinion, a crank pin secured to said gear wheel, a lever pivotally mounted between its ends and a pitman between one end of said lever and the crank pin on said gear.

1,462,028. INDICATOR. PASQUALE LO CASCIO, Brooklyn, N. Y., assignor to Toy Business Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 10, 1919. Serial No. 343,888. 10 Claims. (Cl. 46—56.)

1. In an indicator, a rotating member, means to maintain said rotating member in desired position com-

prising a weight detachable from and movable with respect to said rotating member, and means to hold and

to release said weight with relation to said rotating member.

1,462,029. PROCESS FOR THE FERMENTATION OF MILK. ARTHUR B. CLARK, St. Louis, Mo., assignor to Fer-Mil-Lac Process Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 12, 1921. Serial No. 514,565. 2 Claims. (Cl. 99—11.)

2. The improved process for the fermentation of milk, consisting of the following steps: the addition of a culture of Bulgarian bacillus to a small quantity of whole milk at a temperature of 90° F., in the proportion of about one ounce of the former to one quart of the latter, and the ferment of this mixture for a period of about twenty hours; the addition of this ferment at the end of about twenty hours to a larger quantity of whole milk at a temperature of 90° F., in the proportion of about one quart of the first ferment to three gallons of milk, and the maintenance of this mixture at a temperature of 90° F., for a period of twelve hours; the further addition of this second ferment to a larger quantity of whole milk at a temperature of 90° F., in the proportion of about three gallons of the former to one hundred gallons of the latter, and the maintenance of the mixture at a temperature of 90° F., for a further period of twelve hours, until the process of fermentation is complete.

1,462,030. GLASS-CUTTING MACHINE. HOWARD B. DAVIS, Millville, N. J. Filed Aug. 16, 1920. Serial No. 403,991. 3 Claims. (Cl. 49—48.)

1. In a glass tube cutting machine, the combination with a frame, of a pair of shafts revolubly supported thereby, complementary disks carried by said shafts to provide rolling supporting means, an adjustable bearing carried by said frame, a strut connected in hinged relation to said bearing, a rod adapted to be fixed in longitudinally adjustable relation to said strut, a cutter carried by said rod, and an adjustable gage stop carried by said rod.

- 1,462,031. NEUTRAL-POSITION SAFETY CONTROL. WALLACE E. DAY, San Francisco, Calif., assignor to Frank M. Spencer, doing business under the name of Spencer Elevator Co., San Francisco, Calif. Filed June 30, 1919. Serial No. 307,732. 4 Claims. (Cl. 172—179.)

1. A control system for mechanically operated electrically driven elevators comprising a mechanical control member adapted to determine the direction of movement of the elevator, a motor, an electric circuit including said motor and the control mechanism, a main contactor adapted to open and close the motor circuit, a main contactor circuit adapted to be closed by the operation of the controller, means for rendering the main contactor inoperative and means whereby said contactor will be restored to its operative condition when the mechanically operated controller is moved to its neutral position.

- 1,462,032. MACHINE AND METHOD FOR WINDING ELECTRICAL COILS. HENRY C. EGERTON, Passaic N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1920. Serial No. 433,756. 9 Claims. (Cl. 242—10.)

1. In a coil winding machine, a rotatable arbor, an adjustably mounted rotatable shaft, a feed member disposed on said shaft and adapted to act as a guide for the wire, a drum, a plurality of contacts mounted on said drum and adapted to control the serving of the wire upon said arbor, an electromagnet, an

armature for said electromagnet, and means associated with said feed member adapted to contact with said drum contacts to cause said armature to step around said drum.

- 1,462,033. DISINFECTOR ATTACHMENT FOR THE FLUSHING ARRANGEMENTS OF WATER-CLOSETS AND THE LIKE. REGINALD VANDEZEE FARNHAM, Skelmorlie, Scotland. Filed Nov. 11, 1922. Serial No. 600,203. 1 Claim. (Cl. 4—30.)

Disinfector attachment for the flushing arrangements of water closets and the like, comprising, in combination, a container for the disinfectant, a mixing chamber having its external wall shaped to conform with the curvature of the flushing pipe, a valve device for permitting a quantity of disinfectant to pass from said container to said mixing chamber, a pivoted lever for operating said valve, one end of which lever projects into the flushing pipe and is depressed by the main flushing stream, and the other end of which contacts with and operates the valve, the end of said lever which projects into the flushing pipe also serving to deflect a quantity of water into the mixing chamber, an inlet near the top of the mixing chamber through which a quantity of water deflected by the lever is admitted to the mixing chamber, an outlet from the mixing chamber at the bottom thereof for the mixture to pass out into the flushing pipe, a deformable washer for interposition between said shaped wall and said flushing pipe, said washer being ported to correspond with the inlet and outlet of the mixing chamber and ports formed in the pipe, and clipping means embracing the pipe and embracing said mixing chamber so as to nip the washer between said shaped wall and said pipe.

- 1,462,034. CONTAINER. ESTELLE B. FINLAYSON, Ossining, N. Y. Filed June 3, 1921. Serial No. 474,636. 1 Claim. (Cl. 132—82.)

In a container, in combination, a receptacle, a transverse partition within the receptacle having an open-

ing therein, a perforated sifter enclosing said opening and extending upwardly therefrom, means for opening and closing the perforations in the sifter, a cover for the upper chamber having an opening considerably smaller than the cover and means for opening and closing the cover opening.

1,462,035. TREATMENT OF MAGNETIC MATERIAL. WILLIAM FONDILLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 10, 1920. Serial No. 402,672. 2 Claims. (Cl. 178-45.)

1. The method of obtaining a substantially uniform initial permeability in a plurality of pieces of magnetic material which consists in adjusting the permeability of these pieces by magnetizing some of the pieces to their saturation point and then thoroughly demagnetizing them.

1,462,036. AUTOMOBILE HEADLIGHT AND REFLECTOR. THOMAS DE LEON GRAHAM, Philadelphia, Pa., assignor of one-third to F. Mortimer Cleveland, Philadelphia, Pa. Filed Aug. 25, 1922. Serial No. 584,199. 7 Claims. (Cl. 240-41.)

1. In a device of the character stated, the combination of a primary parabolic reflector and a convex reflector occupying the lower central portion of said primary reflector, and having its upper edge positioned within the front edges of said primary reflector and terminating at a point below the horizontal median line of said primary reflector.

1,462,037. PIPE-HOOK TONGS. LELAND S. HAMER Fullerton, Calif., assignor of one-half to William Webster Wilson, Los Angeles, Calif. Filed Apr. 21, 1921. Serial No. 463,423. 3 Claims. (Cl. 81-98.)

1. In a device of the character described, a handle; a pipe embracing member pivotally mounted adjacent

one end upon the handle; pipe engaging teeth upon said handle on each side of said pivot; and means on said embracing member cooperating with means on the handle to limit their relative movement in either direction.

1,462,038. MODULATING SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1916, Serial No. 139,784. Renewed Oct. 25, 1922. Serial No. 596,899. 30 Claims. (Cl. 250-19.)

1. The combination of a source of high frequency currents, a line selectively responsive to modulated currents of said high frequency, means associated with said source and said line for modulating said high frequency currents, said means comprising two transformers having primary windings connected to said source and secondary windings connected in series opposition in said line, and signaling means for differentially controlling said transformers whereby a pure modulated wave is transmitted by said line.

1,462,039. DOLLY JACK. LEO J. MCKONE, Chicago, Ill., assignor to Mid-West Manufacturing Company, Minneapolis, Minn., a Corporation of South Dakota. Filed July 8, 1921. Serial No. 483,148. 12 Claims. (Cl. 254-2.)

1. In a device of the kind described and in combination, a jack supporting frame, a triangular truss frame pivotally connected thereto and carried thereby, a lifting cap pivotally connected to and carried by said truss frame, a draw bar slidably in the jack frame, a link pivotally connected between said truss frame and draw bar, whereby a pull on said link will elevate the truss frame to raise the cap, a rack carried by said draw bar, and means for operating said rack.

1,462,040. TIRE-CHANGING JACK. LEO J. MCKONE, Chicago, Ill., assignor to Mid-West Mfg. Co., Minneapolis, Minn., a Corporation of South Dakota. Filed Sept. 8, 1921. Serial No. 499,154. 10 Claims. (Cl. 264-103.)

1. In a jack of the kind described and in combination, a supporting frame, a load-lifting head carried thereby, a ratchet wheel controlling said head, a lifting pawl engageable with said ratchet wheel, means for operating said pawl intermittently to partially rotate said ratchet wheel to move said head, a holding pawl engageable with

said ratchet wheel, means for yieldably releasing said holding pawl while said lifting pawl is in operative engagement with said ratchet wheel, and means operable by

said lifting pawl for automatically moving said released holding pawl into locking engagement with said ratchet wheel when said lifting pawl is released.

1,462,041. ATOMIZER. MABELLE A. MEYER, New York, N. Y. Filed Feb. 19, 1920. Serial No. 359,840. 1 Claim. (Cl. 299-96.)

A perfume atomizer consisting of the combination of the bottle for containing the material to be sprayed, a doll figure having a body portion and costume portions adapted to enclose the bottle, and a stopper rigid with the body portion of the figure adapted to close the mouth of the bottle, a spray tube extending from the liquid within the bottle through the stopper, thence through the doll figure to an exterior point convenient for atomizer purposes, a spray bulb located between the bottle and the costume portions which enclose it and adapted to be operated while thus enclosed, and a connection from said bulb to the interior of the bottle for causing the perfume to be delivered through said spray tube to the point of atomization when said bulb is operated.

1,462,042. WATER CIRCULATOR FOR AUTO ENGINES. GOTTLIEB MULLER and MATHEW B. HILL, Philadelphia, Pa.; said Hill assignor, by mesne assignments, of his entire right to John B. Taylor, Philadelphia, Pa. Filed June 27, 1921. Serial No. 480,660. 2 Claims. (Cl. 74-26.)

1. In an attachment for the cooling system of an internal combustion engine, a fixed arm, a relatively mov-

able arm pivoted at one end thereon, a clip embracing said arms between the pivot and free end of the movable arm, a shaft on the free end of the movable arm, a fric-

tion roller on said shaft, and a spring having one end secured to said shaft and its free end received in said clip and bearing on the top edge of said fixed arm.

1,462,043. PISTON RING. JOHN E. NORWOOD, Baltimore, Md. Filed May 27, 1918. Serial No. 236,860. 2 Claims. (Cl. 74-109.)

1. The combination with the cylinder of an explosive engine and a peripherally grooved piston therein, of a composite ring comprising a radially expansible annular section within and of less width than the groove, and projecting from the groove into peripheral contact with the cylinder wall and having one end face contacting with a side wall of the groove and its other end face beveled to its inner periphery, the ring comprising also a second annular radially expansible section disposed between and contacting with the face of said bevel and the other side wall of the piston groove, the face of the second section that contacts with the beveled face of the first section being conical and continuous to the periphery of the piston where it meets the corresponding end wall of the section.

1,462,044. SECTIONAL DOOR. JOHN EDWARD OGDEN, Mountainville, N. Y. Filed Aug. 12, 1921. Serial No. 491,696. 14 Claims. (Cl. 20—19.)

1. In combination, a door post, vertically movable door sections and means carried by the post for moving one of the sections into engagement with said post and means carried by the said section for moving another section into engagement with the post.

1,462,045. NAIL-EXTRACTING APPARATUS. ABRAHAM PIASER, Elmhurst, N. Y., assignor to Rosenwasser Bros., Inc., Astoria, N. Y., a Corporation of New York. Filed Dec. 18, 1919. Serial No. 345,854. 11 Claims. (Cl. 12—16.)

1. In a machine of the class described, the combination with gripping means, of means for operating said gripping means including a shaft, driving means normally disconnected from said last mentioned means on said shaft to establish an operative connection between said shaft and said driving means, and means adapted to be engaged and raised upwardly by the work to actuate said connecting means whereby said gripping operating means will be driven by said driving means.

1,462,046. CLUTCH MECHANISM. CHARLES E. REDDIG, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 1, 1920. Serial No. 378,142. 3 Claims. (Cl. 192—67.)

1. A clutch mechanism for vacuum cleaners having a rotatable brush and an electric motor, comprising a casing, a worm slidable in said casing into and out of operative connection with the armature shaft of said motor,

a worm gear meshing with said worm, a brush actuating mechanism operatively connected with said worm gear, and a slidable sleeve operatively connected with said

worm and disposed in said casing for sliding said worm into and out of operative connection with the armature shaft of said motor.

1,462,047. CROSSBAR LINE SWITCH. JOHN NEWBERRY REYNOLDS, Greenwich, Conn., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 14, 1920. Serial No. 416,835. 10 Claims. (Cl. 179—27.5.)

2. A line switch comprising a plurality of vertical trunk bars, a plurality of horizontal individually operable line bars cooperatively associated with said trunk bars and a hinged member on which said line bars are mounted.

1,462,048. APPARATUS FOR CLEANING AND CLARIFYING USED LUBRICATING OIL. TREGARTHEN DAVIS RICHARDS, Marrickville, near Sydney, New South Wales, Australia. Filed Sept. 23, 1922. Serial No. 590,022. 5 Claims. (Cl. 210—43.)

1. Apparatus for recovering clean oils from dirty used lubricating oils by water washing the same whilst in a

minutely subdivided condition, said apparatus consisting essentially of a plurality of vessels fitted respectively with diaphragms of fine wire gauze with clearance spaces intervening them, said diaphragms disposed substantially vertically and across the direction of flow of liquid through said vessels, means for maintaining a uniform level of liquid in said vessels submerging said diaphragms, means for introducing an agitated mixture of dirty oil and water forward of the terminal screen at the end of one of said vessels, means for reagitating the mixed oil and water during its course through said vessels, a separator vessel connected serially with the wash vessels, means for removing water from the bottom strata in all said vessels and clean oil from the top stratum in said separator vessel, and means for removing deposited foreign matter from all said vessels.

- 1,462,049. FASTENING DEVICE FOR WEARING APPAREL. SAMUEL RIVELIS, Philadelphia, Pa. Filed Oct. 18, 1921. Serial No. 508,574. 1 Claim. (Cl. 24—224.)

A fastening device comprising a threaded shank having a flange at one end, an ornamental button applied to the shank to grip a member to be secured between the button and flange, a head on the shank spaced from the flange, and a complementary member including spaced flanges to grip the shank between the head and flange and adapted to receive the parts at one end of the flanges in tight engagement, with means forming part of the complementary member for attachment to another member to be secured.

- 1,462,050. SWITCHING DEVICE. EDWARD O. SCRIVEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1921. Serial No. 524,993. 6 Claims. (Cl. 200—11.)

1. A switching device comprising a plurality of contact terminals, a contact arm for engaging said contact terminals, means for yieldably holding the contact arm in contact with alternate terminals, and similar independent means for yieldably holding the contact arm in contact with the other terminals.

- 1,462,051. COUNTER CARTON. AUGUST SEIFERT, Brooklyn, N. Y., assignor to Robert Gair Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 22, 1920. Serial No. 375,758. 8 Claims. (Cl. 206—44.)

1. In a container formed by folding, the combination of, an outer bottom; an inner bottom receivable in the outer bottom; sides and ends for the outer and inner bottoms; the sides and ends of the outer bottom providing

outer sides and outer ends for the container and the sides and ends of the inner bottom providing inner sides and inner ends for the container; means for locking said outer and inner sides and outer and inner ends in operative relation in the container; and a covering portion

for the container, the outer bottom having an easel brace portion connected to one of said outer sides; said easel brace portion and the outer side connected thereto being movable to provide an easel brace and an easel back for supporting the container in display position.

- 1,462,052. PROCESS FOR OBTAINING NITRIC ACID BY MEANS OF THE ELECTRIC ARC IN A CLOSED CYCLE. WERNER SIEBERT, Laufenburg, Switzerland, assignor to Nitrum Aktiengesellschaft, Zurich, Switzerland, a Corporation of Switzerland. Filed May 13, 1922. Serial No. 560,728. 5 Claims. (Cl. 204—31.)

1. In a process for obtaining nitric acid by means of the electric arc in a closed cycle, the maintaining of a relatively low temperature within the absorption apparatus so that the content of vapor in the oxygen and nitrogen gas mixture led back to the electric furnace is reduced to a negligible amount.

- 1,462,053. ELECTRICAL TESTING SYSTEM. HUGH M. STOLLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 13, 1920. Serial No. 423,884. 10 Claims. (Cl. 175—183.)

1. In a system for locating faults in cable conductors, a source of variable current to be impressed on such faulty conductor, an exploring coil, a circuit including the exploring coil and tuned to resonance at the frequency of the source of variable current, and a current detector associated with said circuit.

- 1,462,054. LEVEL. HEDVIG TANGEE, New York, N. Y. Filed May 16, 1922. Serial No. 561,519. 1 Claim. (Cl. 240—8.4.)

The combination with a level, of a device for illuminating the gages thereof, said devices comprising a rec-

tangular supporting plate having two of its parallel sides bent to form hooks, and means for securing said plate to the level, a bracket plate having its one end portion bent back upon itself to form a hook member adapted to engage the hooks formed on said supporting plate for detachably securing said bracket to the said plate, the other end of

said bracket being bent to form a foot at right angles thereto, said foot being provided with an aperture, and a spring member secured to said bracket and adapted to hold a flashlight in position with the lamp illuminating through the said aperture, said foot portion having an outer upwardly turned lip to prevent displacement of the said flashlight

1,462,055. INTERLOCKING KNIFE SWITCHES. LEWIS C. WESCOAT, Elmhurst, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1919. Serial No. 347,801. 6 Claims. (Cl. 200—5.)

4. In combination, two switches, each having a contact blade, and a bar provided with an overhanging ledge, said bar cooperating with said switches so that one switch cannot be opened until the other switch has been opened and so that said second mentioned switch cannot be closed until said first mentioned switch has been closed.

1,462,056. PACKING AND DELIVERING GRAMOPHONE AND LIKE NEEDLES. CLIFTON WEST, London, England. Filed Jan. 21, 1922. Serial No. 530,964. 2 Claims. (Cl. 211—8.)

1. The combination with a fixed support, a holder carried by said fixed support and a reciprocal plunger mount-

ed in said support and operating in the bore of a barrel formed therein of a replaceable magazine comprising a closed container for gramophone needles provided with apertures in its sides, said apertures registering with the said bore when the magazine is placed within the said holder and means for retaining said magazine in its operative position therein for ejection of the needle contents by the aforesaid reciprocal plunger.

1,462,057. SWITCHING MECHANISM FOR VACUUM TUBES AND THE LIKE. PETER I. WOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1920. Serial No. 413,097. 10 Claims. (Cl. 250—27.)

1. An electrical circuit comprising a vacuum tube element having an anode and a cathode, a second element of the same character, means for supplying space current to said first tube, means for supplying heating current to the filament of said first tube, and means responsive to the deterioration of said first tube for replacing said first tube with said second tube and to connect both of said supply means thereto.

1,462,058. CARRY MECHANISM FOR REGISTERS. EDWIN F. BRITTEN, Jr., Maplewood, N. J., assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1920. Serial No. 373,834. 4 Claims. (Cl. 235—133.)

1. In a register, an endwise-shiftable carriage, register wheels mounted thereon, means for selectively operating said wheels, and carry mechanism comprising means for effecting a delayed carry between certain of said wheels in a given position of the carriage, and means for effecting a carry to one of the last-named wheels simultaneously with the passage of the next lower order wheel to decimal position, in another position of the carriage.

1,462,059. AUTOMATIC CARRIAGE RAISING MEANS FOR CALCULATING MACHINES. EDWIN F. BRITTEN, Jr., Maplewood, N. J., assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Filed Aug. 3, 1920. Serial No. 400,972. 2 Claims. (Cl. 235—82.)

2. In a calculating machine, a series of gears, an end-wise shiftable pivoted carriage having a series of numeral wheels provided each with a gear in mesh with the related gear of said series, means for setting said numeral wheels to zero, and means cooperating therewith for automatically raising the carriage and holding it raised during the zero setting, including a rotary cam mounted on the carriage and a series of spaced stationary transverse frame members disposed in parallel vertical planes at right angles to the shaft of said cam and having each a horizontally bent extension adapted to form a bearing for said cam.

1,462,060. CARRY-SET MECHANISM FOR CALCULATING MACHINES. EDWIN F. BRITTEN, Jr., Maplewood, N. J., assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Original application filed Nov. 23, 1920, Serial No. 426,043. Divided and this application filed Sept. 2, 1921. Serial No. 497,863. 6 Claims. (Cl. 235—138.)

1. In a calculating machine, numeral wheels rotatable in either of two directions, carry mechanism including driving elements, and reciprocatory pivoted arms operable by said numeral wheels and adapted to move said elements from inactive to active position, said arms having each a pivoted tooth engaged by said wheels and being thereby adapted to allow excess movement of said numeral wheels when suddenly checked without depression of the arms.

1,462,061. OVERTHROW CHECK FOR CALCULATING MACHINES. EDWIN F. BRITTEN, Jr., Maplewood, N. J., assignor to Monroe Calculating Machine Company, New York, N. Y., a Corporation of New York. Original application filed Nov. 23, 1920, Serial No. 426,043. Divided and this application filed Sept. 2, 1921. Serial No. 497,864. 8 Claims. (Cl. 235—131.)

1. In a calculating machine, selecting mechanism including driving elements, carry mechanism including driving elements, numeral wheels operated by said selecting elements and more rapidly by said carry elements, spring overthrow preventing means for said numeral wheels, and positively acting overthrow preventing means for said numeral wheels operable only during the carry operation.

1,462,062. TOOTHPICK AND METHOD OF MAKING SAME. GEORGE M. BROWNING, New York, N. Y. Filed Nov. 1, 1922. Serial No. 598,284. 8 Claims. (Cl. 132—93.)

1. A toothpick carrier comprising a sheet of hard flexible material having surface cuts arranged to outline toothpick blanks therebetween.

1,462,063. APPARATUS FOR AERATING LIQUIDS. CHARLES JOHN CUTCLIFFE WRIGHT HYNE, Bradford, England. Filed July 26, 1922. Serial No. 577,721. 1 Claim. (Cl. 281—25.)

An aerating device of the class described comprising a casing having a cylindrical shape and provided at one end with means for the admission of air, a water supply nozzle at one side of the casing adjacent the open end thereof, a water outlet tube at the opposite side of the casing adjacent the remaining end thereof, a shaft mounted axially of the casing, a combined fan and water pump mounted on the shaft, and a water supply nozzle at one side of the casing adjacent the open end thereof.

wheel fixed on said shaft adjacent the open end of the casing, said fan and water wheel having a series of blades each curved at the portion adjacent the open end of the casing to constitute a fan element arranged to draw air in through said open end, said blades each further having a portion remote from the open end of the casing arranged to pass in front of said nozzle and shaped to form an impeller bucket, and an agitator on said shaft below the fan having propeller like blades and positioned opposite the outlet tube whereby to mix the air and water in said casing.

1,462,064. PROCESS FOR THE PRODUCTION OF SODIUM DECARBORATE FROM BORON ORES. ALBERT ANDREW KELLY, London, England. Filed Feb. 17, 1922. Serial No. 537,306. 2 Claims. (Cl. 23—13.)

1. A process for the production of sodium decaborate, comprising mixing boron ore with water, heating the mixture and treating the mixture with sulphur dioxide so that on cooling the decaborate is obtained therefrom.

1,462,065. ATTACHMENT FOR HEADLIGHTS. BERNARD J. LEE, Los Angeles, Calif. Filed May 31, 1921. Serial No. 474,012. 2 Claims. (Cl. 240—46.)

1. In a headlight the combination of a casing, a light in the rear of said casing, a transparent rod supported on said casing and having a portion thereof transversely disposed relative to the headlight and one end thereof positioned in front of the light, and the other end visible from the rear of the casing, and an opaque element covering all but the ends of said rod.

1,462,066. GATE. JAMES M. McDANIEL, Amarillo, Tex. Filed Oct. 11, 1921. Serial No. 506,948. 2 Claims. (Cl. 39—5.)

1. The combination of a collapsible gate, a weighted lever to close and yieldingly maintain the gate in closed position, a trough below the gate, troughs in parallelism arranged at opposite sides of and at right angles to the first-named trough, wheel levers pivoted at their outer ends in the second-named troughs and having their inner ends arranged above the first-named trough, means connecting the inner ends of the wheel levers and the gate, bail-shaped levers movable vertically below the inner portions of the wheel levers at one side of the first-named trough, said levers having arms, bail-shaped control levers straddling the outer end portions of the wheel levers and having arms, cables connecting the arms of said control levers and the arms of the first-named bail-shaped levers, bell-crank levers having arms arranged at the inner sides of the arms of the control levers, retract-

tile springs interposed between the arms of the bell-crank levers and the ends of the second-named troughs, pendant tappets on the inner portions of one pair of wheel-levers, said tappets being beveled and being provided at their opposed faces with hooks adapted to assume positions below the first-named bail-shaped levers, and springs on the walls of the troughs and having shoulders adapted to engage the first-named bail-shaped levers and detachably hold the same in depressed position, said shoulders being released from said levers by the beveled portions of the tappets.

1,462,067. GARMENT HANGER. JOHN T. McKENNA, New York, N. Y. Filed Nov. 4, 1922. Serial No. 599,006. 6 Claims. (Cl. 211—13.)

1. A garment support embodying a coat hanger, a bracket secured to and supporting the coat hanger, said bracket being provided with a forwardly extending guiding arm for a vest hanger, a vest hanger, and a bracket secured to the vest hanger and demountably suspended for front to back sliding movement on the guiding arm of the coat hanger bracket for the purpose of conveniently hanging up or removing the vest or other garment from the vest hanger without disturbing a garment on the coat hanger.

1,462,068. PROCESS OF TREATING HYDROCARBON OILS. LEVI H. MANNING, Tucson, Ariz. Filed Apr. 18, 1921. Serial No. 461,994. 18 Claims. (Cl. 196—25.)

1. The process of treating hydrocarbon oils which process comprises subjecting the oil to be treated to a continuous agitating movement within a normally stationary and closed chamber and to contact with freely

movable metallic elements propelled within prescribed limits in said chamber, and subjecting said oil while in said chamber to a heat treatment applied to the exterior of the chamber.

11. The process of producing hydrocarbon oils having low boiling points from hydrocarbon oils having high boiling points which process comprises subjecting the oil to be treated to a pulsating agitating movement lengthwise within a closed tubular container, and subjecting said oil to a heat treatment of at least 700° F. applied directly to the exterior of said container.

1,462,069. APPARATUS FOR TREATING HYDRO-CARBON OILS. LEVI H. MANNING, Tucson, Ariz. Filed Apr. 16, 1921. Serial No. 461,995. 50 Claims. (Cl. 196—25.)

1. In an apparatus for heat treating hydrocarbon oils, a cylindrical treatment chamber, means for heating the exterior of said chamber, a rotatable shaft extending centrally through the length of said chamber, and a series of vanes fixed on said shaft to rotate therewith, each vane having its broader face transverse to the axis of said shaft and being positioned at an inclined angle to the axis of said shaft.

1,462,070. WATER-TURBINE CONSTRUCTION. FRANK PARMENTIER, Philadelphia, Pa. Filed Sept. 2, 1922. Serial No. 585,875. 6 Claims. (Cl. 253—136.)

1. In a water turbine construction, the combination with a water containing basin having a discharge open-

ing at its lower end, of a caisson depending from said basin and connected thereto at the discharge opening thereof, intermeshing water wheels below said caisson having their points contact in line with the center of said caisson, and adjustable vanes in said caisson for directing the water on to said water wheels at the point of contact thereof.

1,462,071. VACUUM CLEANER. PAUL RIEMAN, Rochester, N. Y. Filed July 18, 1921. Serial No. 485,666. 4 Claims. (Cl. 15—10.)

1. A vacuum cleaner, comprising a casing, casters supporting the rear and sides of said casing, a nozzle at the front of said casing, a brush surrounding the perimeter of said nozzle and means adapted to raise and lower said brush surrounding said nozzle.

1,462,072. LIQUID-FUEL BURNER. CLYDE M. RUSHING, Bozeman, Mont. Filed May 2, 1922. Serial No. 557,883. 3 Claims. (Cl. 158—63.)

1. A heating device including a pan, an arch in the pan formed with openings in the sides thereof, outwardly extending air and gas directing wings in the openings, a generator above the arch, a burner disposed beneath the arch and having openings positioned to discharge flame through the air openings, and heat absorbing means supported on the generator.

1,462,073. TRAIN-CONTROL SHOE MECHANISM. ARCHIBALD G. SHAVER, Chicago, Ill., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed May 14, 1921. Serial No. 469,529. 10 Claims. (Cl. 246—193.)

9. A ramp engaging mechanism for train control systems comprising a support, a fixed piston member car-

ried thereby, a cylinder member mounted for slidable movement on said piston member and arranged exter-

nally thereon, and cooperating circuit controlling means carried by said support and said cylinder member.

1,462,074. DETONATOR. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed June 14, 1919. Serial No. 304,215. 6 Claims. (Cl. 102—43.)

5. A detonator comprising an initial priming charge, and a main charge comprising nitrostarch, an oxidizing agent, and a stabilizing agent.

1,462,075. DETONATOR COMPOSITION. WALTER O. SNELLING, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Original application filed June 14, 1919, Serial No. 304,215. Divided and this application filed Oct. 6, 1921. Serial No. 505,779. 6 Claims. (Cl. 52—4.)

1. A detonator composition comprising nitrostarch and an oxidizing agent.

1,462,076. WATCHCASE. MAX SPIRO, New York, N. Y. Filed Apr. 28, 1922. Serial No. 557,187. 1 Claim. (Cl. 58—88.)

A watch case comprising a substantially rectangular casing having angular corners, a similar open faced

cover hingedly connected to said casing, the hinge sleeves of both members projecting partly into the casing chamber, a carrier frame receptive of a watch movement being adapted to telescope into the casing and cover members, said carrier frame having a channel which receives the said inwardly projecting portion of the hinge, said channel being adapted to retain the car-

rier frame removably secure in either the casing or cover member, a longitudinal rib on the carrier frame on the side opposite to the channel and projecting outwardly between the cover and casing, said rib being adapted to retain the carrier frame in telescoped position in either the casing or the cover when said casing and cover are opened.

1,462,077. APPARATUS FOR FORMING PIPE JOINTS. LEROY A. WESTON, Adams, Mass. Filed Nov. 23, 1922. Serial No. 602,781. 5 Claims. (Cl. 25—127.)

1. In a device for the purpose described, the combination with the spigot and bell ends of two adjacent sections of pipe, said device having two sets of flexible finger like elements designed to engage the outer ends of the bell and spigot end respectively, said fingers having upturned portions, bands engaging the fingers, and retained in place by the upturned portions, means for tightening the bands to draw the fingers against the pipe sections, said device having an upwardly extending member for introducing the joint forming material, as semi-liquid cement into the annular space between the sections.

1,462,078. WARE-DISTRIBUTING MECHANISM. PERCY Q. WILLIAMS, Cincinnati, and LEONARD D. SOUBIER, Toledo, Ohio, assignors to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 10, 1922. Serial No. 551,052. 14 Claims. (Cl. 198—19.)

1. The combination of a leer, selecting tables, and automatic means to receive ware from the leer and distribute it to the selecting tables.

1,462,079. HEAT TRANSMISSION. JOSEPH LE ROY BANKS, Baltimore, Md. Filed Aug. 29, 1921. Serial No. 496,726. 18 Claims. (Cl. 158—29.)

1. In a heat circulating system, a secondary preheater independent of the fire box, secured to the fuel supply, an electrical or primary preheater secured to the fuel supply intermediate of the secondary preheater and the fuel supply, and means for starting the primary preheater.

1,462,080. KNIFE SHARPENER. ARVID BOHLIN, Trenton, N. J. Filed Apr. 1, 1921. Serial No. 457,620. 2 Claims. (Cl. 76—86.)

1. A knife sharpener comprising, in integral formation, a base and a bifurcated standard embodying two oppositely disposed cutting members which partly overlap and are ranged one in advance of the other.

1,462,081. SAFETY DEVICE FOR INFLATING PNEUMATIC TIRES. HOWARD H. BREEDEN, Millville, N. J. Filed May 10, 1921. Serial No. 468,238. 2 Claims. (Cl. 137—53.)

1. In a device of the character described, an elongated valve housing having an open slot along one side, and a lever bearing in one end, a valve seated near said end, said valve having a slotted stem, an elongated lever passing through said slot and having its end pivotally connected to aforesaid lever bearing, slidable spring means pressing against said lever to hold said valve normally closed, means extending through aforementioned slot for moving said spring to regulate the air pressure required to open said valve, and an adjacent scale indicating said air pressure.

1,462,082. SIPHON APPARATUS. DAVID M. CARR, Brooklyn, N. Y. Filed Apr. 7, 1921. Serial No. 459,402. 7 Claims. (Cl. 137—20.)

1. In a device of the class described, a container, a drainage tube having three spaced openings of substantial equal area, one communicating with the container and one with a faucet and the other comprising a discharge tube, a siphon tube connected with the discharge

tube, and automatic liquid control means to cause liquid under pressure entering the said opening communicating with the faucet to pass through the same into the discharge tube, and, when the flow of the liquid

under pressure is cut off, to cause a flow of the liquid to be set up by gravity through the drainage and discharge tubes and the siphon tube, whereby the liquid in the container may be discharged.

1,462,083. ADJUSTABLE PROPELLER FERRULE AND WOOD-HOLDING DEVICE. NILS HERMAN CEDERQUIST, Los Angeles, Calif. Filed May 3, 1922. Serial No. 558,291. 4 Claims. (Cl. 170—173.)

1. A wood holding device including a body member, a substantially cone shaped split bushing mounted thereon with its ends normally standing apart, and means mounted upon said bushing whereby to cause the edges thereof to move toward each other.

1,462,084. PISTON. JOHN W. CORSER, Los Angeles, Calif. Filed May 16, 1921. Serial No. 470,148. 3 Claims. (Cl. 74—108.)

1. A piston comprising an imperforate skirt and a head, a wrist pin ring having aligned bushing openings and slits extending peripherally across said openings to allow for contracting them, said skirt having inner supporting means for attachment thereto of said ring, a disk interposed between said ring and said supporting means, bushings in said openings, and bolts extending through said ring and secured to said supporting means whereby to attach said ring to said supporting means and contract said openings for locking the bushings in place.

- 1,462,085. NONINTERFERING SIGNAL DEVICE. LEWIS DEGEN, Berkeley, Calif. Filed Aug. 23, 1920. Serial No. 405,455. 7 Claims. (Cl. 177—361.)

1. In a fire alarm box, the combination of a signalling train having a signal transmitter provided with a character wheel and a make and break, a resistance in circuit with said make and break, said signal transmitter including contact means operated by said character wheel to short circuit said resistance when said train is normally stopped and for an interval after starting of the train, a stop to lock said train, a catch for said stop, means normally holding the latter so as to stop said train, an electro-mechanical means in circuit with said make and break and controlling said catch so that when said resistance is short circuited said catch will be moved to release said stop means and to hold said catch in release position after said train has moved said interval and during a round of signals.

- 1,462,086. LADDER ATTACHMENT. PHILANDER M. ECHLIN, Toronto, Ontario, Canada. Filed Oct. 13, 1922. Serial No. 594,340. 1 Claim. (Cl. 304—34.)

The combination with a ladder, of a foot support therefor, comprising a platform made up of spaced boards, U-shaped brackets connecting the boards and designed to rest on one of the rounds of the ladder, a hanger formed from a single strand of wire, said hanger having its arms at their lower ends bent upon themselves to provide yokes, elements secured to the platform passing through the yokes, adjustable binding elements engaging the last mentioned elements and contacting with the members of the yokes, said hanger having its arms at their upper ends bent to provide hooks to engage another round of the ladder, and a connecting element between the hooks.

- 1,462,087. CENTRIFUGAL GOVERNOR. CHARLES J. HENDRICKSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1921. Serial No. 503,842. 4 Claims. (Cl. 188—184.)
3. A centrifugal governor comprising a stationary member having an annular surface, a rotatable member

comprising a fly-weight, a friction stud for frictionally engaging said annular surface and so placed upon the

fly-weight that any driving force in excess of that required to maintain a predetermined speed of operation is substantially opposed by the frictional retarding force.

- 1,462,088. JUMP ROPE. GEORGE C. LA SARES, Springfield, Mass., assignor to C. E. Bradley Corporation, Brattleboro, Vt., a Corporation of Vermont. Filed Feb. 15, 1922. Serial No. 536,800. 3 Claims. (Cl. 46—30.)

1. A jump rope construction, having in combination, with the rope, of handle members formed with openings therein, devices loosely mounted in the openings of the handle members, devices formed to receive the loosely mounted devices in the openings of the handles, means for securing the two devices together, the second mentioned devices serving to secure the ends of the rope thereto, whereby when the rope is rotated the handle members will remain stationary and the loosely mounted devices therein will turn with the rope as described.

- 1,462,089. SPLIT PISTON FOR INTERNAL-COMBUSTION ENGINES AND ANALOGOUS USES. GEORGE THOMAS LEWIS, Middleville, N. Y. Filed Sept. 19, 1922. Serial No. 589,096. 3 Claims. (Cl. 74—108.)

1. A piston composed of opposite sections, a coupling pin extending diametrically through both sections at substantially right angles to the plane of their meeting edges, the meeting sides of the head end of each section being provided with a laterally projecting tongue and a groove, the tongue of each section being slidable in the groove of the other section.

1,462,090. TOY. FRANK L. LINDSTROM, Bridgeport, Conn. Filed Jan. 21, 1922. Serial No. 530,779. 5 Claims. (Cl. 46—40.)

1. A toy of the character described, comprising a body and a differential winding drum mounted therein, said winding drum consisting of a pair of pulleys connected to turn with each other, and one of said pulleys consisting of a plurality of stampings including a cup shaped member having an annular pulley face and an integral bottom having a central perforation forming a bearing for the pulley, and a flange plate secured at the open side of said cup shaped member and having a central perforation forming a second bearing for the pulley spaced from said first bearing, and a shaft supported by said body and engaging said bearings.

1,462,091. SPINNING TOP. FRANK L. LINDSTROM, Bridgeport, Conn. Filed Jan. 21, 1922. Serial No. 530,780. 7 Claims. (Cl. 46—32.)

1. A top body comprising a lower section having a centrally arranged spindle, an upper section, a supporting member having its opposite edges fastened between said sections, and a stem, the body portion of which is fitted in a centrally arranged hole in the upper section and the lower end of which is associated with the supporting member, said stem being arranged directly above and in alignment with said spindle.

1,462,092. VACUUM VESSEL, SLAB, PARTITION, AND OTHER DOUBLE-WALLED VACUUM STRUCTURE. ARTHUR JOHN ROACH-CUMING, London, England. Filed Nov. 19, 1919. Serial No. 339,131. 2 Claims. (Cl. 220—9.)

1. A heat insulating device comprising a vacuum chamber having walls formed of metal, the vacuum-facing surfaces of said walls being coated with a substance for preventing the discharge of material from said surfaces into the vacuous space in said chamber.

1,462,093. DETONATOR COMPOSITION. CHARLES E. WALLER, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed May 13, 1921, Serial No. 469,193. Renewed Apr. 4, 1923. 7 Claims. (Cl. 52—4.)

3. A primer composition comprising an oxidizing agent, a stabilizing agent, and nitrostarch in granules of an average size in excess of .045 mm.

1,462,094. GANG DIE PRESS. HARRY C. H. WALSH, Chicago, Ill., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Dec. 9, 1920. Serial No. 429,395. 24 Claims. (Cl. 164—88.)

1. A die press comprising a gang of similarly formed dies, means for reciprocating said dies, means for feeding a sheet step by step to said dies, and means for suspending the movements of any one of said dies when the same overlies the edge of the sheet.

1,462,095. SHOE OR BOOT. ELI H. WIEL, San Francisco, Calif., assignor to Buckingham & Hecht, San Francisco, Calif., a Corporation of California. Filed Feb. 4, 1922. Serial No. 534,092. 2 Claims. (Cl. 36—11.)

1. A boot or shoe having a one piece vamp and having an exterior U-shaped reinforcing stay fastened along the sides and across the toe of the vamp.

2. A boot or shoe having quarters and a one piece vamp which are connected together by seams and having an exterior U-shaped reinforcing vamp stay secured along the sides and across the toe of the vamp and extending along and covering and protecting the seams which connect the vamp and quarters.

1,462,096. MACHINE FOR REMOVING AND CRUSHING ROCK. PETER HENRY WIERTZ, New York, N. Y. Filed June 21, 1922. Serial No. 569,878. 4 Claims. (Cl. 262—10.)

3. In a machine for removing and crushing rock, in combination, a bed, a shovel, a carrier operably mounted on top of the bed for conveying to the rear of the bed rock received on the shovel, rotatable crushers under the carrier for receiving and crushing rock delivered by the carrier, and mechanism operative for driving the carrier and to rotate the crushers.

1,462,097. TWINE-CUTTING DEVICE. SHIGETARO YAMADA, Honolulu, Territory of Hawaii. Filed June 11, 1921. Serial No. 476,786. 6 Claims. (Cl. 30—14.)

1. A machine of the character described, comprising a base, reciprocating twine feeding means carried thereby, a knife adapted to sever twine interposed in the path thereof, a hand operated rod for actuating said knife, and

means operated by said rod for moving the twine feeding means to cause the end portion of the twine to be fed forwardly, said actuating means comprising meshing gears operated by the rod, and a crank arm connected with one of the gears and engaging the reciprocating twine feeding means for moving said feed upon the actuation of the gears.

1,462,098. DRILLING MACHINE. HARRY C. BREWSTER, Shreveport, La. Filed Sept. 19, 1921. Serial No. 501,702. 7 Claims. (Cl. 255—23.)

1. A drilling machine comprising skids, a sub-bed having attaching members imbedded in said skids, a main bed arranged above the sub-bed and having gripping devices.

1,462,099. FISHING TOOL. CHARLES H. BROWN, Breckenridge, Tex. Filed Oct. 29, 1921. Serial No. 511,366. 4 Claims. (Cl. 294—86.)

1. A fishing tool comprising a head having a plurality of forwardly directed arms provided with inwardly directed flat barbs adapted to be received within the slots of a valve cage, the forward terminal portions of said arms and said barbs being beveled whereby to spread the arms upon being engaged with the valve cage, and adjustable means to limit the forward movement of said arms, said adjustable means being rotated between and protected by said arms.

1,462,100. DEVICE FOR DETERMINING THE COURSE ON FLYING MACHINES. GIANNI CAPRONI, Milan, Italy. Filed May 28, 1919. Serial No. 300,274. 3 Claims. (Cl. 35—6.)

1. A device of the character described including a casing having a transparent top provided with graduated lines dividing said transparent top into a number

of squares, a map movably mounted in said casing beneath said transparent top, a deformable double parallelogram device mounted on said casing and bearing

against said transparent top, a protractor and a rule attached to the movable end of said parallelogram device, and means to permit said parallelogram device to be raised from said transparent top.

1,462,101. TOOL. ERICK G. COLSON, Glen Morris, N. Y. Filed Jan. 19, 1921. Serial No. 438,494. 5 Claims. (Cl. 90—59.)

1. A tool adapted for use on magnetizable surfaces, comprising a base, an electromagnetic coil associated with the base, and adapted when energized to hold the base in engagement with a magnetizable surface, and a tool support carried upon the base and movable independently thereof with definite guidance with relation to work.

1,462,102. TRAP FOR CAPTURING ANIMALS. ARVY B. DODSON, Longton, Kans. Filed Nov. 15, 1921. Serial No. 515,363. 1 Claim. (Cl. 43—81.)

In combination, a platform, a spring actuated animal engaging element associated therewith, a trip arm fulcrumed on the platform, a dog fulcrumed on the platform and having one end formed so as to engage the

animal engaging element for holding it in an inoperative position and an extension formed on its other end with a notch provided therein for receiving an end of

the trip arm, and a spring element mounted on the dog so as to press against the said end of the trip arm so as to normally hold it in the said notch.

1,462,103. VEHICLE TRAILING DEVICE. LOUIS ERICKSON, La Crosse, Wis. Filed July 5, 1921. Serial No. 482,398. 1 Claim. (Cl. 280—33.5.)

A device for attaching a towing bar to a towed vehicle including a U-shaped bracket, an engaging casting pivotally mounted in the bracket and including a plate, and a hook member, said plate and hooked member diverging from each other, and a set screw mounted in the plate.

1,462,104. AUTOMOBILE FENDER. SAMUEL G. FITZSIMONS, Charleston, S. C. Filed Mar. 19, 1923. Serial No. 626,070. 7 Claims. (Cl. 293—41.)

1. An automobile fender comprising a pair of main levers having means whereby the same may be pivoted intermediate their ends to a motor vehicle, a roller carried by the terminal portions of said levers, supporting arms pivoted to the lower portions of said levers, a second roller carried by the outer terminal portions of said arms, and links connected to said arms and to said levers, a contact bar carried by said links, and a curtain connected to said rollers.

- 1,462,105. DEVICE FOR COOKING UTENSILS. JOHN J. HART, Omaha, Nebr. Filed Oct. 14, 1921. Serial No. 507,602. 14 Claims. (Cl. 53—1.)

7. An egg poacher comprising a support, a receptacle tiltable connected thereto and having an opening in a side thereof through which an egg is discharged, means for tilting the receptacle, and means carried by the support for closing the opening when the receptacle is arranged in its normal position.

- 1,462,106. MEANS FOR CONTROLLING FLUSH-TANK VALVES. EDWARD G. HEDGES, Newark, and WALTER W. HEROX, Bloomfield, N. J. Filed May 14, 1921. Serial No. 469,546. 4 Claims. (Cl. 4—5.)

1. The combination, with a tank-outlet having a seat, of an inverted water-chamber above the seat with an air-passage at its top and water-inlet near the seat, a float-valve movable within the water-chamber, a rod attached to the top of the float-valve and extended loosely through the air-passage, and the float-valve having an air-valve fitted to close the air-passage, the confined water-column operating during the entire emptying of the tank to maintain and press the air-valve against the air-passage until the tank is emptied, such emptying admitting air to the water-inlet near the seat and causing the sudden automatic dropping of the float-valve to the seat, to permit the refilling of the tank.

- 1,462,107. FOX PEN. HARRY TINSON HOLMAN, Summerside, Prince Edward Island, Canada. Filed July 5, 1922. Serial No. 572,966. 3 Claims. (Cl. 119—20.)

1. A fox pen comprising two separated portable cages connected by a portable runway, the whole constituting a

plurality of demountably constructed sections covered inwardly as to the sides, top and bottom with wire netting, doors for separating the cages and sliding door means for separating the runway sections.

- 1,462,108. TELEPHONE PENCIL HOLDER. HAROLD S. HOLYWELL, Brooklyn, N. Y. Filed Nov. 14, 1922. Serial No. 600,973. 1 Claim. (Cl. 120—108.)

A pencil holder of the kind stated, comprising a circular band to place around the telephone instrument or fixture, opened at the end, screwed together to hold the circular band around the telephone instrument, at the end of which hangs a cone-shaped pocket, into which is placed the point of the pencil when not in use, and which pencil is attached to the end of the circular band by a chain.

- 1,462,109. PRESSURE INDICATOR. MICHAEL SULLIVANT HOPKINS, Columbus, Ohio. Filed Apr. 11, 1922. Serial No. 551,601. 8 Claims. (Cl. 73—31.)

1. In an apparatus of the class described, the combination with a pressure gauge, of means to connect said gauge with the combustion chamber of an internal combustion engine, means to limit the influence upon said gauge of the gases within the combustion chamber to optionally selected periods of the cycle of operation of the engine, and means to select the period of said cycle which shall influence said gauge.

1,462,110. VALVE. JACOB T. HOSTETTER and FREDERICK J. KEISER, Sharon, Pa. Filed Aug. 18, 1922. Serial No. 582,827. 1 Claim. (Cl. 251—84.)

A valve including a casing having a fluid inlet, and outlet, an apertured valve seat within the casing, a valve movable on said seat to cover and uncover the aperture therein, and means to move said valve, said means including a shaft rotatable at right angles to the axis of the valve, and a swinging member movable by said shaft carrying a threaded trunnion.

1,462,111. MAGNETIC SEPARATOR. AUGUST F. JOEKE, Pittsburgh, Pa. Division after grant of application Serial No. 230,604, filed Apr. 24, 1918. This application filed May 29, 1922. Serial No. 564,576. 8 Claims. (Cl. 83—71.)

1. In a magnetic separator a separating member movable between upper and lower magnet poles, having its largest dimension and a lower collecting edge at an angle to the direction of the flow of ore and to a radius from the axis of its movement, and its smallest dimension in a direction at right angle thereto and to the flux and in the direction of its movement.

1,462,112. MERCURY-VAPOR PUMP FOR HIGH VACUUMS. JULIUS JONAS, Meierhof, Baden, and OSKAR SEITZ, Oberer Kappelerhof, Baden, Switzerland, assignors to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland. Filed June 6, 1921. Serial No. 475,486. 11 Claims. (Cl. 230—13.)

1. A mercury vapor pump for obtaining high vacuums, including a closed vessel containing mercury, a pipe for

connection to a preliminary vacuum pump, and a pipe for connection with the receiver, i. e., the chamber to be exhausted, a chamber in which the mercury is heated by a heating device, a cooling device for condensing the mercury vapor, characterized by the feature that above the heating chamber there is provided as a guide for the ascending vaporized mercury and also for the falling drops of condensed mercury, an internally unobstructed tube at the upper end of which is located the connection to the preliminary vacuum pump, whilst the connection to the receiver is made at the lower end of said tube; the cooling device being located between these two points of connection.

1,462,113. TEMPORARY END CLOSURE FOR LOCOMOTIVE VALVE CHAMBERS. OSCAR KUHNER, Columbus, Ohio. Filed Oct. 14, 1920. Serial No. 416,793. 9 Claims. (Cl. 137—76.)

1. A device of the character described including a body bar, a head upon the bar, radially movable segmental clamps carried by said head, a ring surrounding the clamps of each head, a gasket surrounding said clamps and overlying the ring, and means for shifting the clamps radially.

8. The combination with a locomotive valve chamber, of means for temporarily closing the chamber at its ends, and means associated with the first means for draining the chamber.

1,462,114. TALKING MACHINE. BERT EDWARD LANE, Camden, N. J. Filed June 12, 1919. Serial No. 303,649. 3 Claims. (Cl. 274—2.)

1. A talking machine including a unitary amplifying horn housing having two holes in alignment with each other and positioned one above the other; a sound conducting tube entering said housing through the upper one of said holes; and means providing a pivotal thrust bearing for said tube and positioned within the other of said holes; substantially as described.

- 1,462,115. VALVE-TESTING DEVICE. WILBERT E. LAUSTER, Yatesboro, Pa. Filed Aug. 19, 1921. Serial No. 493,691. 3 Claims. (Cl. 73—51.)

1. A valve testing device for automobile engines comprising a cylinder having one end closed and the other end opened, said open end being provided with packing on its face, an automobile tire valve connected under and opening into said cylinder, an air gauge carried by the cylinder, and a bar extending diametrically through the axis of the cylinder and slidable in the direction of its length, said bar being provided with openings at its end for the reception of holding down bolts.

- 1,462,116. ASSEMBLING AND TRANSFER MECHANISM. FREDERICK W. LETSCH, Baltimore, Md. Filed Nov. 12, 1920. Serial No. 423,698. 24 Claims. (Cl. 199—29.)

1. In a mechanism of the kind described, means for receiving and supporting matrices to form a line, a transfer slide, a finger pivotally mounted on said slide and arranged to press constantly against the front matrix of a line while the line is being assembled and transferred, resilient means for yieldingly pressing said finger against the matrices, a second finger connected to and movable bodily with said slide and adapted to be positioned to support the rear end of an assembled line, and means to bodily move said slide and fingers to transfer the assembled line.

- 1,462,117. TIRE AND RIM CONSTRUCTION. CHARLES N. MCCLINTOCK, Elwood, Ind. Filed Mar. 3, 1922. Serial No. 540,777. 3 Claims. (Cl. 152—20.)

1. A combined tire and rim construction for vehicle wheels including a casing having clincher beads formed at opposite edges thereof and providing inner and outer shoulders, and also having wings formed at the edges of the tread for overlying the outer shoulders of the beads, an inner floating ring engaging with the inner shoulders

of the beads, and a rim consisting of separable sections and each having inturned clincher flanges for engaging the outer shoulders of the beads and lying beneath the said wings.

- 1,462,118. THEFT-PREVENTING DEVICE FOR AUTOMOBILES. JOHN McMULLEN, Butte, Mont. Filed Aug. 20, 1921. Serial No. 493,976. 6 Claims. (Cl. 188—6.)

1. A brake for automobiles, comprising a swinging arm having a journal mounted parallel with, and eccentrically to, the wheel axle and below said axle, a lever journaled on the frame of the automobile to swing transversely to the length direction of the automobile, said lever having an inoperative and an operative position, a connection between said lever and said arm for giving said arm a limited angular movement, the end of said arm extending beyond the periphery of the wheel.

- 1,462,119. ARRANGEMENT IN COKE CONTAINERS OR THE LIKE. ARNOLD MOETTEL, Oberwinterthur, Switzerland. Filed Jan. 19, 1922. Serial No. 530,485. 3 Claims. (Cl. 259—38.)

1. In a coke cooling apparatus means for preventing bridging of the contents and clogging the container outlet, comprising at least two pendulum bodies arranged at different points in the apparatus and connections between said pendulum bodies for mutually imparting to each of said bodies movements produced by the action of the coke on another of said bodies.

- 1,462,120. LAND LEVELER. WILLIAM H. MONROE, San Jose, Calif. Filed Aug. 1, 1922. Serial No. 578,945. 3 Claims. (Cl. 55—22.)

2. The combination with a series of transversely arranged channel-beam scrapers including a scraper having rearwardly extending teeth, of a plurality of brackets on each scraper arranged in rows, longitudinally disposed draft bars and an intermediate bar above said scrapers, a bolt connecting each bracket with a bar and adapted to form a pivot and a second bolt for each bracket adapted to form a clamp bolt.

1,462,121. SEPARATOR. MERLE M. NEWTON, Colorado Springs, Colo. Filed Apr. 18, 1922. Serial No. 554,433. 14 Claims. (Cl. 233—27.)

1. In a separator of the character described, a helical shaped pan, means for supporting said pan for rotation upon its normal axis as a center, and means for adjusting the pan with relation to the axis of rotation.

1,462,122. VALVE DEVICE FOR DUPLEX PUMPS. HANS PETER PETERSEN, Copenhagen, Denmark, assignor to Glent & Hassenkamm Ltd., Copenhagen, Denmark, a Corporation of Denmark. Filed July 6, 1921. Serial No. 482,844. 6 Claims. (Cl. 277—60.)

1. In combination, a valve box, superposed valve seats arranged in said box, opposed stop members carried by said seats and engaging portions of the box, adjustable securing means passing through the valve box and arranged to draw the stop members against the box whereby to clamp the seats in position, said seats being respectively removable from the top and bottom of the box, and valves associated with said seats.

1,462,123. PEANUT PICKER. THEOPHILUS I. PHELPS, Woodville, N. C. Filed Apr. 27, 1920. Serial No. 377,080. 3 Claims. (Cl. 130—30.)

2. A peanut cleaning machine comprising a conveyor having upper, lower, front and rear runs, shafts and

sprockets for the corners of the conveyor, means cooperating with the upper run of the conveyor to provide a picking mechanism, a vibrating table disposed below the picking mechanism, a reciprocating stemming mechanism ar-

ranged beneath the vibrating table, and a pitman connected to each vibrating and reciprocating mechanism, said pitman being connected to diagonally disposed sprockets of said conveyor.

1,462,124. CUT-OUT BOX. ALFRED LAWRENCE PIERCE, Wallingford, Conn. Filed Apr. 16, 1920. Serial No. 374,409. 1 Claim. (Cl. 247—7.)

In a cut out box, a back comprising a rear wall, a bottom, sides and a downwardly and rearwardly inclined top; and a front comprising a forward wall, a bottom, sides and a top including a downwardly and rearwardly inclined portion, and pivot means connecting the lower portion of the back with the lower portion of the front, the sides of the front being overlapped on the sides of the back, and said portion of the top of the front being overlapped on the outer surface of the top of the back, the downward and rearward inclination of the top of the back, and the downward and rearward inclination of said portion of the top of the front serving to prevent the front from swinging downwardly to an open position on the pivot means, the pivot means embodying a lost motion connection, whereby the front may be raised, thereby to permit said portion of the top of the front to be disengaged from the top of the back, and to permit the front to be swung to an open position.

1,462,125. CORD ANCHOR. PAUL RISSMANN, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed May 18, 1921. Serial No. 470,647. 5 Claims. (Cl. 24—265.)

1. In a support for trimmed cords, the combination of a fixture for securing to a support and comprising a plate having a boss raised at its center and provided with an opening at one end of the boss into the hollow interior, a

trimmed cord passing through said opening, and a two-part clamp secured and clinched on the end of the cord

and shaped to prevent being drawn through said opening, said clamp contained within the interior of said boss for anchoring the cord and clamp within the fixture.

1,462,126. DISCHARGING CONVEYER. JOHN ROSS, Philadelphia, Pa. Filed May 5, 1921. Serial No. 467,004. 5 Claims. (Cl. 193—27.)

1. In an apparatus of the character stated, an upright rigid self-supporting tubular conduit of a height approximating several stories of a building and having its interior provided with a large number of oblique oppositely projecting floors arranged at intervals from top to bottom and providing a zigzag passageway in which the bottom of any oblique floor is above the top of the next lower oblique floor, the upper end of the tubular conduit immediately above the uppermost oblique floor provided with a normally open hopper-like structure for at all times receiving the material to be handled, and the bottom of the upright tubular conduit provided with a discharging orifice having controlling means for regulating the discharge, the said conduit divided into separable sections detachably connected one above the other and each section having one of the oblique floors extending part way across the passageway therethrough and providing a throat at the bottom.

1,462,127. SHIELD. ALBERT C. SANDERS, Helena, Ark. Filed Aug. 30, 1921. Serial No. 496,810. 5 Claims. (Cl. 296—95.)

2. In combination, a motor vehicle having a top, a reticulated sheeting supported forward to the driver's seat of the motor vehicle, and a sun reflecting sheeting extending between the upper end of the reticulated sheeting and the top of the motor vehicle.

1,462,128. VEHICLE WHEEL. JOHN L. STOLTZ, Sumner, Ill. Filed Jan. 12, 1922, Serial No. 528,705. Renewed Jan. 30, 1923. 4 Claims. (Cl. 132—47.)

3. A wheel comprising in combination, a hub, a felly, spokes connecting the hub to the felly, each spoke comprising a cylinder having its outer end closed and provided with an aperture, a removable apertured cap on its inner end, a rod extending through the cylinder and through the apertures in its closure and in the cap, said rod being provided with a threaded shank, a sleeve longitudinally adjustable on the rod, washers slidable on the sleeve within the cylinder, and springs mounted between said washers.

1,462,129. ELECTROMAGNET. ERNEST B. THURSTON, Toledo, Ohio, assignor to The Haughton Elevator & Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Sept. 30, 1921. Serial No. 504,457. 15 Claims. (Cl. 175—338.)

3. The combination with a hollow core of converging windings disposed on said core, a polyphase electric current supply for the windings for the production of

a rotating magnetic field, and a cylindrical plunger magnetized to effect relative pulling into position within said hollow core.

9. The method of controlling a plunger as to its core of an alternating current solenoid having a tapered portion and a straight portion, which comprises establishing a rotating magnetic field by supplying a polyphase current thereto, having the tapered portion within the influence of said field and the straight portion beyond the influence of said field when the plunger is in its inoperative position, and directing shifting to bring the plunger into a magnetically balanced position of rest in said field.

1,462,130. MICROMETER CALIPER. LAWRENCE O. BEARD, Lancaster, Pa. Filed Sept. 6, 1922. Serial No. 586,515. 3 Claims. (Cl. 33—178.)

1. A micrometer-caliper comprising a plate having parallel side portions, a tubular guide member on said plate, a sleeve slidably mounted in said guide member and extending through said plate, and a measuring spindle threaded in said sleeve whereby relative rotation between the spindle and the sleeve will adjust the spindle longitudinally of the sleeve, said sleeve and said spindle having cooperating graduations thereon.

1,462,131. CASING HEAD. CLEM S. CLARKE, Shreveport, La. Filed May 26, 1921. Serial No. 472,763. 3 Claims. (Cl. 24—263.)

3. The combination with a well casing head having a tapered bore, of a plurality of tapered well tube gripping segments received in the bore, a member pivotally connected with the upper faces of a plurality of segments, and a loop pivotally connected with the upper face of another segment.

1,462,132. ELECTRIC-LIGHTING FIXTURE. HARRY W. CORDINGLY, Fredericksburg, Ohio, assignor to Daisy Cordingly, East Liverpool, Ohio. Filed Aug. 26, 1922. Serial No. 584,435. 3 Claims. (Cl. 240—78.)

1. In a ceiling light fixture, a pan, guide flanges carried thereby, said flanges having seats associated therewith, spring arms carried by the ceiling for yieldably and detachably engaging said seats and means for limiting the rotary movement of the pan in one direction.

1,462,133. PORTABLE CLOTHES BASKET. THEODORE GLOCK, Webster, Wis. Filed June 24, 1921. Serial No. 480,151. 2 Claims. (Cl. 280—39.)

1. A clothes basket comprising a basket body, a base secured to the bottom thereof and having depending sides, wheels swingingly supported to swing to a folded position between the sides, a single strap for holding the wheels in such position, a two part foldable brace, said parts having an interfitting connection at their ends when extending and a bolt for locking the parts when extended.

1,462,134. LOCOMOTIVE WATER COLUMN. WALLACE M. GRAY, Cincinnati, Ohio. Filed Mar. 1, 1920. Serial No. 362,224. 4 Claims. (Cl. 137—21.)

1. A locomotive water column comprising a column, a detachably mounted elbow section at the head of said column provided with projections for the attachment of spout supporting arms valve actuating rods and a column locking rod, a pair of spout supporting arms attached rigidly to said elbow and projecting laterally and down-

wardly therefrom, a sheet metal spout section projecting laterally and downwardly from said elbow section, intermediate of said supporting arms an adjustable sheet metal spout section telescopically adjustable upon and exteriorly of said stationary spout section and counterbalanced relative to said column, and valve actuating means and column locking means mounted upon said supporting arms.

1,462,135. ANTISIDE-DRAFT PLOW. PAUL HANSMANN and HERMAN STRACK, Long Prairie, Minn. Filed Feb. 14, 1921. Serial No. 444,949. 6 Claims. (Cl. 97-199.)

1. A plow hitch for use in connection with tractors comprising, a draw head adapted to be attached to the rear of the tractor, a plow having a jointed beam bendable upwardly, said plow positioned at one side of the center of draft of the tractor a distance at the rear of said draw head, a part of the plow above the rear portion of the plow share extending outwardly toward the center of draft of the tractor, a draw rod pivotally connected to said draw head and to said outwardly extending part of the plow, said draw rod extending diagonally rearwardly toward the center of draft of the tractor, and a tie rod pivotally connected to said plow beam and draw head and extending across said draw rod.

1,462,136. WATER DISTRIBUTOR FOR LITHOGRAPHING PRESSES. CARL HENDERSON, Oak Hill, Ill., assignor to The Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1917. Serial No. 183,132. 5 Claims. (Cl. 101-148.)

1. In a mechanism for applying moisture to a plate on a rotary lithographing press, the combination of a water

fountain, two distributing rollers adapted to engage said plate, and means for conveying a greater quantity of water from said fountain to that distributing roller which first engages said plate as the same passes from the impression position to the inking position.

1,462,137. AUTOMOBILE LOCK. ALBERT C. HILL, Chicago, Ill. Filed Nov. 25, 1921. Serial No. 517,455. 4 Claims. (Cl. 70-90.)

1. In a device of the class described, a block having a face arranged to engage a steering post and said face having a counterbore therein, a lock, a cam and a cover plate located in said counterbore, said plate having a boss projecting into the post to which the device is connected, a locking bolt supported in said plate, and means by which a key inserted in said lock will operate said cam to move said bolt.

1,462,138. MACHINE FOR MAKING FIBER SHINGLES. SAMUEL M. LANGSTON, Wenonah, N. J. Filed Apr. 22, 1922. Serial No. 555,936. 65 Claims. (Cl. 164-68.)

1. A machine for cutting multiple shingle strips from a prepared sheet of roofing material, each strip extending lengthwise of the sheet and having along one longitudinal edge thereof a plurality of narrow notches or recesses and interposed tabs simulating the ends of individual shingles, said machine including means for cutting a plurality of rows of transversely extending slots in the sheet, said rows extending longitudinally of the sheet and said slots being spaced at distances equal to the distances between the recesses or notches in the finished strip, cut off mechanism arranged beyond said means for severing said sheet transversely into sections, each of a length corresponding to the length of a finished strip, and means arranged beyond said cut off mechanism for separately slitting said sections in succession lengthwise along a plurality of lines.

1,462,139. GEAR-SHIFTING DEVICE. LAURITS A. LAURSEN, Eau Claire, Wis., assignor to James T. Joyce, trustee for United States Auto Gear Shift Company. Filed Mar. 9, 1921. Serial No. 450,858. 13 Claims. (Cl. 74-58.)

1. In a gear shifting unit of the type described, for application to different types of change speed gear mechanisms, the combination with gear actuating parts,

of locking means for holding either of said parts locked while the other is operative, and instrumentalities where-

by the said locking means may be rendered operative or inoperative at will without dismounting it from the device.

1,462,140. SYSTEM OF BOOKKEEPING. HAROLD J. LA WALL and CHARLES E. WETZEL, Philadelphia, Pa. Filed Jan. 6, 1922. Serial No. 527,311. 2 Claims. (Cl. 283—66.)

DAILY CASH BALANCE SLIP						
DEPARTMENT	A	B	C	D	E	F
CASH SALES						
a Cash in cash drawer (less change)						
b Cash paid out for Petty Expenses						
c Cash paid out for Money Returned						
d Tot. l (a+b+c)						
e Less Cash Paid on Act of Charge Sales						
f Gross Cash Sales for Day (d-e)						
g Less Cash Paid out for Money Returned						
A Net Cash Sales for Day (f-g)						
CHARGE SALES						
h Gross Charge Sales						
i Less Charge Sales Returned						
A Net Charge Sales for Day (h-i)						
k Total Sales for Day (A+i)						

1. In a system of bookkeeping, the combination of a daily cash balance sheet suitably ruled and appropriately designated to provide departmental columns with spaces for entry of designated cash and charge transactions occurring in each department; an invoice record sheet suitably ruled and with appropriate headings for the entry of invoice data thereon; a daily record sheet comprising a plurality of numbered, suitably ruled columns and headings therefor designating the particular account in which the expenditures for the day are to be entered, said daily record sheet also comprising a section suitably ruled, lettered and numbered for transfer thereto of the departmental transactions in summarized form from the daily cash balance record, suitable spaces with appropriate titles also being provided for balancing the cash and bank account at the end of each day; a monthly record sheet suitably ruled and designated for transfer thereto of items from the daily record sheet, a column containing the dates of the month being provided at one end of the sheet so that the entries for each day may be properly entered opposite its date, said monthly record sheet constituting a statement of all transactions for each day for a full month of the business; and a yearly summary sheet having an upper portion divided by suitable ruling into columns corresponding by number and heading to the columns of the monthly record sheet, the names of the months appearing in a column at the end of the sheet, opposite to which in the space provided therefor may be entered the item in the proper column as transferred from the monthly record, said yearly summary sheet also comprising sections suitably ruled and entitled "Monthly summary of accounts receivable," "Monthly comparison," "Summary of cash for the year," "Profit for year," and "Statement of assets and liabilities for year," suitable and self-explanatory directions and

titles being provided in the sections to enable the proper entries to be made therein as ascertained from said upper portion of the yearly summary, the monthly record and the invoice record.

1,462,141. BRAKING DEVICE FOR CENTRIFUGAL MACHINES. MEREDITH LEITCH, deceased, late of Poughkeepsie, N. Y.; by Lucy B. Leitch, administratrix, Gordonsville, Va., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Original application filed Apr. 22, 1920, Serial No. 375,735. Divided and this application filed July 8, 1921. Serial No. 483,192. 4 Claims. (Cl. 188—90.)

1. A centrifugal machine comprising a revoluble bowl having a spindle and a bowl casing closely surrounding the bowl, there being a liquid inlet to the space between the bowl and casing, there being an annular outlet surrounding the spindle, and means to retard escape of said liquid from said space, thereby stopping the bowl by liquid friction between the opposing walls of the bowl and casing.

1,462,142. ALARM CLOCK. PAUL LUX, Waterbury, Conn., assignor to Lux Clock Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Oct. 14, 1922. Serial No. 594,462. 9 Claims. (Cl. 58—16.)

1. In an alarm clock, a casing, time-keeping and alarm-producing mechanism mounted in said casing, means for releasably locking said alarm-producing mechanism, and an indicating pointer in front of the dial of said clock to show whether said alarm-producing mechanism is locked or unlocked.

- 1,462,143. METHOD OF CRACKING HYDROCARBON OILS. FREDERICK T. MANLEY, Houston, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Oct. 10, 1917. Serial No. 195,775. 8 Claims. (Cl. 196—25.)

2. The continuous method of cracking hydrocarbon oils which comprises charging the oil into an elongated vertical still to maintain therein an extended column of liquid oil, maintaining said column of oil at a temperature and pressure sufficient for cracking, removing residue and vapors from the still to maintain a substantially constant liquid level therein, separating out the heavier constituents of said vapors and directly returning said constituents in cyclic passage through substantially the full length of the extended column of oil by positively forcing them into the bottom of the still.

- 1,462,144. STEAM TRAP. JOHN MOREHEAD, Detroit, Mich. Filed Dec. 30, 1920. Serial No. 433,989. 5 Claims. (Cl. 137—101.)

5. In a steam trap, a stationary chamber, a movable tank suspended within the stationary chamber, means for delivering water of condensation to the movable tank, means for delivering steam to the trap to force the water of condensation upwardly and out of the movable tank, a valve for controlling the delivery of steam to the trap and means for actuating said valve at predetermined intervals.

- 1,462,145. TENNIS-COURT MARKER. MICHAEL K. MURRAY, Bloomfield, N. J. Filed July 7, 1922. Serial No. 573,485. 7 Claims. (Cl. 91—54.)

1. A tennis court marker, comprising a frame provided at its forward end with a central marker wheel and at its rearward end with a pair of laterally spaced traction wheels, a tank supported by said frame in the rear of said marker wheel, a rotatable dipping wheel within said tank, idler guide pulleys associated with the forward end of said tank, a marking belt arranged to run over said marker wheel, dipping wheel and idler guide pulleys, means for adjusting one of said idler guide pulleys to regulate the tension of said belt, a belt cleaning means supported from said frame intermediate said marker wheel and said tank to engage the return course of said belt, and means for retaining said cleaning means in either "in service" or "out of service" positions.

- 1,462,146. BLADE HOLDER. JOSEPH E. MYERS, Tacoma, Wash. Filed Aug. 6, 1921. Serial No. 490,207. 1 Claim. (Cl. 30—25.)

A blade holder consisting of resilient sheet metal bent back twice upon itself so as to form a double fold, one of said folds being in the form of a pocket to receive a blade, said holder having a part projecting in one direction from said folds to form a handle and another part projecting in the opposite direction from said folds and serving to hold a blade in said pocket.

- 1,462,147. VALVE. LEO F. O'FLAHERTY and WILLIAM L. KIRKPATRICK, Elgin, Ill. Filed Mar. 31, 1922. Serial No. 548,338. 3 Claims. (Cl. 277—18.)

1. A mixing device including a casing having mixing and discharge chambers therein; a partition between

said chambers provided with a connecting aperture; an inverted cup-shaped member adapted to rest upon said partition, said cup-shaped member being provided with an inwardly turned hollow boss; means for retaining said cup-shaped member in said casing; a mixing valve in said mixing chamber; an operating stem extending through said boss and said aperture and being connected to said valve; and a spring disposed about said stem and seated in said boss.

1,462,148. VEGETABLE SLICER, CUTTER, AND NUT-CRACKER. PAUL PERHÁTS, Chicago, Ill. Filed Aug. 17, 1922. Serial No. 582,361. 3 Claims. (Cl. 146—11.)

1. A device of the class described comprising a heavy rimmed wheel, a bracket supporting said wheel, a rotary head supported by said bracket adjacent said wheel and having a number of pockets in its perimeter, a shaft adapted to rotate said wheel and head, slicer elements carried by said wheel, and means whereby said shaft may be caused to drive said wheel at relatively fast or slow speeds.

1,462,149. MACHINE FOR MAKING WINDOW ENVELOPES. CHARLES F. PFLANZE, St. Louis, Mo. Filed Apr. 4, 1919. Serial No. 287,426. 7 Claims. (Cl. 93—61.)

1. In a machine for making window envelopes, patch applying devices comprising a pressure member having a flat face adapted to press the patch into engagement with the envelope blank, and feed rollers whereby the patch is forced onto the flat face of said pressure member, said flat face being provided with a patch gripper and said feed rollers being located adjacent to said flat face so as to feed the patch to said patch gripper.

1,462,150. KEY-DUPLICATING MACHINE. SAMUEL SEGAL, New York, N. Y. Filed Mar. 17, 1920. Serial No. 366,002. 13 Claims. (Cl. 90—13.2.)

1. In a key-duplicating machine, a pair of clamps for holding a master key and key blank, a post extending up-

wardly from the machine and having a guiding finger mounted thereon and an attachment pivoted to said post and provided with outwardly extending arms adapted to

simultaneously engage the shoulders on the key and key blank adjacent their biting edges whereby said key and key blank may be given the same relative longitudinal position in their respective clamps.

1,462,151. MULTIPLE PROPELLER FAN. JAMES M. SEYMOUR, Newark, N. J. Filed May 18, 1922. Serial No. 561,816. 7 Claims. (Cl. 230—11.)

1. A multiple propeller fan, comprising a main fan element having an open center portion, an auxiliary fan element aligned with the open center portion of said main fan element, said fan elements being arranged in concentric relation to rotate about a common axis, and means for independently rotating said respective fan elements.

1,462,152. AUTOMOBILE FENDER. LEMON M. SMITH, Clairton, Pa. Filed May 1, 1922. Serial No. 557,497. 1 Claim. (Cl. 280—157.)

In an automobile wheel fender, a casing adapted to fit about the upper portion of an automobile wheel, means for supporting said casing for movement with the wheel, shield members hinged to the lower end of the casing at the sides thereof, means for holding the shield members

in parallelism with the sides of the casing, said means permitting outward movement of the shield members, flexible guard strips secured to the lower portions of the shield members, reinforcing wires secured to and extending about the lower and front and rear portions of the strips and acting to normally hold the same parallel with said shield members, and means for limiting inward movement of the shield members.

- 1,462,153. COVER-FASTENING DEVICE FOR PAPER PAIRS. GEORGE W. SWIFT, Jr., Bordentown, N. J. Filed Sept. 8, 1921. Serial No. 499,266. 5 Claims. (Cl. 229—28.)

1. A pail or vessel having a bail or handle, a closing flap, and a flap securing device arranged to engage the bail or handle.

- 1,462,154. DOUBLING SPREADER. ANDREW THOMA, Cambridge, Mass., assignor to Abraham Sydemann, Boston, Mass. Filed July 15, 1918. Serial No. 244,848. 10 Claims. (Cl. 154—37.)

2. A doubling spreader, having, in combination, means for supporting a web, means for coating one face thereof, means for progressively superposing another web on the coated face of the first web, and means acting through one of the webs on a line inclined to the direction of feed to exert an evening and smoothing pressure upon said webs and the coating.

- 1,462,155. TRACTOR ATTACHMENT. ALBERT R. TILSTRA, South Holland, Ill. Filed Apr. 21, 1920. Serial No. 375,517. 2 Claims. (Cl. 97—48.)

2. In a device of the kind described and in combination, a cultivator frame adapted to be connected to the rear of a driving means and having a pair of registering slots therethrough in a horizontal plane, a bar slidable

through said slots in a straight line transversely of the direction of the travel of said driving means, cultivator mechanism suspended from said bar, means for adjusting said bar, and means for actuating said bar comprising a shaft arranged transversely thereof, a controlling handle at the end of the shaft, a gear at the forward end of the shaft, and a rack on said bar to mesh with said gear, said rack adapted to abut against the sides of the frame to limit its movement in both directions.

- 1,462,156. SIGN. ANDREW P. TRUCKSESS, Camden, N. J. Filed Apr. 3, 1922. Serial No. 548,888. 1 Claim. (Cl. 40—130.)

In combination, a sign comprising a frame with front and rear walls, an opening in the front wall, a lip on the inside of the front wall near the side edge of each opening and a lip near the lower edge of the opening, a box like letter form, a flange at the side and the bottom edges on the front wall of the said letter form engaging the aforesaid lips in the frame, conductor wires along the top wall on the inner side of the frame connected with downward extending resilient contacts, other contacts on the upper surface of the letter forms cooperating with the aforesaid resilient contacts, lamps arranged on the front face of the letter arranged to form the outline of a letter and electrically connected with the aforesaid contacts.

- 1,462,157. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Original application filed May 8, 1919, Serial No. 295,555. Renewed Mar. 2, 1921, Serial No. 449,077. Patent No. 1,415,743, dated May 9, 1922. Divided and this application filed Aug. 25, 1921. Serial No. 495,386. 13 Claims. (Cl. 238—330.)

11. A one piece rail anchor consisting of a bar formed to extend diagonally across a rail base, provided at one end with a jaw for engaging one edge of said base and at the other end with a return bent portion, the major part of which is substantially straight, which terminates in means for engaging the other edge of said base and for bearing against a tie; said tie engaging portion being formed to engage substantially the same point on the tie when the said bar assumes different positions on the rail base.

1,462,158. SILENCER FOR FIREARMS. FRANZ WILDER, Buschullersdorf, near Reichenberg, in Bohemia, Czechoslovakia. Filed Mar. 25, 1922. Serial No. 546,865. 1 Claim. (Cl. 89—42.)

A silencer for fire-arms, comprising, in combination, a perforated external tube having closed ends and adapted to be fixed with its rear end on the barrel muzzle of the fire-arm, a shorter internal perforated tube having a closed front end and concentrically arranged in said external tube, the closed front ends of said tubes having holes therein for the passage of the projectile, a coil spring intervening between the front ends of said tubes, transverse double discs of different materials at the inner front ends of said tubes to be passed by the projectile and adapted to close again the holes caused by the passage of the latter, means to prevent said internal tube from twisting within said external tube, and an aim finder within said tubes consisting of a conical tube having its inner walls coated with a luminous matter.

1,462,159. PUMPING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 30, 1921. Serial No. 456,842. 5 Claims. (Cl. 103—6.)

1. In a steady flow chamber, a base having an inlet and an outlet substantially on the same level, a chamber mounted on and secured to the base, a horizontally extending partition between said inlet and outlet, said partition having a relatively large valve port there-through, a check valve of relatively small lift controlling said port and seating thereupon by gravity, an air inlet valve comprising a valve body mounted in the lower wall of the base below the partition, a valve port through said body having an internal seat, and a valve held on said latter seat by gravity.

1,462,160. ROTARY VALVE. MARCUS O. ANTHONY, Cleveland, Ohio, assignor to Continental Engineering Corporation, Omaha, Nebr., a Corporation of Nebraska. Filed Oct. 9, 1922. Serial No. 593,244. 7 Claims. (Cl. 123—90.)

3. A valve in combination with a valve rotator, said valve having a stem with opposing shoulders on its

end, a collar mounted on said stem between said shoulders, and having a portion projecting below said stem end,

means for reciprocating said collar longitudinally of said stem, and means for rotating said collar as it is moved longitudinally.

1,462,161. WHISTLE. HARRY G. BALTHASAR, St. Louis, Mo., assignor to B. and B. Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 8, 1920. Serial No. 363,920. 4 Claims. (Cl. 116—137.)

4. In a whistle of the compression type, the combination with a casting having attachment to an engine cylinder and provided with a whistle throat, of a pair of pivotally mounted co-operatively arranged plates having adjustment over the throat opening and being capable of relatively open-and-shut movement permitting innumerable permutation of arrangement for small or large openings.

1,462,162. RAIL ANCHOR. LAURENCE J. BERKELEY, Milwaukee, Wis., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 19, 1921. Serial No. 438,462. 27 Claims. (Cl. 238—329.)

1. A rail anchor comprising a jaw member and a spring interposed between said jaw member and the

rail, and adapted to be strained in its application to the rail to exert spring pressure against the edge of the rail adjacent said jaw member.

1,462,163. FOOD PRODUCT AND METHOD OF MAKING SAME. THEODOR BRAFF, Vienna, Austria, assignor of one-half to Joseph Braff, Cleveland, Ohio. Filed Aug. 12, 1922. Serial No. 581,496. 3 Claims. (Cl. 99—13.)

1. An artificial goose-grease comprising a major proportion by weight of vegetable fat, a minor proportion by weight of olive oil, and a much smaller proportion by weight of the juice of onions.

3. The method of making an artificial goose-grease which comprises roasting raw onions in vegetable fat to a golden brown color, filtering the onions from said liquid, and while hot adding olive oil to the filtered liquid and stirring until the resulting product cools to a solid or semi-solid condition.

1,462,164. AUTOMATIC PRESSURE CONTROL. GEORGE A. BROOKE, Jr., Germantown, Pa. Filed Aug. 4, 1921. Serial No. 489,916. 16 Claims. (Cl. 236—15.)

1. The method of automatic pressure control, which consists in utilizing variations from normal of the pressure in a given region, acting directly, but in opposite directions, upon two connected pressure responsive devices to actuate a controller.

1,462,165. BOTTLE CAP. WILLIAM C. BUTTNER, Chicago, Ill. Filed June 21, 1922. Serial No. 569,956. 8 Claims. (Cl. 215—74.)

1. A bottle closure constructed to seat on the bottle at the mouth thereof, and provided with a port, and flexible means fixed in position and operable to permit the passage of gas into the bottle through said port and prevent its escape through the port from the bottle.

1,462,166. FILM REEL. LEO LAVERNE CHAPMAN, Fond du Lac, Wis. Filed Dec. 18, 1922. Serial No. 607,467. 6 Claims. (Cl. 242—74.)

2. A film reel comprising a pair of counterpart sections, each section comprising a side disk and a hub portion integrally connected together, the meeting ends of

the respective hub portions having interengaging stud and socket formations arranged a distance inside their

perimeters, and means for securing the reel sections fixedly together, the same comprising screw bolts passing transversely through said hub portions.

1,462,167. HAIRDRESSER'S COMB. LOUISE J. PERRY CROOMS, Orlando, Fla., assignor of one-half to William P. Bush, Jacksonville, Fla. Filed Nov. 4, 1921. Serial No. 512,935. 5 Claims. (Cl. 132—35.)

1. In a hair dresser's appliance, a comb having a handle, and a presser bar pivotally mounted upon the handle and spaced from the back of the comb to provide a space through which the hair is drawn.

1,462,168. STITCHING MECHANISM FOR HAT BRIMS. JACOB DENEMARK, Trenton, N. J. Filed June 23, 1921. Serial No. 479,740. 5 Claims. (Cl. 112—2.)

1. In combination with a sewing machine having a feeding mechanism, a carrier for hat brims, a lead screw to feed the carrier transversely of the direction of feed of the sewing machine feeding mechanism, means associated with the driving mechanism of the sewing machine to operate the lead screw, feeding means carried by the carrier to releasably engage the lead screw, and an adjustable trip to disengage the feeding means from the lead screw at a predetermined point in the transverse movement of the carrier.

1,462,169. RIFLE. E. F. LEWIS FRITZ, Chicago, Ill. Filed Sept. 30, 1922. Serial No. 591,626. 6 Claims. (Cl. 42—17.)

1. In a rifle, the combination with the stock thereof, a storage compartment in the stock adapted to hold a number of cartridges, a member adapted for movement within the compartment and actuated by the trigger mechanism of the rifle, for feeding the cartridges into a firing position, and means for locking the member against movement in one direction but permitting movement of the member in the opposite direction.

1,462,170. FLUID METER. BENJAMIN GREENFIELD, Bartlesville, Ohio, assignor, by mesne assignments, to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 27, 1919. Serial No. 285,597. 13 Claims. (Cl. 73—167.)

1. A fluid meter comprising in combination a conduit for fluid, means in said conduit for developing a difference in pressure in said fluid having a definite relation to the rate of flow of the fluid, means for forcing separate streams of fluid at a regulated rate into said conduit at pressures substantially equal to those on opposite sides of said differential pressure development means, and means for measuring the difference in pressures of said separate streams of fluid.

1,462,171. METAL TUBULAR SHADE ROLLER. WILHELM F. D. GRENINGER, Bridgeport, Conn. Filed Aug. 31, 1922. Serial No. 585,578. 2 Claims. (Cl. 156—29.)

2. A tubular metal shade roller having oppositely located depressions in its outer surface and in each end thereof, a semicircular metal clamp partially embracing the roller and having oppositely located eyes formed in each end and in the edges thereof adapted to be seated in the depressions of the roller, a metal binding strip for the inner end of the shade, said shade projecting therefrom and further anchored by one of the eyes of the

clamp to the roller, a rod extending through the roller, brackets in which the projecting ends of the rod are journaled, pins located in the eyes of the clamp and projecting outwardly therefrom, end plates mounted on

the rod having openings therein to receive said pins and lock the clamp to the roller, said plates having circumferentially arranged lugs on their inner faces adapted to engage the inner surface of the roller to centralize the rod with respect to the roller.

1,462,172. MEANS FOR FINISHING FABRICS. ALFRED A. GRUNDY, Philadelphia, Pa., assignor of one-third to himself, one-third to George Grushlaw, and one-third to John Sichel, all of Philadelphia, Pa. Filed Sept. 1, 1921. Serial No. 497,598. 1 Claim. (Cl. 26—2.)

Means for finishing fabrics comprising a pair of feed rolls, a pair of calendaring rolls, a stationary arcuate ironing surface positioned between said pairs of rolls, means to heat said surface, an apron passing over said arcuate surface, a supply of liquid, and a roller adapted to pick up and transfer liquid from said supply to said apron.

1,462,173. PERCUSSION FUSE. RUDOLF HAAS, Baden, Germany, assignor to Techno Service Corporation, New York, N. Y., a Corporation of New York. Filed July 30, 1921. Serial No. 488,607. 14 Claims. (Cl. 102—39.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

12. A percussion fuse comprising two plungers, curved surfaces on which said plungers can move, and a mass

associated with said plungers in such a way that its radial movement will cause the plungers to move axially, while its axial movement will have no effect upon the plungers.

1,462,174. LUBRICATING DEVICE. LEE M. HALE, Chicago, Ill. Filed Oct. 31, 1921. Serial No. 511,566. 9 Claims. (Cl. 184—7.)

9. In combination with a valve having a rocker arm; a lubricating device mounted on said rocker arm and having a reservoir disposed at one end thereof there being an aperture in said reservoir; an annular interior rib surrounding said aperture; a spout mounted on and communicating with said reservoir and having its outer end disposed above the other end of said rocker arm; wicks disposed in said aperture and said spout for regulating the flow of lubricant therethrough; and absorbent material disposed in said reservoir to retain lubricant therein.

1,462,175. FILTERING MEANS FOR LUBRICATING SYSTEMS. EDMUND E. HANS, Kalamazoo, Mich. Filed Apr. 19, 1920. Serial No. 375,034. 9 Claims. (Cl. 184—6.)

5. In a lubricator system for internal combustion engines, the combination with the parts of the engine to be lubricated, of a crank case constituting an oil reservoir and receiving the lubricant escaping from such lubricated parts, said reservoir having a low portion to receive the impurities in the oil as they settle, a filter, means to draw oil and the impurities therein from a low level of the reservoir and deliver the same to the filter, a conduit for conducting the purified oil from the filter to the reservoir, and means to draw oil from the filter and the reservoir and supply it to the parts of the engine to be lubricated.

1,462,176. TOILET-PAPER HOLDER. AUGUST W. HARTMEYER, Los Angeles, Calif. Filed Apr. 8, 1922. Serial No. 550,939. 1 Claim. (Cl. 211—31.)

A toilet paper holder comprising a pair of brackets adapted to be attached to support, a bar rigidly con-

necting the brackets, a saddle at the forward end of one bracket, a hollow rod, a spring in the hollow of

the rod and adapted to bear downwardly, and a pivot connecting the hollow rod and spring to the forward end of the other bracket.

1,462,177. METHOD OF COOLING AIR. ADOLF MESSE, Frankfort-on-the-Main, Germany. Filed Aug. 29, 1921. Serial No. 496,766. 1 Claim. (Cl. 62—177.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

Method of precooling air to be liquefied and separated into its constituents which consists in compressing said air, passing said compressed air in heat exchanging relation with water and cooling said water by conducting anhydrous gases therethrough in a finely divided state.

1,462,178. DRAIN BOARD FOR SINKS. WILLIAM F. MUIR, Fresno, Calif. Filed Mar. 13, 1922. Serial No. 543,501. 7 Claims. (Cl. 4—36.)

1. A drain board for sinks and the like comprising a back member adapted to be mounted parallel with a wall; ears projecting upwardly from the upper edge of said back member; a relatively narrow downwardly depending portion centrally of the lower edge of said back member; and an arcuate downwardly opening trough extending longitudinally of the lower edge of said back member.

1,462,179. GAME APPARATUS OR AMUSEMENT DEVICE. FRANK A. PEEFER and CHARLES NAAB, Newark, N. J.; said Naab assignor to Thomas Mills, Maplewood, N. J. Filed Apr. 1, 1921. Serial No. 457,760. 20 Claims. (Cl. 46—56.)

1. In a game-apparatus or amusement device, in combination with a tank adapted to contain water, a track located outside of said tank, said track having an end-portion terminating above the level of the water in said tank, and the car adapted to be placed upon said track, and adapted to be plunged from the end-portion of the track into and beneath the surface of the water in said tank, said car being adapted to receive floatable toy-figures, and means connected with said tank for the withdrawal of a toy-figure from the water in said tank.

1,462,180. MACHINE FOR WORKING SKINS, HIDES, AND LEATHER. GEORG WALTER RICHTER, Crimmitschau, Germany. Filed Mar. 19, 1915. Serial No. 15,992. 1 Claim. (Cl. 149—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

An improved machine for working skins, hides and leather comprising in combination with two stationary tool cylinders arranged at a convenient distance apart, means for revolving said two tool cylinders in opposite directions, a stationary feeding roller for each tool cylinder, two transporting rollers designed to transport the hide from the one tool cylinder to the other and means for moving said transporting rollers so that at the first stage both approach the first tool cylinder, that at the second stage when the treatment of the hide by the first tool cylinder is nearly finished the outer transporting roller is moved with the hide toward the second tool cylinder and that at the third stage the inner transporting roller is moved away from the first tool cylinder to take the hide away from the same.

1,462,181. STEEL-WOOL-MAKING MACHINE. ARTHUR J. ROTH, Chicago, Ill., assignor to James H. Rhodes & Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1922. Serial No. 565,297. 8 Claims. (Cl. 29—4.5.)

8. In mechanism of the class described, a support for the passage of parallel wires curved on its working surface in an arc corresponding to the natural curvature of wires passing from coils at one end of the support to coils at its opposite end, a pair of wire holding drums in tandem at each end of the support

adapted to pass two parallel wires over said support, means mounting the drums so that each wire passes from the inside drum of one pair to the outside drum of the other pair, whereby the curves of two wires between these respective drums are the same, a cutting tool adjacent to the support engaging the wires traveling over the support, tensioning devices on the side

of the cutting tool from which the wires are delivered adapted to engage said plurality of wires placed side by side and passing in engagement with the tool to sufficiently tension said wires passing the tool so that the single tool may simultaneously cut from each wire a steel wool shaving, means for driving said drums and automatic means laterally shifting said drums to maintain the wires parallel on the support.

1,462,182. INTERNAL-COMBUSTION ENGINE. DANIEL MICHEL WEIGEL, Chicago, Ill. Filed June 23, 1920. Serial No. 391,034. 18 Claims. (Cl. 123—44.)

9. In a rotary internal combustion engine, in combination, a plurality of rotary power cylinders, pistons in said cylinders, said pistons having an exhaust stroke and a power stroke, said power stroke directly following the exhaust stroke; of means for pre-compressing the fuel mixture, and for admitting the same to the cylinders at a time after the completion of the exhaust stroke and before the commencement of the power stroke, of exhaust valve means in said cylinders operating to permit the burned gases to be swept out of the cylinders by the centrifugal force set up on the rotation of the cylinders, and means comprising a scoop operating upon rotation of the cylinders for directing scavenging air through the exhaust valve means into the cylinders which are exhausting burned gases, said air being thereafter swept out by the centrifugal force whereby the incoming fuel is substantially undiluted with mixed burned gases in said cylinders.

1,462,183. VARIABLE CARRIAGE-FEED MECHANISM FOR TYPEWRITERS. ARTHUR S. WHEELER, New York, N. Y. Filed Sept. 9, 1922. Serial No. 587,101. 5 Claims. (Cl. 197—84.)

1. A variable spacing carriage feed mechanism having rack and gear connection between the escapement

and the carriage, said rack and gear connection comprising a plurality of gears and racks, and yielding manually controlled means for bringing a selected pair of said gears and racks into mesh to establish the desired interval of spacing.

1,462,184. SAVINGS BANK. BERT C. WILLIAMS, Ocean Park, Calif. Filed Oct. 31, 1921. Serial No. 511,554. 12 Claims. (Cl. 232-4.)

1. A bank including a coin chamber, a coin slot, a housing having an open bottom surrounding said slot, and tumblers arranged within said housing on opposite sides of said slot, the pivotal movement of said tumblers in opposite directions with respect to each other being limited by the side walls of said housing.

1,462,185. DROPPING MACHINE. ROBERT EZEKIEL WILSON and ROBERT EUGENE WILSON, Belleville, N. J., assignors to Seymour R. Gross, Newark, N. J. Filed Nov. 12, 1921. Serial No. 514,832. 19 Claims. (Cl. 226-2.)

1. In mechanism of the kind described, means for holding a supply of wires or the like, means for discharging wires from said holding means by gravity, wire releasing mechanism, a vertically movable carriage, a wire receiving means detachably mounted on said carriage, upward movement of said carriage device being adapted to carry said wire receiving means into operative relation to said wire releasing mechanism, means actuated by the upward movement of said carriage device for operating said wire releasing mechanism to drop wires into said wire receiving means, and a stop means for limiting the drop of released wires.

1,462,186. METAL-MOLDING APPARATUS. HENRY C. ZENKE, Richmond Hill, N. Y. Filed Nov. 14, 1921. Serial No. 514,919. 10 Claims. (Cl. 22-142.)

1. In apparatus of the character described, in combination, a mold including two cooperating and separable

parts for receiving a molten metal, means pivotally connecting said parts, means tending to swing one of said

parts about said pivotal connecting means and away from the other part, and an automatically operative latch for locking said parts together.

1,462,187. ADJUSTABLE FLANGE. LOTHAR R. ZIFFERER, Lancaster, Pa. Filed May 11, 1922. Serial No. 560,023. 2 Claims. (Cl. 248-31.)

2. In combination with a rod, a flange surrounding the same and adjustable longitudinally thereof, the flange comprising two interlocked metallic parts, one rigid and the other flexible, the latter being provided with a plurality of spring elements adapted to frictionally engage with the rod, the rigid part also engaging with the rod and co-operating with the spring elements to maintain the flange in a transverse relation to the rod in all positions of adjustment thereupon, substantially as described.

1,462,188. MINE-CAR COUPLER. FRANK S. BARKS, St. Louis, Mo., assignor to Lincoln Steel and Forge Company, St. Louis, Mo., a Corporation of Missouri. Filed June 10, 1921. Serial No. 476,445. 4 Claims. (Cl. 213-205.)

1. The combination with a coupler having spaced horizontal jaws, of a pin swiveled in said jaws, a link

mounted between the jaws and upon said pin, said link having sliding movement relative to said pin and having vertical movement with said pin relative to said jaws

but being designed to turn with the pin, and a spring engaging the upper end of the pin for maintaining the link in predetermined vertical and horizontal planes.

1,462,189. APPARATUS FOR PLAYING RACE GAMES. HENRY THOMAS BROOKER, Southend-on Sea, England. Filed Dec. 21, 1922. Serial No. 608,301. 12 Claims. (Cl. 64—57.)

4. Game playing apparatus comprising a board, an abreast series of tracks thereon, the tracks sloping to one end, a corresponding series of units mounted capable of propulsion along the tracks, an actuating device in each track for imparting intermittent thrusts to the unit therein to advance it therealong, the actuating devices being returned by gravity along the sloping tracks after impact, and means for intermittently impelling the actuating devices so that a series of intermittent thrusts are given that are variable both in magnitude and period

1,462,190. CAR COUPLER. HARRY M. BROWN, New Kensington, Pa. Filed Oct. 20, 1922. Serial No. 595,771. 3 Claims. (Cl. 213—75.)

1. In a car coupling the combination of a coupling head, a pin pivoted in the head and having an elbowed end, a link secured by the pin and swinging integrally with the pin, and a guide plate stationary with respect to the car and adapted as the car travels to engage the elbowed end of the pin and swing the link.

1,462,191. CERIUM POCKET LIGHTER. FRITZ BECK, Nuremberg, Germany. Filed Feb. 10, 1921. Serial No. 444,065. 2 Claims. (Cl. 67—7.1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A pocket lighter of the type described in which the ignition means is arranged in the enclosing cap which fits over the burner piece or tinder holder comprising in combination an enclosing cap, a striker of the shape of a knife with broad edged blade, an ignition metal piece of rectangular shape having two side faces bevelled from below upward, a ring removably inserted in said cap having a rectangular opening and two side faces inclined so that they fit on the inclined side faces of said ignition metal piece designed to securely hold said ignition metal piece and to serve as guide for said striker.

1,462,192. TUFT-YARN SPOOL FOR LOOMS. HARRY D. CLINTON, Johnson City, N. Y. Filed Sept. 28, 1922. Serial No. 591,113. 6 Claims. (Cl. 242—118.)

1. A tuft yarn spool comprising a barrel of wood having oblong sockets formed in the ends thereof and projections or flanges extending around the outer ends of said sockets, and heads of hard vulcanized fibre having central openings therein of frusto-conical form, and annular grooves in their confronting faces in which said flanges are seated, and means whereby said heads are rigidly and permanently secured to said barrel, so as to form a practically integral structure, without using bolts or screws; said means consisting of wooden plugs inserted through the openings in said heads and extending into said sockets and having their outer ends of frusto-conical form to closely fit said openings; said plugs being secured in said sockets by an adhesive substance applied before inserting them in the sockets.

1,462,193. CLIP. RAYMOND W. COOK, Bristol, Conn., assignor to The Wallace Barnes Company, Bristol, Conn., a Corporation. Filed Nov. 10, 1922. Serial No. 600,046. 5 Claims. (Cl. 40—2.)

1. As a new article of manufacture, a clip made of resilient sheet-metal and comprising a face-plate and an

integral shank originating at the upper edge thereof, and extending downwardly behind the same, the said plate and shank being furnished with gripping-fingers set into

the space formed between the plate and shank arranged in line opposite each other and directly co-acting in discharging their gripping function.

- 1,462,194. DRYING KILN. CLIFFORD A. CUTLER, Buffalo, N. Y. Filed Dec. 27, 1920. Serial No. 433,307. 22 Claims. (Cl. 34—49.)

1. A drying kiln comprising non-porous kiln walls, and porous de-humidifiers, located in spaced relation with the kiln walls.

- 1,462,195. MULTIPLE FUSE. NICHOLAS J. DOYLE, Buffalo, N. Y. Filed Nov. 6, 1920. Serial No. 422,174. 4 Claims. (Cl. 200—125.)

1. A multiple fuse comprising an insulating core, having a plurality of longitudinal spaces formed therein, a multiple fuse element, having one of its members arranged in each of the spaces of the core, and radially-arranged spring-pressed index means rotatable about the core and engageable with any one of the members of the fuse element.

- 1,462,196. FISHING APPARATUS. CORNELIS P. DROS, Amsterdam, Netherlands. Original application filed Mar. 29, 1919, Serial No. 286,154. Divided and this application filed Sept. 10, 1920. Serial No. 409,400. 5 Claims. (Cl. 43—4.)

1. In a fishing apparatus, the combination of a catching station; a net having a catching compartment; a discharge conduit for the fish having its inlet end connected to said compartment and its outlet end arranged at said station; a pressure fluid supply pipe connected at its outlet end to said compartment; and a pump at said station

to which the inlet end of said supply pipe is connected; said pump acting to deliver pressure fluid through said

pipe into said compartment, to force the fish therein into and through said conduit and to discharge them at said station.

- 1,462,197. MACHINE FOR CUTTING TIRES INTO TRANSVERSE SECTIONS. ERICK O. FELLROTH, Minneapolis, Minn., assignor of one-third to Frederick N. Hegg and one-third to Carl I. Lindskoog, both of Minneapolis, Minn. Filed Mar. 7, 1922. Serial No. 541,800. 10 Claims. (Cl. 164—41.)

1. A tire cutting machine comprising a base having a seat for the tire to be cut transversely, a severing knife mounted to cut the tire tread and knives actuated at a predetermined point in the severing operation for cutting transversely through the tire beads and the metallic reinforcing therein.

- 1,462,198. TIRE GAUGE CUTTER. ERICK O. FELLROTH, Minneapolis, Minn., assignor of one-third to Frederick N. Hegg and one-third to Carl I. Lindskoog, both of Minneapolis, Minn. Filed Mar. 7, 1922. Serial No. 541,801. 7 Claims. (Cl. 164—57.)

1. A machine of the class described comprising a base, a tire seat mounted thereon and having a surface conforming substantially to the inner surface of a tire shoe to

provide a substantial support therefor, said base having upright standards adjacent the end of said seat and between which standards the end of the tire to be severed is inserted, resting upon said seat, and a severing knife mounted to cut the tire transversely into a series of guard sections.

- 1,462,199. COIN-CONTROLLED VENDING MACHINE. HARVEY GILES, Brooklyn, N. Y., assignor to Artemas Ward, New York, N. Y. Filed Nov. 20, 1919. Serial No. 339,268. 8 Claims. (Cl. 194—80.)

1. In a coin-controlled vending machine having a tray for holding a stack of the articles of merchandise to be sold and a manually operative handle, enclosed mechanism comprising a slide operable in a direction toward said tray by means of said handle and having a coin-receiving recess within which the coin is held on edge facing rearwardly in a direction toward said tray, the rear face of said coin being positioned to serve as an abutment to effect the positive dislodgement of merchandise from said tray when said handle is operated on its goods discharging stroke, a member slidably carried by said slide and affording a lower support for the coin in said recess, a stop in the path of said supporting member for arresting the same against movement during the rearward movement of said slide to effect the dislodgement of the merchandise and before said slide ceases its movement, whereby said slide is caused to carry the coin beyond said arrested supporting member to permit the release of the coin, and means for restoring said supporting member in its relation to said recess after the discharge of the merchandise and during the forward movement of said slide to its normal position.

- 1,462,200. STAMP MOUNT AND INDEX. EVERETT D. GUDGEL and MATT M. COREY, Chicago, Ill., assignors to R. D. Swisher Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 26, 1922. Serial No. 596,944. 2 Claims. (Cl. 101—368.)

1. In a stamp mount, a box formed of sheet metal so as to have one side open, and a screw inserted in a hole in the metal of the side opposite the open side, said screw having a bead formed thereon by upsetting part of the metal thereof so as to clamp the metal of the box between the head of the screw and said bead.

- 1,462,201. TENNIS POST. ROWLAND RUSHWORTH HIRST and ARNOLD HIRST, Halifax, England. Filed Aug. 7, 1922. Serial No. 580,376. 2 Claims. (Cl. 46—24.)

1. A tennis post formed of a straight cylindrical tube of ductile metal provided with longitudinal notches having curved converging sides, said notches being formed in the upper end of the tube and the metal between the notches being bent to hemispherical form so that the two notches form a single continuous opening, the hemispherical end portion of the tube being of the same diameter and thickness as its main portion and having holes for receiving the spindle of a guide pulley.

- 1,462,202. SURGICAL INSTRUMENT. EARLE B. HOPPER, Ridgewood, N. J. Filed May 14, 1921. Serial No. 469,661. 1 Claim. (Cl. 128—321.)

A pair of surgical forceps comprising coacting members pivoted together and having coacting slender terminal portions adapted to grasp between them the part to be held and each of which is bent toward the other and thence tapered to substantially a point, each bent-off tapered portion being adapted to puncture and thereby catch the part to be held and being arranged to overlap and to wipe against the other bent-off tapered portion in the grasping position of the forceps.

- 1,462,203. ADJUSTABLE FEED-ROLL JOURNAL FOR CARD FEEDERS. JOSEPH B. HOWE, Worcester, Mass., assignor to George S. Harwood & Son, Boston, Mass., a Copartnership consisting of Sydney Harwood and John H. Harwood. Filed July 29, 1922. Serial No. 578,518. 10 Claims. (Cl. 19—160.)

1. A card feeding machine comprising a supporting frame, upper and lower feed roll brackets mounted thereon, the lower bracket having an opening therein constituting an enclosed journal-box, a lower feed roll supported in said journal-box and means for adjusting said lower bracket relatively to the frame.

- 1,462,204. AUTO REAR-AXLE DIFFERENTIAL MECHANISM. FRANK TOBIS and FRANK JARZYNA, Chicago, Ill. Filed Jan. 23, 1922. Serial No. 531,296. 5 Claims. (Cl. 74—7.)

1. A differential transmission gear for motor vehicles comprising, in combination, a divided axle, two coaxially arranged clutch members rotatably mounted on the inner ends of said axle, said clutch members each having ratchet teeth projecting from the outer ends thereof and the teeth of one member being reversely arranged with respect to those of the other member, one of said members consisting of two separate elements each carrying a set of ratchet teeth adapted to be projected beyond the teeth of the other member and to be retracted inwardly thereof, two clutch members slidably but nonrotatably mounted adjacent the ends of said axle, each having two concentric sets of ratchet teeth reversely arranged with respect to each other and adapted to engage the teeth of said first mentioned members, springs tending to force said second mentioned clutch members inwardly, and means for rotating said coaxially arranged clutch members and for projecting and retracting said elements according to the direction of rotation.

- 1,462,205. KEY RING AND THE LIKE. LEWIS F. KORNS, Minneapolis, Minn. Filed Nov. 18, 1921. Serial No. 516,239. 2 Claims. (Cl. 59—98.)

1. In a key ring a coil of approximately two complete turns produced from a single piece of wire of a uniform cross-section throughout its entire length, an oblique por-

tion intermediate its two ends forming an offset of a length equal to the cross-section of said wire, a laterally projecting arched portion at one end of said wire having

its terminus inside of said coil and having an inward curvature of a sufficiently reduced radius to admit of its extreme end passing inwardly of the oblique portion when compressed.

- 1,462,206. REFRIGERATOR. FRANCIS T. LYNCH, Baltimore, Md. Filed Oct. 17, 1921. Serial No. 508,123. 2 Claims. (Cl. 62—31.)

1. A refrigerator, comprising a freezing chamber, a freezing mixture chamber above said freezing chamber, a space on the side of said freezing chamber in screened communication with said freezing mixture chamber, and means for regulating the height of brine resulting from the melting of the freezing mixture in said space and said freezing mixture chamber at a desired point above said freezing chamber.

- 1,462,207. BATTERY LAMP. EDGAR J. MCEACHRON, Madison, Wis., assignor to French Battery & Carbon Co., Madison, Wis., a Corporation of Wisconsin. Filed Aug. 10, 1921. Serial No. 491,160. 3 Claims. (Cl. 240—8.5.)

2. A shock-absorbing device adapted for attachment to the threaded shank of the reflector of a battery lamp, said device comprising a tubular insulation block having one end provided with an internally threaded bore and the other end provided with an end wall, a contact stud extending thru said end wall, and a spring contact in the bottom of said bore and connected with said stud.

1,462,208. BUILDING CONSTRUCTION. ERNEST A. MAYO, Evanston, Ill. Filed Mar. 25, 1921. Serial No. 455,387. 15 Claims. (Cl. 72-16.)

1. In a building, a downwardly extending engaging device on the ceiling thereof, an upwardly extending engaging device on the floor thereof, and integral wall panel longer than the distance between the effective bottom of the floor device and the lower end of the ceiling device and shorter than the distance between the ceiling and the upper end of the floor engaging device, said panels being held in place by said engaging devices, said engaging devices permitting said wall panels to be set up by an end to end insertion.

1,462,209. UNIVERSAL CONDUIT BOX. FRANK J. MINER, Detroit, Mich. Filed Jan. 27, 1919. Serial No. 273,294. 5 Claims. (Cl. 247-18.)

1. An outlet box having a thickened wall formed with a screw-threaded opening into which a tubular member is adapted to be screwed, and means for sealing said opening water tight, said means being bodily insertable within the completed opening and having a thickness less than the axial length of the opening, the positioned means being adapted to be knocked out bodily without injury to the thread zone of the opening to expose said zone and permit the member to be screwed to position.

1,462,210. RAZOR-BLADE HOLDER. EDWARD M. MOYLAN, Boston, Mass. Filed Dec. 3, 1921. Serial No. 519,685. 2 Claims. (Cl. 30-25.)

1. A device for use in stropping double edged razor blades, comprising a holder for one of said blades, a guard for one edge of a blade mounted in said holder, and means connecting said guard with said holder and permitting the guard to be swung about two axes located transversely to each other into guarding relationship to either edge of said blade.

1,462,211. STORE-FRONT CONSTRUCTION. DANIEL J. MURNANE, Chicago Heights, Ill., assignor to Zouri Drawn Metals Company, Chicago Heights, Ill., a Corporation of Illinois. Filed Dec. 2, 1921. Serial No. 519,407. 4 Claims. (Cl. 20-56.4.)

1. The combination with a member forming a wall of a glazed opening, of glass-plate-clamping means extending along opposite sides of the sheet of glass, said means being formed at their rear side with a plate-like portion which extends rearwardly from said sheet and at an angle thereto and lengthwise of the construction and a portion which depends from said plate-like portion and is inset forwardly from the rear edge of said plate-like portion, whereby a recess or channel is provided and an angle-iron member secured to said first-named member and extending lengthwise of said clamping means, with one of its angularly-disposed portions disposed in said recess, and means engaging said clamping means with the portion of said angle-iron member located in said recess.

1,462,212. ENAMEL SHINGLE CONSTRUCTION. PAUL PERCSENYI, East Pittsburgh, Pa. Filed Oct. 7, 1922. Serial No. 593,021. 4 Claims. (Cl. 108-17.)

1. In a roof, an angular metal strip extending along the ridge thereof and having inturned hook-flanges on its lower edges, a metal bar extending along the lower edge of the roof, shingles arranged in successive rows, means interlocking the shingles of each row with those of adjacent rows, and the top and bottom rows with the said angular metal strip and metal bar respectively.

1,462,213. CARRIER-CONTROLLING DEVICE FOR BRAIDING MACHINES. ANKER PETERSEN, Winthrop, Mass. Filed Aug. 16, 1922. Serial No. 582,162. 11 Claims. (Cl. 96-5.)

1. A braiding machine comprising in combination a braiding carrier movable in a circular path, and drive means moving in a path concentric with that of the

carrier and comprising a roll of relatively large diameter for pushing the carrier along its path, and a roll of relatively small diameter for preventing overrunning of the carrier when the driving means comes to rest.

- 1,462,214. CONDENSER. ELMER F. SEAGER, Detroit, Mich., assignor of one-half to Robert C. Sturgeon, Windsor, Canada. Filed Oct. 6, 1921. Serial No. 505,744. 3 Claims. (Cl. 257—28.)

1. A condensing apparatus comprising a main tank adapted to receive a cooling agent, a receiver in said main tank, an outer coil about said receiver and communicating therewith, and an inner coil in said outer coil and communicating with said main tank.

- 1,462,215. CENTERING MEANS FOR SPINDLES. FREDERICK G. SMITH, New Bedford, Mass., assignor of one-half to Isaac N. Babbitt, Fairhaven, Mass. Filed June 9, 1922. Serial No. 567,037. 9 Claims. (Cl. 118—66.)

1. The combination, with a spindle including a base having a head and a depending extension, of a supporting rail having a face on which said head is seated and an opening through which said extension passes, and an adjusting means having an external rotative bearing in said rail and an interior rotative bearing on said extension, the two bearings being eccentric to one another, whereby rotation of the adjusting means is effective to incline the spindle with respect to the rail.

- 1,462,216. GASOLINE RESERVE VALVE. EDWARD J. STALDER and EDWARD SCHOLZ, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 490,162. 1 Claim. (Cl. 158—46.5.)

In combination with a liquid supply tank, a reserve valve comprising a body member adapted to be arranged at an opening in the top or bottom of said tank, said body member having a pair of ducts entirely therethrough from end to end, extension insertable into said ducts adapted to conduct the liquid from said tank at different levels, a tapered bore extending laterally through said valve body and communicating with both

of said ducts intermediate their ends; a tapered plug seated in said bore and having a pair of ducts independent of each other and extending entirely therethrough from one side to the other, said last-mentioned ducts having their axes arranged in mutually transverse directions and adapted to alternately register and align with the ducts through said body member, a handle for operating said plug and bearing against the body member to prevent axial movement of the plug in one direc-

tion, means for retaining said plug and handle in place, and means for limiting the rotational movement of said plug and comprising abutments on said body adapted to be engaged by said handle, whereby the liquid from said tank will normally flow through one of said ducts until it reaches a predetermined level in the tank so that the plug may be actuated to place the other duct into registry with the duct through the plug and permit the remaining reserve supply of liquid to flow therethrough.

- 1,462,217. GASOLINE RESERVE VALVE. EDWARD J. STALDER and EDWARD SCHOLZ, Chicago, Ill. Filed Oct. 8, 1921. Serial No. 506,450. 5 Claims. (Cl. 158—46.5.)

1. In combination with a liquid supply tank having a discharge opening with an outlet pipe projecting therefrom, a reserve valve comprising a member adapted to be stationarily arranged at said outlet pipe and having a single discharge duct therethrough, a collar on said member coaxial with said outlet pipe and annularly abutting thereagainst, said collar provided with an outlet pipe extending therethrough and communicating with the single discharge duct in said member, a second member movably arranged relative to said first-mentioned member and having a pair of ducts therethrough and communicating with the liquid in the tank at different levels, and means for selectively moving said second-mentioned member to place one of said pair of ducts into registry with the single duct of said first-mentioned member and closing the passage through the other of said pair of ducts.

- 1,462,218. VACUUM-CLEANER ATTACHMENT. DOMENICK TONSO, New York, N. Y. Filed Mar. 15, 1922. Serial No. 543,956. 1 Claim. (Cl. 15-8.)

A vacuum cleaner including a casing provided with a suction nozzle and a rotary brush adjacent thereto, wheels carrying said casing, wheels operating said brush, both sets of wheels normally resting on the ground, a handle pivotally connected with said casing, a hook fixed to said casing, and a flexible connection between said hook and said handle including a link in engagement with said hook, whereby the lowering of said handle below a certain limit results in the lifting off the ground of said brush operating wheels while the casing carrying wheels remain on the ground, and the lifting of said handle beyond a certain limit causes a disengagement of said link from said hook.

- 1,462,219. CARBURETOR. ALBERT WAGNER, Cincinnati, Ohio, assignor, by mesne assignments, to The Wemb Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1922. Serial No. 538,319. 3 Claims. (Cl. 261-19.)

3. In a carburetor the combination of a mixing chamber, an air supply therefor, a liquid fuel supply, and an air tube disposed about the fuel supply, said air tube having an inlet located above the normal level of the liquid fuel supply for diverting a part of the air supply and conducting said air supply in opposition to the flow of the liquid fuel supply to an outlet in the air tube at a point below said normal level, and a deflecting canopy upon the upper end of the air tube, the upper end of the tube being flared and the canopy being of a greater diameter than the flared end and having its under end tapered to deflect air downwardly within the tube.

- 1,462,220. LABEL. CARL WIEGANDT, Barmen, Germany, assignor of one-half to Albert Viehmann, Barmen, Germany. Filed Feb. 6, 1923. Serial No. 617,291. 2 Claims. (Cl. 91-68.)

1. As a new article of manufacture: a label made of sheet-metal and coated with an ordinary light-colored oil-paint containing hydrochloric acid.

- 1,462,221. FLYING TOP. LESTER WOLFE, New York, N. Y. Filed July 11, 1921. Serial No. 483,691. 9 Claims. (Cl. 244-2.)

1. A flying top comprising a circular flier with oblique vanes, and a central hub portion provided with axial aligned openings, an axial pin projecting through said openings and held in yielding engagement with the hub portion by tensioning means acting in opposition to axial movement of the pin in either direction, substantially as described.

- 1,462,222. PNEUMATIC PUMP. JAMES L. WRAY, Rock Island, Ill. Filed May 9, 1921. Serial No. 467,873. 3 Claims. (Cl. 103-248.)

3. The combination with a main casing having a valved liquid inlet, of an outlet pipe within the casing having a check valve, superposed independently movable floats upon said pipe, a valve casing within the main casing and having a port communicating therewith, a pressure passage opening into said casing and an exhaust passage in communication with said valve casing, a valve within the valve casing, means for holding the valve normally positioned with the port in communication with the exhaust passage, means operated by the rise of one of the floats for releasing the valve, and means operated by the other float when the valve is released for shifting the valve to close the exhaust passage and place the pressure passage in communicating with the port.

- 1,462,223. VACUUM-CLEANING DEVICE. MORRIS S. WRIGHT, Worcester, Mass., assignor to M. S. Wright Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 21, 1916. Serial No. 121,479. 4 Claims. (Cl. 15-9.)

1. In a vacuum cleaning machine the combination of a fan casing having an opening in one wall thereof, a

nozzle having openings in the front and rear walls thereof with the opening in the front wall of increased diameter relative to that of the rear wall, the said rear wall of the nozzle having a flange part projecting through the opening of the fan casing and turned inwardly whereby to overlie the inner surface of the fan casing,

the said flange forming a smooth continuous engaging surface, and a coupling member of sheet metal having a tapered periphery insertable through the openings of the nozzle and adapted to conform to and frictionally engage said engaging surface, and means interposed between the nozzle and coupling member for maintaining such frictional engagement.

- 1,462,224. ELECTRIC COOKER AND MELTING POT. HAROLD C. BAUSERT, Brooklyn, N. Y. Filed Feb. 28, 1922. Serial No. 539,946. 4 Claims. (Cl. 219-44.)

1. An electric heating device of the class described, comprising an outer receptacle, and an inner receptacle nesting thereon, said receptacles being uniformly spaced, and high and low resistance heating units secured to the outer receptacle and disposed between the space defined by said receptacles, whereby high or low heat may be generated.

- 1,462,225. FOLDING LUNCH BOX. RAYMOND L. BRAZEE, Westfield, Mass., assignor to The Hampden Toy Company, Westfield, Mass., a Corporation of Massachusetts. Filed Nov. 12, 1921. Serial No. 514,543. 7 Claims. (Cl. 229-41.)

1. As an improved article of manufacture, a folding lunch box constructed from a single piece of material

bent and scored to provide a bottom adapted to be folded on itself lengthwise, back and front sides, end pieces and

bottom spreaders, end flaps adapted to be folded on themselves vertically, and a cover, and two rivets to fasten together said end pieces and end flaps.

- 1,462,226. INHERENTLY-REGULATED DIRECT-CURRENT DYNAMO. HANS CHARLET, Krefeld, Germany. Original application filed July 8, 1920, Serial No. 394,849. Divided and this application filed Apr. 3, 1922. Serial No. 549,299. 5 Claims. (Cl. 171-232.)

1. In an inherently regulated direct current dynamo, adapted to be used at will as either a generator or as a motor, the combination with a constantly excited primary field, a secondary field produced by the armature winding, a neutralizing winding on the magnet poles, and means for reinforcing the primary excited field, a plurality of sets of brushes, one set of brushes short circuited and located in the neutral zone of the said primary excited field, another set of brushes located in the neutral zone of the said secondary field and connected with a neutralizing winding disposed on the magnet poles, the primary field required for producing the working current being produced by the main current windings.

- 1,462,227. TIRE VALVE. WALTER E. COPITHORN, Natick, Mass. Filed July 15, 1920. Serial No. 396,381. 1 Claim. (Cl. 152-12.)

In a tire valve, the combination with a valve stem having an interiorly screw-threaded bore and an external shoulder, of a valve casing screw-threaded into said bore and provided with a conical valve seat, said casing having a non-circular head which fits against the end of the valve stem, a spring-pressed valve within the casing engaging said seat, said valve having a screw-threaded rod or projection extending therefrom through and beyond the casing, and a cap adapted to seat against the shoulder of the valve stem and having screw-

threaded engagement with said projection, whereby when the cap is turned the valve will be firmly forced against

its seat, said cap having a recess to fit the non-circular end of the casing and thus constituting a wrench for removing the casing from the valve stem.

1,462,228. SPRING ACTUATED CLOSURE. THOMAS CROCE and DOMINICK MORABITO, East Boston, Mass. Filed Jan. 24, 1922. Serial No. 531,389. 1 Claim. (Cl. 220—86.)

A closure for a receptacle having, in combination, a body portion provided with a bore open at its lower end, a cap detachably fastened to the upper end of said body portion, said body portion being adapted to be fastened to a receptacle in alignment with a hole provided in said receptacle, a funnel fast to and concentric with said body portion, said body portion being provided with a port opening from said funnel into said bore, a cover for said funnel, a valve adapted to close the open end of said bore, a valve stem slidably mounted in said body portion, a head on said valve stem, a spring interposed between said head and body portion and adapted to normally hold said valve in position to close the lower end of said bore and a screw having screw-threaded engagement with said cap and adapted to bear against the head of said valve stem whereby said valve may be locked in open position, said screw projecting outwardly through an opening in said cover.

1,462,229. PNEUMATIC BRAKE. IVAR DROLSHAMMER, Hamar, Norway. Filed May 5, 1921. Serial No. 467,146. 7 Claims. (Cl. 303—32.)

1. In a controlling valve for pneumatic brakes for railway vehicles and the like, an automatic slidable valve member, a chamber or conduit connected to the train pipe and by the pressure in which said valve member is controlled so that said valve member is caused to open a supply port to the brake cylinder when said pressure is reduced and said valve member is caused to be restored to closing position by the rising pressure in the brake cylinder, means for limiting the movement of the member

controlled by the air pressure, and means for adjustment of the said means for limiting the movement so

that the time required for the shorter movement may be substantially equal to the time required for the longer movement.

1,462,230. CREMATORY. AUGUSTUS CICERO FELTON, Jr., Macon, Ga. Filed Sept. 26, 1922. Serial No. 590,649. 4 Claims. (Cl. 110—12.)

1. A crematory structure comprising vertical side and end walls, a charging floor section supported upon the vertical side and end walls, a floor consisting of juxtaposed grate and garbage supporting sections, an arched roof overlying the floor and being spaced from the charging floor, said side wall having an inlet therein for admitting air to the space between the roof and the charging floor, walls cooperating with the said end walls and the arched roof for conducting the admitted air by tortuous paths from the inlet to a space below the grate section, a stack adjacent to one of said end walls, said garbage supporting section having a flue extending longitudinally thereof in adjacent underlying relation to the supporting surface thereof and being spaced from the end wall of the crematory remote from the stack to provide a port establishing communication between the one end of said flue and the space within the crematory structure below the arched roof, said flue being in open communication at opposite end with the stack, and a charging chute depending from the charging floor through the arched roof.

1,462,231. SPIRIT LEVEL. FREDERICK WILLIAM FOUSE, Muskogee, Okla. Filed Jan. 28, 1919. Serial No. 273,625. 4 Claims. (Cl. 287—9.)

3. An articulated device comprising a plurality of hinged sections, one of which is provided with rods

having their extremities extending beyond the end of said section and proportioned and positioned to enter orifices in the opposed section, and having lateral notches adapted to lockingly engage the sides of said orifices, and a resilient member positioned to be manually actuated and to move the rods yieldingly out of such locking engagement.

1,462,232. VALVED COLLAPSIBLE TUBE. HERBERT L. FRIZELL, Dorchester, Mass. Filed Apr. 5, 1920. Serial No. 371,227. 6 Claims. (Cl. 221—60.)

1. The combination with two pivotally connected parts and a rivet providing the pivot connection between them, of means for limiting the relative rotation between said parts comprising a lug projecting from the side of the rivet and notches in said parts in which the lug is contained, the sides of said notches serving as stops for the lug, and one of the notches being wider than the lug.

6. A collapsible container for fluid material of pasty consistency, having an end wall and a lateral outlet port, a valve cap embracing that part of the container in which said port is located and having likewise an end wall overlying the first named end wall, and further having a port adapted to be placed, by rotation of the valve, into and out of registry with the first named port, and a rivet passing through said end walls pivotally connecting the valve to the container, the container end wall having a notch and the rivet having a lug occupying said notch to limit rotation of the valve, and the rivet having also a flange covering said notch.

1,462,233. KICK-OFF FOR HAND TRUCKS. SAMUEL KERR, Caruthers, Calif. Filed July 5, 1921. Serial No. 482,479. 3 Claims. (Cl. 214—82.)

1. In a hand truck the combination of a frame composed of side members and cross members; wheels on one end of said frame adapted to support the same; handles on the other end of said frame; legs near said handles adapted to support said frame in a horizontal position; a fender on the end of said frame near said wheels adapted to prevent accidental displacement of the load carried by said frame; in combination with a kick-off device comprising a substantially U-shaped operating member pivotally mounted on the under side of one of the cross bars of said frame and having its free ends curved to extend downwardly and forwardly and terminating in eyes; a lever extending downwardly and out-

wardly from the center of said operating member, between its bearings; a substantially inverted U-shaped elevating member having its free ends terminating in eyes, said eyes being pivotally connected to the eyes of said first member; bearings pivotally mounted in the sides of said frame to extend outwardly therefrom adapted to have slidably mounted therein the legs of said U-shaped elevating member; and a coil spring connected at one end to the cross bars of said elevating member, and at its other end to an axle of said truck, adapted to normally hold said elevating member in its inoperative position.

1,462,234. ROUTING MECHANISM. EDWARD A. LAUGHLIN, Port Arthur, Tex. Filed Nov. 17, 1922. Serial No. 601,577. 10 Claims. (Cl. 144—144.)

1. A routing mechanism comprising two cutting tools, means for rotating the cutting tools, means for reciprocating said cutting tools while rotating, and means for revolving one of said cutting tools about the other as a center while reciprocating the same.

1,462,235. WINDOW SPRING. OSCAR A. LAWRENCE, San Francisco, Calif., assignor to Urban H. Roberts, San Francisco, Calif. Filed Dec. 2, 1920, Serial No. 427,724. Renewed Apr. 18, 1923. 2 Claims. (Cl. 292—76.)

1. A device such as described comprising a strip of metal with a head portion thereon and an end portion formed in an arcuate contour; said head portion having a lateral projection adjacent the end thereof, bent at right angles thereto and terminating with an end rebended on a plane substantially parallel with that of the head portion.

1,462,236. COMPOSITION FOR VARNISH. RANNIE S. LLOYD, Maysville, N. C. Filed July 19, 1922. Serial No. 576,117. 6 Claims. (Cl. 134—26.)

6. The process of preparing varnish which consists in mixing crude pine sap with spirits of turpentine in substantially the proportions of one to three; and heating the mixture to substantially 300 degrees F.

1,462,237. TANK HEATER. HOWARD LOCKHART, Falls City, Nebr., assignor to Emma L. Vernon, Akron, Colo. Filed Mar. 3, 1921. Serial No. 449,447. 7 Claims. (Cl. 126—367.)

1. In a tank heater comprising a body portion having a chute communicated therewith, a grate in said body portion, a horizontal partition above the grate, a water back arranged directly above the grate, and a second water back supported upon the partition.

1,462,238. SPARE-TIRE LOCK. CIRO R. MENNILLO, New City, N. Y. Filed May 18, 1922. Serial No. 561,976. 3 Claims. (Cl. 70—17.)

1. A securing device comprising a flexible steel band, a housing secured to one terminal of the band, a rack bar secured to the other end of the band for slidable association with the housing, and a laterally extending casing formed on one side of the housing, a cylinder lock disposed in the casing including a rotatable key operated plug, a resilient pawl disposed in said housing for engaging the rack bar, and a cam secured to said rotatable plug and disposed in the path of the pawl for moving the pawl out of engagement with said rack.

1,462,239. WINDOW, ESPECIALLY FOR RAILROAD, TRAMWAY, AND OTHER VEHICLES. ARTUR MOLLENKOPF, Lubeck, Germany. Filed July 6, 1920. Serial No. 394,399. 5 Claims. (Cl. 20—53.)

1. A window structure comprising a frame provided with an upper cross bar and a sill, a sash reversibly mounted in said frame with the rail at the top thereof normally spaced from the horizontal surface of said cross bar and the rail at the bottom normally engaged with said sill, and means for swingingly associating said sash with said frame, said means comprising a box carried by a jamb of said frame and provided with an opening and a pivot pin carried by the sash and extend-

ing into said opening, the distance between the opposite walls of said opening being greater than the diameter of said pin whereby the sash may be raised to clear the

sill, then moved laterally and downwardly to clear the lintel, and then swung toward reversed position while the pin rests on the bottom wall of the opening.

1,462,240. TELEPHONE SUPPORT. JOHN JOSIRA Moss, Chicago, Ill. Filed July 24, 1922. Serial No. 577,205. 5 Claims. (Cl. 248—20.)

1. A device of the type described comprising a base, a casing having a longitudinal slot therethrough, a corrugated metal strip in said casing adjacent to said slot, a platform slidably supported in the slot in said casing, a lug forming a part of the supporting means for said platform, a bolt set in said supporting means adjacent to said lug and extending exteriorly of said casing, and a U-shaped spring member disposed on said bolt between the head thereof and the outer wall of said casing, whereby said lug may be yieldably held into engagement with said corrugated strip.

1,462,241. SAFETY CLOTHESLINE BRACKET. JOHN P. MUMFORD, Brooklyn, N. Y. Filed May 17, 1921. Serial No. 470,345. 1 Claim. (Cl. 68—3.)

A clothes line bracket having a vertical shaft, means for supporting said shaft for turning movement, a clothes line pulley carried by the bracket, a pair of arms mounted loosely on said shaft to turn around said shaft and

adapted to receive the clothes line between them, means on said shaft for supporting said arms in the desired

vertical position, said arms having apertures, and a pin insertable in said apertures to retain the clothes line between said arms behind said pin.

1,462,242. RACING DEVICE. EUGENE F. PANARIO and WILLIAM B. CROSS, Sacramento, Calif. Filed Oct. 27, 1920. Serial No. 420,012. 13 Claims. (Cl. 46-73.)

13. In a racing device of the class described, a conveyor, an extension arm supported by the conveyor and disposed at right angles thereto, a lure suspended from the outer end of the arm, a housing carried by the arm and positioned adjacent the outer end, and means for raising or lowering the lure with relation to the housing to cause the lure to disappear at any time desired.

1,462,243. SOAP. PAUL LÉON EUGÈNE PECH, Narbonne, France. Filed Jan. 4, 1921. Serial No. 435,014. 2 Claims. (Cl. 87-5.)

2. A soap prepared by means of the following materials in the following approximate proportions:

Cocoa nut oil 100 kilograms.
Anhydrous caustic soda 4,750 kilograms.
Silicate of soda 5 kilograms.
Anhydrous caustic potash 6 kilograms.
4 per cent solution of chlorate of potash 100 kilograms.

1,462,244. TOY AEROPLANE. WALTER A. PIPER and ARTHUR V. NAEGELE, Chicago, Ill. Filed Oct. 26, 1921, Serial No. 510,499. Renewed May 22, 1923. 5 Claims. (Cl. 244-14.)

3. An aeroplane consisting of upper and lower wings, the lower wing being provided with upwardly extending struts having their end portions extended angularly, metallic eyes connecting the angularly extended end portions of said struts and the end portions of said upper wing, a fuselage arranged between said wings and having sides, the rear portions of said sides being connected by a metallic eyelet, said lower wing being provided with integral upwardly extending struts hav-

ing their end portions extended angularly and in contact with the under side of said upper wing, metallic eyelets securing the angularly extended end portions of said second named struts to the intermediate portion of said upper wing, the forward portions of said sides of the fuselage being overlapped, a metallic eyelet joining

the overlapped ends of the sides of said fuselage and constituting a bearing, a propeller shaft extended through said bearing, the forward longitudinal edge of the lower wing being provided with upwardly extending portions having an opening, a metallic eyelet carried by said upwardly extending portion and rotatably receiving said shaft, and a propeller secured to said shaft.

1,462,245. TOOL OR IMPLEMENT CASE. CARL W. REGLEIN, Houston, Tex. Filed July 3, 1922. Serial No. 572,437. 6 Claims. (Cl. 190-19.)

1. A tool case comprising a hollow body open at its upper end, opposed lid sections hinged to the upper edge of the body and each angular in cross section and adapted to close the body when the lid sections are closed, means limiting the outward movement of the lid sections to a position at right angles to the body to thereby support the lid sections with one wall in a horizontal plane extending from the top edge of the body, a tray, and means supporting the tray normally in a middle position with relation to the body but acting to swing the tray into a position resting flat upon said horizontally disposed wall of one lid section when the lid sections are fully opened.

1,462,246. WRENCH. THOMAS M. RENICK, Morgantown, W. Va. Filed Dec. 31, 1921. Serial No. 526,211. 1 Claim. (Cl. 81-57.)

In a wrench, a tubular body portion having an enlargement at one end thereof, and having external threads, a sleeve positioned within the enlargement, said sleeve having teeth at one end thereof providing a bev-

eled gear, a head having a circular threaded portion adapted to be positioned over the threaded portion of the enlargement to secure the head to the tubular body portion, said head extending laterally from one end of the tubular body portion, a sleeve carrying a beveled

gear cooperating with the first mentioned beveled gear, the last mentioned sleeve being positioned in the head, a shaft operating in the tubular body portion and having a squared end fitted in the first mentioned sleeve, and an adjustable handle at one end of the shaft to rotate the same.

1,462,247. TREATMENT OF HYDROCARBONS. WALTER F. RITTMAN, Pittsburgh, Pa. Filed Feb. 5, 1917. Serial No. 146,719. 1 Claim. (Cl. 196—25.)

The process herein described for forming a low boiling hydrocarbon from a high boiling hydrocarbon which consists in cracking the high boiling hydrocarbon, segregating from the products of cracking the end product desired and then cracking the remaining hydrocarbons, one of the cracking operations consisting in subjecting the hydrocarbons in a relatively large liquid mass, to heat and pressure suitable for the production of the end product desired, segregating such end product, and the second operation consisting in vaporizing the material remaining after such segregation and subjecting such vapors to heat and pressure and for a period of time suitable for the formation of the desired end product.

1,462,248. AUTOMATIC SEMAPHORE SIGNAL SYSTEM. ROBERT L. ROCKWELL and ERNEST G. HOWE, Seattle, Wash., assignors, by mesne assignments, to Ernest G. Howe, trustee, Seattle, Wash. Filed June 12, 1918. Serial No. 239,673. 2 Claims. (Cl. 246—90.)

1. An automatic signal system for railways comprising a series of semaphore arm signals disposed along the track of said railway, local circuits for each of said semaphore arm signals, primary relay circuits provided with simple and differentially wound relays for controlling said local circuits, a series of batteries for said primary relay circuits disposed at selected points along said railway, motors provided with limit switches for

actuating said semaphore arm signals, switches operatively connected to said batteries, and means provided on the cars of said railways for engaging said switches and reversing the terminals of said batteries whereby said motors will be started and said limit switches will be caused to automatically break the circuit to and arrest said motors and provide circuits through the motor windings upon the completion of the new position of the semaphore arms whereupon when the original relay connections are made said motors will return the semaphore arms to their original positions and cause the said limit switches to be returned to their original positions.

1,462,249. TIRE-CHAIN TIGHTENER AND LOCK. LEWIS SLAMA, Humboldt, Nebr. Filed Feb. 2, 1922. Serial No. 533,599. 3 Claims. (Cl. 24—69.)

1. A device of the type described comprising a member having a hook portion, and having an opening therein, a U-shaped member pivotally secured to said first named member and being adapted to receive said first named member, said U-shaped member having a hook portion adapted to be aligned with said first named hook, and a spring pressed pin carried by said U-shaped member and being adapted to enter the opening, said first named member having a beveled edge adapted to force said pin outwardly when said pin is moved thereby.

1,462,250. FLAT-BED PRINTING PRESS. MARTIN F. SLATTERY and HOWARD MCALONIE, Cohoes, N. Y. Filed Apr. 12, 1922. Serial No. 551,764. 13 Claims. (Cl. 271—84.)

1. In a printing press having a cylinder, and a delivery-bed, the combination with sheet-delivery mechanism for transferring a printed sheet from the cylinder to the delivery-bed; of sheet-guarding mechanism overhanging the path of the delivered sheet from a point above the delivery-bed to a point adjacent to said cylinder, said sheet-guarding mechanism being automatically extensible and contractible in the operation of the press.

1,462,251. SEQUENCE SWITCH. FRANK M. SLOUGH, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 8, 1918. Serial No. 233,202. 12 Claims. (Cl. 179—27.5.)

5. In a sequence switch, a rotatable cam shaft, a plurality of separate cams secured thereto, means to rotate the said

shaft, and means to cause alternate cams in their motion to operate contact springs located on the same side of the said shaft, the other cams operating contact springs on the opposite side of the said shaft.

1,462,252. TELEPHONE-SIGNAL-ALLOTING SYSTEM. JOHN A. TAGGART, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 24, 1918. Serial No. 213,584. 28 Claims. (Cl. 179—54.)

27. In a telephone system, a main station having operators' positions, a plurality of telephone lines terminating in said operators' positions, signals at said operators' positions for indicating that said telephone lines are calling, automatic means for allotting operators' positions for use, progressively movable automatic switches for disabling certain of said signals except those at an allotted operator's position, and operator's mechanism for controlling said switch.

1,462,253. AUTOMATIC FUNNEL. NEILS TOBIASSON, Orton, Alberta, Canada. Filed May 16, 1922. Serial No. 561,493. 3 Claims. (Cl. 226—37.)

1. A device of the character described, comprising a casing, a tubular extension formed with said casing, a disk dividing the casing into upper and lower sections, a tubular member disposed in said disk and communicating with the casing sections, a valve plate arranged on said tubular member for closing the same, a latch member arranged on said tubular extension, a wire connection between said valve plate and latch, a catch member connected to said extension and adapted for engagement with said latch, a float member connected to the catch member, the tubular extension of said casing adapted for insertion within the neck of a bottle to be filled, a rigid connection between the said float and catch member, and the said catch member being adapted for release from the latch member upon the elevation of said float member.

1,462,254. SAFETY APPARATUS FOR RAILWAY ROLLING STOCK. HOMER SPELLMAN VOTAW, Choptaka, Wash. Filed Aug. 10, 1922. Serial No. 580,975. 8 Claims. (Cl. 246—171.)

7. A safety apparatus for railway rolling stock embodying a car truck and comprising rotatable shafts carried by the car truck and engageable with the rails upon derailment of the car, said shafts having a pair of flanges engageable with either side of the rails.

1,462,255. RUNNING GEAR FOR WHEELED VEHICLES. HAROLD E. AUSTIN, Louisville, Ky., and JESSE C. COOK, Jeffersonville, Ind., assignors to American Creosoting Company, Louisville, Ky., a Corporation of Indiana. Filed Dec. 8, 1922. Serial No. 605,729. 2 Claims. (Cl. 295—43.)

1. Running gear for wheeled vehicles including a revolvable axle having a longitudinal slot and a transverse bore near each wheel carrying end, a wheel keyed to such axle through such slot, the hub of said wheel being slotted diametrically on one face and having a recess at one end of said slot, and a pin extending through the bore of said axle and seated in the slot of said wheel, the end of said pin being bent to lie in said recess.

1,462,256. LAWN SPRINKLER. LOUIS D. BARNEY, Chicago, Ill. Filed May 28, 1918. Serial No. 236,983. 4 Claims. (Cl. 299—61.)

1. A device of the class described comprising a vertically disposed tubular housing having an inlet opening and a

drain valve in the lower portion thereof; a spraying device in the form of a tube revolubly and slidably mounted in said housing and provided with an upwardly opening groove about its lower end portion; and a ring of wood mounted within said groove and supported thereby, adapted, by engagement with a fixed metal portion of the housing, to limit the upward movement of the tube, substantially as described.

1,462,257. POWDER PUFF AND COVER THEREFOR. MAX BROCK, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1923. Serial No. 611,124. 6 Claims. (Cl. 132—78.5.)

3. An article of the class described comprising a powder puff having a pair of powder-applying surfaces folded upon themselves and normally extending in opposite directions, a case secured to said puff between said powder-applying surfaces, and a pair of pockets on said case for enclosing said powder-applying surfaces.

1,462,258. POWDER PUFF. MAX BROCK, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1923. Serial No. 614,970. 2 Claims. (Cl. 132—78.5.)

1. An article of the class described comprising a puff having a pair of powder-applying surfaces which are normally folded, a flat cover located on one side of said puff and forming a backing therefor, said puff and cover being adapted to be folded on a line located between the folded powder-applying surfaces to enclose said puff between the folded portions of the cover, and detachable means for holding the puff and cover in said folded condition.

1,462,259. POWDER PUFF. MAX BROCK, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1923. Serial No. 614,971. 3 Claims. (Cl. 132—78.5.)

1. An article of the class described comprising a powder puff having a pair of normally folded powder-applying

surfaces, flat sections of material independent of said puff being secured on opposite sides of said puff and interen-

gaging, detachable fastening means for uniting the opposite edges of said sections being secured to the sections on their inner faces and adjacent their edges.

1,462,260. POWDER PUFF. MAX BROCK, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1923. Serial No. 614,972. 3 Claims. (Cl. 132—78.5.)

2. An article of the class described comprising a powder puff, a flexible disk on which said puff is adapted to be secured and spaced-apart parallel straps extending across the face of said disk and adapted to maintain the puff flat upon said disk.

1,462,261. LIQUID-FUEL BURNER. GEORGE ALFRED BRYAN, Peru, Ind., assignor to Bryan Harvester Company, a Corporation of New Mexico. Filed June 18, 1921. Serial No. 478,682. 4 Claims. (Cl. 158—76.)

1. A fuel oil burner comprising a mixing chamber having an opening in one side for the admission of oxidizing fluid, an atomizer for the fuel oil entering an end of the mixing chamber, means for directing oxidizing fluid under pressure into the opening in the side of the mixing chamber, and a shield member surrounding the atomizer and extending in front of the opening in the side of the chamber, a portion of the two opposite sides of the shield member in the line transverse that of the opening in the side of the chamber and extending substantially above the plane of the bottom of the opening being cut away.

1,462,262. EYELET TACK. JOHN P. BRYANT, Chicago Ill. Filed Feb. 23, 1922. Serial No. 538,809. 1 Claim. (Cl. 156—40.)

In combination with a curtain shade stick, a tack having a concave body portion and a wing portion bent thereover to form an eyelet, said tack driven into said stick, and bent so that the eyelet lies thereagainst; and a flexible member secured in said eyelet.

1,462,263. AIR-CONTROL VALVE. LEE F. CHANEY, Springfield, Ohio, assignor to The Chaney Manufacturing Company, Springfield, Ohio, a Corporation of Ohio. Filed Nov. 12, 1920. Serial No. 423,656. 7 Claims. (Cl. 251—137.)

2. A pressure chamber, having a vent orifice to be closed by the finger of the operator, a control valve admitting pressure to said chamber, and finger operated means for opening said valve manipulated by the application of the operator's finger to the vent orifice.

1,462,264. SAFETY ELEVATOR INTERLOCK. FRANK M. COFFIN, Pelham, N. Y. Filed Apr. 23, 1921. Serial No. 463,746. 5 Claims. (Cl. 187—31.)

5. The combination with an elevator having doors normally retained in locked position and means for operating the elevator, of an electromagnet adjacent to each of said doors for unlocking the same, said electromagnets being electrically connected with a source of energy, a circuit-controlling device in the circuit of each of said members and operable to close said circuit during movement of the elevator, an electromagnet having a pair of circuit-closing elements one effective to close a circuit through said elevator-operating means and the other to close the circuit through said circuit-controlling devices, said circuit-closing elements being so disposed

that one is in circuit-closing position and the other in circuit-breaking position when the electromagnet is energized and vice versa when the electromagnet is deenergized, and means for closing a circuit through the coil of said electromagnet thereby to energize the same.

1,462,265. BRAKE FOR ELECTRIC-MOTOR-OPERATED HOISTS. MATTEO COSULICH, New York, N. Y., assignor to Thomas & Buckley Hoisting Co., New York, N. Y., a Corporation of New York. Filed Oct. 27, 1921. Serial No. 510,703. 1 Claim. (Cl. 188—82.)

In an electric motor operated hoisting apparatus, the combination of a brake drum fixed on the armature shaft and having an internal braking surface concentric with the shaft, two brake shoes within the drum and arranged to engage the drum at diametrically opposite points, a stationary support forming a bearing for the armature shaft, a pair of outwardly extending links within the drum at each side of the said support, one link of each pair being tangential, means pivotally connecting the inner ends of the links of each pair to said support at opposite sides thereof, means pivotally connecting a brake shoe with the outer ends of the links of each pair, and spring means normally tending to swing the links in one direction to bring the brake shoes into engagement with the brake drum, whereby the thrust of the brake shoes will be in opposite directions and will be balanced on the said bearing support.

1,462,266. TRAFFIC REGULATOR. GEORGE C. DEGENER, Long Beach, Calif. Filed Nov. 3, 1920. Serial No. 421,536. 10 Claims. (Cl. 116-63.)

2. A traffic regulator comprising a supporting base, a vertical tubular post rising therefrom, a rectangular casing mounted on said post and having in each side thereof a transparent dial, a pivoted indicating arm in each side of the casing normally standing in horizontal position, extending outwardly, a continuously rotatable shaft extending through said post into the casing, a cam cylinder on said shaft coacting with said arms to intermittently turn them into vertical position, a gear wheel on the shaft, short horizontal shafts mounted in the casing geared with said gear wheel and extending out through said dials and carrying hands on their outer ends to indicate on said dials the movements and positions of the cams of said cam cylinder.

1,462,267. FURNACE ARCH. ROGER D. DE WOLF, Rochester, N. Y. Filed Aug. 18, 1920, Serial No. 404,425. Renewed June 7, 1923. 20 Claims. (Cl. 110-95.)

1. A furnace arch comprising a plurality of supporting elements, a plurality of hanger bricks supported by each of said elements independently of the other elements by means providing for the lowering and replacement of the bricks through the combustion chamber, and lining bricks carried by said hanger bricks to protect the latter and form a complete lining for said arch.

1,462,268. FILING INDEX. PAUL DIETRICH, Cleveland, Ohio, assignor to Yawman & Erbe Mfg. Co., Rochester, N. Y., a Corporation of New York. Filed Aug. 16, 1920. Serial No. 403,785. 3 Claims. (Cl. 129-16.5.)

1. An index file comprising a plurality of alined or superposed units, one behind the other and provided with projecting index tabs embodying a group designation

and an individual name designation for each unit, the individual name designations being all similarly placed

and in alinement and unlike group designations being relatively and progressively offset to be simultaneously viewable.

1,462,269. SOUND-REPRODUCING MACHINE. GIOVANNI DI FALCO, New York, N. Y. Filed Feb. 1, 1922. Serial No. 533,247. 6 Claims. (Cl. 274-15.)

1. A repeating mechanism for sound reproducing machines, comprising a rotatable member, means involving a train of gears for rotating said member, said member being provided with an adjustable platform and a part carried by the tone arm of the machine adapted to be engaged by said platform to move said tone arm transversely of the record supporting table of the machine.

1,462,270. AUTOMATIC SLACK ADJUSTER FOR BRAKES. AXEL RUDOLF KONRAD DJURSON, Malmö, Sweden, assignor to Svenska Aktiebolaget Bromsregulator, Stockholm, Sweden, a Company. Filed Apr. 27, 1921. Serial No. 464,864. 4 Claims. (Cl. 188-202.)

2. An air brake controller having a piston rod, a slack adjuster, a member for operating the slack adjuster, a guide formed with a slot slidably receiving a connection from said member and a connection from said piston rod, means joining said connections, said guide being movably mounted to respond to loose play of the piston rod, said guide being formed to positively operate said member in a predetermined movement of the piston rod.

- 1,462,271. SEWING-MACHINE CABINET AND SEAT. MADDALENA H. ENNIS, Ansonia, Conn. Filed Sept. 26, 1922. Serial No. 590,625. 5 Claims. (Cl. 45-27.)

2. A machine cabinet comprising a box-like base having front, rear and end walls, supports hinged to the base adapted to be placed in upright positions or in horizontal superimposed positions in the cabinet, one of said supports when in the latter position forming a cover for the cabinet, a machine support hinged to one of said supports and comprising a plurality of sections hinged together, means for holding the hinged sections in alignment, and means for detachably connecting the machine support with the other support when the latter is in upright position.

- 1,462,272. LOADING DEVICE. NICOLAUS W. FABECK, Freeport, Minn. Filed May 5, 1921. Serial No. 466,985. 4 Claims. (Cl. 198-203.)

1. A manure loader comprising a frame, a portion of which is angularly disposed, rollers at the ends thereof, the roller at one end of said frame being adjustably supported in place, an additional roller intermediate of the aforesaid rollers, an endless carrier disposed over said rollers, a plurality of smaller rollers in said frame supporting the upper strip of the carrier, means for retaining the upper strip of the carrier in contact with said additional roller, means for manually rotating said carrier, and an adjustable scraping member adapted for contact with the lower strip of the carrier below the adjustable roller.

- 1,462,273. SMOKE CONSUMER. FREDERICK P. FISCHER, Chicago, Ill. Filed May 13, 1920. Serial No. 380,961. 1 Claim. (Cl. 110-60.)

A device of the class described including a tubular member having a flattened end portion and an orifice

formed in said end portion, a reducer at the opposite end of said tubular member and open for the admission of atmospheric air, a steam pipe carried by said reducer and extending into the interior thereof and carrying a T at the interior end, a pipe carried at one end of said T and in communication with said steam pipe and extending into the interior of said tubular member, a plug having a central opening formed therein at the opposite end of said T, and a pipe passing through the opening of said plug and said second named pipe and extending beyond the inner end of said pipe for delivering water vapor to the interior of said tubular member to be ejected through said orifice by the steam from said second second named pipe.

- 1,462,274. REAR LAMP FOR AUTOMOBILES. MICHAEL FRASCADORE and ROMEO VALLONE, Philadelphia, Pa. Filed Oct. 24, 1922. Serial No. 596,563. 6 Claims. (Cl. 40-131.)

1. A rear lamp for automobiles comprising a rear wall; a front wall having an opening; a top wall sloping rearwardly; resilient means affording attachment of the front wall to the top wall; a channeled lower edge on the front wall; a transparent closure member in the channel covering the opening; and illuminating means to the rear of the closure member.

- 1,462,275. COOKING UTENSIL. KARL GAMMEL, Cleveland, Ohio. Filed May 21, 1921. Serial No. 471,427. 7 Claims. (Cl. 53-2.)

5. In a cooking utensil, a plurality of nested members adapted for use in combinations, and a handle secured to an intermediate one of said members constructed to rigidly support said intermediate member upon the member outwardly adjacent thereto, and to furnish support to the member inwardly adjacent thereto.

1,462,276. UNIVERSAL JOINT FOR SHAFTS. HARRY C. GRANT, Bayonne, N. J. Filed Sept. 9, 1921. Serial No. 499,462. 2 Claims. (Cl. 64-102.)

1. A universal joint comprising a central member having a lubricant chamber, hollow bosses located upon said member in pairs at right angles to each other and communicating with the lubricant-chamber, the inner surfaces of said bosses converging outwardly, fork members straddling each pair of bosses, a driving shaft connected with one of said fork members, a driven shaft connected with the other fork member, tapered plugs fitted within said bosses and constituting bearings for said central member, shanks projecting outwardly from said tapered plugs into said fork members and means whereby said shanks are adjustably secured in said fork members.

1,462,277. CASING FOR SMOKING PIPES. LOUIS GRAVEURE, New York, N. Y. Filed Sept. 21, 1921. Serial No. 502,261. 2 Claims. (Cl. 131-12.)

2. An article of the class described comprising a casing for a corn cob pipe consisting of a tubular metal member having a projecting internally-threaded boss extending from one side thereof, a pipe bowl received within said member with its stem opening in alignment with said boss, means on one end of the member for retaining the pipe bowl within said member, and a stem having a threaded end adapted to be received in said boss and into the stem opening in the pipe bowl.

1,462,278. LOCKING BAR. FREDERICK J. GREENE, Racine, Wis., assignor to Greene Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed May 5, 1922. Serial No. 558,780. 8 Claims. (Cl. 45-94.)

6. A locking device for a removable drawer, comprising a substantially tubular sheet metal locking bar having rearwardly extended flanges and inwardly directed flanges, the inwardly directed flanges being spaced from the front of the bar and terminating at a point slightly inwardly of one end of the bar, a part projected over the top of the bar end to form a keeper receiving recess, the front of the bar at the keeper receiving recess being bulged outwardly to accommodate a keeper, a lock concealed within the bar and confined between the front face thereof and the rearwardly

and inwardly directed flanges, said lock having a bolt projectable into the keeper receiving recess, and a keeper

adapted to have its outer end concealed in said recess and engaged by the lock bolt to secure the locking bar in position.

1,462,279. ELASTIC FABRIC. VICTOR GUINZBURG, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed June 4, 1920. Serial No. 386,564. 1 Claim. (Cl. 154-48.)

An article of the class described, comprising a strip of gathered or shirred textile fabric having a plurality of spaced narrow strips of elastic secured to it by stitching, some of said strips being secured on one face of the fabric and a strip on the opposite face thereof, two of said strips constituting flat, unshirred elastic strips at the opposite longitudinal edges of said fabric strip, and over-stitching enclosing said edge strips to secure the same to one face of the fabric strip and to provide a reinforcement for the edges of said fabric strip.

1,462,280. TRAIL STOP. DAYTON A. GURNEY, Caro, Mich. Filed May 19, 1922. Serial No. 562,239. 1 Claim. (Cl. 89-40.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

The combination with a gun carriage, including an axle, a top carriage mounted on the axle, a center pin carried by the top carriage, a bearing ring mounted on the pin, and a pivotally mounted pair of trails, of a flexible connection between each trail and the bearing.

1,462,281. ELECTRIC FOUNTAIN. WALTER L. HAA-NEL, Chicago, Ill. Filed Apr. 15, 1920. Serial No. 374,194. 5 Claims. (Cl. 299-4.)

1. An electric fountain having a basin, a lamp receptacle housing extending above and projecting through

the bottom of the basin, a power pump unit comprising a motor and pump supported from the housing below the

basin, a removable water projector supported in the basin, and water connections between the pump and the projector.

1,462,282. FIXED-RIM CONSTRUCTION FOR DISK WHEELS. LOUIS B. HARVEY, Stockton, Calif., assignor to Harvey Rim & Wheel Company, Inc., Buffalo, N. Y. Filed Mar. 16, 1920, Serial No. 366,215. Renewed May 9, 1921. Serial No. 468,048. 6 Claims. (Cl. 301—23.)

1. A built-up fixed rim structure comprising a ring having an outwardly projecting flange on one edge thereof, such flange terminating in an outwardly flared portion, another ring having a shoulder seating on the flared portion of the flange and being welded thereto, and having also an inwardly projecting annular flange on the opposite side extending past the first named ring to the inner edge thereof and being welded thereto, and a removable rim-locking ring positioned on the outside of the last named flange and adapted to be held thereagainst.

1,462,283. VENDING MACHINE. PETER J. HEGNES, Canton, S. Dak. Filed May 9, 1921. Serial No. 467,825. 3 Claims. (Cl. 211—8.)

1. In a vending machine, a casing, an article holding magazine having a discharge, a stationary horizontal plate located below the discharge and having a coin-opening, a vertical plate located rearwardly of the coin-opening and extending upwardly from the horizontal plate and towards the discharge and spaced from the latter, an approximately oval-shaped delivery member in the space between the discharge and vertical plate and having a depending pivot located so that the ends of the delivery member extend on opposite sides of the

vertical plate, a coin-controlled slide below the horizontal plate, a slotted plate carried by the slide, a horizontal arm pivoted to the casing at one end, a vertical link pivoted at one end to the other end of the arm and at

its other end to the rear end of the delivery member, and a projection on the arm located between the ends thereof engaging in the slot of the slotted plate, said slot being formed to effect article discharging movement of the delivery member upon actuation of the slide.

1,462,284. METHOD OF MAKING HYDRATED LIME. MAX HERMANN, New York, N. Y. Filed Jan. 12, 1921. Serial No. 436,675. 1 Claim. (Cl. 222—4.)

The method of making hydrated lime which consists in subjecting lump lime to a water spray under a relative movement of the lime with reference to the spray, then causing the so moistened lime to fall upon, become distributed over and be exposed to evaporative action on a moving means, and then collecting the product in the form of powdered hydrated lime.

1,462,285. REFRIGERATED DISPLAY APPARATUS. GEORGE HILGER, Chicago, Ill. Filed Aug. 25, 1922. Serial No. 584,235. 6 Claims. (Cl. 62—37.)

1. A display apparatus comprising a casing, a central tubular column mounted for rotation on a vertical axis in said casing, means carried by said column for rotation therewith adapted to support products to be preserved, said column having a plurality of openings therein adjacent said supporting means, and means providing a refrigerating chamber in the upper portion of the casing having a central opening in its bottom wall

through which the upper open end of said column projects and having a coil therein with supply and return

pipes depending through said column, said refrigerating chamber being arranged to communicate with the lower portion of the case at the sides thereof.

1,462,286. WASH MACHINE. WILLIAM JEPSON, London, England. Filed Mar. 14, 1922. Serial No. 543,681. 4 Claims. (Cl. 220—55.)

1. A washing machine, a door therefor, a toggle mechanism hingedly mounted on one of said parts, a projection on the other of said parts to be engaged by said toggle mechanism, and an element formed on the toggle mechanism to engage and bear directly upon the door when the toggle mechanism is in locked relation.

1,462,287. HOT-AIR FURNACE. JOSEPH C. KANAK, Chicago, Ill. Filed Oct. 13, 1922. Serial No. 594,253. 9 Claims. (Cl. 126—99.)

1. In combination with a hot air furnace having an outer casing with an opening provided therein, a device mounted in said opening and comprising means for taking in cool air, means for directing said air upwards within said casing, means on the inward wall of said air directing means for also leading air against the inner wall of said casing, means for conducting warm air directly from the furnace casing into said device, and means for forcing the circulation of air through said device.

1,462,288. PROCESS AND APPARATUS FOR EXTRACTING HYDROCARBONS FROM OIL WELLS AND OIL-BEARING STRATA. WILLIAM JOHN KNOX, New York, N. Y., assignor, by mesne assignments, to said Knox and Arthur Robins Speer, Bronxville, N. Y. Filed Apr. 10, 1919. Serial No. 288,926. 6 Claims. (Cl. 166—17.)

1. The method of increasing the production of an oil well consisting in maintaining the oil bearing stratum

adjacent the well at a temperature above normal and sufficiently high to reduce the viscosity of the oil therein and facilitate its flow toward the well by discharging

heated liquid into the well in a sufficiently continuous supply to maintain the desired temperature in said stratum and removing the same in the usual pumping operation.

1,462,289. STACKER FOR THRASHING MACHINES. JULIUS KOSAN, Cleveland, Ohio. Filed Aug. 1, 1922. Serial No. 578,912. 4 Claims. (Cl. 198—114.)

1. In a thrasher, a main body, a horizontal frame, a stacker normally extending from one end of said body, means for moving the stacker to a position resting on the top of the main body, a pair of collapsible posts supporting said stacker, and means for moving the lower ends of said posts along said frame to collapse the posts, said last means comprising gear pinions mounted on the lower ends of said posts, racks extending along said frame, a band engaged with the lower end of each post, and means for moving said band.

1,462,290. TRACK-RAIL JOINT AND SAFETY DEVICE. ALOYSIUS L. LAUBY, Antigo, Wis. Filed July 15, 1922. Serial No. 575,152. 1 Claim. (Cl. 238—192.)

A rail joint unit comprising a metallic fish plate for nested engagement with a rail comprising two component parts each being shaped in cross section to conform to the rail and having a vertical web-strip having an out-

wardly and downwardly sloping beveled upper face with its uppermost inner edge in close proximity to the under surface of the rail head, said web-strip having upper and lower flange strips, the lower flange strips of said component parts cooperating to engage the bottom of the rail-base throughout substantially the entire width of said rail-base, said lower flange strips having a series of flat bottom longitudinal ribs.

- 1,462,291. BOTTLE PROTECTOR. JOSEPH McCrink, Newark, N. J. Filed Aug. 30, 1922. Serial No. 585,123. 9 Claims. (Cl. 215—11.)

1. A bottle protector of the class described, comprising a cage-like structure of unitary construction and consisting of a bottom ring member, a top ring member, intermediate ring members spaced apart by vertical rib members, and said bottom ring member being provided with a plurality of inwardly projecting retaining members.

- 1,462,292. DEVICE FOR GUIDING, CLEARING, AND TENSIONING YARN. JOHN O. MCKEAN, Westfield, Mass., assignor to Foster Machine Company, Westfield, Mass., a Corporation of Massachusetts. Filed June 9, 1921, Serial No. 476,264. Renewed June 14, 1923. 2 Claims. (Cl. 28—67.)

1. In a tension device, a bracket, a substantially U-shaped grid forming a skeleton yarn support projecting laterally from said bracket and adjustable longitudinally therein, and a gravity operated disc arranged to coact with said yarn support, the yarn support being removable and the outer end thereof being inclined downwardly.

- 1,462,293. TOOL FOR PNEUMATIC RIVETERS. JOHN MASON, Philadelphia, Pa. Filed July 12, 1919. Serial No. 310,409. 1 Claim. (Cl. 78—46.)

A tool for pneumatic riveters and the like consisting of a solid body of metal adapted to extend into the riveter barrel and of substantially even diameter throughout except for a shallow encircling, circumferential recess for cooperation with the tool-retaining device of the riveter, and having on its butt end an impact-receiving surface of reduced diameter sustained by immedi-

ately circumjacent and subjacent unbroken and uniformly tapering enlargement of the butt to full size, so that

the stress and vibration of impact are freely diffused and local distress or fatigue of the metal from abrupt change of contour is avoided.

- 1,462,294. RAILWAY-CAR-WHEEL CLAMP. CHARLES MITCHELL, Woodstock, Ontario, Canada. Filed July 25, 1921. Serial No. 487,531. 1 Claim. (Cl. 254—33.)

In a device of the class described, the combination of a horizontal base part, a vertical standard provided with teeth on its outer face rising from one end of said base, a vertically adjustable, wedge shaped wheel clamping member mounted on said standard and provided with teeth on the side adjacent the standard and co-acting therewith, said upwardly tapered portion presenting an outer inclined surface, a rectangular ring member mounted on the standard and arranged to be engaged by the said inclined face of the clamp to securely hold the same to the standard when in operative position substantially as described.

- 1,462,295. SAND-BLAST APPARATUS. EDWARD J. MOORE and RAYMOND H. MOORE, Cleveland, Ohio, assignors to The W. W. Sly Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1918. Serial No. 262,507. 8 Claims. (Cl. 51—12.)
6. The combination, with a barrel of an arm pivoted adjacent to said barrel, an extension of said arm ro-

tatably and longitudinally adjustable with respect thereto, a clamp pivotally connected to such extension, a

sand blast gun supported by said clamp, and connections for supplying sand to said gun.

1,462,296. SAND-BLAST APPARATUS. EDWARD J. MOORE and RAYMOND H. MOORE, Cleveland, Ohio, assignors to The W. W. Sly Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 14, 1918. Serial No. 262,508. 11 Claims. (Cl. 51—12.)

6. The combination, with a head having an upper passageway and a lower passageway with a partition between said passageways and a passageway communicating with the upper passageway between the front and the rear thereof and above said partition, of a tapered baffle extending downwardly within the upper passageway and located rearwardly of the third passageway, a pressure-fluid pipe communicating with the rear of the upper passageway, a pressure-fluid pipe communicating with the rear of the lower passageway, and a nozzle common to both passageways.

1,462,297. FOLDING BOX. JOSEPH R. MYERS, Chicago, Ill. Filed Aug. 16, 1920. Serial No. 403,720. 3 Claims. (Cl. 229—34.)

3. A folding box made from a single blank of chip lined boxboard and comprising bottom, side and end

walls foldable into flat or distended positions, lines for bending being defined by slits in and confined to the chip side of said boxboard.

1,462,298. TYPE-LINE-CASTING MACHINE. FREDERICK W. NEUMAYER, Baltimore, Md. Filed Aug. 26, 1921. Serial No. 495,483. 12 Claims. (Cl. 199—29.)

1. In a device of the kind described having an assembling channel provided with a matrix supporting rail, an auxiliary matrix supporting rail movable laterally for projection into and retraction out of the channel, an extension on said auxiliary rail forming a gate and movable longitudinally thereof to increase and decrease the effective supporting length of said auxiliary rail, a finger lever mounted for pivotal and sliding movement, a connection between said lever and the extension arranged to shift said extension longitudinally of the auxiliary rail upon pivotal movement of the lever, and a connection between the lever and auxiliary rail arranged to move the rail laterally upon sliding movement of the lever.

1,462,299. CYLINDER LOCK. MARTIN J. O'CONNOR, Ogden, Utah. Filed May 16, 1922. Serial No. 561,270. 5 Claims. (Cl. 70—46.)

1. In a lock including a tumbler casing and a telescoping cylinder therefor, said cylinder being adapted to be screwed into a lock case, means in part carried by said tumbler casing and in part by said cylinder for automatically locking said casing and said cylinder, such means permitting longitudinal movement in one direction only between said casing and cylinder.

1,462,300. CLIP GUIDE. WILLARD H. PARROTT, Los Angeles, Calif. Filed July 10, 1922. Serial No. 573,980. 9 Claims. (Cl. 101—415.)

1. A clip of the character described comprising a base forming a front abutment surface and having ears

extending laterally beyond said surface with the front edges of said ears in alinement with said surface, said base being adapted to be received upon a printing press top sheet with said ears extending through and beneath the same.

- 1,462,301. PLATE-VALVE UNLOADER. FREDERICK W. PARSONS, Elmira, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 18, 1922. Serial No. 588,918. 3 Claims. (Cl. 230—24.)

3. A plate valve unloader, comprising a plate valve and its seat, stop plate and stud, adapted to lie in a valve opening in the cylinder wall of a compressor, a valve cover over the valve seat having a stud for holding the plate valve structure to its seat in the wall of the compressor, a plurality of piston chambers in said valve cover, hollow pistons in said chambers, retracting springs within the said chambers adapted to be compressed by the pistons, plungers carried by the pistons and adapted to hold the said plate valve open, and springs in said hollow pistons tending to hold said plungers outwardly.

- 1,462,302. SLIDING DOOR AND TRACKS THEREFOR. ELLIS J. G. PHILLIPS, Aurora, Ill., assignor to Richards-Wilcox Manufacturing Company, Aurora, Ill., a Corporation of Illinois. Filed Sept. 25, 1922. Serial No. 590,466. 5 Claims. (Cl. 20—19.)

1. In combination, two overhead tracks that are parallel and adjacent for a portion of their length, one of said tracks near one of its ends curving away from the other track and terminating in a straight end portion that is parallel with said other track, a plurality of doors, and two carriers for each door that respectively travel upon said tracks, each of said doors having means extending beyond one of its faces for effecting a swiveling connection with a carrier on one of the tracks and means extending beyond the other of its faces for effecting a similar connection with a carrier on the other track.

- 1,462,303. BEVELED-GLASS-POLISHING MACHINE. BENJAMIN REHM, Crystal City, Mo., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 3, 1918. Serial No. 252,310. 1 Claim. (Cl. 51—168.)

In combination in a glass bevel polishing apparatus, a polishing disc of felt, clamping plates on opposite sides of the disc engaging the inner portion thereof, and substantially parallel supporting rollers mounted opposite each other on opposite sides of the disc in engagement with the portion thereof lying outward from said clamping plates and adapted to prevent spreading of the edge of the disc.

- 1,462,304. TRACTOR. RAY P. SAFTOLD, Bisbee, Ariz. Filed Jan. 7, 1920. Serial No. 349,849. 3 Claims. (Cl. 105—215.)

3. The combination with a car truck, running wheels, an axle and a pinion on said axle, of a shaft on said truck, a gear wheel on said shaft, a pinion on said shaft, a gear meshing with the pinions on said axle and shaft, and a continuous self laying track adapted to pass over said running wheels and gear wheels.

- 1,462,305. APPARATUS FOR APPLYING HEADS TO MUSIC-ROLL TUBES. WALTER SNYDER, Newark, N. J., assignor of one-half to Robert L. Hatfield, Newark, N. J. Filed Nov. 21, 1921. Serial No. 516,650. 11 Claims. (Cl. 144—14.)

1. Apparatus for applying flanged heads to roll tubes, comprising means for successively presenting and holding tubes in a fixed position, carrier means having seats for tube heads positioned adjacent the tube ends when the tube is in such fixed position, said seats having

openings therethrough, gripper means, push rods acting through the openings in said seats to move the heads

into engagement with said gripper means, and means for causing said gripper means to apply the heads to the tubes.

1,462,306. PLASTICISER FOR CELLULOSE PLASTICS. ARCHIBALD D. ST. JOHN, Maplewood, N. J. Filed May 22, 1922. Serial No. 562,813. 5 Claims. (Cl. 106—37.)

4. A plasticiser, a mixed cresyl-phenyl-phosphate, liquid at normal temperature and pressure.

5. A plasticiser, a compound, the probable structure of which is

and a liquid at ordinary temperature which boils with not more than slight decomposition at atmospheric pressure at about 400 degrees C.

1,462,307. DAMPER-CONTROLLING MEANS FOR COTTON-PICKING MACHINES. AMASA ST. ONGE, Providence, R. I. Filed Aug. 11, 1922. Serial No. 581,150. 5 Claims. (Cl. 19—95)

1. In a cotton picking machine, a grid, a second grid spaced therefrom, a perforated baffle plate adjacent the first grid, a damper plate supported at one end by the second grid, and engaging the baffle plate, and means for adjusting said damper plate.

1,462,308. FORCE PUMP. MONTAGUE WILLIAM TUTT, London, England, assignor of one-half to Hulburd Engineering Company, Limited, London, England. Filed July 25, 1922. Serial No. 577,405. 6 Claims. (Cl. 103—38.)

1. A force pump comprising a cylinder having inlet and outlet ports, a pair of plungers reciprocable therein,

means for retaining the upper or outer plunger stationary for a portion of the inward and downward strokes, and for moving the said plungers together for the remaining portions of the stroke so as to draw in a charge between the plungers, and expel it therefrom, the move-

ment of one plunger being effected by the movement of the other plunger, and means for varying the time in the cycle of operation during which the upper or outer plunger is held stationary, to vary the capacity of the pump.

1,462,309. TIMER. ERNEST VON HAMBACH, Chicago, Ill., assignor to Herbert D. Lafferty, Oakland, Calif. Filed Mar. 29, 1920. Serial No. 369,478. 2 Claims. (Cl. 200—26.)

1. In a timer, a central shaft adapted to be rotated, a sleeve of insulating material carried by said shaft, an electrical contact extending through said sleeve, a housing surrounding said sleeve, a plurality of brush holders mounted in said housing, brushes mounted in said holders, and spring means for forcing said brushes into engagement with said rotating sleeve, said sleeve having at one end thereof a cone-shaped surface which serves to cam the brushes radially outwardly during assembling.

1,462,310. FURNACE FOR PULVEROUS FUEL. KARL HJALMAR VILHELM VON FORAT, Stockholm, Sweden, assignor to Motala Verkstads Nya Aktiebolag, Motala Verkstad, Sweden, a Corporation. Filed Nov. 4, 1919. Serial No. 335,629. 12 Claims. (Cl. 110—28.)

1. In a furnace for different kinds of fuel, the combination of a combustion chamber, a firing opening in the rear end wall of said chamber, an arch dividing said chamber into an upper and a lower compartment communicating with each other at the rear part of the chamber, a grate in the front part of the the bottom of the chamber, said

arch projecting rearwardly beyond the said grate, the rear part of the bottom of the chamber being composed of refractory material, and means for causing one kind of fue to flow from the rear part of the chamber first forwardly,

to the front end of the lower compartment, then rearwardly to the rear part of the upper compartment and then forwardly along the upper side of the arch before escaping from the chamber.

1,462,311. PIPE-FORMING PLANT. DAVID L. WILLIAMS, Bessemer, Ala. Filed May 19, 1920. Serial No. 382,472. 1 Claim. (Cl. 22—20.)

In a pipe forming plant, a molding platform comprising a base, a turntable mounted to revolve on said base, said turntable comprising a hub, and a plurality of radial arms extending therefrom, said arms being of substantially uniform width and adapted to support molding flasks, and retaining means comprising plates secured to the sides of said arms and projecting above the surface, said plates being adapted to contact with the sides of the flasks to retain them in position.

1,462,312. COASTING VEHICLE. WILLIAM THOMAS WOOD, Nashville, Tenn. Filed May 5, 1922. Serial No. 558,691. 3 Claims. (Cl. 280—88.)

1. A vehicle of the character described, consisting of a body or platform, a rear axle carrying wheels and rigidly secured to said body, a front axle carrying wheels and pivotally mounted with reference to said body, a pair of up-rights formed on said front and rear axle and in normal position being in line, and a pair of sliding rods mounted in said up-rights for turning the front pivoted axle to guide said body.

1,462,313. DETONATING FUSE. JOHN H. WOODBERRY, U. S. Army. Filed Dec. 10, 1918. Serial No. 266,144 14 Claims. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

2. The combination with a fuse for projectiles, of a plunger detonator moving from a non-functioning to a

functioning position, a centrifugally movable locking device deterring the movement of said plunger to functioning position, said device lying on a surface oblique to the axis of rotation of the projectile, the obliquity of said surface

and the inertia of said device and said plunger being effective to prevent said device from moving centrifugally during the acceleration period of the projectile in the bore of the gun.

1,462,314. FUSE. JOHN H. WOODBERRY, U. S. Army. Filed Dec. 10, 1918. Serial No. 266,146. 1 Claim. (Cl. 102—39.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

In a combined time and percussion-detonating fuse, the combination, with a concussion-plunger, carrying a primer, and a stationary firing pin cooperating with said primer, of a percussion-primer disposed in front of said first mentioned primer, and a nose detachably secured to the front end of said fuse and carrying a firing pin cooperating with said percussion primer.

1,462,315. BENDING MACHINE. MEADER R. AKEY, Sacramento, and HERMAN KATZ, Oakland, Calif. Filed Aug. 5, 1919, Serial No. 315,488. Renewed Dec. 14, 1922. 5 Claims. (Cl. 153—46.)

1. In a machine for bending steel shapes, a bed plate, a form adapted to be seated on said bed plate, a second plate pivotally arranged on said bed plate for movement in a vertical plane for securing and supporting the form, a pair of arms mediately mounted on said bed plate for pivotal movement in both horizontal and vertical planes, a roller arranged on each arm in engagement with the shape on said form, means for moving each arm in a horizontal plane to cause the rollers to press the shape against the form, and means for moving the arms and second plate in the vertical plane to permit the bent shape to be removed from the form.

1,462,316. GEARING FOR MARINE PROPULSION AND THE LIKE. KARL ALQUIST, New York, N. Y. Filed Mar. 19, 1920. Serial No. 367,158. 2 Claims. (Cl. 74-7.)

1. In a ship propulsion gearing, the combination of a propeller shaft, a low speed gear wheel mounted thereon, said gear wheel having single helical teeth of an angle of the order of five degrees, a high speed pinion, an intermediate speed shaft carrying a low speed pinion, and a high speed gear wheel which mesh with said low speed gear wheel and high speed pinion respectively, said high speed pinion and high speed gear wheel being of the double helical type and said low speed pinion being of the single helical type for meshing with the low speed gear wheel, and a thrust bearing for said intermediate speed shaft to take the axial thrust of the single helical low speed pinion.

1,462,317. WHIRLIGIG. LOUIS V. ARONSON, Newark, N. J. Filed Mar. 30, 1923. Serial No. 628,802. 5 Claims. (Cl. 46-14.)

1. A whirligig comprising, in combination, a member having an opening, a covering of colored translucent material for said opening, a pyrophoric material holding device adjacent said opening, a circular band of abradant material, means to cause relative movement of revolution between said device and band whereby sparks may be produced to show through said colored material.

1,462,318. BACKSTOP FOR ELEVATORS AND THE LIKE. EMIL A. BEYL, Minneapolis, Minn. Filed Feb. 27, 1922. Serial No. 539,796. 11 Claims. (Cl. 188-82.)

1. The combination with a fixed member and a rotary driving member, of an interposed clutch member, said driv-

ing member and clutch member having reversely acting ratchet surfaces that are always in engagement and said fixed member and clutch member having ratchet acting surfaces that are disengageable and engageable, respectively, by forward and rearward movements of said driving member.

1,462,319. SIGNAL DEVICE FOR VEHICLES. JOHN P. BROPHY, Cleveland, Ohio. Filed July 20, 1921. Serial No. 486,045. 1 Claim. (Cl. 116-52.)

In a device of the character described, the combination of an inverted U-shaped support adapted to be clamped onto the upper edge of the side of an automobile body or door, a signal arm pivotally attached to the outer side of said support for movement about an approximately vertical axis, a torsion spring associated with said arm adapted normally to retain the same in inactive position against the side of the automobile, a cam face on the inner end of said signal arm, a lever pivotally attached to the upper side of said support for movement about a transverse axis, and a depending cam finger upon said lever adapted to engage the cam face upon said signal arm to swing the same into active position when said lever is forced downwardly.

1,462,320. TONE MODIFIER FOR SOUND-REPRODUCING MACHINES. FRED W. COOLEY, Minneapolis, Minn. Filed Sept. 28, 1921. Serial No. 503,896. 15 Claims. (Cl. 181-27.)

1. The combination with the tone arm of a sound reproducing machine, of a resonant tube spaced therefrom and located where the sound waves will pass there-through on their way from the arm to the sound chamber and a tension device placing said tube under tension, said device comprising a resilient member secured adjacent both ends to the inside of said tube and covered with a yielding material.

1,462,321. METHOD AND MEANS FOR COOLING ELECTRICAL APPARATUS. LOCKE H. BURNHAM, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 20, 1922. Serial No. 530,738. 4 Claims. (Cl. 62—170.)

1. In a method for cooling a radiating surface, the step which consists in inducing and directing a plurality of jets of air through and in contact with a surrounding body of air and toward the radiating surface, the paths of said jets being at acute angles to the general plane of the surface, whereby air from said surrounding body of air is carried with the air of the jets along said surface in front of the jets.

1,462,322. COFFEE MAKING OR BREWING MACHINE. VITTORIO CASOLETTI, Turin, Italy. Filed Nov. 3, 1920. Serial No. 421,558. 6 Claims. (Cl. 219—43.)

2. A coffee making or brewing machine comprising a kettle, a filter chamber carried by and communicating with the kettle, supporting means on the kettle adapted to permit rotation of the latter, a heat accumulator mounted on the kettle, an electrical resistance mounted on the accumulator, an electrical conductor, and means controlled by the rotation of the kettle to connect and disconnect the conductor and resistance.

1,462,323. STAR NAMER. CHARLES W. COMPTON, Worster, Ohio. Filed Aug. 18, 1922. Serial No. 582,769. 1 Claim. (Cl. 35—3.)

In a device of the character described, the combination with a rotatable map disk of a celestial hemisphere, having time and astronomical indicia imprinted thereon, of a stationary platform for said disk to rotate upon, a support rod for said platform adjustable to point to the north pole of the heavens, a dial ring and a horizon ring mounted above said disk independently thereof, in engagement with said platform; a rotatable standard pivoted above said support rod, in line therewith, an arm

pivoted on said standard its outer end adapted to swing thereon vertically, a sight-rod or pointer mounted upon said outer end, a reverse S-shaped groove or track on said standard with an arm pivoted at the center of the upper arc thereof, and a flexible metal band mounted on

said track, having its upper end in operative engagement with said arm, and its lower or outer end free to extend outwardly from the base of said standard, said outer end being adapted to swing said standard rotarily and to be drawn in and out to points on said map, substantially as set forth and for the purpose specified.

1,462,324. HARROW. RILEY M. CROWDER, Holland, Ky., assignor of one half to Charles L. Wood, Holland, Ky. Filed Nov. 26, 1920. Serial No. 426,499. 4 Claims. (Cl. 55—153.)

1. A harrow comprising resiliently mounted teeth, a resiliently supported panel to coact therewith, and means for limiting swinging movement of the teeth and panel.

3. In a harrow a block having an opening and provided at the forward end of its opening with a chamfered surface, a soil treating member pivoted in the block and extending through the opening and adapted to engage the forward end thereof when in a vertical position and adapted to engage the chamfered surface when inclined with relation to the block, a spring connected with the block, and a rod pivotally connected with the member and entering the spring and engaging the same.

1,462,325. SAW-TOOTH DRESSER, JOINTER, AND GAUGE. MICHAEL DALLENBACH, Ridgway, Pa. Filed Dec. 22, 1921. Serial No. 524,157. 17 Claims. (Cl. 33—202.)

1. A saw tooth dressing mechanism comprising a plate; a gauge-arm support operatively associated with

the plate; cooperating gauge-arms operatively associated with the support, one portion of an arm having a swinging movement in relation to the support and an instrumentality for moving the gauge-arm support with relation to the plate, operatively associated with the support and plate.

1,462,326. CIGARETTE-POUCH-PACKAGING MECHANISM. HILARION DE ESCOBALES, Brooklyn, N. Y., assignor to H. Escobales Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 4, 1921. Serial No. 442,404. 45 Claims. (Cl. 93—2.)

1. Mechanism for applying pouch wrappers to embryo cigarette packages and arranged for co-operation with a cigarette packaging machine comprising an intermittently moving rotary horizontal mold table provided with pockets in which the embryo packages are formed and means for moving the completed embryo package from the pockets at one station to a delivery point, said mechanism comprising means for applying pouch wrappers to the successive embryo packages, means for folding the wrappers into pouch form about the packages, and means arranged for connection with an operative part of said machine for moving the embryo packages from said delivery point to said pouch wrapper applying means.

26. The combination with a machine for forming and initially wrapping and successively delivering cigarette packages at a discharge point, of means for automatically gumming and applying cup wrappers to successive packages delivered by said machine.

1,462,327. CIGARETTE-POUCH-PACKAGING MECHANISM. HILARION DE ESCOBALES, Brooklyn, N. Y., assignor to H. Escobales Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 4, 1921. Serial No. 442,405. 24 Claims. (Cl. 93—2.)

1. Cup wrapper applying mechanism arranged as an attachment for a cigarette packaging machine in which initially wrapped cigarette packages are successively

delivered, said mechanism comprising means for automatically forming cup wrappers about successive packages delivered by said machine, and rotary transfer means for moving the packages from the machine discharge point to said cup wrapper applying means.

1,462,328. SCOOP. CONRAD C. DE JONG, Wessington Springs, S. Dak. Filed Mar. 30, 1921. Serial No. 457,161. 2 Claims. (Cl. 294—55.)

1. An implement of the class described comprising a blade having a rectilinear sharpened front edge and parallel side walls with the edge of the rear portion of the blade converging toward the midwidth thereof, an upstanding flange around said side edges and rear edge with a break at the apex of the rear edge and provided at said point with laterally spaced outturned handle engaging ears, and a handle to engage the rear end of the blade, said handle being located between said ears and fixedly secured thereto and to the body of the blade.

1,462,329. CONSTRUCTION OF VEHICLE ROOFS. CHARLES F. DENNIS, Cleveland, Ohio, assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1921. Serial No. 522,384. 3 Claims. (Cl. 296—137.)

1. The combination in a vehicle roof structure, of a frame having two longitudinal letter panels extending at the side and over part of the roof, the portions of each panel at the roof being depressed to form a flange; a veneer plate extending the full length of the flange of each letter panel and secured at one edge to said panel; carlines connecting the flanges of the two panels; and roofing sections extending from one side of the vehicle to the other side thereof and resting on the flanges of the letter panels and under the veneer plates.

1,462,330. MILK BOTTLE. RAY DUNN, Tipton, Iowa. Filed May 6, 1922. Serial No. 559,021. 4 Claims. (Cl. 215—1.)

1. The combination with a bottle-like container having an inclined orifice tapered with respect to the horizontal

and the vertical, of a removable tapered stopper having its longitudinal central axis inclined in like manner to

both the central and transverse axis of the bottle and located at the lower diagonal corner of the bottle.

1,462,331. GAS BURNER. JOHN FESTA, Brooklyn, N. Y. Filed Mar. 31, 1921. Serial No. 457,208. 4 Claims. (Cl. 158—105.)

3. In a gas burner, the combination of a plurality of horizontally disposed gas supply pipes on the same plane, an elongated burner pipe on a plane above the supply pipes and divided by partitions into end and middle sections, a mixing tube beneath the middle section and communicating with the latter and one of the supply pipes, a second mixing tube communicating with the end burner pipe sections and a second supply pipe, and burners for the various sections.

1,462,332. SEPARABLE BUTTON. IGNATIUS FRIED, Mobile, Ala. Filed Jan. 25, 1923. Serial No. 614,829. 4 Claims. (Cl. 24—101.)

1. A separable button comprising two similar hollow parts, a movable member within one part which has a central bore, ball carrying openings, and a head located outside of said hollow part, balls in said openings, and a pin passing through the other hollow part and normally spring pressed outwardly, but adapted to enter the central bore and be firmly gripped by said balls when the two parts are pressed toward each other.

1,462,333. ROLL FABRIC HOLDER. JOHN GIRARD, Thomaston, Conn. Filed Aug. 26, 1921. Serial No. 495,461. 1 Claim. (Cl. 211—18.)

A roll holder and display cabinet comprising a support, spaced disks rotatably mounted by said support, said disks having spaced openings around their outer edges, cylinders supported at their ends by said disks, and

extending between the same, the ends of said cylinders received in the openings in the disks, said cylinders having longitudinal slots in their outer sides, blocks in the ends of said cylinders, means carried by said blocks for supporting a fabric supporting coil within each of said cylinders, said blocks being of different length to vary the effective length of the cores and extending inward from the outer ends of the cylinders to

reinforce the same at their point of connection with the disks, a metallic casing surrounding said disks and supported thereby, said casing having longitudinally extending slots registering with the slots in the cylinders, the edges of the slots in the casing being folded around the edges of the slots in the cylinders to present a smooth surface to the fabric, and certain of the core supporting means carried by the blocks being adapted to be rotated to wind fabrics onto the cores.

1,462,334. STERILIZING CONTAINER. GILBERT MENDENHALL GROSS, Eldorado Springs, Mo. Filed Mar. 24, 1922. Serial No. 546,388. 2 Claims. (Cl. 215—6.)

1. In combination, a container casing consisting of a cylindrical body closed at its lower end and an arched removable lid for the upper end thereof, a plurality of cells adapted to lie in juxtaposed spaced relation within the container casing, means within the container casing for removably supporting the cells within the casing in spaced relation to one another and to the bottom and side walls of the container casing, a removable closure for the upper end of each cell, and a closure fitting within the container casing at the upper end thereof to rest upon the closures of the said cells.

1,462,335. APPARATUS FOR TREATING GASOLINE. THOMAS A. GROSS, Frederick, Okla. Filed July 14, 1920. Serial No. 396,303. 1 Claim. (Cl. 210—58.)

An apparatus for the treatment of gasoline and like liquids consisting of a plurality of units of which each consists of a cylindrical receptacle having a partition arranged therein and terminating short of the bottom

and deflected laterally to provide a baffle, the partition dividing the receptacle into main and auxiliary compartments, a perforated coil adapted for connection to an air supply and disposed in the main compartment above said baffle, the receptacle being formed with a funnel

shaped bottom by which communication between the two compartments is effected, a draw-off pipe at the apex of the funnel, an inlet disposed at the top of the main compartment, and an outlet means in the auxiliary compartment.

1,462,336. BROODER. JOHN HALE, Reedsville, Wis. Filed May 5, 1921. Serial No. 466,895. 5 Claims. (Cl. 119—34.)

1. A brooder comprising a water container including a water space and a centrally disposed air passage, a cover pivoted to the container for controlling said passage, a pair of semi-circular head plates mounted on the container and each provided with a depending flange surrounding and spaced from said container and each further provided with vertical supports, a pair of semi-circular vertically movable suspension plates arranged below and adjustably connected to said head plates, tufts depending from said suspension plates, a slitted apron depending from said flanges and disposed concentrically with respect to said container and forming in connection with said head plates a hover, means to provide a hot water supply communicating with said container, and said container formed with cross pipes to provide for the circulation of air.

1,462,337. ELECTRICAL INSTRUMENT. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Apr. 13, 1920. Serial No. 373,549. 8 Claims. (Cl. 171—308.)

1. An electrical instrument comprising a pair of flat bi-metallic members adapted to be bowed in response to a variation in thermal conditions, a support for one of said members near its end, a pivotal support for the other of said members near its end, an electric heating coil for one of said members, said members being so

proportioned and arranged that the pivotally mounted member rotates in response to a difference in their thermal conditions, and means for indicating the rotation of said pivotally mounted member.

1,462,338. TYPOGRAPH MECHANISM. CHARLES A. HARMS, Indianapolis, Ind., assignor, by mesne assignments, to Ludlow Typograph Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1919. Serial No. 335,425. 6 Claims. (Cl. 199—1.)

1. A holder for matrix-bars of the character described, comprising an independent member formed with an elongated opening adapted to receive a number of such bars transversely disposed therein, and a bar disposed longitudinally of the opening in said member and movably secured to the latter so as to be adapted to quad out any desired portion of such opening.

1,462,339. AIR HEATER. BURT S. HARRISON, Brooklyn, N. Y., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Dec. 28, 1920. Serial No. 433,640. 5 Claims. (Cl. 126—104.)

1. In a device of the character described, the combination of a horizontal combustion chamber, a plurality of horizontal ducts for the gases of combustion positioned around the combustion chamber, a plurality of baffle plates separating the said ducts into sections and adapted to direct the gases of combustion through successive sections of said ducts, a fresh air duct, a heating chamber and an annular dividing plate in said heating chamber whereby the fresh air is brought into contact with heating surfaces of progressively higher temperature.

1,462,340. ELECTRIC SWITCH. HERMAN J. H. HUBER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 19, 1918. Serial No. 254,824. 21 Claims. (Cl. 200—153.)

10. In an electric switch, the combination with cooperating fixed and movable contacts, a mechanism for controlling said contacts, an energy storing means associated with said mechanism rendered operative in response to the movement of said mechanism to switch

opening position for exerting a force on said mechanism in switch closing direction to substantially counterbalance the weight of said mechanism.

- 1,462,341. TRACTOR ATTACHMENT. VICTOR IVARSON, Cleghorn, Iowa, assignor to William F. Hutton, Cherokee, Iowa. Filed Apr. 16, 1920, Serial No. 374,338. Renewed June 11, 1923. 2 Claims. (Cl. 180—77.)

1. In a device for maintaining tractor controlling mechanisms on a trailer, the combination with a seat support for the trailer, a flat and longitudinally curved member which is detachably secured to the seat support, said member having at its forward end an upstanding tubular socket, a member having a post for movable engagement with the socket, said post having at its upper portion apertures for the passage therethrough and the support of tractor controlling rods.

- 1,462,342. ANCHOR. GEORGE H. JAMES, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1921. Serial No. 507,929. 1 Claim. (Cl. 114—208.)

The combination in an anchor of a body formed with a socket having an annular recess in its wall, there being two openings into said socket of which one is circular and the other substantially rectangular in section; a shank having a head movably fitting the socket and including a portion of substantially rectangular section operative in the rectangular opening; with a spring ring in the annular recess normally holding the head in the socket.

- 1,462,343. VENTILATOR. THOMAS A. JENKINS, Jersey City, N. J. Filed Aug. 3, 1921. Serial No. 489,492. 2 Claims. (Cl. 98—31.)

2. A ventilator element for building constructions and the like comprising two opposed complementary sheets

of vitreous material having equally spaced openings, each of said sheets having its outer face provided with integral laterally projecting and depending curved louvers opposing said openings, each of said louvers having its top and sides closed, said louvers extending transversely of the sheets and providing means for directing air through the openings, means connected with the outer face of one of said sheets for shifting it relatively to the other, the portions of said sheets between the louvers being of a width to close the openings of the sheets when one sheet is shifted relatively to the other, and a stationary flat foraminous body interposed between said complementary sheets.

- 1,462,344. GUARD RAIL. AUGUST JOHNSON, Toivola, Minn. Filed May 20, 1922. Serial No. 562,282. 1 Claim. (Cl. 238—19.)

A guard rail having a plate formed integral therewith and at one side thereof and adapted to extend under the main rail and rest upon the ballast between the ties, said plate having a depression in its upper surface adapted to receive the base of the main rail and space the guard rail from the main rail, and said plate extending longitudinally of the guard rail a distance equal to the distance between a pair of ties and adapted to having its side edges about the opposed edges of a pair of ties, to prevent longitudinal movement of the guard rail relative to the main rail.

- 1,462,345. SASH FASTENER. JOHN KALTENBACH, Waterloo, Iowa. Filed July 3, 1922. Serial No. 572,686. 2 Claims. (Cl. 292—63.)

1. The combination of a slide-bolt adapted to be mounted on the lower sash of a window, a plate mounted over a recess in the window-jamb and having longitudinally-aligned opposite holes adjacent both its longitudinal edges respectively in the paths of the lower and upper sashes, a plate mounted on the upper sash of the window having a longitudinal row of sockets in its face over one of said rows of holes, and resiliently-controlled rock-bodies mounted in the jamb-recess and having pins extending into the opposite holes in the plate, said slide-bolt when moved toward said plate pushing outwardly the pin aligned therewith to rock its rock-body and push the other pin on said rock-body into an aligned socket on the plate on the upper sash.

- 1,462,346. PROTECTIVE DEVICE FOR ELECTRICAL APPARATUS. CHARLES HOWARD KLINE, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 16, 1921. Serial No. 445,439. 7 Claims. (Cl. 175—361.)

5. The combination with an encased electrical apparatus having a lead opening in its casing, of a bushing formed with an interior chamber having a perforated

wall, a lead in said bushing adapted for abnormal voltage discharge therefrom to said casing through the per-

foration in the bushing wall, and a spark gap device secured to a wall of said casing and having an electrical discharge connection to ground.

1,462,347. PARTITION SUPPORT AND SURGE PLATE. ANDREW A. KRAMER, Kansas City, Mo. Filed Apr. 14, 1920. Serial No. 373,978. 4 Claims. (Cl. 220—22.)

1. A tank, a pair of parallel transverse frames in the tank mounted in spaced relation, longitudinal surge plates in the tank connected to one of the frames, and to the tank, and a transverse dividing partition co-extensive with the cross sectional area of the tank and mounted between the frames so that the frames will receive any pressure communicated to the partition in either direction, the partition being solely supported by attachment to the tank.

1,462,348. METHOD AND APPARATUS FOR PRODUCING COOL LIGHT. JOSEPH LYONS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 5, 1922. Serial No. 558,601. 8 Claims. (Cl. 88—24.)

1. The method of illuminating a circumscribed region practically without heating the same, which consists in resolving an ordinary beam of light into an assemblage of its elementary constituent rays, diverting the dark heat rays from the assemblage and recombining the remaining rays in the region of illumination.

1,462,349. WIRE-CLOTH-DISPLAY ROLL RACK. CHARLES M. MCCARTHY, Minneapolis, Minn. Filed Sept. 14, 1921. Serial No. 500,598. 4 Claims. (Cl. 211—18.)

4. A wire screen rack having in combination, a frame having a vertical side and a side inclined toward the upper end thereof, said latter side having spaced vertical plates secured thereto, rolls of different lengths extending between said plates and said vertical side and

journaled therein and adapted to carry sheet material, spring pressed means extending over said rolls to retard

rotation thereof, said sheet material being adapted to be pulled outwardly and unrolled from any of said rolls at the sides of the frame.

1,462,350. ELECTRIC STEAM BOILER. WILBUR L. MERRILL and HARRY A. WINNE, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Feb. 15, 1922. Serial No. 536,665. 37 Claims. (Cl. 219—38.)

1. In an electric boiler, a shell, a feed water pipe for supplying water to it, an electrode chamber in the shell above the level of the water therein, one or more electrodes which project into the electrode chamber, a pump for supplying water from the shell to the electrode chamber, and means for regulating the pump to regulate the level of water in the electrode chamber.

1,462,351. ILLUMINATED DISPLAY SIGN. WILLIAM J. MICHELSEN, Chicago, Ill. Filed Jan. 19, 1922. Serial No. 530,281. 4 Claims. (Cl. 40—132.)

4. In an illuminated display sign, a screen composed of a plain sheet of protecting glass, a photographic posi-

tive containing reproductions of printed matter and transparencies and a light diffusing element composed

of a single sheet of glass having both surfaces "etched" by means of acid, substantially as set forth.

1,462,352. SAFETY DISPENSING DEVICE. MAIRIE'S FRANÇOIS MILLOT, Paris, France. Filed Sept. 5, 1919. Serial No. 321,954. 1 Claim. (Cl. 221—74.)

Apparatus for the storage and distribution of inflammable liquids comprising a main storage reservoir, an auxiliary receptacle supplied with liquid from said reservoir, a measuring vessel, a liquid raising column connecting the bottom part of the auxiliary receptacle with the bottom of the measuring vessel, a pipe connecting the top of the auxiliary receptacle with the top of the liquid raising column at a point above the measuring vessel, a three way cock in said pipe, and a flask containing an inert gas under pressure connected to said cock.

1,462,353. MANHOLE DOOR. GEORGE GORDON MUSTED, Partick, Glasgow, Scotland. Filed June 2, 1920. Serial No. 385,983. 3 Claims. (Cl. 220—25.)

1. Manhole and like doors comprising tank or other plating, a door opening therein; a door plate; a "joggle" formed in said door plate concentric with the outer edge of same; a flat elevated rim part and a flat depressed central part in said door plate; a ring plate; a plurality of recesses in the outer surface of said ring plate and near the edge thereof; circular pendant walls, forming said recesses, projecting from said ring plate towards said door plate; bolts secured in said door plate and passing through the pierced bottoms of said recesses; nuts on said bolts located in said recesses; and an operating handle located under said ring plate within the open center part of same.

1,462,354. SPEED CONTROL FOR MACHINE TOOLS AND THE LIKE. BERTRAM S. PERO, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 4, 1921. Serial No. 505,292. 7 Claims. (Cl. 172—240.)

1. The combination with a machine tool or the like and an electric motor for driving the same, of means for automatically increasing and decreasing the speed thereof in accordance with the progress of the work and manually controlled means for changing the periods of increased and decreased motor speed while the machine is in operation.

1,462,355. PRESSING IRON. HERMAN W. PETH, Baltimore, Md. Filed Apr. 19, 1920. Serial No. 374,844. 2 Claims. (Cl. 68—26.)

2. A pressing iron comprising a body having a pressing face formed with a longitudinally extending groove extending throughout the length of the body, the bottom wall of said groove also being provided with a groove the ends of which are spaced from the ends of the body, a strip inserted in the groove in the body and having its upper face provided with a longitudinally extending groove the ends of which are spaced from the ends of the strip, the strip having openings leading from the groove thereof to the under side of the strip, and the groove in the strip with the groove in the body forming a channel, and means for admitting steam to such channel.

1,462,356. BOTTLE RECEPTACLE. THOMAS E. PETTY, Washington, D. C. Filed June 7, 1919. Serial No. 302,387. 1 Claim. (Cl. 232—41.)

A receptacle comprising a cylindrical tubular body having its ends open, a cover closing the upper end of said body, and a plurality of longitudinally extending resilient sheet metal gripping arms forming the only internal obstruction in said body secured to the body and

unconnected to the cover, the upper ends being free and gripping heads located in close proximity to the upper end of the body and being adapted to encircle and grasp the neck of a bottle inserted through the open bottom of said body, said heads being urged inwardly toward the longitudinal axis of said body by the resiliency of the gripping arms and being adapted to automatically release the bottle neck and permit its withdrawal through the top of the body, said body being of substantially the same diameter as the bottle to be gripped in order to prevent any releasing instrument from being inserted between the body and the bottle.

1,462,357. SPEED-CONTROL MECHANISM FOR VEHICLES. HAROLD V. RUDOLPH, Charlottesville, Va., assignor to American Automatic Train Control Corporation, Baltimore, Md., a Corporation of Maryland. Filed Feb. 3, 1920. Serial No. 355,993. 1 Claim. (Cl. 246—181.)

In a train control apparatus the combination with a vehicle having a controlling device, of a current supply on the vehicle; plural pairs of switch contacts and shoe actuating means therefor also on the vehicle; means to effect an operation of the shoe means as the vehicle travels; a normally closed circuit on the vehicle between the vehicle current-supply one pair of switch-contacts and the controlling means; a magnetic circuit-closer and means for retarding its action also on the vehicle; normally-open connections also on the vehicle and including the vehicle current supply another pair of said switch-contacts and the retarded magnetic circuit closer; and means for forming a substitute stick-circuit on the vehicle from the vehicle current-supply through the controlling-device when the said normally open connections are closed.

1,462,358. SPEED-CONTROL MECHANISM FOR VEHICLES. HAROLD V. RUDOLPH, Baltimore, Md., assignor to American Automatic Train Control Corporation, Baltimore, Md., a Corporation of Maryland. Filed May 14, 1921. Serial No. 469,437. 7 Claims. (Cl. 246—180.)

4. In a train control apparatus the combination with a vehicle having a stop device, of a current supply on

the vehicle; means for normally maintaining the stop device from the vehicle current supply; a retarded circuit closer also on the vehicle; connections also on the vehicle for forming a stick-circuit from the vehicle current-supply through the said stop device when the retarded circuit closer has been actuated, and a signal device on the vehicle and operated when the stick circuit is closed.

1,462,359. BANJO TAILPIECE. ERNEST OLIVER WINSHIP and FREDERICK J. BACON, New London, Conn. Filed Mar. 10, 1921. Serial No. 451,114. 9 Claims. (Cl. 84—300.)

1. The combination with a stringed musical instrument having the usual complement of bass and treble strings and the usual bridge over which the strings are stretched, of means exerting inward pressure against the strings rearwardly of the said bridge and in decreasing degree from the treble to the bass side of the complement.

1,462,360. AUTOMOBILE-RADIATOR-REPAIR DEVICE. MAX ANCHELEVICH, Evansville, Ind. Filed July 26, 1921. Serial No. 487,808. 3 Claims. (Cl. 137—76)

1. A leak repair device for automobile radiators of the honeycomb type comprising a pair of oppositely extending telescopic and threadably engaging tapering tubular closure elements for insertion through opposite ends of a radiator tube and adjustable towards and away from each other, each of said elements having its outer end provided with an enlarged head constituting a closure for one end of the tube and each of said elements of less length than the length of the tube.

1,462,361. VAPORIZER FOR LIQUID FUEL. HARRY L. BLACKWOOD, Salem, Oreg. Filed Feb. 11, 1922. Serial No. 535,780. 8 Claims. (Cl. 158—53.)

8. A filler for the generator tubes of liquid fuel burners, consisting of a cylindrical core provided with an integral continuous right hand helical rib and with an integral interrupted left-hand rib, spaces being left between the ends of the interrupted rib portions and the adjacent sides of the continuous rib to afford free passages for the fuel and the vapor, and the ends of the filler being also formed to provide free passages for the same.

1,462,362. GLASSWORKING MOLD. CLYDE C. BOHNER, Chicago, Ill., assignor to General Electric Company, a Corporation of New York. Filed July 14, 1919. Serial No. 310,802. 4 Claims. (Cl. 49—69.)

1. A mold adapted for use in lathe type machines for blowing bulbs from rotating glass tubing and having a cavity which is substantially one-half of a surface of revolution corresponding to the shape of the bulb to be

produced, said cavity extending out more on one side than on the opposite side of a longitudinal axis deter-

mined by the mounting for said mold, and arranged to coincide with the axis of rotation of said glass tubing.

1,462,363. METHOD OF AND APPARATUS FOR MAKING SPRAY FROM LIQUIDS AND COMMINGLING THE SAME WITH GASES. NIELS C. CHRISTENSEN, Salt Lake City, Utah. Filed May 27, 1919. Serial No. 300,185. 10 Claims. (Cl. 261-92.)

1. The method of spraying liquids which consists in revolving a rigid imperforate circular-cylindrical surface dipping slightly into a body of liquid with its axis substantially parallel to the upper surface of said body of liquid, at such a speed about its axis that liquid continuously carried out of said body on said cylindrical surface, is thrown from said surface as a rain of liquid drops forming a substantially continuous fan of spray radiating from said cylindrical surface.

6. In an apparatus for spraying liquid media, the combination of a rigid imperforate circular cylinder arranged to revolve about its axis with said axis in a substantially horizontal position; a container located beneath the cylinder for holding the liquid to be sprayed; means for maintaining the upper surface of the liquid at such level that the cylinder will dip to a slight extent only into the liquid; and means for revolving said cylinder at such a speed that the liquid in the container will be carried up therefrom on the outer surface of the cylinder and will be thrown from said surface as a rain of liquid drops forming a substantially continuous fan of spray radiating from said surface.

10. In an apparatus for securing an intimate mixture of gaseous medium and liquid spray concurrent with a countercurrent flow of said liquid and gaseous medium, which comprises in combination, an elongated rigid imperforate circular-cylinder arranged to revolve about a substantially horizontal axis; a housing for said cylinder, the walls whereof against which the spray is thrown stand substantially parallel to the axis of the cylinder; means for maintaining a body of liquid in the lower portion of the housing at such a level that the cylinder will dip slightly into said body; means for revolving said cylinder at such a speed that liquid will be carried up from the body on the outer surface of the cylinder and will be thrown from said surface as a rain of liquid drops forming a solid fan of spray filling the space within the housing; means for passing a current of gaseous medium through said housing in one direction parallel to the axis of the cylinder; and means for introducing liquid into the housing at one end and removing it at the opposite end so as to cause a flow of liquid through the housing in a direction opposite to the flow of said gaseous medium.

1,462,364. BATTERY-STRAP MOLD. THOMAS E. JONES, Peru, Ind., assignor of one-half to Lloyd M. Stump, Plymouth, Ind. Filed Mar. 1, 1922. Serial No. 540,254. 7 Claims. (Cl. 22-136.)

1. In a molding apparatus, a base having its upper face provided with a channel way formed with undercut walls, mold bodies cooperating one with the other and mounted on said base and further extended into said channel and undercut walls, blocks mounted on the base and extended into said channels and further into said undercut walls and having said bodies interposed therebetween, means carried by one of the blocks for clamping said mold bodies in operative position, and an ingate pivoted on the other of said blocks and movable to and from operative position over said mold bodies.

1,462,365. TRAFFIC SIGNAL. CHARLES F. KELLERMAN, Battle Creek, Mich. Filed Dec. 1, 1921. Serial No. 519,246. 6 Claims. (Cl. 116-50.)

1. A signal of the class described comprising a signaling member having corresponding signal characters on opposite sides thereof, means to project and retract the signal member, and said means serving to operate said member to display one set of signal characters when the member is retracted and to display the second set of signal characters when the member is projected.

1,462,366. SUBMERGED BEARING. HENRY E. KELLOGG, Mountain View, Calif. Filed Nov. 21, 1921. Serial No. 516,581. 7 Claims. (Cl. 64-56.)

1. In combination, a shaft, a cylindrical member slidably mounted thereon to rotate therewith, and carrying outwardly extending spaced flanges, a fixed cylindrical member carrying flanges overlapping and engaging said first mentioned flanges, and a bearing inserted between said fixed and movable members and intermediate said spaced engaging flanges.

- 1,462,367. MACHINE FOR UNITING LOOPED FABRICS. PATRICK P. LA MONTAGNE, Bourbonnais, Ill., assignor, by mesne assignments, to Pope Machine Company, Kankakee, Ill., a Corporation of Illinois. Filed Feb. 17, 1922. Serial No. 537,216. 33 Claims. (Cl. 112—25.)

1. A machine for sewing looped fabrics, including a movable impaling-pin-support, impaling pins thereon, and a hosiery-stripping device normally extending beneath the pins and swingingly mounted for movement in a direction away from the pins while the support is in motion, such swinging movement being effected under abnormal conditions by an article carried by and moving with the pins.

- 1,462,368. TELEPHONE REPEATING SYSTEM. MARIUS LATOUR, Paris, France. Filed Apr. 28, 1923. Serial No. 635,280. 2 Claims. (Cl. 179—170.)

1. In an interurban telephone communication system, a transmission line consisting exclusively of two pairs of speech conductors, each pair including a uni-lateral amplifying repeater, a two-conductor subscriber's line at each extremity of the four-wire interurban line, and means located at the extremities of the pairs of speech conductors and operating concurrently to alternately branch said subscribers' lines to either pair of interurban conductors at a sufficiently high frequency to establish a two-way communication.

- 1,462,369. DANDY ROLL. JAMES HENRY LOWE, Basted, Boro' Green, England. Filed May 2, 1922. Serial No. 557,817. 6 Claims. (Cl. 92—48.)

1. A water mark device for dandy rolls comprising a tablet adapted to carry a water mark and adapted to be fitted to the dandy roll, and two-part detachable fasteners carried by the back of said tablet and said roll whereby to removably attach the tablet to the dandy roll.

- 1,462,370. MILK-BOTTLE HOLDER. WILLIAM H. LYKINS, Sioux City, Iowa. Filed Jan. 28, 1922. Serial No. 532,427. 2 Claims. (Cl. 232—41.)

1. A milk bottle holder comprising a supporting plate, means for securing the plate to a support, said plate provided adjacent its upper end, centrally of its side longi-

tudinal edges with an opening, a bottle supporting member comprising a rectangular plate having its opposite side longitudinal edges bent downwardly at right angles thereto, supporting flanges formed integrally with

said side edges of the top plate, and in spaced relation thereto, retaining and bottle supporting flanges formed integrally with the extreme ends of supporting flanges, and means for securing the bottle supporting member in the opening of the supporting plate.

- 1,462,371. INDICATOR. NEWELL CHANDLER MCCONAHY, Tyrone, Pa. Filed Oct. 19, 1921. Serial No. 508,797. 1 Claim. (Cl. 116—129.)

In an indicator, the combination of a housing provided with an opening; a pointer movably mounted in said housing; a lever pivotally mounted in said housing; a closure plate attached to said lever and normally resting against said housing over its opening; means operated by said lever and adapted to move said pointer; a tubular casing attached to the outside of said housing; a flexible conduit adapted to be removably attached to said casing; and a reciprocable member independently housed in said conduit and said casing and adapted to be protruded into said housing through its opening and impinge against said plate to move said lever.

- 1,462,372. EDGING OR BORDER FINISH. JOSEPH M. MERROW, Hartford, Conn., assignor to The Merrow Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Oct. 8, 1921. Serial No. 506,514. 4 Claims. (Cl. 112—266.)

1. An ornamental border consisting of a strand or thread extending through the material at a distance from the edge thereof several times successively at practically the same point to form the apex of a cluster of loops, and from said point upon one side of the material in divergent looped form to or near the edge thereof, a second strand or thread extending upon the opposite side of the material in divergent looped form from the point of intersection

of the material by the primary thread to or near the edge of the material, the threads being interlocked at both ends of the loops, the points of intersection of the mate-

rial by the clusters of thread or strand loops being spaced at intervals, and one of the strands or threads extending substantially parallel with the edge of the material between the said points of intersection.

1,462,373. EDGING OR BORDER FINISH. JOSEPH M. MERROW, Hartford, Conn., assignor to The Merrow Machine Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 8, 1922. Serial No. 535,017. 4 Claims. (Cl. 112—269.)

1. An ornamental border for a straight edge margin comprising a plurality of threads interlooped against said straight edge, one of said threads penetrating the material for a plurality of stitches at each of a series of points spaced from the margin, thus forming a succession of clusters, the loops of each cluster radiating from one of said points to said straight edge.

1,462,374. CONCRETE BLOCK. LEO VINCENT METZ, Erie, Pa. Filed Mar. 16, 1922. Serial No. 544,119. 4 Claims. (Cl. 72—38.)

1. A concrete block comprising a body portion formed with a lengthwise opening and transverse groove at one end intersecting said opening, the upper and lower walls of said groove having curved portions forming continuations of the wall of said opening, said body portion further having its other end formed with a transversely extending split tongue conforming in contour to the contour of said transverse groove and with the inner side of each

section of the tongue shaped to form a continuation of the wall of said opening, one of the sections of said split tongue projecting beyond one side of the body portion, said body portion further having one of its sides formed with a longitudinally extending tongue having one end integral with one of the sections of the transverse tongue and its

other end provided with a projection positioned at one end of the transverse groove, said body portion having at its other side a longitudinal groove conforming in contour to the shape of the longitudinal tongue and further formed with a projection at that end provided with a transverse groove, and said transverse tongues being undercut for seating on said projection.

1,462,375. PROCESS OF PREPARING CHEESE. GOTTFRIED MEYER, Verdale, Minn. Filed July 18, 1922. Serial No. 575,764. 3 Claims. (Cl. 99—11.)

3. The herein described process of preparing cheese which consists of comminuting already prepared cheese as a base, then adding natural milk thereto, then gradually heating the mass and constantly stirring the same until the product assumes a stringy, dough-like or elastic condition, and working the product by pulling until it assumes the proper consistency, then placing the product in cans which are sealed airtight and sterilized.

1,462,376. VANITY CASE. BENNIE F. OSTROWSKI, San Jose, Calif. Filed Jan. 25, 1923. Serial No. 614,861. 6 Claims. (Cl. 132—79.)

1. A vanity case comprising a body portion forming a receptacle, said receptacle having an orifice formed in one end thereof, a comb arranged in said receptacle and passing through said orifice, means for normally securing said comb in said receptacle, and means for partially ejecting said comb when said securing means is moved to an inoperative position.

1,462,377. PIPE CLAMP AND WRENCH. JOHN A. PAINTER, Hominy, Okla., and HARVEY GLENN McCULLOUGH, Angola, N. Y. Filed Mar. 24, 1922. Serial No. 546,226. 4 Claims. (Cl. 81—54.)

1. A device for the purpose set forth comprising a revoluble hollow annular body portion formed of a pair of sections hingedly connected at one end and detachably connected together at their other end, each of said body sections having the major portion of its inner face eccentrically disposed with respect to its outer face and formed with an inwardly extending

abutment at its hinged end, oppositely disposed segment shaped toothed gripping members each slidably positioned against the eccentric portion of the inner face of each section and normally positioned against an

abutment, a bolt and slot connection between each gripping member and a body section intermediate the ends thereof, and means for detachably connecting one end of a gripping member to a body section when the other gripping member is active.

1,462,378. MACHINE FOR UNITING LOOPED FABRICS. EDISON E. RANDALL, Kankakee, Ill., assignor, by mesne assignments, to Pope Machine Company, Kankakee, Ill., a Corporation of Illinois. Filed Feb. 27, 1922. Serial No. 539,700. 31 Claims. (Cl. 112—252.)

1. A machine for sewing looped fabrics, including a movable impaling pin support, impaling pins arranged thereon and traveling therewith, stitch-forming mechanism for securing together the impaled fabric loops by forming a line or chain of stitches therein and above the impaling pins, continuously-operated chain raising and severing mechanism juxtaposed to the path of travel of the pins, and a chain-curling device associated with said mechanism.

1,462,379. ROLLER BEARING. TURE GUSTAF RENNERTFELT, Stockholm, Sweden. Filed Apr. 15, 1922. Serial No. 553,061. 10 Claims. (Cl. 64—50.)

1. The combination of a shaft, a flange thereon, another flange threaded on the shaft, two racers rotatably mounted on the shaft between the flanges, a yoke journaled on the shaft, a plurality of rollers mounted in the yoke in contact with the racers, and a lid fastened to the yoke in contact with the end surface of a roller.

1,462,380. ELECTRIC HEATER. EARL H. RICHARDSON, Ontario, Calif., assignor, by mesne assignments, to Majestic Electric Development Company, a Corporation of California. Filed Apr. 2, 1920. Serial No. 370,734. 6 Claims. (Cl. 219—34.)

1. An electric heater comprising a concave reflector having an axial opening therethrough, a support at the rear of the opening and a heating unit within the reflector and carried by said support, the part passing through the opening being spaced from the reflector.

1,462,381. WATERPROOFING COMPOSITION. ALBERT SCHMIDT, Paris, France. Filed Oct. 31, 1922. Serial No. 598,199. 1 Claim. (Cl. 134—15.)
A waterproofing composition comprising chlorinated mineral wax and turpentine as a solvent thereof.

1,462,382. GRIPPING DEVICE FOR LIFTS AND THE LIKE. PAUL SCHÖNFELD, Bochum-Weitmar, Germany. Filed Aug. 24, 1921. Serial No. 494,962. 9 Claims. (Cl. 187—86.)

5. In a gripping device for lifts in combination, a cage, a grip jaw connected with said cage, a wooden rail adapted to be gripped by said jaw, a plurality of superposed cutting teeth on said jaw spaced apart so as to allow chips of wood to pass between them, a projection on said jaw and a stop on said car adapted to cooperate with said projection in limiting the gripping motion of said jaw.

1,462,383. RESILIENT TRANSMISSION. BENJAMIN F. SEYMOUR, Washington, D. C. Filed June 7, 1919. Serial No. 302,413. 4 Claims. (Cl. 64—100.)

1. In a resilient shaft transmission, the combination of a driving element, a driven element, a spring asso-

ciated with one of said elements, oppositely adjustable collars for tensioning the spring, and means connected

with the other of said elements for actuating said adjustable collars, substantially as set forth.

1,462,384. COMBINED RESILIENT BEARING AND TRANSMISSION. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Nov. 8, 1919. Serial No. 336,632. 6 Claims. (Cl. 152-45.)

1. In a combined resilient transmission and bearing for vehicle wheels the combination of a hub portion, a wheel rim mounted in bearing relation to the hub adapted to have limited radial movement thereon, a ring mounted to have axial movement on the rim and provided with wedge elements fixedly mounted, wedge elements on the hub co-operable with said ring wedge elements, and resilient means normally holding said wedge elements in co-operative relation, substantially as set forth.

1,462,385. COMBINED RESILIENT BEARING AND TRANSMISSION. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Dec. 3, 1919. Serial No. 342,285. 8 Claims. (Cl. 152-45.)

1. In a combined resilient transmission and bearing for vehicle wheels the combination of a hub portion, a wheel rim mounted to have limited radial movement thereon, a plurality of members having wedge elements

mounted on the wheel rim, fixed and movable wedge elements on the hub co-operable with said rim wedge elements, and resilient means normally holding said wedge elements in co-operative relation, substantially as set forth.

1,462,386. COMBINED RESILIENT BEARING AND TRANSMISSION. BENJAMIN F. SEYMOUR, Washington, D. C. Filed Dec. 3, 1919. Serial No. 342,286. 3 Claims. (Cl. 152-45.)

1. In a combined resilient transmission and bearing for vehicle wheels, the combination of a hub portion having side plates, a wheel rim mounted to have limited radial movement between said side plates, said rim provided with a plurality of centrally disposed flanges disposed in bearing relation against one of said side plates; a collar axially movable on the hub, complementary recesses formed in said flanges and the collar, anti-friction bearings fitting in said recesses, and tensioning means associated with said collar and the rim, substantially as set forth.

1,462,387. STRAW SPREADER FOR HARVESTING AND THRASHING MACHINES. BUDD E. SLADE, Cozad, Nebr. Filed June 26, 1922. Serial No. 570,809. 2 Claims. (Cl. 275-8.)

1. A straw spreader having a main frame provided with means for attachment to a harvester, a sub-frame mounted upon the main frame for adjustment longitudinally of the path of progress of the harvester and carrying a distributing platform for receiving the discharge from the thresher mechanism, opposed rotary fans mounted to traverse the surface of the platform, and means actuable by the harvester for communicating rotary motion to the fans.

1,462,388. IRON SPOOL FOR WIRE CABLES OF OIL WELLS. ELLSWORTH F. SMITH, Denver, Colo. Filed Sept. 26, 1921. Serial No. 503,293. 2 Claims. (Cl. 242-117.)

1. A metal spool comprising a drum having a bore for ready reception of a shaft, a head integrally secured to each end of the drum, and a pulley integrally secured to one head for the reception of a rope or belt, said

pulley having a diameter sufficiently smaller than the diameter of the head that said head will serve as a guide for the rope or belt and will prevent the same from

riding up on the periphery of said head, the pulley itself being one-sided, the side of the respective head serving as the other side of the pulley.

1,462,389. GARMENT SUPPORT. MAX SONNENFELD, New York, N. Y. Filed Dec. 30, 1920. Serial No. 433,970. 9 Claims. (Cl. 241-6.)

1. A garment support comprising a web having ends, one end formed into a closed loop consisting of the web and the other end provided with a fastening device adapted to be threaded through said loop and provide a projecting portion and means associated with the loop and web for adjustably securing said loop to the web in definite relation and for adjusting the length of the projecting portion.

1,462,390. SELF-SERVICE-STORE DIRECTORY. OLAF STAVIG, Seattle, Wash. Filed May 25, 1922. Serial No. 563,563. 6 Claims. (Cl. 40-64.)

1. A sign of the class described consisting of a frame, a transverse rail on said frame, a sign board insertable into said frame, fastening means on the sign board to engage said rail, a closure bar below said rail, and said closure bar and rail being spaced apart to permit access to said fastening means for operation.

1,462,391. BRAKE BLOCK. ROBERT J. STOKES, Trenton, N. J., assignor to Thermoid Rubber Company, Hamilton Township, N. J., a Corporation of New Jersey. Filed July 7, 1921. Serial No. 482,991. 3 Claims. (Cl. 188-250.)

2. A curved bearing block consisting of layers of asbestos fabric and a vulcanizable binder, the face of the block having tapered, parallel grooves, the fabric, at and near the face of the block, being cut to expose the ends thereof at the grooves.

1,462,392. ELECTRIC HEATER. ERVE C. STRICKLAND, San Jose, Calif. Filed Feb. 9, 1922. Serial No. 535,344. 1 Claim. (Cl. 219-22.)

A device of the character indicated comprising a stand of heat conducting material having a closed top and ventilating means arranged in the upper part of its side portions, a plurality of tubular elements arranged in a horizontal plane within said stand, each tube having an open end communicating with the front of said stand whereby to receive pleating irons, and heating elements wound around said tubes and operatively arranged in an electrical circuit, the front of said stand extending a distance above the top thereof and having a plurality of notches formed therein adapted to receive and support the handle end of the pleating irons when not in use or in said tubes.

1,462,393. FURNACE GRATE. ROBERT E. STURMAN, Delano, Minn. Original application filed July 18, 1917, Serial No. 175,384. Divided and this application filed Jan. 29, 1919. Serial No. 273,910. 5 Claims. (Cl. 126-176.)

1. A rocking bar grate comprising a plurality of tapered grate bars provided at their ends with trunnions, fixed means for supporting said grate bars in radial arrangement, upstanding lugs formed on the innermost trunnions of said grate bars and an oscillatory head journaled in said supporting means having means adapted to engage said upstanding lugs to rock the grate bars.

1,462,394. DUST CAP. GEORGE W. TERRY, Nashville, Tenn. Filed Nov. 11, 1922. Serial No. 600,312. 8 Claims. (Cl. 152—12.)

1. In combination with a felly, a valve stem, a washer supported on said felly and having grooves formed in one face, a dust cap, and a spring permanently attached to said dust cap adapted to seat in one of said grooves.

1,462,395. CONSTRUCTION OF SPRAYING NOZZLES OR ATOMIZERS. HERBERT ALEXANDER THOMPSON, North Shields, England, assignor of one-half to Smith's Dock Company Limited, South Shields, England, a Corporation of Great Britain. Filed June 12, 1922. Serial No. 567,653. 15 Claims. (Cl. 158—76.)

1. A spraying nozzle or atomizer for use in dealing with liquid fuel for combustion purposes comprising the combination of a central outlet chamber, two annular supply chambers disposed coaxially, tangential discharge passages leading in converging directions from said annular supply chambers into said outlet chamber so that the jets of discharged fluid meet in said outlet chamber.

1,462,396. PORCELAIN. CHESTER C. TREISCHER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 8, 1921. Serial No. 476,084. 3 Claims. (Cl. 106—11.)

1. A raw batch for a porcelain mix comprising beryl as a component.

1,462,397. CALCULATING MACHINE. FRANZ TRINKS, Brunswick, Germany. Filed Aug. 2, 1920. Serial No. 400,833. 5 Claims. (Cl. 235—73.)

1. In a calculating machine, the combination with the setting mechanism, of a registering mechanism and its numeral wheels provided each with two series of num-

bers disposed in opposite order and displaced from each other, and a plurality of displaying means adapted for conjoint cooperation with all the numeral wheels and for independent cooperation with a part of said numeral wheels.

1,462,398. AUTO APPLIANCE. PAUL E. VAN NOSTRAND, Lyons, Nebr. Filed Oct. 24, 1921. Serial No. 509,813. 1 Claim. (Cl. 240—1.)

In a device for the purpose set forth, the combination of an adjustable and extensible handle, comprising two portions; one of which is provided with a longitudinal central bore that extends from one end to a point slightly beyond the longitudinal center thereof; and the other of said portions being adapted to enter the bore of the first portion, a ferrule surrounding one end of the second portion, and a comparatively short portion of the second portion extending slightly beyond the ferrule, brackets secured on the comparatively short portion, illuminating means secured in the brackets, a yoke formed integral on one end of the arm, and a mirror adjustably secured in the yoke and adapted to be positioned at various angles with respect to the handle portions, arm and illuminating means.

1,462,399. TRAP. NORMAN V. WALLIS, San Antonio, Tex. Filed Oct. 16, 1922. Serial No. 594,807. 6 Claims. (Cl. 43—05.)

1. A trap comprising a cage having a yieldable side wall formed of two sections disposed in spaced planes, having an entrance opening between them through which the prey may enter by springing one section away from the other section, the edge of the latter along said entrance opening being provided with a stiffening bar, and an inwardly extending flange carried by said bar and extending in spaced relation to the inner side edge of the other section.

1,462,400. COMB AND BRUSH. ALICE N. WARREN, Reno, Nev. Filed Apr. 22, 1922. Serial No. 556,125. 3 Claims. (Cl. 15—155.)

1. A vacuum brush or the like, comprising a body portion and a plurality of tubular teeth carried by the body portion and communicating therewith, each of the teeth being provided near their outer end with oppositely disposed and upwardly converging openings.

1,462,401. REEL FOR CINEMATOGRAPH FILM AND THE LIKE. EDWARD JOHN WAY, Johannesburg, Transvaal, South Africa, assignor to Bioscope Improvements Limited, Johannesburg, Transvaal Province, South Africa, a Company of the Transvaal Province. Filed Sept. 14, 1922. Serial No. 588,257. 3 Claims. (Cl. 242—74.)

1. A reel for cinematograph film and the like consisting of two cheeks, core segments mounted for radial movement on one cheek, a cone on the other cheek adapted to enter and expand said core, and co-acting parts on the cheeks locking the same for rotational movement and also against axial separation, said parts being arranged thus to co-act upon relative rotational movement of the cheeks after the core has been fully expanded by the cone.

1,462,402. RAILWAY-FREIGHT-CAR DOOR. CHARLES E. WEBSTER, Winthrop, Minn. Filed July 20, 1922. Serial No. 576,317. 9 Claims. (Cl. 20—30.)

1. A collapsible closure including a plurality of disconnected boards arranged in vertical alinement with their longitudinal edges in abutting relation, the outer ends of these boards bearing against the car body, and a sustaining member cooperable with the opposite ends of the boards, said member having a retractable retainer co-operating with the lowermost boards to permit removal thereof when it is desired to discharge the grain from the car, whereby to permit collapsing of the entire structure.

1,462,403. AUTOMOBILE RADIATOR ATTACHMENT. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 18, 1920. Serial No. 411,255. 20 Claims. (Cl. 70—90.)

13. An automobile radiator attachment comprising a rotatable cap, a bushing rotatably mounted therein,

means frictionally engaging said members to restrain them against relative rotation, said bushing being equipped with means for effecting its attachment to a suitable mounting by rotary movement, and manipulative means housed by the cap for engaging the bushing to permit rotation thereof by the cap.

1,462,404. THEFT-PREVENTING DEVICE. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1920. Serial No. 419,402. 13 Claims. (Cl. 70—90.)

6. In a theft preventing device, the combination of a retaining member adapted for connection with a suitable mounting by rotary movement, an operating member housing the retaining member and rotatably mounted thereon, and a connecting member protectively housed by the operating member for engagement with the retaining member to permit rotation of the latter by the operating member, said operating member including a concealed portion effective to lock the connecting member out of engagement with the retaining member.

1,462,405. THEFT-PREVENTING DEVICE. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 29, 1920. Serial No. 420,549. 19 Claims. (Cl. 70—90.)

11. In an automobile radiator closure, the combination with a nipple of a cap adapted to form a closure therefor, said cap having symmetrically arranged laterally extending arms whereby it may be rotated on the nipple, and engaging means for securing the cap to the nipple, said engaging means including a lock member housed in one of said arms and an operating member engageable at the outer extremity of said arm for operating said lock member.

1,462,406. COUPLING. JOSEPH ZAJIC, Jersey City, N. J. Filed Feb. 3, 1922. Serial No. 533,892. 3 Claims. (Cl. 24—126.)

1. A coupling of the class described including tapered coupling ends, means connecting the ends with each other and clamp rings on said ends, the said ends being tapered externally and the clamp rings having a corresponding taper and said ends having axial bores for the passage of elements to be coupled from the outer ends through the

said bores to the inner ends, the opposed bases of said ends being separated to present a clearance space per-

mitting of the elements to be coupled being return bent on to the tapered exterior of said ends to extend through the clamping ring.

1,462,407. DISPENSING AND MEASURING DEVICE. OSCAR HAUENSTEIN, Uniontown, Pa. Filed July 27, 1922. Serial No. 577,953. 4 Claims. (Cl. 226—47.)

1. A dispensing and measuring device comprising a container having a spout extension open at its outer end, an open ended measure having its side provided with a longitudinally extending inlet opening, and means for slidably and pivotally connecting said measure with the outer end portion of the spout of said container.

1,462,408. RAILWAY CROSSING. JAMES PAUL HOUK, Mountain Grove, Mo. Filed Jan. 24, 1923. Serial No. 614,712. 8 Claims. (Cl. 246—273.)

1. A railway crossing of the character described comprising pairs of spaced apart rails lying in planes intersecting at right angles, each of said rails comprising fixed aligned rail sections terminating short of each other at the intersection of the plane of said rail with the plane of one of the rails disposed at right angles thereto, a substantially T-shaped bridge member associated with each of said rails, spring means acting on said bridge member continuously to urge the body of the latter into position to close the gap between adjacent ends of adjacent fixed sections of the rail and the head

of the bridge member against the intersecting rail, said head being adapted to be actuated by the flange of a car

wheel traversing the intersecting rail and moved out of position to close the gap between said fixed rail sections.

1,462,409. LATHE CENTER. DE WITT E. HOWARD, Ridgewood, N. J. Filed Feb. 25, 1922. Serial No. 539,246. 4 Claims. (Cl. 82—33.)

1. A lathe center of the class described, comprising a hollow body, a raceway ring tightly mounted in said body, a work receiving spindle having a raceway ring tightly mounted thereon, a plurality of ball bearings interposed between said raceway rings for rotatably mounting the work receiving spindle in the body, means carried by the work receiving spindle for protecting the raceway and body, and a plurality of screws projecting through the body wall and engaging with the outer raceway ring to serve as a means for forcing said ring out of the body.

1,462,410. AEROPLANE. LYLE JACOBY, Paris, Ky. Filed Oct. 27, 1922. Serial No. 597,414. 3 Claims. (Cl. 244—12.)

1. An aeroplane construction comprising a supporting plane, a plurality of uprights carried thereby, said uprights being preferably four in number and two arranged at the rear end of the supporting plane and two at the forward end thereof, a plurality of collars carried by each of said uprights and freely slidable thereon, a plurality of planes superposed with relation to each other and arranged longitudinally of said aeroplane, said planes being disposed between the pair of posts occurring at the rear end of the aeroplane and also between the pair of posts occurring at the forward end of the aero-

plane, connecting means between the collars and planes adapted to permit the similar ends of the planes to be

adjusted with respect to each other and combined push rod and lever means operable from the aeroplane whereby the planes may be adjusted.

1,462,411. REEL. LANE JOHNSON, Ingram, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,488. 12 Claims. (Cl. 242—78.)

1. In a reel, a supporting frame, and a plurality of strip guiding devices forming a substantially enclosed circular unobstructed coiling space and adapted to co-operate with a strip fed to said reel and form the same into a series of superimposed convolutions, said guiding devices being movable outwardly under the action of the material being coiled, substantially as described.

1,462,412. COMPASSES. UNO JOHNSON, Brooklyn, N. Y. Filed Dec. 21, 1921. Serial No. 523,969. 10 Claims. (Cl. 33—148.)

1. A compass including a plurality of legs movable with respect to each other, one of said legs being hollow,

a scale associated with said leg, and means associated with said hollow leg and actuated upon said legs being

moved with respect to each other for registering the movement of one of said legs with respect to the second of the same.

1,462,413. COMBINATION FAUCET AND MIXING NOZZLE. SAMUEL KERSTEN, Chicago, Ill. Filed Mar. 24, 1921. Serial No. 455,210. 4 Claims. (Cl. 277—18.)

1. A mixing faucet comprising a body having upper and lower intakes and an outlet, left and right hand valves, separated outer passages extending downwardly around the lower intake along opposite outer lateral walls of the body from the outlet sides of the valve ports to the body outlet, inner passages in the body connecting the intake sides of the valve ports with the upper and lower body intakes, and suitable inner walls separating the inner and outer passages.

1,462,414. TRACTOR HITCH. MADISON MONROE KNOWLES and JAMES NICHOLAS BATES, Fort Branch, Ind. Filed July 1, 1922. Serial No. 572,130. 11 Claims. (Cl. 280—33.44.)

1. In a tractor hitch, a hitch device, means to dispose the same on a tongue at a side thereof for a side

draft connection, a brace pivotally secured to said hitch device, and guide means in which said brace may have

movement with the lateral swinging of the hitch device, said guide means including means to mount the same.

1,462,415. APPARATUS FOR CLEANING THE OUTSIDE OF BOILER TUBES. FRITZ KOBER, Subl, Germany. Filed Mar. 22, 1921. Serial No. 454,498. 2 Claims. (Cl. 15—104.04.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An apparatus for cleaning the exterior of boiler tubes, comprising a portable operating mechanism, and an endless band or chain having cleaning tools and operated by said mechanism, said band or chain being adapted to be passed around the tube to be cleaned.

1,462,416. FLYCATCHER. LYLE CHAS. McDERMOTT, Pocatello, Idaho. Filed Sept. 3, 1921. Serial No. 498,233. 6 Claims. (Cl. 43—134.)

1. In a fly catcher, a frame having its sides made up of elastic strips arranged in parallel relation a distance apart less than sufficient to provide the entrance of a fly therebetween, as and for the purpose set forth.

1,462,417. DUMPING BODY. WILLIAM H. MAHLOW, Trenton, N. J. Filed Apr. 25, 1922. Serial No. 556,437. 4 Claims. (Cl. 298—11.)

1. A dumping body including a support, a body positioned upon said support, and means for elevating the opposite ends of the body to different levels comprising elevating cables engaging opposite ends of the body, said body being provided adjacent one end with arms projecting below the bottom of the body to the lower ends of which arms are connected the cables engaging that end of the body, means connected to the inner ends of all the cables for retracting the cables, and guiding means for said cables including standards secured to said support and arranged adjacent to the ends of said body, and pulleys on said standards near the tops thereof over which said cables are passed.

1,462,418. WASHER FOR CLASSIFYING COAL, MINERALS, OR THE LIKE. LUCIEN MALÉCOT, Grand Croix, France. Filed Mar. 8, 1922. Serial No. 542,069. 4 Claims. (Cl. 83—82.)

1. Apparatus for separating and grading mineral substances, comprising an approximately horizontal water conveying conduit, a vertical conduit connected at its lower end to said horizontal conduit through which said water flows upwardly for effecting the final separation of said substances, a hopper containing substantially stationary water connected to the upper end of said vertical conduit, and a slightly sloping conduit through which water carrying the substances to be separated flows, said sloping conduit having a passageway to said hopper, at which passageway the preliminary separation of said substances is effected.

1,462,419. PICTURE-RETAINING DEVICE FOR PICTURE FRAMES. CARL MANDEL, San Francisco, Calif. Filed July 7, 1922. Serial No. 573,349. 3 Claims. (Cl. 40—156.)

1. In a device of the character described, the combination with a frame, of pivoted arms secured to said frame, and lugs formed on said arms, said lugs being adapted to retain the free end of the next adjacent arm when said arms are moved into a position parallel to each other.

1,462,420. GRINDING MACHINE. ERIK W. MIKAELSON and ANDREW A. NEAVE, Easton, Pa., assignors to Treadwell Engineering Company, a Corporation of Pennsylvania. Filed June 27, 1919. Serial No. 307,083. 15 Claims. (Cl. 51—89.)

1. In a grinder, a motor, a grinding wheel driven thereby, a main body carrying said motor at one end and said grinding wheel at the opposite end, and wheeled supporting means directly carried by said main body intermediate the grinding wheel and the motor, said motor and grinding wheel being substantially in balance relatively to said supporting means whereby the operator adjacent the grinding wheel end can readily manipulate the grinder over the work.

1,462,421. ELECTROLYTIC TREATMENT OF METALLIFEROUS MATERIALS CONTAINING METALS OF THE CHROMIUM GROUP. RICHARD EDGAR PEARSON, London, and EUSTACE NEVILLE CRAIG, Ham Common, England, assignors to Metal Patents Limited, London, England, a British Company. Filed June 1, 1922. Serial No. 565,209. 17 Claims. (Cl. 204—15.)

1. A process for concentrating metalliferous material containing a "chromium-group" metal, which process consists in surrounding an anode with said metalliferous material and with an electrolyte in which the mate-

rial is insoluble but in which the anode products to be isolated are soluble, and passing a current from the anode into the electrolyte.

1,462,422. HOISTING AND LOWERING COLLAPSIBLE LIFEBOATS. GIOVANNI RINESI, Genoa, Italy. Filed May 28, 1921. Serial No. 473,304. 4 Claims. (Cl. 9—23.)

1. The combination of a collapsible lifeboat including a solid lower structure, a gunwale, flexible extensible side portions between the lower structure and the gunwale, of spaced parallel tracks mounted fore and aft of the boat, foldable link supporting structures mounted on the lower solid structure, weighted hooks pivotally supported in the outer ends of the link structures and adapted for engagement with tackles of a ship, rollers mounted on the link structures for association with the track whereby when the life-boat is moved outwardly for lowering into the water the weight of the lower structure will effect extension of the foldable link structure while the engagement of the rollers with the track will effect an extension of the collapsible sides of the boat simultaneously therewith.

1,462,423. CORSET. PHILIP H. ROBBINS, New York, N. Y., assignor to Poirette Corsets, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 8, 1922. Serial No. 542,043. 4 Claims. (Cl. 2—73.)

4. A corset including alternate elastic and non-elastic panels, the outer panels slit part way from the upper edge, and elastic members secured to said slit edges and extending in opposite directions around the figure both back and front, the alternate elastic and non-elastic panels forming two complete circles.

- 1,462,424. PROPELLER SCREW. JAMES SAMETZ, New York, N. Y. Filed Jan. 24, 1922. Serial No. 531,421. 1 Claim. (Cl. 170—187.)

A propeller comprising a hub, spaced pairs of spokes radiating therefrom and arranged at diametrically opposite sides of the hub, the spokes of each pair being diametrically disposed with relation to the hub, a blade supported by each pair of spokes and each blade being elongated horizontally and twisted longitudinally, with the blades extending in relatively opposite directions.

- 1,462,425. SMOKING-PIPE ATTACHMENT. JOHN T. SHAW, Jonesboro, Ark., assignor of one-half to H. W. Applegate, Jonesboro, Ark. Filed Aug. 31, 1920. Serial No. 407,152. 1 Claim. (Cl. 131—12.)

A smoking pipe attachment comprising a circular grate like member adapted for disposition within the bowl of a pipe near the bottom thereof, an upstanding support carried by the grate like member and terminating in a split ring frictionally engaging within the bowl of the pipe.

- 1,462,426. RIM. EMIL O. STEEBER, Flagstone, British Columbia, Canada. Filed Aug. 2, 1922. Serial No. 579,207. 2 Claims. (Cl. 152—32.)

2. A wheel of the class described comprising an inner rim having notches therein, an outer rim, springs placed between the rims and having their inner ends engaging the notches, a sectional flanged ring engaging the inner rim for holding the springs in the notches, bolts for holding said sectional ring to the inner rim and bolts for fastening said sectional ring to the wheel to hold the inner rim on the wheel.

312 O. G.—40

- 1,462,427. LEER CONVEYER. WALTER R. STERRETT, Carnegie, Pa., assignor to H. L. Dixon Company, Carnegie, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1921. Serial No. 453,457. 12 Claims. (Cl. 198—195.)

1. A leer conveyer having pans which are formed in separate transverse sections, and a common supporting chain to which the inner end of each pan section is connected, substantially as described.

- 1,462,428. SNAPPED-CORN SEPARATOR. FRANK J. TEMPLE, Decatur, Ill., assignor to Union Iron Works, Decatur, Ill., a Corporation of Illinois. Filed July 17, 1919. Serial No. 311,640. 2 Claims. (Cl. 130—22.)

2. In a separator of the character described, in combination, a cylindrical grate including an annular row of closely spaced rods, an enclosing casing for said grate closely spaced from the rods to provide a passage therearound, a trough below the grate and in communication with the closure for the grate, a conveyor in said trough, means to operate said conveyor, a hopper inlet above one end of said grate and in communication therewith and having air inlet openings in one wall, a spiral feeder below the hopper and within the grate, a plurality of spaced beaters within the grate, in spiral arrangement, and extending uninterruptedly from the feeder to the discharge end of the grate, a fan casing at the discharge end of the grate, a fan in said casing, means to operate said feeder and beaters, and means to operate said fan.

- 1,462,429. ADJUSTABLE COMBINATION STOP-ACTION FOR ORGANS. EDMOND VERLINDEN, Milwaukee, Wis. Filed May 11, 1921. Serial No. 468,468. 4 Claims. (Cl. 84—345.)

3. In an adjustable combination stop-action for organs, the combination of a trace rod, a trigger pivotally mounted on said rod, a spring for holding said trigger in either "on" or "off" position, means distinct from said spring for limiting the swinging movement of said trigger, a stop key, and means operatively connected to said stop key to operate upon or be operated by said trigger.

1,462,430. SPIRIT LEVEL. PAUL HERMAN VOGEL, New Britain, Conn. Filed May 12, 1921. Serial No. 469,018. 9 Claims. (Cl. 33—213.)

1. In a spirit level, the combination of a beam or body having tube openings, with a sectional container for each opening, comprising mating sections, each section being adapted to support a spirit tube, and means cooperating with the sections to adjustably secure the sections on the body, each section adapted to be adjusted independently of the other.

1,462,431. ELECTRICALLY-HEATED TOOL. EDWARD A. WAGNER, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Dec. 5, 1921. Serial No. 519,876. 8 Claims. (Cl. 219—26.)

1. An electrically heated tool comprising a rod having a portion at one end adapted to generate heat, and a heated body secured in engagement with said portion so as to be included with said rod in an electric heating circuit and be heated by conduction from said portion.

1,462,432. TIRE PUMP. PETAR WAJDIC, Pleasant Unity, Pa. Filed Dec. 17, 1921. Serial No. 523,037. 3 Claims. (Cl. 230—27.)

1. A pump of the type described comprising an annular supporting member, pump cylinders within said annular member, brackets rigidly connecting said pump cylinders at their outer ends with said annular member, a piston in each cylinder, a connecting rod between the pistons, an offset portion formed in said piston connecting rod, a brace arm rigidly connecting said cylinders at their inner ends, said brackets and brace cooperating for holding said cylinders in alignment, and means to reciprocate said pistons, said means including a crank shaft journaled in said brace arm, crank arm carried by the inner end of said crank shaft, and a link connection between said crank arm and the piston connecting rod, said offset portion in the piston connecting rod being provided to afford clearance for said crank arm.

1,462,433. MAGNETIC SUSPENSION. HENRY E. WARREN, Ashland, Mass., assignor to General Electric Company, a Corporation of New York. Filed Jan. 18, 1921. Serial No. 438,224. 2 Claims. (Cl. 64—10.)

2. A magnetic suspension for shafts comprising a vertically disposed shaft of magnetic material, an upper bearing

for said shaft, a support for said bearing having a horizontally disposed opening therein above said shaft,

and a permanent magnet in the form of a nearly closed ring having its lower portion adjustably secured in said opening.

1,462,434. MAGAZINE RACK. ADA B. WENDEL, Smithland, Iowa. Filed Mar. 6, 1922. Serial No. 541,544. 1 Claim. (Cl. 211—20.)

A receptacle for use in connection with an endless display rack comprising a bottom, vertical sides and ends rising from the bottom to form an open-topped box, a vertical longitudinal central wall rising from the bottom and connected to the end walls and dividing the box into two compartments, said central wall rising to a distance above the side and end walls, straps secured to and straddling the upper edge of the central wall for suspending the receptacle on a support, and article retaining bars extending longitudinally of the box on each side of the central wall and bearing thereagainst, the ends of the bars being formed with spring coils and secured to the end walls of the box exteriorly thereof.

1,462,435. PILE LIFTER. CHARLES L. WEST, Franklin, N. C. Filed Sept. 13, 1922. Serial No. 588,051. 2 Claims. (Cl. 294—83.)

1. A reinforced concrete pile lifter having a lifting bar for arrangement in contact with the upper end of the pile and provided with means for engaging the same, and a hoisting ring or hook connected with said bar at an intermediate point for engagement by the hook of a hoisting cable, the lifting bar being provided with openings for the reception of the extended terminals of the pile reinforcing rods, and means provided for holding said bar in engagement with the rods.

- 1,462,436. ICE BOX FOR REFRIGERATORS. EMIL WOERTH, Hamilton Beach, N. Y. Filed July 8, 1922. Serial No. 573,563. 3 Claims. (Cl. 62-68.)

1. In an ice box for refrigerators, the combination of a shell comprising inner and outer walls with a space for ice between them and a bottom wall, perforated partitions in the space between the walls and forming compartments to contain salt to impregnate the lower water and ice, and a drain for said shell.

- 1,462,437. GEAR PULLER. ADAM F. YOUNG, San Jose, Calif. Filed Feb. 9, 1922. Serial No. 535,289. 1 Claim. (Cl. 29-85.)

A pulling device comprising a screw, a bar slidably mounted thereon, opposed clamps pivotally mounted on said bar, and having notches formed in the outer edges of their free ends, a threaded element engaging said screw, opposed slotted links pivotally mounted on said element and engageable with the notches in said clamps, each clamp passing through the slot in the link in engagement therewith.

- 1,462,438. CAP. GROVER C. APPLE, Greensboro, N. C. Filed Nov. 29, 1921. Serial No. 518,633. 1 Claim. (Cl. 220-24.)

A radiator cap consisting of a bowl-shaped lower part, a headed stem, means for flexibly connecting the lower end of the stem with the lower part, an upper part hav-

ing a central bore through which the stem passes, a nut for holding said part on the stem, spring arms held on the stem by the nut, recessed lugs on the bowl-shaped part for receiving the ends of the arms so as to lock the two parts together and a flange on the upper part for entering the bowl-shaped part.

- 1,462,439. SCAFFOLD. JOHN L. BALDWIN, Washington, D. C. Filed Aug. 24, 1922. Serial No. 584,017. 3 Claims. (Cl. 304-10.)

1. In a scaffold structure, in combination, a plurality of uprights, means carried by the uprights for supporting a scaffold board, a scaffold board supported by said means, a bracket slidable on the scaffold board, a laterally expansible mechanism secured to the bracket, means adjacent to the scaffold board for expanding and contracting said mechanism, and means for locking the mechanism in expanded position.

- 1,462,440. SPRING TIRE. ARTHUR E. BAUMAN, Akron, Ohio. Filed May 15, 1922. Serial No. 560,998. 7 Claims. (Cl. 152-8.)

4. In a spring tire construction, a spring member secured upon the felly of a wheel and slits transversely at intervals, the outermost portion of said spring member being formed with a longitudinal rib, a correspondingly shaped plate member located over each slit and carrying projections fitting therein, a cushion tire having a longitudinal groove on its inner periphery fitting upon said spring member, the groove receiving said rib.

1,462,441. SPRING WHEEL. WILLIAM JAKOB BRISSEL, Port Richmond, N. Y. Filed Dec. 7, 1921. Serial No. 520,576. 5 Claims. (Cl. 152—50.)

4. A spring wheel structure comprising in combination, an outwardly facing channel bar rim rectangular in cross section having laterally outward extending portions along the outer edges of its side walls, a series of transversely flat spring spokes curved in the plane of the wheel between their ends, the outer ends being so shaped as to fit the sides and base of the channel of the rim and means for securing said ends to the portion of the rim forming said channel.

1,462,442. SLASHER. WESLEY A. BLACK, Spartanburg, S. C. Filed Jan. 17, 1921. Serial No. 437,917. 1 Claim. (Cl. 28—28.)

In combination with a slasher, means for supporting the cord beam of the slasher between the drying drum and the comb thereof, comprising a pair of aligned spaced substantially V-shaped brackets bolted to the frame of the slasher, an inverted substantially channel shaped bracket secured on the opposite faces of each V-shaped bracket and being provided with the longitudinally arranged dove tail in cross section groove, a shaft threadedly associated with the free end of each of the channel shaped brackets and a beam bearing fittingly engaged in the dove tail groove and carried by the shaft as and for the purpose specified

1,462,443. PAPER CAN OR CARTON. LEWIS C. BROOKS, Milwaukee, Wis., assignor, by mesne assignments, to The National Paper Can Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 21, 1916. Serial No. 115,962. 5 Claims. (Cl. 229—3.1.)

3. An all-paper can or carton for the storage and preservation of food products having a body portion formed of a strip of paper previously impregnated with a material which renders the paper impervious to grease or impervious to moisture, wound on itself and consolidated into a seamless unbroken laminated shell, and closures attached to both ends of the body portion, each

closure comprising a plurality of layers of paper previously impregnated with a material which renders the

paper impervious to grease or impervious to moisture and consolidated into an unbroken laminated sheet, substantially as described.

1,462,444. PLECTRUM PIANO ACTION. GIUSEPPE CASCIO, New York, N. Y. Filed May 11, 1921. Serial No. 468,560. 9 Claims. (Cl. 84—258.)

8. A piano action including a movable arm, a string to be picked, a pick carried at the end of said arm adjacent to its string, and means for moving said arm to cause the pick to pluck said string, such means including a single fixed guiding member on one side of the string having a cross-section elongated more in one direction than in the direction perpendicular to the first-mentioned direction, and a single guided member carried by the pick-carrying end of said arm.

1,462,445. PUMP PISTON. THOMAS W. DELANEY, St. Paul, Minn. Filed June 7, 1921. Serial No. 475,616. 3 Claims. (Cl. 103—225.)

1. In a pump, a plunger rod, a disk valve on the plunger rod, a cylinder in which the plunger rod and the valve operate, a piston above the valve and a spider provided with fingers engaging the inner wall of said piston snugly fitting in said cylinder, at the upper end of

said piston, said piston being capable of movement in the cylinder relatively to the plunger rod and limited by the valve and spider, said spider centering said plunger rod and said fingers centering said piston to prevent piston slop.

1,462,446. TIPPING CRUCIBLE FOR BASALT FURNACES. PAUL DHÉ, Paris, France. Filed Jan. 26, 1922. Serial No. 531,923. 3 Claims. (Cl. 266—40.)

1. A crucible for receiving basalt when discharged from a melting furnace and for pouring the same into ingot or like moulds, comprising a stationary horizontal axle whereupon the crucible may be given a swinging movement, a basin formed within the crucible, a vault constituting a reverberatory dome situated above the said basin, a plurality of burners disposed at the periphery and opening into the said basin, the said burners being substantially tangent to the circumference of the basin.

1,462,447. TOOL FOR REMOVING SHACKLE BOLTS OF AUTOMOBILE SPRINGS AND THE LIKE. CLAUDE O. DUTRO, REGINALD W. KENT, and GEORGE S. KENT, Burkburnett, Tex. Filed May 28, 1921. Serial No. 473,333. 2 Claims. (Cl. 29—87.1.)

1. A tool of the character described comprising a channel shaped member, a screw bolt adapted to pass through a screw threaded hole in the channel shaped member, a wrench engaging member swivelled to the channel shaped member and being provided with a screw threaded socket and a screw threaded bolt received in the socket as and for the purpose specified.

1,462,448. CHECK HOLDER. CARL FEDDERN, Philadelphia, Pa., assignor to Globe Ticket Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,113. 3 Claims. (Cl. 211—37.)

1. The combination of a support adapted to receive a pack of checks and having a forwardly bent portion at

one end, a yoke-shaped gripping member composed of a strip of flat resilient material formed separately from the support but having its intermediate portion abutting flatwise against said forwardly bent portion of the support, said yoke shaped member forming opposed arms extending longitudinally of the support, said arms being arranged to engage opposite sides of a pack on said support and having a normal tendency to spread apart, and a locking member cooperative with the arms of the gripping member to force them into gripping engagement with the pack.

1,462,449. PAPER-HANGER'S TABLE. ABRAHAM FINN, Elizabeth, N. J. Filed Dec. 17, 1921. Serial No. 523,104. 7 Claims. (Cl. 304—2.)

1. A table of the class described comprising a collapsible top having flexible elements and means for stretching the same, a metal cutting strip on one side of said table, and a removable sectional cutting strip on the other side of said table.

1,462,450. COOLING CONTAINER OR SO CALLED "DRY CONTAINER" FOR ICE CREAM AND SIMILAR PRODUCTS TO BE MAINTAINED COLD FOR MANY HOURS. JAMES E. GRAHAM, Newtonville, Mass., assignor to Glacifer Company, Boston, Mass. Filed Apr. 24, 1922. Serial No. 556,274. 8 Claims. (Cl. 217—7.)

1. In a dry container for the preservation of products to be maintained cold, such as ice cream and the like, the combination of an outer receptacle, a chamber within said receptacle for the reception of the product, suitable insulation between the outer receptacle and the product the said insulation being characterized by its relative non-conductivity for heat, a cover for the whole, a cooling drum containing a freezable solution for preserving the product in the container cold for a long period of hours, and means secured to the cover for the reception of the cooling device whereby the cover and said cooling drum may be removed as a single unit from and replaced on the dry container, thus eliminating the need for handling loose parts.

1,462,451. ATTACHMENT FOR TRACTORS. HARRY M. GREASLEY, Corry, Pa. Filed Dec. 21, 1921. Serial No. 523,962. 11 Claims. (Cl. 180—82.)

1. In a tractor of the character described, a ratchet gear carried by the rear axle structure of said tractor, a bell crank lever fulcrumed upon the frame of the tractor, a pawl connected to said bell crank lever and adapted to be brought to engage the ratchet wheel, means adapted to normally hold the pawl out of engagement with said ratchet gear, said means being also adapted to permit the pawl to engage the ratchet gear upon the tractor turning about the rear axle as a pivot, and means connected with the bell crank lever whereby when the same is actuated the driving power of said tractor will be rendered inoperative.

1,462,452. METHOD OF MANUFACTURING PNEUMATIC TIRES AND THE LIKE. KARL B. KILBORN and WILLIAM S. WOLFE, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 4, 1919. Serial No. 328,573. 3 Claims. (Cl. 154—14.)

1. The method of manufacturing pneumatic tires, which consists in first assembling the carcass material upon a form, then partially vulcanizing the same in confining mold members under pressure, then applying the requisite tread portion to the carcass and finally vulcanizing the same in rigid mold members under compacting pressure.

1,462,453. TIRE CONSTRUCTION. WILLIAM G. LERCH, Akron, Ohio, assignor to The India Tire & Rubber Company, Mogadore, Ohio, a Corporation of Ohio. Filed June 22, 1921. Serial No. 479,500. 2 Claims. (Cl. 152—13.)

2. A tire construction comprising, a carcass composed of a plurality of layers of rubberized fabric, a layer of rubber of a character to constitute a cushion over the carcass, a layer of tread rubber over the cushion, and two layers of parallel cords 7 and 8 interposed between the tread and the cushion, said cord layers being arranged as shown and described with the cords in op-

positely arranged diagonal positions with respect to the central plane of the tire, whereby the functions of a breaker strip are performed by the layers of cords without frictional engagement of the cords with one another, without loss of traction between the tread and the carcass, and without restriction of the circumferential contraction or expansion of the tire.

1,462,454. MANIPULATOR FOR ROLLING MILLS. DAVID F. NISBET, Crafton, Pa., assignor to Mackintosh-Hemphill Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1922. Serial No. 529,402. 3 Claims. (Cl. 80—48.)

3. A feed table for rolling mills in combination with pivotally mounted main rails arranged parallel with the rollers of the feed table pivotally mounted auxiliary rails having their axes eccentric to the pivotal axes of the main rails and having their free ends connected to the main rails at points intermediate the ends of the main rails, beams supported at points adjacent to their outer ends by the auxiliary rails, and at points intermediate their ends by the main rails, a manipulator head carried by the beams, means for raising and lowering the free ends of the rails and means for shifting the beams longitudinally of the rails.

1,462,455. TIRE-RIM RACK. CHRISTIAN H. LARSON, Guffey, Tex. Filed May 7, 1921. Serial No. 467,647. 2 Claims. (Cl. 157—1.)

1. A tire rim rack including an enclosed casing formed of two plates, an overturned marginal flange carried by one of said plates and against which the other plate rests, radiating guides carried by one of said plates and spaced apart, a lug block slidable in each guide, an upstanding lug and a hook outside of said lug carried by each block, a rod threaded through each block, the upper end of each rod being formed to receive a wrench, radiating plungers within the casing, radiating guide ways in which said plungers move, the inner ends of said rods having swiveling connections with the corresponding plunger, a stand upon which said casing is mounted, a central bearing in the upper plate of the casing, a stub shaft rotatable in said bearing and whose upper end is formed to receive a wrench, a disc within the casing fixed to the lower end of said shaft, said disc being formed with cam shaped grooves, the inner ends of said plungers being bifurcated forming fingers which embrace said disc bearings mounted between said fingers and working in the corresponding grooves.

1,462,456. PARACHUTE PACK AND HARNESS, ETC.
 FLOYD SMITH, Dayton, Ohio, assignor to Floyd Smith Aerial Equipment Company, a Corporation of Illinois. Filed Apr. 28, 1919. Serial No. 293,047. 21 Claims. (Cl. 244—21.)

1. A parachute pack adapted to hold a folded parachute, embodying a sheet of flexible material with flaps adapted to be folded about the parachute, means for connecting said pack to the body of a rider, releasable means for holding the edges of the flaps together, and a pull cord extending from said releasable means to a point convenient to be operated by the rider.

1,462,457. METAL-BASKET-CORRUGATING MACHINE.
 FRANK T. WERNIMONT, Cedar Rapids, Iowa, assignor to The Hall Manufacturing Company, Cedar Rapids, Iowa. Filed Jan. 12, 1921. Serial No. 436,645. 5 Claims. (Cl. 153—75.)

1. In a metal-basket corrugating machine, the combination of a fixed swage-block composed of a pair of cheek-plates and an interposed tongue pivotally attached at one end, and adjustable at the other end, an undergrooved swage in register therewith, a tilting bar to which the swage is attached, and a revolving crank-wheel adapted to lift said bar at each revolution.

1,462,458. MACHINE FOR OPENING AND CLEANING COTTON, WOOL, AND OTHER FIBERS. WILLIAM YOULTEN, Hove, England, assignor to Harry Seymour Foster, Westminster, England, and Louis Napoleon Schoenfeld, Hove, England. Filed Mar. 2, 1921. Serial No. 449,206. 2 Claims. (Cl. 19—67.)

1. A machine for opening and cleaning cotton, wool and other fibers, comprising in combination, a treating chamber, a beater shaft rotatable in said chamber, a feed hopper through which the material is fed into said chamber, a discharge valve through which the treated product is delivered, a shaft carrying a worm and driven through variable transmission gearing from a source of power, a worm wheel in constant mesh with said worm, discs mounted adjustably on said worm wheel each having a segmental rack, a disc also having a segmental rack co-

operating with each of said first mentioned discs and adapted to be intermittently rotated thereby, and means

associated with said second mentioned discs connected by links and levers to each of said valves, substantially as described.

1,462,459. MACHINE FOR OPENING AND CLEANING FIBROUS MATERIAL. WILLIAM YOULTEN, Hove, England, assignor to Harry Seymour Foster, Westminster, England, and Louis Napoleon Schoenfeld, Hove, England. Filed Nov. 14, 1921. Serial No. 515,101. 5 Claims. (Cl. 19—92.)

1. Apparatus for opening and cleaning fibrous material comprising a chamber into which the material is delivered, and a rotary beater in said chamber having blades arranged in rows and disposed in spiral formation, the spirals commencing at the ends of the beater and meeting towards the center.

1,462,460. HEAT TREATMENT OF LIGHT CASTINGS. STANLEY APGAR, High Bridge, N. J., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed June 5, 1922. Serial No. 566,160. 4 Claims. (Cl. 148—13.)

1. The herein described method of heat treating manganese steel chain and other light castings, which consists in heating them in an environment in which they are substantially protected from decarburization and oxidation, and then proceeding in the usual way.

1,462,461. CONVEYER-COUPLING MEANS. FRANK B. CALDWELL, Oak Park, Ill., assignor to H. W. Caldwell & Son Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 19, 1921. Serial No. 493,602. 8 Claims. (Cl. 198—213.)

1. Means for connecting horizontal screw conveyers arranged at right angles and having overlapping shafts comprising a passageway traversed by said shafts and connecting the conveyor troughs, and gearing on the ends of said shafts outside said passageway.

1,462,462. MILK-BOTTLE CLOSURE. ASSAD M. BAROODY, Danville, Va. Filed Feb. 25, 1922. Serial No. 539,210. 3 Claims. (Cl. 215—51.)

2. A bottle closure comprising a disk having a relatively stationary portion and a relatively movable portion, the abutting edges of said portions being formed with ledges one of which is directed toward one face of the section and the other directed toward the other face of the other section said abutting edges being approximately L-shaped with corresponding portions in alignment and in parallel relation respectively, the disk being scored on one face at right angles to and between the outer ends of the parallel portions of the said cuts, the said ledges being so arranged that the material of the disk of the movable section will snap past the material of the other section when the said movable section is moved out of the plane of the other section.

1,462,463. SECURING MEANS FOR FASTENER ELEMENTS. LAURENCE M. FOSS, Amesbury, Mass., assignor to G. W. J. Murphy Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1921. Serial No. 516,456. 4 Claims. (Cl. 24—221.)

3. A securing means for cooperation with a fastener element which has a plurality of prongs to extend through

a supporting member comprising a washer, a cover plate closely fitting the margin of said washer but defining therewith a peripheral series of prong receiving openings, said plate presenting an upsetting surface to clench prongs projected through said openings over the washer.

1,462,464. PROCESS AND APPARATUS FOR MIXING AND BURNING OIL. ALBERT E. GRANT, New York, N. Y., assignor to Caloril Burner Corporation, a Corporation of Delaware. Filed May 14, 1920. Serial No. 381,294. 10 Claims. (Cl. 158—28.)

4. In an oil burner a combination with a source of water supply at variable pressure, of means for equalizing said pressure and supplying water at constant pressure, comprising a pressure controlled valve, a furnace, a steam generator in said furnace and receiving its water supply from said equalizing means, a flame forming means supplied with steam from said generator and an oil supply for said flame forming means, comprising a siphon for automatically drawing oil from a container when the level of the oil in said supply is lowered below a predetermined level.

1,462,465. TIRE MACHINE. ROLAND S. TROGNER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 29, 1919. Serial No. 327,129. 23 Claims. (Cl. 154—10.)

1. In an apparatus of the character described, the combination with a rotatable core, of a tread roll, and a stitcher adapted to traverse the side of the core, said stitcher being connected to the tread roll for simultaneous operation therewith.

1,462,466. EXPANSION VALVE. RICHARD WHITAKER, Bradley Beach, N. J., assignor, by mesne assignments, to Brunswick-Kroeschell Company, New Brunswick, N. J., a Corporation of New Jersey. Filed June 16, 1920. Serial No. 389,359. 5 Claims. (Cl. 50—23.)

1. A valve comprising a seat provided with a port, a slide movable to close and open the port, said slide having a depression in its upper surface, a spindle, one end of which is received in the depression, a spring for pressing the spindle against the slide to keep the

latter in operable contact with the seat, a diaphragm arranged to be moved by pressure thereagainst, and a

2

connection between the diaphragm and the slide, whereby the movement of the diaphragm is imparted to the slide to close and open the port.

1,462,467. DRAG LINK AND PROCESS OF MAKING SAME. JOHN W. WHITE, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 4, 1920. Serial No. 428,291. 10 Claims. (Cl. 113-116.)

9. A link for use in motor vehicle steering gear, comprising a single piece stamping formed up to provide a rod portion having a closed but hollow section and an integral tubular head portion at the end and of larger diameter.

1,462,468. TRAY-TURNING MACHINE. WILLIAM F. SCHALLER, San Francisco, Calif., assignor of five-tenths to Elizabeth Schaller, three-tenths to Alice Eleanor Schaller, and two-tenths to Chas. A. Schoeneman, all of San Francisco, Calif. Filed Mar. 13, 1920. Serial No. 365,385. 2 Claims. (Cl. 198-211.)

1. A tray turning machine comprising the combination of a frame, a pair of supporting rails on said frame, a shaft revoluble in bearings on said frame, channeled spokes in pairs and facing each other on said shaft and a wheel for turning said shaft.

1,462,469. SCREENING DEVICE. BASIL B. CARLTON and CLEM J. BURKLEY, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 1, 1918. Serial No. 260,739. 8 Claims. (Cl. 83-56.)

1. A device for separating finely divided material comprising a screen partially supported by and embedded in a flexible material.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 312—No. 4.

TUESDAY, JULY 24, 1923.

Price—\$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, \$5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(U. S. C. C. A. Mich.) Rodman patent, 949,446, for material for case-hardening steel, claims 1, 2, and 5 Held invalid for lack of invention. *Rodman Chemical Co. v. Steel Treating Equipment Co.*, 288 Fed. Rep., 471.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,310,093, J. H. Richards, Engine-starting device, decided Mar. 14, 1923, claims 3, 4, and 10.

Pat. 1,338,328, A. F. Poole, Clock system, decided June 16, 1923, claims 1, 3, 5, 6, and 7.

Pat. 1,393,994, S. I. Fekete, Stove for intake manifolds of internal-combustion engines, decided June 12, 1923, claim 14.

Pat. 1,399,100, A. L. Bower, Automatic train-controlling device for preventing collisions, decided June 16, 1923, claims 11, 12, and 13.

Pat. 1,432,314, G. Wood, Box-strapping tool, decided June 1, 1923, claim 1.

Changes in Classification.

(ORDER No. 2,829.)

U. S. PATENT OFFICE, Washington, July 5, 1923.

The transfer of class 51, Abrading, from Division XXVII to Division XXIX is hereby directed, to take effect on July 5, 1923.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notices.

U. S. PATENT OFFICE, Washington, July 12, 1923.

Jesse Minor, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the New England Confectionery Company, 253 Summer Street, Boston, Mass., for registration of a trade-mark and trade-mark registered June 2, 1903, No. 40,490, to Jesse Minor, 3822 Pier Street, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Jesse Minor at the said address having been returned by the post office undelivered, notice is hereby given that unless said Jesse Minor, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner of Patents.

U. S. PATENT OFFICE, Washington, July 12, 1923.

Bucknam & Vanderpoel, their assigns or legal representatives, take notice:

An interference having been declared by this Office between D. B. Scully Syrup Company, 321 East Illinois Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered May 29, 1906, No. 53,164, to Bucknam & Vanderpoel, 198 West Broadway, New York, N. Y., and a notice of such declaration sent by registered mail to said Bucknam & Vanderpoel at the said address having been returned by the post office undelivered, notice is hereby given that unless said Bucknam & Vanderpoel, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner of Patents.

Condition of Applications Under Examination at Close of Business July 13, 1923.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

ROBERTSON, COMMISSIONER OF PATENTS, AND FALL, SECRETARY OF THE INTERIOR, v. THE UNITED STATES OF AMERICA, EX REL. BAFF.

Decided December 4, 1922.

1. ATTORNEYS—DISBARMENT—PREMATURE PETITION FOR MANDAMUS.

The filing of a petition for mandamus praying for a writ directing the Commissioner of Patents to vacate an order of disbarment and to reinstate the petitioner as a registered attorney of the Patent Office is premature if made after the attorney has applied for reinstatement on the ground of irregularities in the proceedings against him and before his application has been denied and the order of disbarment has become final.

2. DUTIES WHICH AMOUNT TO A JUDICIAL FUNCTION.

The authority to hear and determine a mixed question of law and fact upon evidence, written or oral, coupled with a power after such hearing to render a decision affecting the material rights and interests of anyone is a judicial function, and such hearing, determination, and decision are characteristic of judicial proceedings.

3. SAME—DISBARMENT PROCEEDINGS BY COMMISSIONER OF PATENTS UNDER SECTION 487, REVISED STATUTES, ARE JUDICIAL IN CHARACTER.

The Commissioner of Patents was authorized by section 487, Revised Statutes, to hear and determine the charges against Baff and upon the evidence submitted to him to render a decision affecting the material rights and interests of the accused. *Held*, therefore, that the proceedings before and by the Commissioner were judicial in character.

4. SAME—REVIEW AND APPROVAL BY THE SECRETARY OF THE INTERIOR ARE JUDICIAL ACTS.

The review and approval by the Secretary of the Interior, designed, as they were, to correct errors or mistakes affecting the rights of patent attorneys, took the place of the usual judicial safeguards provided for established courts, and completing, as they did, the whole proceedings must be regarded as judicial acts.

5. SAME—JUDICIAL AUTHORITY CAN NOT ORDINARILY BE DELEGATED, BUT CONGRESS HAS POWER TO AUTHORIZE DELEGATION.

As an abstract proposition it is true that judicial authority can not be delegated, but Congress, having the power to clothe an executive or administrative officer with judicial functions, has power to authorize their delegation.

6. SAME—CONGRESS CAN AUTHORIZE THE SECRETARY OF THE INTERIOR AND COMMISSIONER OF PATENTS TO DELEGATE DISBARMENT CASES TO SUBORDINATES.

If Congress could by statute legally authorize the Secretary of the Interior and the Commissioner of Patents to hear, determine, and finally decide disbarment cases, it could by statute legally empower those officials to delegate the performance of such duties to a designated subordinate.

7. SAME—UNDER THE PROVISIONS OF SECTION 439, REVISED STATUTES, THE SECRETARY OF THE INTERIOR MAY ASSIGN JUDICIAL DUTIES, INCLUDING THE APPROVAL OF DISBARMENT PROCEEDINGS, TO THE ASSISTANT SECRETARY.

Section 439, Revised Statutes, provides that the Assistant Secretary of the Interior shall perform such duties in the Department of the Interior as should be

prescribed by the Secretary or may be required by law. Baff insisted that the duties which may be assigned to the Assistant Secretary under that provision are administrative, not judicial, duties, and that consequently his approval of the disbarment proceedings was extra-official and void. *Held* that this construction is erroneous, inasmuch as it reads into the statute language which Congress did not use to make manifest its legislative intention.

8. CONSTRUCTION OF STATUTE—NOT WARRANTED IF ITS MEANING IS CLEAR.

Unless the language of a statute is vague, dubious, uncertain, indefinite, or ambiguous, or conveys a meaning that is absurd or in contradiction of other parts of the legislative purpose made evident by the enactment itself, there is no room for construction, and the meaning of the terms actually employed in drafting a law must be accepted as manifesting the legislative intent.

9. ORDER AND JUDGMENT GRANTING WRIT DIRECTING SECRETARY AND COMMISSIONER TO VACATE ORDER OF DISBARMENT REVERSED.

The order and judgment granting the writ as prayed for *Reversed* with costs and the case remanded for further proceedings.

Mr. C. E. Wright and *Mr. E. S. Booth* for appellants.

Mr. A. L. Newmyer and *Mr. Max Rhoads* for appellee.

Before SMYTH, Chief Justice, ROBB, Associate Justice, and SMITH, Judge of the U. S. Court of Customs Appeals.

SMITH, J.:

William E. Baff, enrolled as an attorney entitled to practice in the Office of the Commissioner of Patents, was charged with gross misconduct in his capacity as such attorney, and the Commissioner in an order setting out the charges cited Baff to show cause why he should not be disbarred from practice in the United States Patent Office.

Baff appeared on the hearing of the order to show cause and objected to the jurisdiction of the Commissioner on the ground that the remedy against him by those aggrieved was a civil suit rather than disbarment. He also claims that he made other objections to the hearing of the charges before the Commissioner, but it affirmatively appears that his objections, whatever they may have been, were overruled and that a hearing of the charges was had. That hearing resulted in an order of disbarment which was approved on the 18th of March, 1921, by the Assistant Secretary of the Interior.

The attorney then applied in writing to the Commissioner of Patents for reinstatement with all the rights and privileges enjoyed by him prior to the order of disbarment on the ground, first, that he had not been permitted to confront or cross-examine the witnesses against him; second, that the order of disbarment had been approved by the Assistant Secretary and not by the Secretary of the Interior as required by the provisions of section 487 of the

Revised Statutes; third, that Commissioner of Patents Coulston, who presided at the hearing to show cause, was prejudiced against him and therefore disqualified from passing on the charges.

Thomas E. Robertson, the successor of Coulston as Commissioner, held that the application for reinstatement should have been addressed to the Secretary of the Interior and he therefore refused to reinstate the applicant for want of jurisdiction, but was careful to state that if the matter was referred to him by the Secretary, a recommendation as to the application would be made. Whereupon Baff on the 10th of June, 1921, applied to the Secretary of the Interior for reinstatement, with the result that the case was on the 18th of August, 1921, remanded by the Assistant Secretary of the Interior to the Commissioner of Patents. The remand ordered that a hearing be granted to the relator for the purpose of enabling him to establish his claim that at the trial of the charges he had objected to the introduction of affidavits and had demanded the right to cross-examine the witnesses against him. A copy of the remand was served on the attorneys for the relator and a hearing in conformity therewith was tendered on the 29th of August, 1921.

Notwithstanding that tender, however, the relator elected not to avail himself of the opportunity to be heard and on the 29th of August, 1921, he filed a petition for mandamus praying for a writ directing the respondents to vacate the order of disbarment and to reinstate him as a registered attorney of the Patent Office. The respondents by their amended answer pleaded in defense the facts above recited to which the relator demurred. The demurrer was sustained and the respondents having declined to make any further amendment, judgment was entered directing the writ to issue as prayed for.

From that judgment this appeal was taken and a reversal is asked for on the ground that the court below erred, first, in issuing the writ before disbarment of the relator was finally ordered by the respondents and while the proceeding for disbarment was still pending before the Commissioner; second, in ruling that the Assistant Secretary had no power to approve the order of disbarment.

[1] The admitted allegations of the petition for mandamus and the averments of the answer, which on demurrer must be accepted as true, establish in our opinion that no final conclusion was reached by the respondents as to the disbarment of the relator and that the proceedings for that purpose were still pending before the Commissioner of Patents. It is true that an order for disbarment was actually made by Commissioner Coulston and that order was approved by Assistant Secretary Hopkins. It is also true, however, that after that order was made, the relator applied to the Secretary of the Interior for reinstatement on the ground that his disbarment was unlawful for the reasons stated in his application. That application was a direct attack on the decision of the Commissioner and the

approval of the Secretary. It had for its purpose the vacation of the order of disbarment and had the attorney taken advantage of the order remanding the case to the Commissioner and of the tender formally made to him by the latter, the hearing ordered by the remand might well have resulted in a retrial of the whole matter. The attorney having applied to the Secretary for reinstatement on the ground of irregularities in the proceedings against him, the order of the Commissioner stood suspended while the application or motion to vacate, modify or correct it was pending and the relator had no ground for complaint until his application had been denied and the order of disbarment had become final. The filing of the petition for mandamus was therefore premature and on that ground alone the judgment appealed from should be reversed.

However, to avoid delay and expense as well as the encumbering of calendars with further litigation as to the vital question raised by the appeal, we think it proper to determine whether the Assistant Secretary of the Interior has the power to approve an order of disbarment.

The proceedings against Baff were had under section 487 of the Revised Statutes which section reads as follows:

Sec. 487. For gross misconduct the Commissioner of Patents may refuse to recognize any person as a patent-agent, either generally or in any particular case; but the reasons for such refusal shall be duly recorded, and be subject to the approval of the Secretary of the Interior.

The appellee contends that the official action contemplated by that section is judicial in nature and that the Secretary's approval of an order of the Commissioner disbarring an attorney from practice is a judicial attribution. It is further argued that a judicial function can not be delegated and that therefore even if authorized by the Secretary of the Department, the Assistant Secretary of the Interior had no right whatever to approve an order of disbarment.

[2] The authority to hear and determine an issue of fact or a mixed question of law and fact upon evidence, written or oral, coupled with a power after such hearing and determination to render a decision affecting the material rights and interests of anyone is a judicial function and such hearing, determination and decision are characteristic of judicial proceedings. (*Marine, Collector, v. Lyon et al.*, 65 Fed., 992, 994; *Stone, Collector, v. Whitridge White & Co.*, 129 Fed., 33, 36; *Sinking Fund Cases*, 99 U. S., 700, 761; *Runkle v. United States*, 122 U. S., 503, 555.)

[3] The Commissioner of Patents was authorized by section 487 to hear and determine the issues of fact raised by the charges against Baff and upon the evidence submitted to him to render a decision affecting the material rights and interests of the accused. We must therefore hold that, in hearing the charges, determining the facts, deciding the case, the Commissioner was performing a judicial duty and that the proceedings before and by him were judicial in character.

[4] The review and approval of the Secretary of the Interior, designed as they are to correct errors or mistakes affecting the rights of patent attorneys, take the place of the usual judicial safeguards provided for established courts and completing as they do the whole proceeding, must be regarded as judicial acts.

That Congress had the right to vest the Commissioner and the Secretary of the Interior with the powers specified in section 487 is not questioned but it is strenuously contended that as such powers were judicial they could not be delegated.

[5] As an abstract proposition it is true that judicial authority can not be delegated, but can it be said, no constitutional inhibition intervening, that Congress, having the power to clothe an executive or administrative officer with judicial functions, has no power to authorize their delegation. The organic law of the land might have limited the exercise of judicial faculties to judges learned in the law, or it might have prohibited the delegation of such faculties once vested, but if it imposed no such limitation or prohibition, and it is not claimed that it did, can the judicial department of the Government restrict the legislative will to bounds not constitutionally defined? We think not.

[6] If Congress could by statute legally authorize the Commissioner of Patents and the Secretary of the Interior to hear, determine and finally decide disbarment cases, it could, by statute, legally empower those officials to delegate the performance of such duties to a designated subordinate.

[7, 8] Section 439 provides that the Assistant Secretary of the Interior shall perform such duties in the Department of the Interior as should be prescribed by the Secretary or may be required by law. The relator insists that the duties which may be assigned to the Assistant Secretary under that provision are administrative, not judicial duties, and that consequently his approval of the disbarment order was extra-official and void. We can not agree with that construction inasmuch as it reads into the statute language which Congress did not use to make manifest its legislative intention. The section says that the Assistant Secretary shall perform such duties, not such administrative duties, as the Secretary shall prescribe, and having said that, it does not lie with the courts to legislate into the law a word which Congress carefully omitted. The clear intention of the section was to permit the Secretary to relieve himself of those duties to which in his judgment he could not give proper attention and that purpose might well be defeated in part at least by the introduction of what would be nothing less than a judicial, if not injudicious, amendment. Such legislation is in the interest of governmental efficiency and its value should not be lightly impaired or its scope narrowed because of a mere conjecture that the law maker *might* not have meant what he said. Unless the language of a statute is vague, dubious, uncertain, indefinite, or ambiguous, or conveys a meaning that is absurd or in contradiction of other parts of the enactment or

in contravention of the legislative purpose made evident by the enactment itself, there is no room for construction and the meaning of the terms actually employed in drafting a law must be accepted as manifesting the legislative intent. (*Lake County v. Rollins*, 130 U. S., 662, 670-671; *United States v. Goldenberg*, 168 U. S., 95, 102, 103; *The Paulina's Cargo v. United States*, 7 Cranch, 52, at p. 60; *Lewis v. United States*, 92 U. S., 618, 621; *Thornley v. United States*, 113 U. S., 310; *William A. Gardner v. John C. Collins*, 2 Pet., 58, 92; *Maxwell et al. v. Moore*, 22 How., 185, 191.)

In support of the proposition that the Secretary of the Interior can not delegate his authority to approve a decision of the Commissioner, the appellee cites the case of *Wedderburn v. Bliss* (12 App. D. C., 485; 83 O. G., 296) and *Runkle v. United States* (122 U. S., 543). We are of the opinion that neither case is decisive of the point under discussion.

In *Wedderburn v. Bliss*, the disbarment of the attorney was approved by the Secretary himself. That approval was attacked on the sole ground that it was made without notice to the attorney and without giving him an opportunity to submit by argument or brief his objections to the finding of the Commissioner and to the approval thereof by the Secretary.

Whether the attorney was entitled to be heard by the Secretary of the Interior before approving the charges was therefore the only issue raised and the right of the Secretary to delegate his power of approval was not involved in this case.

Commenting upon the act of 1884, Mr. Justice Morris said that that act left it undetermined how and before whom a hearing was to be had and that there was great plausibility in the theory that the hearing therein provided for should be had by the person who was authorized to take final action. The learned justice then stated that if he were dealing with the action of judicial tribunals he would have no hesitation whatever in so holding and made use of the following language on which the appellee relies:

A court authorized to decide necessarily is the court authorized to hear, and it may not delegate to anyone its duty to hear any more than it can delegate its function to decide.

It is well settled law and a fundamental rule of our governmental system that purely judicial functions can not be conferred upon an executive officer. But of necessity executive officers are frequently vested with discretionary functions of a quasi-judicial character and these can no more be delegated than can strictly judicial authority.

Neither statement can well be regarded as authoritative here for the reason that delegation of authority was not an issue in the case and for the further reason that neither declaration fairly construed denies to Congress the right to authorize a delegation of judicial functions which it had the power to vest in executive or administrative officers. In our opinion Mr. Justice Morris sought to do and did nothing more than to announce the well-known doctrine that courts and judicial functionaries can not on their own initiative delegate the performance of their duties to someone else.

In *Runkle v. United States*, an officer of the Army charged with violating an act of Congress and with conduct unbecoming an officer and gentleman was found guilty by court-martial and was sentenced to be cashiered. That sentence, under the provisions of the then 65th Article of War could not become effective until approved by the President of the United States. (2 Stat., 367, ch. 29, art. 106, sec. 1342, R. S.)

The cashiering of the officer was approved by the Secretary of War but not by the President. The Supreme Court of the United States held that the sentence of dismissal could not become effective until approved by the President in person and that as that approval was not administrative but judicial in character it could not be delegated to the Secretary of War. *It was not decided, however, that Congress had no power to authorize the President to delegate to the Secretary of War the performance of that duty.*

Inasmuch as section 216 of the Revised Statutes provides, however, that—

the Secretary of War shall perform such duties as shall from time to time be enjoined on or intrusted to him by the President relative to military commissions, the military forces * * * or to other matters respecting military affairs,

the appellee argued that the Supreme Court decided *in effect* that presidential approval of a sentence cashiering an Army officer could not be delegated to the Secretary of War notwithstanding a legislative enactment permitting such delegation.

We can not agree that section 216 authorized a delegation of the authority vested in the President by the 65th Article of War and much less that the Supreme Court so decided. That section was not cited in the briefs of counsel in the *Runkle* case as authorizing a delegation of the judicial functions of the President and it is nowhere referred to or commented upon by the Supreme Court in its opinion, from which it may be fairly presumed that it was not regarded as delegating or attempting to delegate the judicial duties of the President. The duties which may be performed for the President by the Secretary of War under section 216 are such as relate to military commissions, to military forces, to warlike stores of the United States and other matters respecting military affairs. As trial by court-martial is a judicial, not a military proceeding, it is evident that approval of court-martial sentences is a judicial not a military act and is consequently not within the scope of section 216. True enough courts-martial are made up of military officers and the President is Commander-in-Chief of the Army; therefore at least, such officers when they hear, determine and decide charges in court-martial cases and the President, when he approves the sentences imposed, acts not as military but as judicial functionaries.

We are not prepared to say, therefore, that the Supreme Court either expressly or impliedly held that Congress could not legally empower the President to delegate to the Secretary of War the review and approval of court-martial proceedings. The *Runkle* case is consequently not in point.

[9] The order and judgment granting the writ as prayed for is reversed with costs and the cause remanded for further proceedings not inconsistent with this opinion.

Mr. Justice ROBB concurs upon the first ground.

Supreme Court of the United States.

OLGA GATHMANN FOLEY, ADMINISTRATRIX OF ESTATE OF LOUIS GATHMANN, DECEASED, v. UNITED STATES.

Decided January 29, 1923.

1. CONTRACT—BY GOVERNMENT FOR USE OF PATENT—WHEN EFFECTED.

No contract is effected by a proposal of an inventor to give the Government the option of using his method for certain compensation, which is accepted by the statement that the apparatus will be tested, and, if it works satisfactorily, the agreed compensation will be made, where, after test, the Government informs him that the apparatus has failed, and that other methods will be used in the Government work.

2. SAME—RESCISSION—ACQUIESCENCE—EFFECT.

One who has offered the Government an option to use his apparatus in its work, for certain compensation, will be held to have acquiesced in the decision of the Government not to use it after test, where for years he makes no response to the letter of rejection.

3. PATENTS—INEVITABLE RESULT—VALIDITY.

If the addition of moisture to heated air sent by a drying apparatus into contact with green smokeless powder, for the purpose of drying it, when the contact is effected, is inevitable, the use of moistened air for drying purposes is not the subject of patent.

APPEAL by claimant from a judgment of the Court of Claims rejecting a claim for alleged use by the Government of a patent of claimant's intestate. **Affirmed.**

See same case below (56 Ct. Cl., 303).

The facts are stated in the opinion.

Mr. Charles J. Pence, Mr. L. T. Michener, and Mr. P. G. Michener for the appellant.

Mr. Melville D. Church, Solicitor General Beck, and Assistant Attorney General Lovett for the appellee.

Mr. Justice McKENNA delivered the opinion of the Court.

Appeal from judgment of the Court of Claims, dismissing petition of appellant, in which she prayed judgment against the United States for the sum of \$236,750.

A summary of the allegations of the petition is as follows: The Government was engaged in the manufacture of smokeless powder at its station at Indian Head, Maryland.

Gathmann had under consideration, with a view to the application for patents, methods of drying the materials of the powder, and, in consequence of conversations with the Chief of the Bureau of Ordnance of the Navy Department, he made to the Bureau the following proposition:

1839 VERNON AVE., N. W.,
Washington, D. C., March 24, 1903.

SIR:—The undersigned has made an invention, "Method of drying materials," for which patent has been filed February 9, 1903, Series No. 142,653.

Now, in consideration of the Navy Department building an apparatus for testing this method, without expense to me, I hereby give the Navy Department the

option of using my method of drying materials, if they find it to their advantage, by paying to me, my heirs, or my legal representatives, \$0.01 (one cent) for each pound of material dried by my method.

Very respectfully,

LOUIS GATHMANN.

Admiral O'NEIL,

Chief of Bureau of Ordnance.

He delivered with the proposition a plan or drawing for an experimental apparatus.

To the proposition the Chief of the Bureau of Ordnance replied as follows:

3 Address Bureau of Ordnance, Navy Department, and refer to No. 3585.

WASHINGTON, D. C., March 26, 1903.

SIR:—Referring to your communication of March 24th, 1903, offering the Navy Department the option of using your method of drying materials, on payment of 1 cent per pound on materials so dried:

The Bureau has to inform you that it accepts your proposition, and has ordered one experimental apparatus for drying smokeless powder, constructed in accordance with plan submitted by you. This apparatus will be tested without expense to you, and, if it works satisfactorily to the Bureau, the Bureau agrees to pay you, your heirs or legal representatives, 1 cent for each pound of smokeless powder dried by the method covered by your application or applications filed or to be filed with the U. S. Patent Office, provided a patent or patents is or are issued to you therefor.

Respectfully,

CHAS. O'NEIL,

Chief of Bureau of Ordnance.

Mr. LOUIS GATHMANN,

1839 Vernon Avenue, Washington, D. C.

At the time of the conversation of Gathmann with the Chief of Ordnance, and his proposition and the reply to it, he, Gathmann, contemplated applying for patents for his methods, and on February 9, 1903, and subsequent dates, made applications for patents, and patents were issued to him for his methods, and at various times from April, 1909, to April, 1915, the Government made use of the processes and methods covered by the patents in the manufacture of smokeless powder to the amount of 23,675,061 pounds thereof, and became indebted to the estate of Gathmann in the sum of the petition, to wit, \$236,750.

A general traverse was filed to the claim. Upon the issues thus formed, and upon considering the evidence taken, the Court of Claims made findings of fact, and from them deduced, as conclusion of law, that appellant was not entitled to recovery, and dismissed her petition.

The court decided that the proposition made by Gathmann's communication and the reply thereto presented an option only, and not a contract, and that it was terminated by the bureau by a letter addressed to Gathmann, October 14, 1904, which was as follows:

Referring to your apparatus for drying powder, installed at the naval proving ground for trial: The bureau forwards herewith a copy of the report made by the inspector of ordnance in charge of that station for your information. After carefully considering this report the bureau is of opinion that this apparatus has failed to demonstrate anything that would warrant further experiment with it, and the bureau has instructed the inspector of ordnance in charge of the naval proving ground that, when the drier can hold no more samples, the whole amount be put in the dry house until dried to the proper volatiles.

The court decided, besides, that the Government had not used Gathmann's methods. Appellant attacks both rulings, but concentrates her attention upon the first. The existence of the second, she assumes, is demonstrated by the physical laws of nature, of which the court will take judicial notice.

The specifications of error against the first ruling are as follows:

(1) The letters made an express contract of license for the full term of the patents; (2) the license could not be renounced or ended in any manner except by mutual consent or the fault of Mr. Gathmann; (3) he had the right, after the receipt of the letter of October 14, 1904, to regard the license still in force and to sue for the unpaid royalties, the Government having used the inventions thereafter; (4) what was said prior to the letters of March 26th and 28th, 1903, should not be considered; (5) the Court of Claims should not have considered the development and state of the art prior to the issuance of the patents; (6) the licensee is estopped from denying the validity of the patents.

To estimate these contentions, the findings of the court must be considered. A summary of them, stated narratively, is as follows:

The material of smokeless powder in its first stages is in a plastic condition, containing about 40 per cent of moisture, due to the presence of ether and alcohol, called the "solvent." To make the powder ready for use, the solvent must be reduced to between 4 per cent and 7 per cent, according to caliber. The process requires several months' time. The elements of the solvent were expensive, and it became an object to the Government and its manufacture of the powder to save them for reuse.

As early as 1900 the Government had used, along with other methods of drying, what was known as the closed-circuit method of drying and solvent recovery. In this method there is, generally speaking, a heating chamber, a powder chamber, and a condensing chamber, with the necessary connecting pipes or conduits, and means for effecting circulation of the air in the circuit, as by fan or by gravity. In operation, the warm air from the heating chamber passes on to the powder chamber, where it absorbs solvent from the "green" powder, then passes on to the condensing chamber, where the solvent carried by it is condensed to liquid form, the air then passing on to the heating chamber again for reheating and repetition of the cycle.

When the powder is newly made, or "green," the solvent is given off rapidly; but as the percentage of the solvent in the mass is reduced, it volatilizes less rapidly and comes off less freely. When the solvent is reduced to about 10 per cent, this closed-circuit process is discontinued, and the drying of the powder is completed in the ordinary drying houses.

The plans of the apparatus used by the Government in 1900 were secured from the California Powder Works, of California, by whom the apparatus was understood to have originated. It illustrates "the closed-circuit method."

Louis Gathmann was an inventor, and was interested in improving the method of expediting the manufacture of smokeless powder, and had discussed the question with Admiral O'Neil. The Government at times had two systems; one, for merely drying by hot air, and the other, for both drying and recovery of the solvent. Gathmann claimed a method that would do both in a very much shorter time, and proposed that a test be made. The letters we have quoted grew out of the conferences between Gathmann and Admiral O'Neil, and Gathmann's

representation furnished the chief inducement to the Admiral to enter into the agreement shown by the letters.

Pursuant to the agreement or option shown by the letters, the United States, under the direction and supervision of Gathmann, at its own expense, constructed and exhaustively tested at its Indian Head (Maryland) powder plant the experimental apparatus and method so proposed by Gathmann. The apparatus and method were substantially the same as those shown and described in Gathmann's Letters Patent.

The tests began in October, 1903, and continued until October, 1904, during which time reports of the results obtained by the tests, comparative and otherwise, were periodically made by the officer making the tests, comparison being made with results obtained from concurrent operations under the regular Government method. In making the tests, the instructions and wishes of Gathmann were complied with except that he desired a continuous and unbroken operation, though he had acceded at first to the closing down of the operation of the Government plant on Sundays. His desire was not acceded to.

In the tests the time required for drying the powder was not reduced, nor did it appear that the former methods used and results obtained by the Government in drying and solvent recovery were otherwise improved upon, nor did Gathmann's apparatus work satisfactorily to the Bureau of Ordnance, and, at the close of the tests, Gathmann was so notified by a letter from the Acting Chief of Ordnance.

No change was made in the Government's solvent recovery and drying processes as a result of the test of Gathmann's method.

On June 28, 1904, a patent, No. 763,387, in pursuance to his application of February 9, 1903, was issued to Gathmann. On the same day there was granted to Gathmann and his assignees of a fourth interest therein, United States Patent No. 763,388. These patents and the applications upon which they were granted were the applications and patents in contemplation by Gathmann and Admiral O'Neil in their respective letters of March 24th and 26th, 1903.

Beginning in 1907, the Navy Department, at various times in the manufacture of smokeless powder, used drying and solvent-recovery apparatuses and methods.

They are illustrated by figures attached to the findings. From August 1, 1910, to 1916, an apparatus known as the box-type method was used, in which—

the circulation is gravity circulation, induced wholly by the heating and the cooling of the air in the different parts of the circuit.

It is not necessary to reproduce the illustrations, and the processes need but little explanation. They are all of the closed-circuit method of drying and solvent recovery. All have a heating chamber, a powder chamber, and a condensing chamber, with connecting pipes or conduits and means of

effecting circulation of air in the circuit, as by fan or by gravity. It is not necessary to compare their mechanisms. We think that the apparatus received by the bureau from the California Powder Works did not differ in essential structure from them, and, of course, it differed from that of Gathmann's apparatus. And differed from them necessarily, otherwise Gathmann would have had no purpose in submitting a proposition to the bureau. The difference was in the method—amount of vapor, means "provided," to quote the patent, "to produce a vapor-laden atmosphere in the drying chamber," and "so as to maintain," and to quote the patent further, "a substantially vapor-saturated atmosphere in the drying chamber nearly to the end of the operation of drying * * *." In other words, the vapor from the moisture of the materials was added to "by admitting vapor as steam."

Considering the methods, their illustrations, and the letters exchanged by Gathmann and the Bureau of Ordnance, the conclusion of the Court of Claims was that a contract was not created.

At most, [the conclusion was,] a mere option was granted by Gathmann to the Government to use his method if found suitable after making a test of certain apparatus furnished by him, which he continued to improve or change.

And again,

There was never any agreement between the parties to use Gathmann's method, and all we have is, as has been stated, an option granted, declined, and terminated.

[1] This conclusion appellant resists, and insists here, as she insisted in the Court of Claims, that a contract was created, with its comprehensive and determining effect, it having continued, is the contention, after the date of the letters. That a contract existed or continued we cannot concede to appellant. But whether option or contract, we think it was terminated. There was an election given to the Government, to be exercised by it according to the judgment of its officers, of a test of the "experimental apparatus" submitted by Gathmann. The test was made, judgment was exercised, and its effect notified to Gathmann in the letter of October 14, 1904. Gathmann's letter gave "the option of using" his "method of drying materials, if they [Navy Department] find it to their advantage, by paying to" him, his heirs or legal representatives, "\$0.01 (one cent) for each pound of material dried by" his "method."

Clearly, therefore, there was a conditional proposal and an acceptance upon the condition that the apparatus, after test, should work "satisfactorily to the bureau." It did not so work, and the bureau so declared to Gathmann.

[2] It is true that there was no response by Gathmann to the letter of the bureau. His silence, however, was tantamount to acquiescence. It does not appear when that silence was broken. The original petition was filed in this case April 17, 1915; that is, more than ten years after the bureau's action in declining the proposal. We think that he could not keep the Government in obligation, uncertainty, and restraint all that time, or even until April, 1909, the first date alleged of the use by the Government of his apparatus. He therefore must be

considered as having accepted the decision of the bureau, and the termination of the relation created by the letters, whether it was obligation or option, "right" or "privilege." Responding, therefore, to the contention of appellant that a contract (license, to use appellant's word) can "not be renounced or ended in any manner except by mutual consent or the fault of Gathmann," we think there was such consent,—that which must be considered as tantamount to consent.

We do not think it is necessary to review the claims of the patents, and wherein either of them is an advance upon the uses and knowledge of the world, and, necessarily, including the methods of the Government. The Court of Claims has done this, and, we think, so satisfactorily, that we content ourselves by referring to its opinion. We need only to say that Gathmann emphasized the distinction of his patents from all that preceded them as using a "vaporous or vapor-laden atmosphere," and that such necessarily existed or will occur in the methods used by the Government.

[3] It is counsel's contention that it is—inevitable that vaporous and vapor-laden atmosphere would be created the instant the heated air came in contact with the green powder, and would continue vaporous and vapor-laden until all of the alcohol and ether were extracted from the powder, or the powder be removed from the drier.

And of this, it is asserted, this court takes judicial notice as "the law of physics;" and the further assertion is that—

of course, this contact of the heated air with the alcohol and ether caused the air to become vapor laden, whether the defendant wished it or not.

The assertions prove too much. They leave the patents without basis, and the distinction they express and dwell on as merely verbal. If the asserted result was inevitable in the method of the patents, it was inevitable in the method in use prior to the patents; and, we repeat, the patents are left without justification.

The conclusion, therefore, must be that if the methods of the patents are different from the prior art by reason of the "initial vapor-laden atmosphere by admitting vapor as steam," the Government does not use it; if that be not its distinction, and the methods of the prior art inevitably have it, the patents are no advance upon that art and are invalid.

Judgment affirmed.

PATENT SUITS.

Highest Prize Awarded by
the Paris Exposition 1878

BROMO PAPER

A PERFECTLY PURE ARTICLE
FOR THE
WATER CLOSET.

The properties of this paper are such that it is the only paper that can be used in the water closet without causing any odor or stain. It is also the only paper that is not only a positive preservative of the toilet but also a thorough deodorizer and disinfectant of the water closet.

The inventor respectfully recommends this paper as the most thorough and effective toilet paper ever offered to the public.

None genuine without water-mark
"BROMO" in each sheet.

SOLD BY ALL DRUGGISTS

REISSUES.

JULY 24, 1923.

15,660. HAIR CLIPPER. FOREST L. GRAY, Kenmore, Ohio. Filed Apr. 28, 1923. Serial No. 635,346. Original No. 1,395,104, dated Oct. 25, 1921, Serial No. 376,740, filed Apr. 26, 1920. 8 Claims. (Cl. 30—1.)

1. The combination with a hair clipping device, of a base plate, a plurality of right angularly disposed spaced blades carried thereby, said blades having convex outer edges terminating in pointed ends, and extending from the extreme ends of the teeth of the clipping device to the rear edge of the base plate.

15,661. AUTO TAIL LAMP AND SIGNAL. CHARLES STERN and GEORGE F. EGAN, Jersey City, N. J. Filed Apr. 21, 1920. Serial No. 375,641. Original No. 1,286,825, dated Dec. 3, 1918, Serial No. 200,133, filed Nov. 3, 1917. 4 Claims. (Cl. 116—49.)

1. A signal comprising a tube in connection with a source of light and having a slotted side wall, means to

support the tube at one end through which the light is received, a relatively short stud projecting from the other end of the tube, a panel-bearing drum enveloping the tube and rotatable thereabout with its end adjoining the stud provided with a socket to receive the stud, said drum itself carrying a trunnion also comparatively short and independent of the stud, a bearing to support the trunnion, and means on the side of the bearing away from the drum having connection to the trunnion for rotating the drum.

15,662. OPERATING DEVICE FOR VOTING-MACHINE REGISTERS, ETC. CURTIS HUSSEY VEEDER, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Sept. 12, 1922. Serial No. 587,861. Original No. 1,342,476, dated June 8, 1920, Serial No. 332,580, filed Oct. 23, 1919. 2 Claims. (Cl. 235—144.)

1. The combination with a register, and gearing for operating the same, including a gear having a driving aperture, of an operating knob supported in fixed position and a spring pressed driving member carried by the knob and normally in engagement with the driving aperture of said gear and movable out of such engagement by an implement introduced from the opposite side of the driving gear.

DESIGNS.

JULY 24, 1923.

62,687. SHOE OR SIMILAR ARTICLE. WILLIAM LEO BAXTER, Beverly, Mass. Filed Feb. 8, 1922. Serial No. 593. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a shoe or similar article, substantially as shown.

62,688. PLATE OR SIMILAR ARTICLE. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to The Palm Brothers Company, New York, N. Y. Filed Oct. 27, 1922. Serial No. 4,119. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate or similar article, as shown.

62,689. PLATE OR SIMILAR ARTICLE. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to The Palm Brothers Company, New York, N. Y. Filed Oct. 24, 1922. Serial No. 4,078. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate or similar article, as shown.

62,690. PLATE OR SIMILAR ARTICLE. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to The Palm Brothers Company, New York, N. Y. Filed Oct. 21, 1922. Serial No. 4,049. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate or similar article, as shown.

62,691. LIQUID CONTAINER FOR FOUNTAIN SYRINGES. ALVIE C. CRIMMEL, Hartford City, Ind. Filed Feb. 17, 1922. Serial No. 754. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a liquid container for a fountain syringe, as shown.

62,692. BRACKET FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed June 23, 1922. Serial No. 2,792. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracket for lighting fixtures, as shown.

62,693. BRACKET LANTERN FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 2,949. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracket lantern for lighting fixtures, as shown.

62,694. CEILING LANTERN FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 2,950. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a ceiling lantern for lighting fixtures, as shown.

62,695. ARM FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 2,951. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an arm for lighting fixtures, as shown.

62,696. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 2,952. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate for lighting fixtures, as shown.

62,697. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 2,953. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate for lighting fixtures, as shown.

62,698. TOP FOR SHADE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 2,954. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a top for shade for lighting fixtures, as shown.

62,699. TOP FOR SHADE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 3, 1922. Serial No. 2,955. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a top for shade for lighting fixtures, as shown.

62,700. BRACKET PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed June 23, 1922. Serial No. 2,793. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracket plate for lighting fixtures, as shown.

62,701. CHANDELIER FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed June 23, 1922. Serial No. 2,794. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a chandelier for lighting fixtures, as shown.

- 62,702. CHANDELIER FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed June 23, 1922. Serial No. 2,795. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a chandelier for lighting fixtures, as shown.

- 62,703. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed July 10, 1922. Serial No. 3,024. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate for lighting fixtures, as shown.

- 62,704. HUSK FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Co., Toledo, Ohio, a Corporation of Ohio. Filed Aug. 28, 1922. Serial No. 3,580. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a husk for lighting fixtures, as shown.

- 62,705. ELECTRIC WALL BRACKET. THURE E. DAHL, New York, N. Y. Filed May 31, 1921. Serial No. 473,936. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an electric wall bracket, as shown.

- 62,706. BRACKET BACK FOR LIGHTING FIXTURES. THURE E. DAHL, New York, N. Y. Filed May 31, 1921. Serial No. 473,947. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracket back for lighting fixtures, as shown.

- 62,707. BODY PART FOR LIGHTING FIXTURES. THURE E. DAHL, New York, N. Y. Filed July 21, 1921. Serial No. 486,584. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a body part for lighting fixtures, as shown.

- 62,708. SOCKET COVER FOR LIGHTING FIXTURES. THURE E. DAHL, New York, N. Y. Filed July 21, 1921. Serial No. 486,586. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a socket cover for lighting fixtures, as shown.

- 62,709. BAND FOR LIGHTING FIXTURES. THURE E. DAHL, New York, N. Y. Filed July 21, 1921. Serial No. 486,587. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a band for lighting fixtures as shown.

- 62,710. CANDY BOUQUET. FAY L. VAN DELINDER, Chicago, Ill. Filed Oct. 30, 1922. Serial No. 4,162. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a candy bouquet, as shown.

- 62,711. AUTOMOBILE RADIATOR CAP. HERBERT A. DENT, Chicago, Ill., assignor to Dent Auto Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 27, 1922. Serial No. 4,413. Term of patent 14 years.

The ornamental design for an automobile radiator cap, as shown.

- 62,712. COUGH TABLET. MARIE ROSE DURANTE, Utica, N. Y. Filed Feb. 23, 1922. Serial No. 842. Term of patent 14 years.

The ornamental design for a cough tablet, as shown.

- 62,713. FINGER RING, BRACELET, OR ARTICLE OF SIMILAR NATURE. SOLOMON EISENBERG, Syracuse, N. Y. Filed Jan. 18, 1923. Serial No. 4,927. Term of patent 7 years.

The ornamental design for a finger ring, bracelet, or article of similar nature substantially as shown.

62,714. COMBINED LAMP AND SOUND-REPRODUCING DEVICE. WALTER ERNI and ARTHUR E. LANGE, Jr., Milwaukee, Wis. Filed June 8, 1922. Serial No. 2,572. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a combined lamp and sound reproducing device, as shown.

62,715. CHANDELIER FOR LIGHTING FIXTURES. FRED FLEISCHAUER, New Milford, N. J., assignor to New York Lighting Fixture Manufacturing Co., New York, N. Y., a Corporation of New York. Filed July 20, 1922. Serial No. 3,145. Term of patent 7 years.

The ornamental design for a chandelier for lighting fixtures, as shown.

62,716. SOLE OR TAP. DUDLEY FREEMAN, Roxbury, Mass., assignor to Panther Rubber Manufacturing Company, Stoughton, Mass., a Corporation of Massachusetts. Filed Mar. 11, 1922. Serial No. 1,133. Term of patent 14 years.

The ornamental design for a sole or tap as shown.

62,717. SHOE HEEL. DUDLEY FREEMAN, Roxbury, Mass., assignor to Panther Rubber Manufacturing Company, Stoughton, Mass., a Corporation of Massachusetts. Filed Mar. 11, 1922. Serial No. 1,134. Term of patent 14 years.

The ornamental design for a shoe heel as shown.

62,718. SPOON OR SIMILAR ARTICLE. EMIL FUCHS, New York, N. Y., assignor to Cartier, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 8, 1922. Serial No. 994. Term of patent 7 years.

The ornamental design for a spoon or similar article, as shown.

62,719. LACE. HENRY GIEBEL, New York, N. Y., assignor to Thomas Wilson & Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 5,307. Term of patent $3\frac{1}{2}$ years.

The ornamental design for the lace, as shown.

62,722. ATTACHMENT PLUG. WILLIAM HENRY HARRINGTON, Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 2, 1921. Serial No. 519,527. Term of patent 14 years.

The ornamental design for an attachment plug, as shown.

62,720. PENCIL. BERNARD GOLDSTEIN, Toronto, Ontario, Canada. Filed Jan. 22, 1923. Serial No. 4,966. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a pencil as shown.

62,723. AUTOMOBILE SIGNAL. WILLIAM HECKMAN and JOHN A. HECKMAN, Denver, Colo., assignors to The Heckman Signal Company, a Corporation of Colorado. Filed May 16, 1921. Serial No. 470,012. Term of patent 14 years.

The ornamental design for an automobile signal as shown.

62,721. STATUETTE. YUBA T. GOODWIN, East Dedham, Mass. Filed Mar. 5, 1923. Serial No. 5,365. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a statuette, as shown.

62,724. LACE. WALTER HELBIG, Queens, N. Y. Filed Feb. 28, 1923. Serial No. 5,308. Term of patent $3\frac{1}{2}$ years.

The ornamental design for lace, as shown.

62,725. HEEL FOR BOOTS AND SHOES. DAVID HILL, Leicester, England. Filed Aug. 3, 1921. Serial No. 489,642. Term of patent 7 years.

The ornamental design for a heel for boots and shoes as shown.

62,726. BRUSH HOLDER. WILLIAM J. HINES, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 4, 1922. Serial No. 1,020. Term of patent 14 years.

The ornamental design for a brush holder as shown in the accompanying drawing.

62,727. RING. OLAUS T. HODNEFIELD, Los Angeles, Calif. Filed Aug. 14, 1922. Serial No. 3,385. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a ring, as shown.

62,728. PLATE OR SIMILAR ARTICLE. PERCY JENNER, New York, N. Y., assignor to The Palm Brothers Company, New York, N. Y. Filed Oct. 12, 1922. Serial No. 3,949. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate or similar article, as shown.

62,729. PLATE OR SIMILAR ARTICLE. PERCY JENNER, New York, N. Y., assignor to The Palm Brothers Company, New York, N. Y. Filed Oct. 17, 1922. Serial No. 4,002. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate or similar article, as shown.

62,730. PLATE OR SIMILAR ARTICLE. PERCY JENNER, New York, N. Y., assignor to The Palm Brothers Company, New York, N. Y. Filed Oct. 19, 1922. Serial No. 4,035. Term of patent $8\frac{1}{2}$ years.

The ornamental design for a plate or similar article, as shown.

62,731. COMBINATION CHIPPED-GLASS FRAME AND MIRROR. JOZEFA KECZUR, West Selkirk, Manitoba, Canada. Filed Dec. 12, 1922. Serial No. 4,583. Term of patent 7 years.

The ornamental design for a combination chipped glass frame and mirror, as shown.

62,732. COMBINATION COLORED CHIPPED-GLASS FRAME AND MIRROR. JOZEFA KECZUR, West Selkirk, Manitoba, Canada. Filed Dec. 12, 1922. Serial No. 4,584. Term of patent 7 years.

The ornamental design for a combination colored chipped glass frame and mirror, as shown.

62,733. WATCHCASE. GEORGE J. KELLER, Newark, N. J. Filed Feb. 2, 1923. Serial No. 5,054. Term of patent 14 years.

The ornamental design for a watchcase, as shown.

62,734. ELECTRIC-LAMP STAND. IRVING L. KLEINFELD, Brooklyn, N. Y. Filed Aug. 31, 1922. Serial No. 3,609. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an electric lamp stand, as shown.

62,735. LACE. JOHN LANGENEGGER, West New York, N. J., assignor to Blanck & Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 10, 1923. Serial No. 5,427. Term of patent $3\frac{1}{2}$ years.

The ornamental design for lace as herein shown and described.

62,736. CHARM. ALFRED B. LEMON, Providence, R. I. Filed Feb. 11, 1922. Serial No. 657. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a charm, as shown.

312 O. G.—45

62,737. MEDALLION, EMBLEM, BUTTON, OR SIMILAR ARTICLE. PETER F. LEON, New York, N. Y. Filed Mar. 28, 1921. Serial No. 456,482. Term of patent 14 years.

The ornamental design for a medallion, emblem, button, or similar article, as shown.

62,738. BRACELET. CHARLES M. LEVY, New York, N. Y. Filed Jan. 31, 1923. Serial No. 5,036. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracelet, as shown.

62,739. RADIATOR CAP. ALFRED B. MEMMOTT, Salt Lake City, Utah. Filed Nov. 2, 1922. Serial No. 4,193. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a radiator cap, as shown.

62,740. FAUCET. CHARLES J. MUEND, Philadelphia, Pa., assignor to Haines, Jones & Cadbury Incorporated, a Corporation of Pennsylvania. Filed Dec. 28, 1921. Serial No. 525,486. Term of patent 14 years.

The ornamental design for a faucet, as shown.

62,741. COMBINED SPAT AND LEGGING. GEORGE J. NICHOLS, Minneapolis, Minn. Filed Aug. 26, 1922. Serial No. 3,567. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a combined spat and legging, as shown.

62,742. BADGE. MABEL H. PALMER, Davenport, Iowa. Filed Nov. 3, 1922. Serial No. 4,218. Term of patent 7 years.

The ornamental design for a badge, as shown.

62,743. LIGHTING FIXTURE. ROSCOE C. PFLEAGER, Cleveland, Ohio, assignor to Benjamin F. Klein, Cleveland, Ohio. Filed Aug. 14, 1922. Serial No. 3,376. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a lighting fixture, substantially as shown.

62,744. CABINET. FRANK W. REYNOLDS, New Washington, Ohio. Filed June 28, 1922. Serial No. 2,856. Term of patent 7 years.

The ornamental design for a cabinet, substantially as shown.

62,745. DOLL. HARRIET M. ROBINSON, Seattle, Wash. Filed May 13, 1922. Serial No. 2,218. Term of patent 14 years.

The ornamental design for a doll, as shown.

62,746. RIBBON, TEXTILE FABRIC, OR ARTICLE OF SIMILAR NATURE. EMIL SPECK, Paterson, N. J., assignor to The Taylor-Friedsam Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 2, 1923. Serial No. 5,344. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a ribbon, textile fabric, or article of similar nature as shown.

62,747. FINGER RING, BRACELET, OR SIMILAR ARTICLE OF MANUFACTURE. JACOB H. SPIRO, San Francisco, Calif. Filed May 31, 1922. Serial No. 2,485. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a finger ring, bracelet, or similar article of manufacture, as shown.

62,748. CASING FOR HUMIDIFIERS. FREDERICK S. STAFFORD, Chicago, Ill., assignor to Henry G. Saal, Chicago, Ill. Filed Mar. 5, 1921. Serial No. 450,001. Term of patent 7 years.

The ornamental design for a casing for humidifiers, as shown.

62,749. DOLL. DAVID STRAITON, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 26, 1922. Serial No. 4,711. Term of patent 14 years.

The ornamental design for a doll, as shown.

62,750. PLATE OR SIMILAR ARTICLE. RALPH STUART, Buffalo, N. Y., assignor to The Palm Brothers Company, New York, N. Y. Filed Nov. 1, 1922. Serial No. 4,183. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a plate or similar article, as shown.

62,751. BIFURCATED NETHER GARMENT FOR CHILDREN. EULAH MYRTLE SUMMERS, Birmingham, Ala. Filed June 6, 1922. Serial No. 2,550. Term of patent 7 years.

The ornamental design for a bifurcated nether garment for children, substantially as shown.

62,752. LIGHTING FIXTURE. ALBERT ULLMAN, Cleveland, Ohio, assignor to The Scott-Ullman Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 13, 1922. Serial No. 3,064. Term of patent 3½ years.

The ornamental design for a lighting fixture, as shown.

62,753. BRACKET BACK. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,204. Term of patent 3½ years.

The ornamental design for a bracket back, as shown.

62,754. ARM FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,205. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures, as shown.

62,755. BRACKET BACK. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,200. Term of patent 3½ years.

The ornamental design for a bracket back, as shown.

62,756. BRACKET BACK. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,201. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracket back, as shown.

62,757. BRACKET BACK. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,202. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracket back, as shown.

62,758. BRACKET BACK. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,203. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bracket back, as shown.

62,759. ARM FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,206. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an arm for lighting fixtures, as shown.

62,760. ARM FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,207. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an arm for lighting fixtures, as shown.

62,761. ARM FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,208. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an arm for lighting fixtures, as shown.

62,762. ARM FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,209. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an arm for lighting fixtures, as shown.

62,763. BODY SHELL. GUSTAVE E. VILLARET, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1922. Serial No. 4,210. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a body shell, as shown.

62,764. HOSIERY. HARRY H. WEST, Montreal, Quebec, Canada. Filed Dec. 21, 1922. Serial No. 4,650. Term of patent $3\frac{1}{2}$ years.

The ornamental design for hosiery as shown.

62,765. LIGHTING FIXTURE. JAMES WILLIAMSON, Chicago, Ill., assignor to R. Williamson & Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1922. Serial No. 3,237. Term of patent 7 years.

The ornamental design for a lighting fixture as shown.

62,766. DOLL. GEORGE R. ZIMMERMAN, Brooklyn, N. Y. Filed Dec. 27, 1922. Serial No. 4,725. Term of patent 7 years.

The ornamental design for a doll as shown.

PATENTS

GRANTED JULY 24, 1923.

1,462,470. POWER PLANT. ERNIE ADAMSON, New York, N. Y. Filed Apr. 12, 1920. Serial No. 373,320. 4 Claims. (Cl. 60—42.)

1. A power plant of the character described including a turbine, a shaft on which the turbine is mounted, motive fluid forming means including a combustion chamber having a motive fluid supply connection leading to the turbine, a blower on the turbine shaft supplying air to the combustion chamber, a water jacket around the said supply connection having an outlet leading into the combustion chamber, a condenser through which the motive fluid is exhausted from the turbine, having an outlet for the condensing liquid connected to the water jacket of the motive fluid supply connection, an exhaust pump on the turbine shaft for withdrawing fluid from the condenser, and a pump on the turbine shaft for forcing condensing liquid through the condenser.

1,462,471. COLLAPSIBLE LAPBOARD FOR CARD PLAYERS. BENJAMIN W. ALPINE, Kankakee, Ill. Filed May 13, 1921. Serial No. 469,222. 1 Claim. (Cl. 45—122.)

A device of the character specified, comprising a lap-board formed of flexible material and provided in its body portion with a plurality of longitudinally disposed transversely spaced sleeves or pockets and at each end with a transversely disposed sleeve or pocket, strips of rigid or semi-flexible material arranged in said longitudinal sleeves or pockets and other similar strips arranged in said transverse sleeves, the inner edges of the transverse strips fitting against the ends of the longitudinal strips and holding the latter against longitudinal displacement and the transverse sleeves or pockets being open at one end, to provide for the removal of the end strips preparatory to collapsing or folding the device.

1,462,472. LENS MOUNTING FOR LAMP CASINGS. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 3, 1921. Serial No. 442,158. 9 Claims. (Cl. 240—41.)

1. A transversely divided resilient lens mounting ring having a smooth periphery concentric to the ring axis and adapted to encircle the juncture of the casing and lens margin, and means embedded within the circumference of said ring to close the ring on the lens and lamp casing.

1,462,473. AUTOMATIC SWITCH CONTROL FOR SPOTLAMPS. ERNST G. K. ANDERSON, Chicago, Ill., assignor, by mesne assignments, to Appleton Electric Co., Chicago, Ill., a Corporation of Illinois. Filed June 27, 1921. Serial No. 480,562. 13 Claims. (Cl. 240—7.)

1. Automatic control for universal electric spot lamps comprising, in combination with the members of a universal mounting for the lamp casing and a lamp controlling switch having an actuator member, of a control element swingingly supported on said mounting and cooperating with said actuator and a part fixed on the mounting and operative to control said switch in a given position of the lamp when moving through any direction of its universal sweep.

1,462,474. APPARATUS FOR CRUSHING CORRUGATED METAL. CHARLES E. ATKINSON, Pine Lawn, Mo., assignor to E. E. Souther Iron Company, Wellston P. O., St. Louis County, Mo., a Corporation of Missouri. Filed June 4, 1921. Serial No. 475,047. 8 Claims. (Cl. 153—2.)

1. In an apparatus of the character described, means for flattening the corrugations at a margin of a corrugated metal sheet and at the same time forming inclined folds in the corrugated metal adjoining said margin, said

means including clamping members between which the corrugated sheet is held, and a bending member cooperating with said clamping members, said clamping mem-

bers having inclined abutment faces and said bending member having a correspondingly formed inclined abutment located opposite to said inclined faces.

1,462,475. METHOD OF CRUSHING CORRUGATED METAL. CHARLES E. ATKINSON, Pine Lawn, Mo., assignor to E. E. Souther Iron Company, Wellston P. O., St. Louis County, Mo., a Corporation of Missouri. Filed June 4, 1921. Serial No. 475,048. 8 Claims. (Cl. 153—2.)

1. The method of crushing corrugated metal sheets which comprises crushing and flattening a marginal portion of the corrugated metal so as to form two oppositely disposed flat marginal folds at the end of each crushed corrugation, at the same time forming tapering folds converging from the respective marginal folds and merging into uncrushed portions of the corrugations.

1,462,476. MOTOR CONTROLLER. THOMAS E. BARNUM, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed July 30, 1917. Serial No. 183,474. 3 Claims. (Cl. 200—97.)

3. In a motor controller, in combination, a panel, a switch mounted thereon, said switch having an oscillatable contact member provided with an extension projecting outwardly from said panel, a magnet frame mounted on said panel contiguous to said switch, an electromagnet mounted on said frame and having a pivoted armature projecting outwardly from said base and engaging said extension of said switch whereby said electromagnet is energizable to actuate said contact member for closure of said switch, mechanical means to lock said switch in closed position, including an oscillatable member having

a part projecting outwardly from said panel to be engaged by said armature for release of said switch following de-energization of said electromagnet and a dashpot

mounted on the front of said magnet frame and connected to said armature for retarding movement of the latter when released by said electromagnet.

1,462,477. AUTOMOBILE HOOD CLAMP. WILLIAM B. BASSICK, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed May 4, 1922. Serial No. 558,412. 6 Claims. (Cl. 292—114.)

1. In an automobile hood clamp, the combination of a clamping member having a hold down clamp at the upper part thereof, adapted to clamp a hood to an automobile frame, a side engaging clamp, and a part adapted to make a pivotal connection with the frame, means enabling the adjustment of position of the pivotal connection with respect to the hood to engage the side engaging clamp with the side of the hood, and means for holding the pivot point of said part in adjusted position.

1,462,478. ADJUSTING MECHANISM FOR TRIMMERS. REES BEYNON and JOHN C. HINTZ, Chicago, Ill., assignors to Dryden Rubber Company, a Corporation of Illinois. Filed Jan. 16, 1922. Serial No. 529,507. 1 Claim. (Cl. 164—60.)

In a trimming machine two overlapping cutting disks, parallel shafts, one attached to the center of each disk for rotating the same, a casting having two arms and four bearings, two bearings in each arm making two pairs of bearings, one pair for each shaft and one bearing of each pair in each arm, one pair of bearings permanently fixing the alignment of one of said shafts, eccentric sleeves in the other pair of bearings, the other shaft being mounted in said sleeves, a pulley on each shaft for driving the same, said pulleys being located between said arms, a bail connecting said sleeves rigidly

together whereby they may be simultaneously rotated to adjust the alignment of said other shaft while maintaining the parallelism of the shafts, said bail passing

around said pulleys at a sufficient distance to permit belts to run around said pulleys and within said bail and means independent of said bail for adjusting said shafts longitudinally to regulate the contact between said disks.

1,462,479. COLOR BOX. JOSEPH J. BOBOK. Yonkers, N. Y., assignor, by direct and mesne assignments, of thirty-five per cent to Cornelius Kyff and thirty per cent to Andrew Purcell, both of Yonkers, N. Y. Filed Apr. 18, 1922. Serial No. 554,726. 2 Claims. (Cl. 101—364.)

1. A device of the class described comprising a box member receptive of a printing fluid and adapted to be secured to a reciprocating table of a printing machine, peaked ends on said box, a baffle cover formed on said ends, the latter adapted to prevent the overflow of fluid when the box comes to an abrupt stop, vertical slots in said box, guide members within the box, plates slidable between said guide members, a shaft rotatable in said plates, an inking roller on said shaft and adapted to dip into the fluid, and means resiliently contacting with said roller on opposite sides thereof for evenly distributing the fluid over said roller.

1,462,480. SMOKING MIXTURE. FREDERICK J. BOSSE, Norristown, Pa. Filed Sept. 17, 1920. Serial No. 410,927. 1 Claim. (Cl. 131—31.)

A smoking mixture comprising tobacco and diatomaceous earth distributed therethrough whereby said earth absorbs moisture from said tobacco during the process of combustion.

1,462,481. ORNAMENTAL TRANSPARENCY. JOHN T. BOYLE, Randolph, Mass. Filed May 23, 1921. Serial No. 471,906. 8 Claims. (Cl. 41—21.)

1. An ornamental structure of the character described, comprising a panel of transparent material; a set of independent transparent design elements distributed

about upon one side of said panel so as to form a design; a set of design elements distributed about upon the

other side of said panel so as to form a similar design positioned to register with the first design, and means securing all of said elements to said panel.

1,462,482. ADJUSTABLE BOOT FOR PIPES. CHARLES M. BULLER, Milwaukee, Wis., assignor to L. J. Mueller Furnace Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 6, 1921. Serial No. 467,394. 5 Claims. (Cl. 137—75.)

1. An adjustable boot for pipes, comprising a collar having one end portion of rectangular shape in cross section and a side wall extending inwardly, angular strips forming grooves mounted on three sides of the rectangular portion, and an angular strip adjustably mounted on the fourth side of the rectangular portion and resting on the inwardly extending side wall to form in connection with the other angular strips a rectangular grooveway to receive one end portion of another pipe.

1,462,483. HYDRAULIC TURBINE. JOHN S. CARPENTER, Irvington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Sept. 21, 1921. Serial No. 502,267. 10 Claims. (Cl. 253—122.)

1. In a hydraulic turbine, the combination, with a runner, a bottom member, and a cover plate, of gates

pivotaly mounted between the bottom member and the cover plate, column members arranged outside the gates for holding the cover plate from the bottom member,

and a swinging guide vane journaled on each column member and arranged to adjust itself to the water flow.

1,462,484. HAIR CURLER. JOSEPH D. COUGHLIN, New York, N. Y., assignor, by mesne assignments, of one-half to Duncan A. McConnell. Filed Dec. 31, 1921. Serial No. 526,114. 2 Claims. (Cl. 132—41.)

1. A hair curler embodying a resilient strip bent intermediate its ends to form two resilient arms, one of which is longer than the other, which arms are normally adapted to partake of diverging relation, the free end portion of the shorter arm being bent outwardly with respect to the remainder of said arm to provide an inclined locking portion and the free end portion of the longer arm being returned upon itself to form a substantially straight inclined retaining portion terminating at the end of the returned portion, the shorter arm being of such length that, when said arms are bowed apart by hair positioned between them and the free ends of the arms forced toward one another, the inclined locking portion at the free end of the shorter arm will engage with the inclined retaining portion of the longer arm and may, by the application of pressure, be forced to slide down the inclined portion of the longer arm and snap beneath the free end thereof so as to become locked behind said free end which forms a shoulder or abutment and engages the inclined locking portion of the shorter arm at a point slightly removed from the extremity of the shorter arm, whereby inadvertent release of the shorter arm is precluded.

1,462,485. METHOD OF AND APPARATUS FOR MIXING MATERIALS. GEORGE W. DENISON, Bay Village, Ohio. Filed Sept. 6, 1921. Serial No. 498,889. 23 Claims. (Cl. 83—73.)

1. The method of mixing materials which comprises ejecting a thin film of one material by centrifugal force through a rotating outlet to form an annular band in close contact with a band of dissimilar material also ejected by centrifugal force through a rotating outlet.

1,462,486. BEET-HARVESTING MACHINE. JOHN DEVEX, Lehi, Utah. Filed June 2, 1921. Serial No. 474,504. 10 Claims. (Cl. 55—107.)

1. In a beet topping machine, the combination of a vertically movable cutting disk for severing the tops of the beets, a sectional height regulating member for the cutting disk connected to the latter and having a ground engaging body portion movable vertically a relatively greater distance than the cutting disk when said member comes in contact with a beet, means for adjusting one section of the regulating member relatively to the cutting disk, and means for raising and lowering the rotary cutting disk and regulating means to an inoperative position.

5. In a beet topping machine, the combination with the main frame and ground wheel axle, of a sprocket wheel carried on said axle, a rotatable shaft carried on the main frame, a sprocket wheel mounted on said shaft, a supplemental frame loosely secured on said shaft, a second shaft journaled on the supplemental frame and movable vertically independently of the first shaft a sprocket wheel and bevel gear on the second shaft, sprocket chains connecting said sprocket wheels, a depending rotatable shaft carried by the supplemental frame, a cutting disk mounted on the lower end of said depending shaft and a pinion mounted on its upper end and adapted to engage said bevel gear.

6. In a beet topping machine, a cutting disk, a pivotally mounted belt frame having side members each

formed of pivotally connected sections, means for elevating the entire belt frame, and means for elevating one section of each of said frame side members independently of the other section of said members.

7. In a beet topping machine, a main frame, a cutting disk, a disk height regulating frame comprising two side members each formed of upper and lower pivotally connected sections, said upper sections being pivotally mounted on the main frame, connections between said upper sections and the cutting disk, means for elevating said disk, and the entire regulating frame, and means for separately elevating the lower sections of the regulating frame side members.

8. In a beet topping machine, a cutting disk, a disk height regulating frame composed of upper and lower sections, and means for elevating the lower frame section independently of the upper section.

1,462,487. MECHANISM FOR REWINDING FILMS
HERMAN A. DE VRY, Chicago, Ill., assignor to The DeVry Corporation, Chicago, Ill., a Corporation of Illinois. Filed Sept. 24, 1919. Serial No. 325,974. 4 Claims. (Cl. 242—55.)

1. In a film rewinding mechanism, the combination of a support for the spool on which a film is to be wound, a spindle removably held in said support, a crank fixed to the spindle, a one-way clutch comprising a member rigid with the crank and spindle, and a member on the spindle and rotatable with the spool, the clutch permitting the spool to rotate and wind up the film by momentum when the crank is held.

1,462,488. SLOPING-BANK-CUTTING ATTACHMENT.
CHARLES L. GEORGE, Findlay, Ohio, assignor to The Buckeye Traction Ditcher Company, Findlay, Ohio, a Corporation of Ohio. Filed Feb. 23, 1922. Serial No. 538,520. 3 Claims. (Cl. 37—94.)

1. In a machine of the class described, a frame, an excavating wheel rotatably mounted in the frame, a slope cutting wheel carried by the frame within the periphery of the excavating wheel, a rotatable agitating member disposed between the excavating wheel and the slope cutting wheel to break up the material cut by the latter, and means for driving the slope cutting wheel and agitating member.

1,462,489. ELECTRIC FUSE. BERTRAM J. GRIGSBY, Chicago, Ill. Filed Jan. 22, 1918. Serial No. 213,165. 1 Claim. (Cl. 200—117.)

An electrical thermal fuse comprising an open ended shell, conducting ferrules applied thereto, a fuse link attached at one end to one of said ferrules, a bushing within said shell for contact with one of said ferrules, a disc slidable in and filling said bushing, and a spring interposed between said disc and a shoulder on the bushing, said fuse link extending into said bushing, through the spring and through said disc and attached to the disc.

1,462,490. RAZOR-BLADE-SHARPENING MACHINE.
VOLNEY T. MILLER, Kansas City, Mo., assignor to Robert S. Spahr, Kansas City, Mo. Filed May 29, 1922. Serial No. 564,493. 19 Claims. (Cl. 51—113.)

1. In a machine of the kind described, a rotary abrading wheel having a flat abrading side comprising a stropping surface and a honing surface concentric and flush with each other, a plurality of blade holders, a supporting guiding means for said holders, means for feeding said holders along said guiding means, and means by which said holders are moved to the sharpening position with respect to said side on said guiding means, substantially as set forth.

1,462,491. PROCESS AND APPARATUS FOR FEEDING GLASS. WILLIAM J. MILLER, Swissvale Borough, Pa. Filed Jan. 7, 1921, Serial No. 435,669. Renewed Apr. 7, 1923. 23 Claims. (Cl. 49—5.)

11. In the feeding of glass, for use in connection with a container for molten glass provided with a discharge orifice, the combination of means intermittently operative for detaching the glass protruding from said orifice to form gathers, a receptacle adapted to contain a quantity of liquid, means for applying said receptacle to the outer end of said orifice between detaching operations whereupon the liquid is gasified by the heat, causing the glass to be temporarily retracted along said orifice for the pur-

poses described, and means for replenishing the supply of liquid to said receptacle when the latter is in its in-

operative position, said replenishing means being adjustable to regulate the quantity of liquid supplied to said receptacle.

- 1,462,492. CHIP POCKET FOR CUTTING SHREDDERS AND THE LIKE. PHILIP S. MITTS and WILLIAM J. WINSTON, Saginaw, Mich., assignors to Mitts & Merrill, Saginaw, Mich., a Corporation of Michigan. Filed May 10, 1922. Serial No. 559,948. 2 Claims. (Cl. 83—75.)

1. In a drum of the class described, a plurality of cutting knives, a pocket formed in said drum in advance of the edge of each knife, the width of the bottom of said pocket substantially uniform throughout the length of said pocket, an end of said pocket flared outwardly.

- 1,462,493. AUTOMOBILE HOOD CLAMP. RAYMOND G. MOORE, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 4, 1922. Serial No. 549,463. 7 Claims. (Cl. 292—114.)

1. In an automobile hood clamp, the combination of a barrel having a transverse top portion integral therewith,

having upper and lower walls with a channel between the same, and a transverse metal strap extending through said channel and secured thereon.

- 1,462,494. EXCAVATOR. WILLIAM OTTO, Edgeley, N. Dak. Filed July 1, 1922. Serial No. 572,231. 2 Claims. (Cl. 37—69.)

1. An ore excavating machine comprising a wheeled platform, a pedestal thereon, side frames rotatably mounted on said pedestal, sprocket wheels between said side frames, chains connecting said sprocket wheels, scoops secured to said chains, longitudinal projections on said side frames, a tilt table pivotally secured to said pedestal having longitudinal guide grooves formed thereon, hinge arms on said tilt table engaging said pedestal, a handle knob adapted to releasably secure said tilt table in any desired angular position by engaging the hinge arms, said side frames adapted to be secured on said tilt table, and means for sliding said side frames laterally on the tilt table.

- 1,462,495. SHEET-GLASS-DRAWING MECHANISM. THOMAS S. OWENS, Toledo, Ohio. Filed Mar. 5, 1920. Serial No. 363,508. 6 Claims. (Cl. 49—17.)

5. In a sheet glass drawing mechanism, a chamber through which glass is drawn in sheet form, a table disposed at one side of a soft portion of the sheet and extending transversely thereof and through and beyond each side wall of the chamber, a sheet flattening member guided by the table for movements transversely of the sheet in hatching contact with a surface thereof and being of a length for one end portion to extend without a side of the chamber when another end portion thereof is disposed in rubbing contact with the surface of a sheet, means without the chamber for imparting reciprocatory movements to the member, and means for cooling each end portion of the flattening member when disposed without a respective side of the chamber.

- 1,462,496. KNOB ALARM. ANDRU G. PAPPADAKIS, Detroit, Mich. Filed July 7, 1922. Serial No. 573,319. 1 Claim. (Cl. 116—97.)

In a device of the character described, the combination with a knob spindle; of an alarm mechanism, having a

pinion to receive the power for operating the same; means comprising a toothed sector, having an opening through

which the said spindle projects, and engaging the pinion whereby rotary movement of said spindle is transmitted to said pinion.

1,462,497. INDEX. JAMES H. RAND, North Tonawanda, N. Y. Filed May 19, 1921. Serial No. 470,856. 8 Claims. (Cl. 40—2.)

1. A composite index element for indexes of the character described comprising a relatively long and narrow multi-ply strip, one ply being of resilient, sheet material and another ply being of sheet material carrying an inscription, the plies being cemented together, and said composite strip being stiffly resilient whereby the strip may be temporarily bent without permanent distortion to insert it in a frame, and whereby the body of the strip between its ends will lie flat against a flat surface and be so self-retained when held at its ends.

1,462,498. LAMP FIXTURE FOR BEDS AND THE LIKE. LOUIS ROTH, New York, N. Y., assignor to Charles F. Kinsman, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,284. 1 Claim. (Cl. 240—4.)

A lamp-fixture adapted for use on articles of furniture comprising a head one face of which is curved in conformity with the contour of the surface of the article with which said curved face is adapted to contact, a single stem in permanently fixed relation to said head, said stem passing through said curved face only of the head and protruding for a substantial distance beyond said head to afford means for the attachment of said fixture, a perforated collar fitted loosely and removably on the stem, one face of said collar being curved for snug contact with the curved face of the head and the other side of said collar being a plane surface, and means co-operating with the stem for clamping the collar and the head in fixed non-rotative relation to each other and to the article of furniture.

1,462,499. DRAFT-REGULATING DEVICE. PETER THOMSEN, Cassel, Germany, assignor to Schmidt'sche Heissdampf Gesellschaft m. b. H., Cassel-Wilhelmshöhe, Germany, a Corporation of Germany. Filed Mar. 18, 1920. Serial No. 367,021. 11 Claims. (Cl. 110—61.)

1. In a boiler or the like, a structure having tubes arranged in a plurality of groups, a chamber divided into separate compartments each communicating with the tubes of one group, draft devices connected with the respective compartments, and means for controlling said draft devices.

1,462,500. VACUUM RELEASE FOR SHELLS. PAUL IRVINE WELLS, Kouts, Ind. Filed Jan. 24, 1920. Serial No. 353,760½. 4 Claims. (Cl. 89—1.)

1. In shells, means for automatically admitting a vacuum reducing agency into the interior of a shell simultaneously with first forward movement of the charge contained in the shell.

1,462,501. PISTON. MONT W. BARWALD, Jacksonville, Fla. Filed May 8, 1922. Serial No. 559,296. 7 Claims. (Cl. 74—108.)

2. A piston provided adjacent its lower portion with a wide and shallow peripheral groove of uniform depth throughout its width adapted to be completely filled with oil and of such width that the oil will be trapped therein and act to guide the piston and prevent piston slap.

1,462,502. COUNTER-DISPLAY CONTAINER. TRUETT F. EMERSON, Somerville, Mass., assignor, by mesne assignments, to Walter M. Lowney Company, Boston, Mass., a Corporation of Massachusetts. Filed June 24, 1921. Serial No. 480,111. 3 Claims. (Cl. 206—44.)

1. A container and a cover therefor provided with flanges, two opposite flanges of said cover being cut

at opposite points thereof and at points much nearer one end of said cover than the other; whereby when said cover is removed from said container and reversed

said container may be set into it and the smaller portion of said cover may be bent backward on a line between said cuts to form an easel support for one end of said container to display the goods therein.

1,462,503. FUEL SAVER. JOHN W. GREEN, Columbus, Ohio. Filed Mar. 27, 1922. Serial No. 546,996. 1 Claim. (Cl. 126-114.)

A fuel saver for burners of stoves comprising a thin metallic casing in the shape of a hollow inverted conic frustum, gripping fingers rising from the upper edge of the casing to pass over and around a skeleton frame in the top of a stove, both the inner and outer sides of said casing being covered with refractory material, said casing adapted to enclose a fuel burner so that its lower end extends below the burner and its upper edge is disposed close to the skeleton frame, the lower edge of the casing being provided with an opening to span the burner supply pipe, and notches to accommodate elements of the stove structure.

1,462,504. VAPORIZER. FREDERICK V. HADLEY, Needham, STANLEY BARNABY, Auburndale, and JOHN O. CLARKE, Forest Hills, Mass. Filed May 23, 1921. Serial No. 472,019. 14 Claims. (Cl. 158-75.)

1. A vaporizer comprising a casing having a mixing chamber therein, means for introducing an annular series of jets of gaseous fluid under pressure into said chamber, means for delivering liquid in the paths of the respective jets, an abutment having an annular concave deflecting surface in the paths of said liquid-carrying jets acting to cause an eddying thereof in said mixing chamber whereby the liquid will be thoroughly atomized and mixed with said gaseous fluid and peripheral outlets in the end wall of said chamber for delivering the mixture.

1,462,505. LADDER ATTACHMENT. HOMER HUNT, Hartford, Conn. Filed July 15, 1922. Serial No. 575,202. 2 Claims. (Cl. 228-63.)

1. An attachment for ladders comprising a base plate adapted to bear against the side of a ladder leg, means for securing the plate to the ladder leg, bracket loops projecting from the side of the plate to receive an extension leg, bolts mounted in the bracket loops, and clamping plates swiveled on the inner ends of said bolts and provided on their inner faces with longitudinal ribs extending from end to end thereof adapted to be embedded in the extension leg, the end of the bolt being located between the ribs.

1,462,506. COMBINED RAIL JOINT AND NUT LOCK. DUDLEY W. JEFFRIES, Springfield, Mo. Filed Aug. 2, 1922. Serial No. 579,157. 1 Claim. (Cl. 238-262.)

In a combined rail joint and nut lock, the combination of companion fish plates, rail securing bolts extending through said plates, nuts adjustable upon said bolts, one of the plates being provided with bottom and side flanges and having its bottom flange thickened toward the side flange thereof and formed at the base of said side flange with a longitudinally directed channel, and a locking bar slidably received in said channel and cut away longitudinally throughout the major portion of its length to define a flat locking face engaging said nuts locking the nuts against rotation as well as to define a vertical stop shoulder at one end of said face abutting one of said nuts and limiting the bar against forward endwise movement lying substantially flush at its ends with said plate, the bar being provided at its shouldered end with a downturned handle overhanging the adjacent end of said plate.

1,462,507. EMERGENCY CONTROLLER FOR ELEVATORS. ARTHUR J. JOHNSON, St. Paul, Minn., assignor to Standard Conveyor Company, a Corporation of Minnesota. Filed Mar. 15, 1921. Serial No. 452,582. 12 Claims. (Cl. 198-232.)

1. In combination with an elevator carrying a tray, a substantially vertical shaft revolvably supported on the elevator frame, arms mounted on said frame and projecting into the path of said tray, gearing connecting said arms

with said shaft, an arm connected with said shaft and arranged to be moved horizontally over a discharge station

of said elevator and a switch adapted to be actuated when the motion of said arm is arrested by an obstacle on said discharge station.

1,462,503. BUFFER CHECK FOR LOOM PICKERS. JOSEPH JOHN KURTZ, Shamokin, Pa. Filed Aug. 1, 1922. Serial No. 578,872. 4 Claims. (Cl. 139—167.)

4. A buffer for use in connection with loom-pickers, said buffer comprising a hollow leg and a shoulder, said leg adapted to be attached to a recoil member, the cross-sectional shape of the buffer being substantially the same as the cross-sectional shape of a standard picker.

1,462,509. SECURE COLLAR BUTTON. FRANK XAVIER LIST, New York, N. Y. Filed Oct. 24, 1922. Serial No. 596,689. 2 Claims. (Cl. 24—90.5.)

1. A device of the class described comprising an upper and lower disk rigidly united in spaced-apart relation, said upper disk having an eccentric circular cut-out therein, a shank on said upper disk adapted to pass thru a button hole, and means for guiding said button hole slit thru the cut-out into the space between the disks.

1,462,510. RECIPROCATING CONVEYER. CHARLES H. LISTER, North St. Paul, Minn., assignor to Standard Conveyor Company, a Corporation of Minnesota. Filed Nov. 21, 1921. Serial No. 516,619. 11 Claims. (Cl. 198—225.)

1. In a reciprocating conveyer, spaced guide rails, supports for said rails, a carrier movable longitudinally on

said rails, means for imparting reciprocating motion to said carrier, push lugs tiltably mounted on said carrier,

spaced rest stations on said rails and means for causing said push lugs to normally project to engage packages on said carrier and rest stations.

1,462,511. RECIPROCATING CONVEYER SYSTEM. CHARLES H. LISTER, North St. Paul, Minn. Filed Aug. 18, 1922. Serial No. 582,653. 12 Claims. (Cl. 198—218.)

1. In a reciprocating conveyer, parallel side rails, rollers mounted on said rails, rigid carriers supported on said rollers, said carriers being arranged to receive packages to be conveyed on their upper surfaces, elevated rest stations arranged at intervals on said rails to freely support packages above said carriers, means projecting from said carriers to engage packages on said rest stations, and means for imparting reciprocating movement to said carriers and thereby advance packages in step by step movement from one of said rest stations to another.

1,462,512. BOTTLE-CLEANING APPARATUS. CHARLES H. LOEW and JOHN R. GRUETTER, Lakewood, Ohio. Filed May 9, 1918. Serial No. 233,431. 6 Claims. (Cl. 15—60.)

4. In an apparatus of the character described, the combination, with a bottle carrier and means for moving the

same intermittently, of a series of brush spindles for the bottles on said carrier, a support for said spindles, a series of sleeves adapted to surround and enclose the brushes of said spindles and interposed between the spindle support and the bottle carrier, a rock shaft, means for rocking the same, an arm operated by said shaft and having an angularly disposed slot therein one branch whereof is curved with said shaft, a stud connected with the spindle support and projecting into said slot, and a connection between said arm and said sleeves.

1,462,513. NOVELTY ENVELOPE. WILLIAM E. LOVER, Findlay, Ohio. Filed July 2, 1918, Serial No. 243,036. Renewed Dec. 11, 1920. Serial No. 430,043. 2 Claims. (Cl. 229—68.)

1. The combination with a relatively flat flexible walled receptacle, closed except for an open mouth, of a sheet of emery cloth or paper secured upon the inner faces of the front and back of the receptacle, the sheets opposing each other.

1,462,514. METHOD OF BURNING FUEL OIL IN INTERNAL-COMBUSTION ENGINES. EDWARD L. LOWE, Palo Alto, Calif. Filed Jan. 4, 1923. Serial No. 610,562. 4 Claims. (Cl. 123—33.)

1. The method of burning fuel in an internal combustion engine, which consists in introducing the fuel into a chamber in communication with the working space of an engine cylinder and containing compressed air, independently heating a volume of compressed air in free communication with the intake and discharge ends of said chamber, segregating the lighter particles of the fuel, utilizing said independently heated volume of compressed air to ignite said segregated lighter particles of fuel, and permitting the ignited fuel to expand into the working space of the engine cylinder.

1,462,515. HOSPITAL GOWN. ELIZABETH MCELROY, Jacksonville, Fla. Filed Aug. 9, 1920. Serial No. 402,291. 1 Claim. (Cl. 2—145.)

An operating gown, said gown comprising two elongated similarly shaped sections adapted to extend around the opposite sides of a patient, the outer and inner vertical sides of the sections being provided with fastening means positioned whereby when the sections are extended around the opposite sides of a person the fastening means of the sections will be centrally disposed in relation to the center of the back and the front of the person, thereby allowing the sections to be connected together in the

above mentioned positions and allowing the formation of pajamas by closing the leg portions of the sections, belt sections carried by the elongated sections, the upper ends

of the elongated sections being bifurcated to a point adjacent the belt and substantially equidistant from the sides of the sections, said sections being proportioned whereby the bifurcations will register with the sides of the person and the arms when the sections are positioned on the opposite sides of the person.

1,462,516. MOTOR DRIVE FOR SEWING MACHINES. ARTHUR T. MACE, East Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 27, 1919. Serial No. 279,474. 8 Claims. (Cl. 112—220.)

1. In a portable sewing machine having an operating shaft, the combination of a sewing machine frame having a hollow base portion, a motor secured within the base portion and enclosed by an end extension thereof, power transmitting means extending from the hollow base portion to the operating shaft, and driving means connecting the motor and the power transmitting means including an intermediate speed reduction means interposed therebetween and completely enclosed by the base.

1,462,517. TIRE BEAD AND METHOD OF MAKING THE SAME. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed July 6, 1920, Serial No. 394,230. Renewed Jan. 9, 1923. 16 Claims. (Cl. 18—53.)

1. A cord or fabric tire casing having bead edges covered by the laminations of its rubber-coated carcass

material, said material carrying substantially less rubber coating around the beads than in the side walls and tread of the casing.

1,462,518. OIL SAVER. CLARK F. RIGBY, Butler, Pa. Filed Sept. 24, 1919. Serial No. 325,987. 4 Claims. (Cl. 286—16.)

1. In a well closure device, a packing chamber, a vertically divided screw member adapted to compress packing in said chamber and having a vertical passage for a well cable and substantially horizontal, internal recesses for lubricant adjacent said passage.

1,462,519. HOLLOW-STEM SUCTION VALVE. PAUL R. ROTHE, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,160. 3 Claims. (Cl. 251—144.)

1. A device of the character described comprising a valve casing having a plurality of radially extending openings through the side wall thereof, a tubular valve slidably disposed in said casing, a spring for normally elevating said valve in said casing to close the radial openings in said casing and to close the mouth of said casing, said valve being formed with a plurality of openings in its side wall and adapted to permit the passage of a fluid therethrough when said valve is forced downwardly against the action of said spring and the mouth of said casing opened.

1,462,520. SPOOL-BEARING BRACKET FOR YARN-TUBE FRAMES. EPPA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, a Corporation of Massachusetts. Filed June 30, 1922. Serial No. 571,853. 9 Claims. (Cl. 139—10.)

9. In a loom, a pattern chain, a supporting tube, a spool bearing bracket secured thereto, a substantially

rigid chain engaging hook pivotally mounted on said bracket and extending within the tube, and means to force said hook yieldingly outward.

1,462,521. STITCHING MECHANISM. LAURENCE SARTORE, Pittsburgh, Pa., assignor of one-half to Decimo Foglia, Pittsburgh, Pa. Filed Feb. 19, 1921. Serial No. 446,502. 10 Claims. (Cl. 112—2.)

1. Mechanism for stitching sausage skins and the like while in a moist condition which consists in a stitching element proper comprising a pair of spaced needles, a carriage movable in a line beneath said needles, and means on said carriage arranged to engage and support a section of sausage skin solely along the longitudinal edges thereof in such position as to subject the same adjacent the longitudinal edges thereof to the stitching action of the needles.

1,462,522. GLASS FINISHING AND POLISHING MACHINE. GROVER CLEVELAND SCOTT, Watson, W. Va. Filed June 20, 1921. Serial No. 478,854. 10 Claims. (Cl. 49—1.)

3. A machine of the character described including a table, a carrier movable around and upon the table, up-right shafts, one of which is rotatable, carrier actuating members on the shafts, a gear wheel loose on the other shaft, means for intermittently rotating the first shaft and thus moving the carrier, means for constantly rotating said gear, a vertically shiftable member adjacent to the gear, a cam rotating with the gear for actuating said shiftable member, a plurality of glass holders each having a stem movable with the carrier above said shiftable member, and a gear splined on the stem and engageable with the first named gear, and a frame on the carrier for each holder, in which the holder stem is journaled to rotate and shift vertically, and in which the gear of said stem is freely rotatable and confined against vertical shifting movement with the stem, and a vertically adjustable support for said mechanism consisting of a platform on which the mechanism is mounted, and a base with which the platform is adjustably associated.

1,462,523. YARN-TUBE FRAME. JOHN G. SODERBERG, Worcester, Mass., assignor to Crompton & Knowles Loom Works, a Corporation of Massachusetts. Filed Mar. 6, 1922. Serial No. 541,278. 1 Claim. (Cl. 139—10.)

A yarn tube frame comprising a bar having a longitudinally extended depressed portion, a sheet metal strip secured to said bar in said depressed portion, and a plurality of yarn tubes fixed to said strip, said metal strip having an integral longitudinally extended corrugated rib displaced outwardly from its surface adjacent the upper ends of said yarn tubes and protecting the ends thereof, the tube supporting portion of said strip and the longitudinally ribbed portion thereof being disposed entirely in said depressed portion of said bar.

1,462,524. TIRE-STRIPPING APPARATUS. WILLIAM C. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 13, 1922. Serial No. 536,381. 16 Claims. (Cl. 154—9.)

11. Apparatus for stripping the rubber portion of solid tires from their metal rims, comprising, a support, a pair of vertically arranged superposed brackets having their respective ends journaled respectively thereon and their adjacent free ends adapted to oscillate respectively in reverse arcuate paths, toothed segments connecting the adjacent ends of the brackets for simultaneous oscillation, adjustable stops upon the support for limiting the movement of the brackets in one direction, a fluted roller mounted upon the free end of each bracket for rotation about an axis parallel with the journaled axis thereof, a second roller mounted for rotation about the journal axis of the lower bracket, and means for rotating the fluted rollers.

1,462,525. ARRANGEMENT FOR PRODUCING COMPLEMENTARY VISUAL AND AUDIBLE EXHIBITIONS. GEORGE K. THOMPSON, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 11, 1922. Serial No. 551,743. 5 Claims. (Cl. 179—4.)

1. An arrangement for simultaneously producing visual and audible exhibitions comprising a plurality of

branch stations having telephonic apparatus and motion picture apparatus thereat, and a master station including means for regulating the operation of the moving picture

apparatus at said branch stations, transmitting means cooperating with the telephone apparatus at said branch stations, and means controlled by said regulating means for directing the operation of said transmitting means.

1,462,526. COMPOSITE RINGER SET. JOHN F. TOOMEY, New York, and WILLIAM H. HARRISON, Hollis, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 31, 1920. Serial No. 434,279. 5 Claims. (Cl. 179—4.)

1. A transmission line, a bridge across said line including switching means, composite ringer apparatus including ringing responsive relays associated with said bridge over the contacts of said switching means, a testing apparatus adapted to be associated with said switching means, said testing apparatus comprising a testing circuit including a source of ringing current, a plurality of relays and a variable resistance network, and a control circuit including a plurality of keys and adapted to be associated with said testing circuit, said keys controlling said relay means in said testing circuit and said relay means controlling said variable resistance network and the application of ringing current from said source to said testing circuit whereby the amount of ringing current applied from said testing circuit to said composite ringer apparatus may be varied.

1,462,527. SNOW REMOVER. MARKS JOSEPH TULLY, Brooklyn, N. Y. Filed June 11, 1920. Serial No. 388,285. 9 Claims. (Cl. 37—12.)

1. In a snow removing machine, a plow, an endless inclined conveyor arranged in rear of the plow, super-

posed conveyors arranged in rear of the first mentioned conveyor, means for spraying the snow with water to

reduce the same to a slush, and means for acting on the snow in rear of the water spraying device.

1,462,528. VARIABLE-SPEED TRANSMISSION GEAR. JAMES H. WATSON, Riverton, Wyo., assignor of one-half to F. Chatterton, Riverton, Wyo. Filed June 3, 1922. Serial No. 565,514. 20 Claims. (Cl. 74-34.)

1. In a variable speed transmission gearing, the combination with a driving member, of a driven member, a clutch connection, multiple speed planetary gearing between the members, selective means controlling the planetary gearing, and means acting independent of the selective means for automatically locking the clutch in an open position when the planetary gearing is in operation.

1,462,529. MEANS FOR SECURING REMOVABLE RIMS. JOHN R. WINTER, Lansing, Mich. Filed Jan. 10, 1921. Serial No. 436,111. 7 Claims. (Cl. 301-22.)

1. In a device of the character described, a locking ring adapted to extend circumferentially of the wheel and provided with an inwardly extending flange adapted to contact at its outer surface with the rim of the wheel

and at its inner with the felly, a part of the flange extending outwardly of the felly in spaced relation therewith, and the inner edge portion of said ring being adapted to contact with the felly.

1,462,530. GEAR-SHIFT MECHANISM. JAMES S. ALSPAUGH, Portsmouth, Ohio. Filed July 5, 1922. Serial No. 572,994. 9 Claims. (Cl. 74-58.)

1. In a motor vehicle having a foot lever and a gear shift rod, means for reciprocating said gear shift rod comprising, in combination, a rock shaft having means for engaging said gear shift rod, a pair of levers connected together and to said rock shaft to cause a back and forth motion of said rock shaft when said levers are alternately and successively moved in the same direction, means operated by the foot lever for imparting such movements to said levers and a selector plate on said rock shaft cooperating with said levers and means for controlling the operation of the selector plate to cause the shifting of said levers from shifted to neutral position by successive operations of the foot lever.

1,462,531. RUDDER CONTROL. MILTON C. BAUMANN, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 23, 1920. Serial No. 405,391. 9 Claims. (Cl. 244-29.)

1. In an aeroplane, a rudder control comprising a pair of operating levers substantially in lateral alignment for normal rudder position; a pivotal mounting for each lever; and means positively interconnecting said levers and permitting the adjustment of the position of both levers relative to the operator's seat, whereby the lateral alignment in the new position, for normal rudder position, is retained.

1,462,532. NONGLARE EYESHIELD. FRED W. BONNER, Pottstown, Pa. Filed Feb. 23, 1922. Serial No. 538,449. 2 Claims. (Cl. 2-149.)

1. As a new article of manufacture, a non-glare eye shield formed from flat sheet material with a vertical

non-glare eye-shield wall having a straight-line bottom marginal edge adapted to extend horizontally across the

medial line of vision, an intermediate reversely-bulged nose-rest portion, and end portions adapted for head-support connections.

1,462,533. FUSELAGE CONSTRUCTION FOR AIRCRAFT. VIRGINIUS E. CLARK, Dayton, Ohio, assignor to Dayton-Wright Company, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 4, 1922. Serial No. 534,228. 8 Claims. (Cl. 244—30.)

7. A fuselage frame for aircraft comprising: longerons built up from sheet metal; a plurality of struts and diagonal tie members connecting said longerons in such a manner as to form trusses, said diagonal tie members being attached to said longerons at the tips of salient bends in said longerons.

1,462,534. ARCH SUPPORTER. MICHAEL J. CONDYLLIS and JESSIE C. CLARKE, Louisville, Ky. Filed June 14, 1921. Serial No. 477,476. 4 Claims. (Cl. 128—166.)

1. In an arch supporter, the combination of a soft, pliable, non-elastic support for the concave of the arch with an elastic webbing of substantial width throughout engaging the non-elastic support on each side and adapted to extend over the arch, with straps, one to adjust the tension of the support vertically and the other adapted to extend back of the heel to hold the supporter in place.

1,462,535. STAMP CONTAINER. LUCILLE COX, Chicago, Ill. Filed Nov. 5, 1921. Serial No. 513,063. 1 Claim. (Cl. 206—39.)

In a container, opposed sections pivotally connected, one of said sections having a tongue disposed at one end thereof and located intermediate the side edges thereof and having a cut out portion formed at its opposite end between the side walls thereof, the opposite section having a flange depending from the under surface thereof, said flange being of a width to fit within the cut out portion of the opposed section, the ends of said flange adapted to contact with the end walls of the cut out portion to lock the sections together.

1,462,536. COLORED ARTICLE. NICOLAS V. DE LIPSKI, New York, N. Y., assignor of one-half to Elaine Hale Phillips, New York, N. Y. Filed Dec. 10, 1920. Serial No. 429,830. 3 Claims. (Cl. 88—1.)

1. An article bearing surface decorations of a plurality of superimposed designs or pictures in colors and shades combined and overlapped, the coloration and shading of each of the designs or pictures being such that when combined with a given colored illumination said design or picture and cooperating parts of the other design or picture appears to the eye and undesired colors and shades constituting parts of other designs or pictures are neutralized or modified to accord with the design or picture appearing.

1,462,537. CHANGEABLE SCENIC EFFECT. NICOLAS V. DE LIPSKI, New York, N. Y., assignor of one-half to Elaine Hale Phillips, New York, N. Y. Filed Apr. 12, 1922. Serial No. 551,950. 4 Claims. (Cl. 46—70.)

1. Scenery for stage settings comprising one scene painted in colors and superimposed shades of color to produce the visual effect of said scene in colors and hues when subjected to a colored light and a second scene painted in colors and superimposed shades of color combining with and overlapping the colors and shades of color of the other scene to harmonize and neutralize therewith in producing the visual effect of said second scene in colors and hues when the scenery is subjected to light of another color from that producing the first mentioned scene, the colors for the two scenes being so applied that each scene is distinctly visible to the eye independently of the other under the influence of the colored lights, respectively.

- 1,462,538. GRAIN SHOCKER FOR HARVESTER BINDERS. JOSEPH E. DERY, Edgley, N. Dak. Filed Apr. 20, 1921. Serial No. 462,905. 9 Claims. (Cl. 56-401.)

7. A shocker comprising a shock former consisting of a stationary front section and a movable rear section, a bearing carried by the former, a vertical shaft journaled in said bearing, a disk connected to the lower end of said shaft and adapted to constitute the bottom of the former, an operating lever secured to the shaft and having connection with the movable section of the former.

- 1,462,539. HUSKING ROLLS. FRED B. DUES, Minster, Ohio. Filed Apr. 17, 1922. Serial No. 553,474. 2 Claims. (Cl. 130-5.)

2. A husking roll having radial sockets, there being intersecting obliquely disposed grooves in the roll radiating from the sockets, the walls of the intersecting grooves forming angular projections at their points of intersection, said grooves decreasing in depth from the socket to their ends.

- 1,462,540. FURNACE. ALFRED FESTA, Paris, France. Filed Mar. 30, 1921. Serial No. 456,962. 2 Claims. (Cl. 158-4.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A regenerative heating apparatus including a masonry body, a furnace supported thereby, a flue supplying combustion air to the interior of the furnace, superposed compartments communicating with the exterior air and provided in the wall of the body, fuel receiving troughs located in said compartments, means to regulate the intake of external air into each of these compartments so as to produce only incomplete combustion of the fuel, another flue with which each of the compartments communicate separately and directly, said last mentioned flue being arranged so as not to communicate with the exterior air and being placed parallel to the flue supplying the combustion air and also emptying into the interior of the furnace, so as to carry therein the gasified product arising from the incomplete combustion of the fuel in the said compartments.

- 1,462,541. PORTABLE BRIDGE. RICHARD D. GALLAGHER, Bay St. Louis, Miss. Filed Apr. 13, 1923. Serial No. 631,895. 1 Claim. (Cl. 14-1.)

An emergency collapsible bridge comprising a metallic bottom wall having its longitudinal edges formed with spaced hinge barrels, side walls provided with spaced hinge barrels arranged between and in alignment with the first named hinge barrels, and hinge pins extending through said hinge barrels for hingedly connecting the side walls to the bottom wall, said side walls being provided with a plurality of inwardly curved lips adapted to flatly contact with the under side of the bottom wall to limit the outward swinging movement of the side walls and to effectively brace the bottom walls, the longitudinal edges of the bottom wall being formed with depending reinforcing beaded portions surrounded by said curved lips, said curved lips being of spring metal and adapted to closely embrace said depending beaded portions whereby to hold the side walls in an upright position.

- 1,462,542. RACK. WILLIAM A. HAMMOND, San Francisco, Calif. Filed Mar. 8, 1923. Serial No. 623,760. 2 Claims. (Cl. 46-55.)

1. A rack for tiles of the character described, comprising an elongated block of material having an inclined frontal ledge and an inclined front face above the same allowing the tiles to rest on the ledge and the front face in a slightly reclined position and a back face substantially parallel to the front face allowing the rack to be turned on the same without disturbing the tile arrangement.

- 1,462,543. VESSEL. KARL GUSTAV HANHART, Ruschlikon, Switzerland, assignor to Farberei Weidmann A.-G., Thalwil, Switzerland. Filed Mar. 24, 1920. Serial No. 368,432. 1 Claim. (Cl. 72-14.)

A large tank adapted to be highly heated from the interior and used in the chemical industry including a prepared inner vessel of calcined clay and an outer strong shell formed of reinforced concrete.

1,462,544. DOOR-CLOSING DEVICE. JULIUS HAUENSTEIN, Jersey City, N. J. Filed Jan. 25, 1922. Serial No. 531,636. 1 Claim. (Cl. 16—154.)

The combination with a door and its frame, of a closing device comprising a pair of hinge bars secured to the door, hinge plates secured to the frame, a pair of spaced horizontal ears extending from the frame plates, a vertical pin rigidly supported to extend between each pair of ears, the outer extremities of said bars extending beyond the door and being rotatably supported by said pins as axes, said hinge bars being adapted to rise and fall on said pins between each pair of ears during opening and closing, of the door, a channelled frame secured in vertical position to the lower hinge bar, a roller axially mounted at the lower end of said frame between the sides thereof and extending below the lower extremities of said frame, and an arcuate inclined cam track secured to the floor beneath the roller, said roller being adapted to engage the lower end of the cam track when closed and to ride upward on said track during opening of the door, the weight of the door causing said roller to descend said track when the opening force on the door has been released, to cause said door to close.

1,462,545. WINDSHIELD ATTACHMENT FOR AUTOMOBILES. HENRY HIGGIN, Newport, Ky., assignor to The Higgin Manufacturing Company, Newport, Ky., a Corporation of West Virginia. Filed Nov. 19, 1921. Serial No. 516,298. 2 Claims. (Cl. 296—95.)

1. In a glare guard attachment, the combination of a rod and a clamp, the clamp comprising clamp members, with means for clamping the same on a support, a bolt and nut carried by the clamp, the bolt having a transverse opening for the passage of the rod, and a clamp washer on the bolt to engage the rod to lock the same when the nut is tightened, a coupling for the rod to the glare guard to permit longitudinal rotation of the rod, with the rod provided with a longitudinal bend to permit of lateral adjustment of the clamp.

1,462,546. BOTTLE-HANDLING DEVICE. HANS HILLMANN, Alton, Ill., assignor to Illinois Glass Company, Alton, Ill., a Corporation of Illinois. Filed Apr. 30, 1919. Serial No. 293,887. 23 Claims. (Cl. 214—1.)

1. In a bottle handling device, the combination with a cooling table on which the bottles are adapted to rest for a definite period before being further handled, of an assembling table distinct from said cooling table and adapted to receive the bottles directly therefrom, means

for delivering the bottles from a bottle forming machine to said cooling table, means cooperating with said cooling table adapted to vary the cooling period of the bottles thereon, and means for delivering the bottles from said cooling table directly to said assembling table.

10. In a bottle handling device, the employment of a cooling table comprising, a carrier having bottle seats, a pair of adjustable supports, guides on each support adapted to engage the bottle necks, and means for adjusting said supports towards and from said carrier.

1,462,547. INTERCHANGEABLE-CHARACTER CONSTRUCTION. MICHAEL J. HOGAN, Chicago, Ill. Filed Dec. 12, 1921. Serial No. 521,582. 2 Claims. (Cl. 40—140.)

1. An interchangeable character construction, comprising a tablet having a slot therein, and a plurality of characters each having a hook-like shank engageable in said slot, said tablet comprising an integral metal plate in which the slot is located, having a longitudinally extending lip overhanging a portion of said slot for retaining said hook-like shank, said slot being open on the front face of said integral metal member, the material of said integral metal plate extending across and closing the rear of said slot to prevent foreign material from entering said slot from the rear and to provide a finished appearance to the rear of said tablet.

1,462,548. WARP STOP MOTION. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 11, 1921. Serial No. 436,427. 5 Claims. (Cl. 139—92.)

1. A warp stop motion having, in combination, a plurality of drop wires, an actuator, loom stopping mechanism, and normally inoperative connections between said actuator and said stopping mechanism, said connections being rendered operative by a fallen drop wire and said stopping mechanism being thereafter actuated to stop the loom and to restore said connections to normal inoperative condition as the loom is stopped.

1,462,549. NARROW-WARE LOOM. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 17, 1921. Serial No. 437,693. 11 Claims. (Cl. 139—188.)

1. A narrow ware loom having in combination, a lay mounted to swing about a fixed axis, a rack bar mounted to slide longitudinally thereon, a member mounted to reciprocation along the axis of movement of the lay, and connections between said member and said bar, portions of said connections being substantially aligned with said axis and being movable along said axis.

1,462,550. BOILER-SCALE REMOVER. CHARLES H. HOPPE, Devils Lake, N. Dak. Filed June 4, 1921. Serial No. 475,160. 6 Claims. (Cl. 87—27.)

1. An antiscale compound, consisting of horn, sodium carbonate, calcium phosphate, and coal tar.

1,462,551. CIRCULAR-KNITTING MACHINE. WILBUR L. HOUSEMAN, Philadelphia, Pa., assignor to Standard Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 3, 1922. Serial No. 558,147. 12 Claims. (Cl. 66—12.)

1. The combination with an oscillatable needle cylinder, a plurality of yarn guides, a clamp and a cutter, of a deflector so positioned that that portion of the floating end of cut yarn which is adjacent the fabric is carried, in the travel of the needle cylinder in one direction, beyond the deflector, the said deflector being adapted to engage said floating end in the reverse travel of the needle cylinder and draw it out of position to accidentally engage with the needles.

1,462,552. MACHINE FOR ASSEMBLING TRUSSES. CHARLES FRANCIS HUNTOON, Chicago, Ill. Filed Mar. 27, 1922. Serial No. 547,162. 3 Claims. (Cl. 29—84.)

1. A device of the class described comprising a base, a pair of supports on said base for supporting a compression member adjacent its ends, a lever pivotally mounted on said base, a link pivotally connected to said lever and arranged for attachment to the compression member intermediate its points of support, and mechanism arranged to shift said lever so as to draw said link for flexing the compression member, said link and base having coacting shoulders for limiting the movement of said link under the action of said mechanism.

1,462,553. GANG-SAW FRAME. OSCAR L. JOHNSON, Proctor, Vt., assignor to Vermont Marble Company, a Corporation of Vermont. Filed Sept. 5, 1922. Serial No. 586,182. 2 Claims. (Cl. 125—17.)

1. A gang saw frame for stone sawing machines having a head block consisting of channel bars spaced apart from each other and secured together and to the side bars of the frame, said channel bars being provided with reinforcing steel webs welded at their edges to the flanges of said channel bars.

1,462,554. WEFT-DETECTOR MECHANISM. CHARLES E. KNOWLTON, North Grafton, and EPPA H. RYON, Waltham, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed June 3, 1920. Serial No. 386,303. 3 Claims. (Cl. 139—242.)

1. In a loom, a weft detecting mechanism comprising a stand, a weft detector mounted for both longitudinal and angular movement on said stand, a recessed link through which said detector extends, an actuator lever, a rod movable into and out of the path of said lever to render the latter operative or inoperative, and a bell crank to which said rod and said link are both directly connected, said

crank being mounted on said stand adjacent said detector and being movable in a horizontal plane through said link by said detector to move said rod across the path of

said actuator and thereby change the axis of movement of said actuator when said detector is moved angularly by engagement with a substantially exhausted weft carrier.

1,462,555. MODELING DRESS FORM. IGNATIUS F. KOBLINSKY, Saginaw, Mich. Filed Apr. 15, 1922. Serial No. 553,291. 3 Claims. (Cl. 211—13.)

1. In a device of the class described comprising a base, a rod extending vertically from said base, a dress form, a tubular member carried by the upper end of said dress form and extending downwardly therein and adapted to be received upon the vertically extending rod, a gear carried by the lower end of said tubular member, a second gear carried by the said rod and meshing with the first mentioned gear, and means for rotating said gears and dress form.

1,462,556. DIE MOUNTING. CHARLES A. KROPP, River Forest, Ill., assignor of one-third to Alfred Nordstrom, Berwyn, Ill., and one-third to Roy A. Kropp, River Forest, Ill. Filed Feb. 10, 1922. Serial No. 535,483. 5 Claims. (Cl. 18—60.)

1. A die mounting comprising a body provided with a stem; a holder having a socket therein somewhat larger

than said stem to permit direct insertion of said stem and lateral movement of said stem in said socket, the walls of said socket and the sides of said stem being arranged to engage with each other upon lateral movement of said stem in said socket; and means for securing said stem in said socket in interlocking relation with the walls thereof, substantially as described.

1,462,557. BLOWER OR SUCTION FAN. CHARLES A. KUENZEL, Jr., Bloomfield, Nebr. Filed Jan. 24, 1922. Serial No. 531,349. 6 Claims. (Cl. 230—11.)

1. In a device of the character stated, a rotary fan, comprising a fan shaft, hub brackets secured to said shaft, each of said brackets being provided with radial ribs juxtaposed to and facing each other, fan blades having their inner terminals secured to said shaft and to said ribs, outer rings to which the outer terminal edges of said fan blades are secured, outer radial arm brackets secured to said rings, and radial arms having their inner and outer ends secured to said hub brackets and outer brackets respectively.

1,462,558. SAFETY RAZOR. JOHN F. LEFFLER, Pittsburgh, Pa. Filed Aug. 9, 1922. Serial No. 580,662. 4 Claims. (Cl. 30—12.)

1. A safety razor comprising an integral blade holding and handle member having flanges along the side edges thereof, a blade provided with lugs arranged to engage in said flanges, a flexible guard on said blade holding and handle member, and a panel arranged to slide in the flanges of said blade holding and handle member for securing the razor blade in position therein.

1,462,559. PAPER-PUNCHING PRESS. ERNEST LESCHHORN, Chicago, Ill., assignor to Latham Machinery Company, a Corporation of Illinois. Filed May 5, 1921. Serial No. 466,916. 10 Claims. (Cl. 164—91.)

1. In a press for punching sheets of paper and the like, the combination with a movable ram, a punch block clamp comprising a fixed clamping jaw and a movably

mounted plate, a clamping jaw carried by said plate for co-operating with the first said clamping jaw, a rotatable

shaft adjacent said movably mounted plate, and an eccentric cam rotatable with said shaft and bearing directly on said plate.

1,462,560. MECHANICAL RACING COURSE. GEORGE LANGLUMÉ and EDWARD J. YBARZABAL, New Orleans, La. Filed Nov. 29, 1922. Serial No. 604,026. 3 Claims. (Cl. 104—61.)

1. A carriage for use on mechanical race tracks comprising a pair of channel beams, a pair of wheels rotatably mounted at the end portions of the beams, and adapted to be mounted upon a single track, a standard having diverging attaching arms secured to said channel beams, a pair of brackets secured to said channel beams and having rollers adapted to engage guide members whereby to hold the carriage in vertical position, and means whereby to brace said standard.

1,462,561. AIR-CUSHION BUMPER FOR MOTOR VEHICLES. BRUNO LEWANDOWSKI, Los Angeles, Calif. Filed May 9, 1922. Serial No. 559,534. 2 Claims. (Cl. 293—55.)

1. In a bumper for automobiles, a bumper bar carried on the forward end of the automobile, an air cushion

bumper resting against the forward side of said bar, a ring fitting over each end of said bumper and an end of said bar, means for securing said rings to said bumper and to said bar, and caps fitting over said rings and over the ends respectively of said bumper.

1,462,562. SPRING-OILING DEVICE. WILFRED G. MARTIN, Peoria, Ill. Filed Aug. 18, 1922. Serial No. 582,655. 6 Claims. (Cl. 184—1.)

1. In a spring oiling device, including, in combination, a differential and axle housing, a spring member, and means, including connections between the differential housing and spring member, whereby oil in the differential is fed, due to the rotary action of the axle therein, to said spring member.

1,462,563. METHOD OF LUBRICATING RUBBER MOLDS. ARTHUR G. VOLTZ, Cleveland, Ohio. Filed Jan. 19, 1922. Serial No. 530,436. 5 Claims. (Cl. 18—53.)

1. The method of lubricating a rubber mold which includes the steps of preparing a mixture of stearin boiled in water, adding sodium borate, ammonia hydroxide and sodium chloride, and spraying the mixture upon the molding surfaces of the mold cavities prior to the filling of the mold cavities with rubber compound.

1,462,564. DRAWERS BLOOMERS FOR WOMEN. WILLIAM WEINER, Philadelphia, Pa. Filed July 13, 1922. Serial No. 574,610. 1 Claim. (Cl. 2—122.)

A woman's bloomers, comprising a blank of a single piece of material having an upper unbroken waistband edge composed of the central convex portion 5 and the outer uninterrupted concave portions 3 and 4, from the outer ends of which lead the downwardly diverging front seam edges 6, terminating in the outwardly curved portions 7 from which lead the slightly concaved outwardly diverging crotch seam edges 8, of substantially the same length as said edges 6, from which edges 8 lead the downwardly converging leg band seam edges 10, terminating in the slightly concaved portions 11 having the deeply concaved semicircular crotch seam edge 9, the central height of said blank between the top of said waist band and the inner portion of said crotch seam edge being substantially the same as the combined length

of the edges 6 and 8, whereby a bloomers is produced having a straight front and the requisite depth and fullness at the crotch and seat portions, and the leg bands are caused to encircle the wearer's limbs at points above the knees.

1,462,565. DOOR FOR FREIGHT CARS. LEE H. BANKS, Lacamp, La. Filed Mar. 3, 1922. Serial No. 540,948. 4 Claims. (Cl. 20—22.)

1. In combination, a car door frame having a sill and a girder, upper and lower tracks pivoted respectively to said sill and girder, a door slidably engaging said upper and lower tracks and supported and guided thereby, and yieldable connections between the car door frame and the said tracks.

1,462,566. PACKAGE FORMING MACHINE. FRANK E. BEAM, Toledo, Ohio, assignor, by direct and mesne assignments, to The Automat Molding and Folding Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 2, 1920. Serial No. 427,664. 27 Claims. (Cl. 93—2.)

1. In a package forming machine, a shiftable member having a pair of fingers for receiving and folding the end side portions of the sheet material in which the object is wrapped against the ends of the object, a swinging member having fingers for folding the opposite side end portions of the sheet material against the ends of the object, a plunger having fingers for folding the top end portions of the sheet material against the ends of the object, and means for shifting the shiftable member towards the swinging member and to move the object and its enclosing wrapper to a point beneath the plunger.

1,462,567. CALCULATING MACHINE. ROBERT G. C. BOA, Herkimer, N. Y., assignor to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1922. Serial No. 599,959. 15 Claims. (Cl. 235—59.)

15. The combination with a totalizer and its carrier, of a holding plate having a notch in which to seat a side plate of said totalizer, and means for detachably interlocking said holding plate with said carrier.

1,462,568. BRUSH-ADJUSTING DEVICE FOR SUCTION CLEANERS. FRANCIS M. CASE, Cleveland, Ohio, assignor, by mesne assignments to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed July 26, 1917. Serial No. 182,870. 8 Claims. (Cl. 15—158.)

1. In a suction cleaner a brush, a shaft upon which it is rotatably mounted, an adjusting plate fixed on each end of the shaft, supports for said plates and means responsive to a rotation of said plates for changing the height of the brush said means comprising a cam groove and a member engaging it.

1,462,569. APPARATUS FOR MOLDING CEMENT BLOCKS. ALBERT FEDERICCI, Paterson, N. J., assignor to Henry C. Neuberger, New York, N. Y. Filed Aug. 25, 1920. Serial No. 405,902. 3 Claims. (Cl. 25—121.)

2. An apparatus for molding blocks embodying a rigid base or platform along the longitudinal edges of which are pivoted wings, each of which is adapted to cast one face of each of several blocks, a plurality of mold units positioned on the platform between the wings and forming partitions between successive blocks, one

face of each partition having a male projection and the other face of each of said partitions having a complementary female depression, and a core member carried by each partition and of such length that its free end will abut the adjacent face of the next partition for the purpose of accurately spacing said partitions apart.

1,462,570. PRESSURE GAUGE. PHILO M. GELATT, La Crosse, Wis. Filed Oct. 8, 1917. Serial No. 195,255. 1 Claim. (Cl. 73-109.)

In pressure gauge construction wherein the gauge housing includes a peripheral wall having openings at its top separated by a bridge, means for maintaining the openings closed in the presence of pressure in the housing, said means being operative to open the housing upon excessive pressure therein, said means including a plate external of and overlying said openings, said plate having dimensions greater than the area of the openings and bridge, said plate having a stem extending through said bridge and having an internal head, and a spring carried by the stem and abutting said bridge and head.

1,462,571. DIAL-REVOLVING DEVICE. LOUIS H. FLERON, Trenton, N. J. Filed Feb. 15, 1923. Serial No. 619,326. 6 Claims. (Cl. 74-7.)

1. In a dial revolving device, in combination, a head, a shaft carried by the head, a loose sleeve carried by the shaft, means for preventing the sleeve from shaft displacement, a removable cap carried by the sleeve and means for retaining the head from contact with the sleeve.

1,462,572. CONDENSING WELDING CIRCUIT. JAMES H. GRAVELL, Elkins Park, Pa., assignor to Thomson Electric Welding Company, Boston, Mass., a Corporation of Massachusetts. Filed June 25, 1920. Serial No. 391,704. 2 Claims. (Cl. 172-246.)

2. The combination with an electric heating transformer, of a booster connected across the terminals of the machine, a condenser connected to the booster and an operating or controlling switch on the line side of the booster as and for the purpose described.

1,462,573. WASHTUB. MAMIE HAGAMAN, Perth Amboy, N. J. Filed Aug. 10, 1921. Serial No. 491,079. 3 Claims. (Cl. 68-31.)

2. A wash tub having bottom, front, back and end walls, and a hollow imperforate box-like projection extending rearwardly from the inner upper portion of the face of the front wall and provided with an inclined rubbing surface on the rear side thereof, said box-like projection being of less width than the width of the front wall and of less depth than the depth of the tub, whereby said projection is spaced from the opposite ends of the tub and from the bottom of the tub.

1,462,574. SUCTION SWEEPER. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Oct. 20, 1917. Serial No. 197,706. 7 Claims. (Cl. 15-158.)

1. In a suction cleaner the combination of a casing having an inlet slot and slotted ends with a rotatable brush means for adjusting and supporting said brush in the casing comprising blocks having a plurality of edge faces, said brush mounted within said blocks, at an unequal distance from each edge face thereof, said blocks adapted to slide in said end slots and means for holding them therein and preventing them from rotation while so held.

1,462,575. SUCTION-CLEANER ATTACHMENT. HOWARD EARL HOOVER, Chicago, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Aug. 16, 1920. Serial No. 403,766. 8 Claims. (Cl. 306-4.)

1. In a suction cleaner comprising a casing having a pivoted handle, the handle including a pivotally

mounted member provided with a slot system the upper edges of which are uninterrupted and act as guideways, which system comprises a short slot, a long slot, and a connecting slot extending from the long slot to the underside of the short slot, and a member adapted to be received in said slot system, one member being mounted on said handle, the other member being mounted on said casing.

1,462,576. COKING OF COAL. STEWART ROY ILLINGWORTH, Brynfedwen, England, assignor to Illingworth Carbonization Company, Limited, Manchester, England. Filed Aug. 29, 1921. Serial No. 496,743. 15 Claims. (Cl. 202—8.)

1. The process of coking coal in which the coal is submitted to heat out of contact with air in order to destroy the non-coke producing substances in the coal but to leave 5% by weight of the resinic substances in the product in order to prevent expansion of the coke during the coking process and then coking the pre-heated coal at a temperature which does not exceed 500° C.

1,462,577. PORTABLE REVERSIBLE GRADE HONE OR ROAD LEVELER. SAMUEL B. JAMIESON, Marathon, N. Y. Filed Feb. 11, 1920. Serial No. 357,976. 1 Claim. (Cl. 37—152.)

In an arrangement of the character described, three manually adjustable grade hones, flexible attaching means associated with each of the hones, two of the hones being arranged opposite and in spaced relation to each other, the remaining hone being arranged rearwardly of the space between the first mentioned hones and an adjustable connection for maintaining the first mentioned hones in various positions in respect to each other including longitudinal perforated bars on the hones, a perforated connection bar, and means engaging the perforations adjacent the ends of the connecting bar and longitudinal perforated bars for maintaining the parts in substantially rigid positions of adjustment.

1,462,578. RECEPTACLE. JOHN KASHINSKY, Weehawken, N. J., assignor to New Jersey Can Company, Weehawken, N. J., a Corporation of New Jersey. Filed Mar. 23, 1920, Serial No. 368,075. Renewed May 12, 1923. 1 Claim. (Cl. 220—56.)

A receptacle having oppositely disposed headed studs extending laterally from the side wall thereof, a cover for

the receptacle provided with a depending flange the lower edge of which is formed with an annular bead, horizontal straps secured to said annular flange above the bead at diametrically opposite points on the cover, arms extending through said straps and having their upper ends provided with apertures and their lower ends formed with slots receiving the adjacent studs, said arms having

frictional contact with the annular bead for holding said arms against the inner faces of the straps whereby the cover is held in adjusted position with relation to the arms, and a bail having hooked terminals engaging the apertures in the arms, said hooked bail terminals by engagement with the upper edges of the straps forming stops for the cover to always maintain the same relation between the grip portion of the bail and said cover.

1,462,579. LATH. MERRILL E. ROBERTS, Pasadena, Calif. Filed Apr. 17, 1922. Serial No. 553,353. 2 Claims. (Cl. 72—32.)

1. In a building construction, a plurality of reinforced composition laths, and a plurality of plain composition laths, said laths being arranged in juxtaposition, whereby the reinforcing elements of the first mentioned laths lap the adjacent plain laths, a sheet of water proof material covering one side of each lath, the opposite side of each lath having a plurality of grooves, and a plastic composition covering said laths and filling said grooves, and also interlocking said overlapped portions of the reinforcing elements of the adjacent lath.

1,462,580. METHOD OF MANUFACTURING ELECTRIC CONDUCTORS. REINHOLD RÜDENBERG, Berlin-Grunewald, and ADOLF FINCKBEIN, Charlottenburg, Germany, assignors to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a German Corporation. Filed Dec. 27, 1920. Serial No. 433,453. 5 Claims. (Cl. 173—13.)

4. The method of producing multiple conductor bars, consisting in winding the constituent conductor ele-

ments separately as flat coils, stretching the windings of said coils apart until the desired pitch has been obtained and in nesting said stretched coil elements into each other to form the bar, the length of the short sides of said flat coils being suitably chosen to obtain the desired pitch of said sides relatively to the axis of the finished bar, and to cause the formation of a longitudinal channel inside of the finished bar.

1,462,581. VALVE-STEM CARBON REMOVER. ALBERT R. SCHMIDT, Milwaukee, Wis. Filed May 12, 1921. Serial No. 468,917. 5 Claims. (Cl. 123—188.)

1. The combination with an internal combustion engine having a valve provided with a guided stem, of a means for preventing the formation of carbon on the valve stem, consisting of a member loosely mounted on the stem between the valve portion and the stem guide and freely movable laterally and vertically thereon independently of the movement of the valve.

1,462,582. OIL BURNER. VACLAV F. SEDLAK, Kansas City, Mo. Filed Dec. 26, 1922. Serial No. 608,858. 4 Claims. (Cl. 158—91.)

1. An oil burner comprising a base having air inlet openings and a central oil inlet opening, a plurality of ring-shaped ribs concentric with the oil inlet opening, the ring-shaped ribs being of decreasing heights from the center toward the periphery of the base and forming relatively deep grooves or spaces between them, the top of the base being formed with a shallow concave portion, the surface of which will direct the flame radially, and an arch having inwardly converging, curved, tubular air conducting legs merging into a central air and vapor fuel chamber above the oil inlet in the base, the lower ends of the legs registering with the air inlet openings in the base, the lower edges of the mixing chamber having outwardly and downwardly disposed spaced flanges for directing the flame against the shallow concave portion of the base.

1,462,583. CHEST SPLINT. SELIG SIMON, St. Louis, Mo. Filed Aug. 12, 1922. Serial No. 581,392. 10 Claims. (Cl. 128—89.)

1. A chest splint of the character described, comprising a jacket composed of an outer covering and an inner

lining and adapted to enclose the chest of the user, in combination with a pneumatic bag interposed between

the outer covering and the lining, and an inflation and deflation tube passing through the outer covering and opening into the bag.

1,462,584. PLACER-MINING MACHINE. DAVID K. SMITH, Denver, Colo., assignor of one-half to John G. Kirschner and one-eighth to Leo C. Hollberg, both of Denver, Colo. Filed Apr. 11, 1922. Serial No. 551,516. 1 Claim. (Cl. 83—67.)

In a placer mining machine; a sluice of substantially rectangular cross-section adapted to be mounted on an incline; a rotatable magnetic separator near the upper end thereof; a screen in the bottom of the sluice slightly below the separator; a removable section in the bottom of the sluice below said screen; a waterwheel in the sluice directly below the removable bottom section power transmitting means connecting the water wheel to the separator whereby they will be forced to rotate in unison; a second sluice located directly below the first named sluice and adapted to receive the material that passes through the screen; an amalgamator in the second sluice; a second power transmitting means connecting the amalgamator brush shaft to the water wheel whereby the latter will rotate the former, said amalgamator being located directly below the removable section and a passageway from said second named sluice opening on one side thereof whereby the waste material from said second sluice will be discharged to one side thereof.

1,462,585. ARMATURE CONSTRUCTION. EDGAR M. SORENG, Milwaukee, Wis., assignor to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 24, 1917. Serial No. 203,789. 10 Claims. (Cl. 200—90.)

10. An armature construction, comprising an armature member, a magnet pole piece with an angularly bent end forming a bendable support, a bearing plate secured to the support and having arms bent therefrom to form open bearings for one end of the armature member, a spring secured to the support, a bendable tongue on the armature member secured to the spring, and a stop for the other end of the armature member.

1,462,586. SHUTTLE-BALANCING MECHANISM. EDWARD C. TAYLOR, Longmeadow, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1922. Serial No. 598,712. 14 Claims. (Cl. 242-6.)

1. In a wrapping or winding machine, a rotatable member adapted to carry wrapping or winding material, and means responsive to the amount of material on the member for preserving the member in rotative balance.

1,462,587. LOCK-STITCH SEWING MACHINE. LAURENCE E. TOPHAM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 11, 1919. Serial No. 310,245. 3 Claims. (Cl. 112-57.)

1. A lock stitch sewing machine having, in combination, a work feeding awl, a hook needle, a looper, a shuttle, a stitch setting take-up, means for actuating the awl to feed the work, means for causing the awl to enter the work after the needle withdraws with its loop of thread from the work and to withdraw from the work before the take-up takes up said loop and sets the stitch, and means for actuating the take-up to set the stitch after the awl has withdrawn and before the needle again enters the work.

1,462,588. SEAL LOCKING DEVICE. EMIL TYDEN, Evanston, Ill. Filed Mar. 23, 1921. Serial No. 454,758. 8 Claims. (Cl. 292-328.)

1. In combination with a permanent securing device designed to be sealed in locked position and having for that purpose a seal catch chamber; having apertures in two opposite walls for a sealing strip to be inserted entirely through the chamber, and a sealing strip adapted to be so inserted, and adapted to be ruptured outside the catch chamber at the side thereof through which it is entered, the casing and the strip having co-operating a spring finger and a catch shoulder adapted for engagement against withdrawal from the strip in the direction from which it enters the chamber.

1,462,589. APPARATUS FOR METAL-COATING WIRE, CHAIN, WOVEN-WIRE FENCING, AND THE LIKE. EDWARD L. WATROUS, deceased, late of El Paso, Tex., by Agnes B. Watrous, executrix, Evanston, Ill. Filed Sept. 20, 1919. Serial No. 325,255. 17 Claims. (Cl. 242-77.)

13. In galvanizing apparatus, a reel adapted to be placed on a rotatable spindle and comprising a barrel having walls of sheet material and longitudinally extending bars at the corners of the barrel, and spaced outwardly extending arms at each end of the barrel to confine material wound on the barrel.

1,462,590. HOOK FOR TIRE CHAINS. CARL H. WIDSTRAND, Lakeside, Mich. Filed July 17, 1922. Serial No. 575,536. 1 Claim. (Cl. 24-230.5.)

Means for connecting a tread chain with a side chain, comprising a hook link consisting of a length of material doubled upon itself at its middle portion to provide

spaced arms, the end portions of said arms being returned upon the arms and inclining toward the same and in convergent relation with one another to form a bill, the distance between the under surface of the bill and the plane of the upper surfaces of the arms being less than the diameter of the material of which the side chain links are formed, the under surface of said bill being disposed at that side of the arms upon which the end portions of the arms are returned.

1,462,591. CLIP. GAMMEL ANDERSEN, Austin, Tex. Filed Apr. 17, 1922. Serial No. 554,165. 4 Claims. (Cl. 24—11.)

1. A clip formed of a single piece of spring material one end of which is formed for attachment to a pen or pencil, a section of said material being bent at right angles to the attached end and the free end of said piece of material being bent back under said bent over section and being formed with a shoulder and an engaging catch beyond said shoulder, which points toward said pen or pencil.

1,462,592. COUNTER-ROTATION TURBOBLOWER. OLIVER D. H. BENTLEY, Norfolk, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed July 16, 1920. Serial No. 396,716. 7 Claims. (Cl. 230—11.)

1. The combination with an elastic fluid turbine having rotors adapted to turn in opposite directions, and nozzles carried by one of the rotors, of a blower comprising two rotary members of different diameters provided with fan blades and adapted to turn in opposite directions, the member of greater diameter being directly connected with the rotor carrying the nozzles and the other member being directly connected with the other rotor.

1,462,593. HOLLOW BUILDING TILE. ERNST PHILIPP BERKES, Pfeddersheim, near Worms, on the Rhine, Germany. Filed Mar. 15, 1921. Serial No. 452,533. 7 Claims. (Cl. 72—66.)

1. A hollow block or tile free of undercuts triangular in cross section having an extension or beak at one apex edge provided with an open flute, said extension flush with one face and extending beyond the adjacent face the entire length of the tile.

1,462,594. SPOT TRIMMING FOR DRESSES. EDWARD CULOTTA, Richmond Hill, N. Y. Filed Feb. 18, 1922. Serial No. 537,613. 8 Claims. (Cl. 24—96.)

1. In a device of the character described, the combination with a backing plate having depending spurs for attaching to dress goods, and upstanding spurs spaced from its edge, of a plastic head conforming to said plate and in which said upstanding spurs are embedded.

1,462,595. SPOT TRIMMING FOR DRESSES. EDWARD CULOTTA, Richmond Hill, N. Y. Filed Feb. 18, 1922. Serial No. 537,614. 3 Claims. (Cl. 24—96.)

1. In a device of the character described, the combination with a backing plate having an opening therein, of a head of plastic material covering said plate and having an integral portion extending through said opening and underlying said plate, and means for fastening said plate to dress goods.

1,462,596. SLATE BRICK. EMIL P. ENGELBRECHT, Chicago, Ill. Filed May 25, 1921. Serial No. 472,573. 3 Claims. (Cl. 18—47.5.)

1. A process of manufacturing bricks and the like consisting in mixing with burned and granulated coal-mine slate a proportionately small amount of unslacked lime, in adding an amount of water sufficient to substantially slack the lime used, in grinding the mixture together until it forms a coherent mass, in pressing the ground mixture into proper shape under a pressure of from two to two and one-half tons per square inch, and in heating the pressed articles for about nine hours in a bath of steam under a pressure of about one hundred and twenty-five pounds.

1,462,597. FOOT REST. ALGOTT H. ENGMARK, Crawfordsville, Ind. Filed Aug. 2, 1920. Serial No. 400,808. 1 Claim. (Cl. 15—265.)

The combination with a stationary platform open under the front portion thereof and adapted to support a

customer, of a base plate secured upon and fixed relative to the platform, said base plate extending up to the front edge of the platform, a top plate hingedly connected to the base plate above the open front end of the platform, means for detachably engaging the free end portion of the top plate for fastening the top plate flat upon the base plate to hold them against relative move-

ment one upon the other, said top plate being normally extended longitudinally of the base plate, and a disappearing foot rest standard secured to the top plate, said top plate being movable from position upon the base plate to a hanging position in front of the platform and against one end of the base plate, with the standard projecting into and concealed within the open front portion of the platform.

1,462,598. BOTTLE-WASHING MACHINE. OTTO C. GRENZKE, Detroit, Mich. Filed July 18, 1921. Serial No. 485,703. 2 Claims. (Cl. 15—69.)

1. In a bottle washer, the combination with a water motor adapted to be attached to a water faucet, of a hollow drive shaft adapted to be rotated by said motor, a bottle cleaning brush at the outer end of said shaft, a water communicating by-pass leading from the water inlet to the interior of the hollow drive shaft, said shaft provided with a discharge outlet at the end adjacent the brush, a sleeve encircling said shaft longitudinally movable thereon, spring means normally holding said sleeve outwardly to close the discharge outlet from the shaft, a collar adjustable lengthwise on said sleeve, said collar adapted to engage the mouth of a bottle when the bottle is inserted over the brush and sleeve so that the sleeve may be moved longitudinally over the shaft against the resistance of the spring to uncover the discharge outlet from the shaft.

1,462,599. FLOAT-CONTROLLED VALVE. WILLIAM L. HAWES, Burbank, Calif. Filed June 20, 1921. Serial No. 478,892. 3 Claims. (Cl. 137—104.)

1. In a float controlled valve, a valve casing having a discharge passage, a valve seating on one end of said casing, a stem on which said valve is mounted projecting

through the passage and terminating beyond the other end of the casing, a spring on said stem acting to normally maintain the valve closed to seal said discharge passage, an arm pivoted on said casing above the stem and extending downwardly to abut the stem having a

socket in which the end of the stem may seat to maintain the stem substantially on center when the arm abuts thereagainst, and a float on said arm adapted to be acted on by a liquid to raise the arm to permit the valve to close and tending to rock the arm downwardly to open the valve.

1,462,600. HYDRAULIC CLUTCH OR COUPLER. HENRY SELBY HELE-SHAW, London, England. Filed July 16, 1919. Serial No. 311,311. 9 Claims. (Cl. 192—59.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A hydraulic clutch consisting of one member comprising pistons, cylinders formed in a cylinder body in which said pistons operate, a closed circuit consisting of a passage in said cylinder body with which all said cylinders communicate so that movement of the piston in one cylinder involves movement of the piston in another, a valve slidable in said cylinder body across said passage for controlling the facility for circulation of the liquid in the closed circuit, an automatically operating valve for admitting liquid into the closed circuit whereby said circuit is maintained full under all working conditions, and a second member comprising a mechanism, corre-

sponding to a crank for giving to the pistons the movement they would have if actuated through a connecting rod of infinite length, cooperating with the pistons, substantially as specified.

1,462,601. SEALING-WAX CANDLE. HUGO HOHMANN, Kopenick, near Berlin, Germany. Filed July 14, 1922. Serial No. 575,107. 1 Claim. (Cl. 120—116.)

A sealing-wax candle consisting of a stick of sealing-wax, of a candle embedded in said stick and of a coating of said candle consisting of a substance which melts only at high temperatures.

1,462,602. CHOCOLATE MIXING AND MELTING MACHINE. OTTO A. LABUS, Wisconsin Rapids, and CHARLES H. PETH, Wausau, Wis.; said Labus assignor to American Carbonic Machinery Company, Wisconsin Rapids, Wis. Filed June 30, 1921. Serial No. 481,550. 16 Claims. (Cl. 257—84.)

5. In a mixing machine, a plurality of spaced hollow sections of a water jacket, a shaft journaled centrally of said sections, paddles mounted on the shaft between said sections, inner casings secured to and between consecutive sections of the water jacket, outer casings secured together and surrounding the inner casing to form with the inner casing and the sections of the water jacket a jacket common to the whole device, the inner casings and alternate sections of the jacket forming individual mixers.

1,462,603. LOOM. CHARLES F. LAVALLE, Newmarket, N. H. Filed Jan. 31, 1922. Serial No. 533,077. 6 Claims. (Cl. 139—50.)

1. A loom comprising a marquissette comb having downwardly facing end portions, a pair of rests loosely supporting said end portions, the comb being freely mov-

able upwardly to separate it from said rests, means being provided for preventing separation of the comb from the

rests by movements of the comb in other directions, and means for operating one of said rests to reciprocate the comb.

1,462,604. TENSION REGULATOR FOR SELVAGE SPOOLS. CHARLES F. LAVALLE, Newmarket, N. H. Filed Jan. 31, 1922. Serial No. 533,078. 4 Claims. (Cl. 139—109.)

1. The combination with a thread spool, and a roll spaced from the spool, and arranged to guide threads passing from the spool, so that thread stretches extend from the spool to the roll; of a tension-applying and regulating mechanism, comprising a fixed thread bearing between the spool and the roll, an oscillatory two-armed lever mounted on said fixed bearing and including an outer arm having a movable thread bearing substantially parallel with said fixed bearing, and an inner arm, said movable bearing and inner arm being at opposite sides of the fixed bearing and rigidly connected for simultaneous movement in opposite directions, a hand brake attached at one end to a fixed support, and extending from said support over a portion of the spool, said hand being connected at its opposite end with the inner lever arm; and yielding pressure means connected with said inner arm, and normally holding the said movable bearing in position to form bights in the said

thread stretches, said means being adapted to exert pressure simultaneously on the brake band in one direction, and on the movable thread bearing in the opposite direction, to maintain the said thread stretches under tension, and compensate for the elongation and shrinkage of the thread and of the brake band, caused by variations of atmospheric moisture.

1,462,605. CYLINDRICAL STRUCTURE AND BLOCKS THEREOF. FRANK LE COCQ and IRWIN LE COCQ, Aberdeen, S. Dak. Filed Mar. 20, 1922. Serial No. 545,088. 2 Claims. (Cl. 72—51.)

1. A cylindrical structure of block formation including a series of segmental wall blocks, each having laterally offset inner and outer sections adapting the same to overlapping interlocking connection and provided with ribs and recesses along opposite sides, and diametrically opposed blocks at opposite sides of which the wall blocks overlap in opposite directions, each of said diametrically opposed blocks having inner and outer sections of different lengths and each having means along the sides of each section to interlockingly engage the side ribs and recesses of the offset sections of adjacent wall blocks upon opposite sides thereof.

1,462,606. EGG SEPARATOR. ROBERT A. MCCRONE, Denver, Colo. Filed Oct. 6, 1922. Serial No. 592,752. 2 Claims. (Cl. 146—2.)

2. An egg separator comprising in combination a conical body portion having a groove near its base and a separator element removably secured in said groove, a second groove and a strainer element secured therein.

1,462,607. REGISTER SUPPORT AND BORDER. NATHAN W. MANROW, Goshen, Ind. Filed Feb. 28, 1923. Serial No. 621,848. 4 Claims. (Cl. 98—52.)

1. A device of the character described, comprising four corner pieces and four side and end rails cooperating with

said corner pieces to form a rectangular supporting frame, said rails being provided with a T shaped upper margin

which has a telescopic connection with said corner pieces, and said rails being provided also with a lower marginal ledge.

1,462,608. METHOD OF AND APPARATUS FOR ENAMELING TUBES. NORMAN MARSHALL, Waltham, Mass. Filed May 6, 1921. Serial No. 467,244. 13 Claims. (Cl. 91—46.)

1. The method of dip enameling the exterior of tubes which consists in closing the upper end of a tube, dipping it vertically in a bath of enamel, and subsequently removing it at a slow and uniform rate.

5. An apparatus for dip enameling tubes having, in combination, means for closing the upper ends of the tubes, an enameling tank, means for dipping the tubes vertically in the tank, and means for withdrawing the tubes at a slow and uniform rate of speed.

12. An apparatus for dip enameling tubes having, in combination, tube supporting means, means for moving the tube supporting means vertically to dip the tubes into a bath of enamel, and means for withdrawing the tubes vertically from the bath of enamel.

1,462,609. CONTACT AND METHOD OF MAKING SAME. LOUIS ALBERT MAU, Milwaukee, Wis., assignor to Milwaukee Auto Engine and Supply Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 16, 1921. Serial No. 478,093. 4 Claims. (Cl. 200—19.)

1. The method of making a contact for electrical ignition devices which consists in punching out a rough crescent-shaped blank from bar stock, swaging the blank to finished size and forming a depression in its rear side, trimming off the surplus metal, and welding one end of the threaded stem of the contact in the depression.

- 1,462,610. COFFEE-MAKING APPARATUS. ALBERT W. MEYER, Roselle, N. J. Filed May 27, 1922. Serial No. 564,068. 6 Claims. (Cl. 53—3.)

1. The combination with a coffee pot and its cover, of a percolator attachment therefor comprising a supporting plate within said cover, a percolator member detachably secured to said plate, a water inlet pipe extending downward within said cover to the said supporting plate, means for securing the latter to the said pipe, a funnel mounted on the upper end of the water inlet pipe and means for closing the inlet end of the same.

- 1,462,611. WATER HEATER. JOHN W. MEYER, Fort Atkinson, Wis. Filed July 20, 1922. Serial No. 576,216. 6 Claims. (Cl. 126—344.)

1. In a water heater, an upright tank having a hollow one-piece gas tight supporting base forming an exposed support for the lower end thereof, so that the bottom wall of said base forms the exposed bottom of the tank, heat inlet means externally connected to said base to supply heat to the gas tight interior of said base to heat the water in said tank, and a heat outlet, said base being gas tight except for the heat inlet and outlet thereof, and being adapted in its exposed position to be opened for cleaning out the interior thereof.

- 1,462,612. COVER PLATE FOR STORAGE BATTERIES. ARTHUR HERBERT MONES, Kerrobert, Saskatchewan, Canada. Filed Apr. 11, 1921. Serial No. 460,172. 1 Claim. (Cl. 204—29.)

In a battery, the combination with a battery box and cover plate having raised bosses adjacent to the edges therein formed with threaded sockets, of clamps pivoted to the battery box extending over and in close contact with the bosses, and threaded bolts extending through the clamps into the threaded sockets in the bosses.

- 1,462,613. METHOD OF PRODUCING AZO COLORS IN NONAQUEOUS SOLVENTS. WALLACE J. MURRAY, Boston, Mass., assignor to Arthur D. Little, Inc., Cambridge, Mass., a Corporation of Massachusetts. Filed June 9, 1921. Serial No. 476,309. 6 Claims. (Cl. 8—6.)

1. A method of producing azo colors in non-aqueous solvents which consists in combining a solution of an amine and a developer in oil with a nitrite.

- 1,462,614. MACHINE FOR MOLDING BUILDING BLOCKS. HENRY C. NEUBERGER, New York, N. Y., assignor to Interlocking Metal Forms Corporation, Tuckahoe, N. Y., a Corporation of New York. Filed Sept. 30, 1922. Serial No. 591,442. 8 Claims. (Cl. 25—121.)

1. A building block casting machine embodying a platform provided at one end with an abutment, a plurality of face plates and partitions assembled on the platform at one side of the abutment, and spring actuated means for forcing all of the face plates and partitions in the direction of the abutment to clamp them between the abutment and the spring actuated means.

- 1,462,615. PORTABLE UMBRELLA STAND. LOUIS H. NOBLE, Philadelphia, Pa. Filed Jan. 31, 1923. Serial No. 616,038. 4 Claims. (Cl. 45—33.)

1. A folding umbrella stand comprising a pair of inverted U-shaped leg members pivoted in crossed relation, brace rods connecting the lower ends of each of said leg members, and a rectangular frame hingedly connected at one edge with the bight portion of one leg member and provided at its other edge with hooks detachably engaged upon the bight portion of the other leg member, a drain pan fitting between the lower ends

of said leg members and having ears pivoted on one of said brace rods, said pan lying upon the other brace

rod, and a combined reinforcing and stop strip on one edge of the pan having its ends projecting beyond the ends of the pan and engaging the adjacent leg member.

1,462,616. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to William H. Miner, Chazy, N. Y. Filed July 19, 1922. Serial No. 575,959. 7 Claims. (Cl. 213—33.)

1. In a friction shock absorbing mechanism, the combination with a friction shell divided into twin friction chambers by an intermediate multiple-element partition; of twin arranged friction means in said chamber; a spring resistance; and a friction element between the twin arranged friction means and movable with the latter, said friction element frictionally cooperating with said elements of the partition.

1,462,617. INTERFITTING CORNER CONSTRUCTION. ENOC OHNSTRAND, Mohawk, N. Y., assignor to Library Bureau, Cambridge, Mass., a Corporation of New Jersey. Filed Jan. 28, 1922. Serial No. 532,447. 12 Claims. (Cl. 109—2.)

1. Corner construction for frames constructed of angle-irons comprising a projection upon one iron joined to both flanges of an adjacent iron.

1,462,618. SPIRAL SEPARATOR. FRANK PARDEE, Hazleton, Pa., assignor to Anthracite Separator Company, a Corporation of Pennsylvania. Filed Oct. 10, 1921. Serial No. 506,755. 6 Claims. (Cl. 83—54.)

1. A spiral separator having a runway comprising a series of inwardly and downwardly inclined segmental plates and a series of plates secured to the outer portion of said segmental plates having their inner ends spaced above the surface thereof to form an outer runway of less inward inclination than the inclination of the first mentioned segmental plates.

1,462,619. SAFETY ATTACHMENT FOR LOCOMOTIVES. WARREN C. PATTERSON, Pottsville, Pa., assignor of one-half to John F. Johnson, Lewisburg, Pa. Filed Dec. 4, 1922. Serial No. 604,914. 3 Claims. (Cl. 105—84.)

1. A safety attachment for locomotives, comprising a means adapted to be secured to the side of the locomotive and to surround the drive rod and connecting rod while permitting full movements of these parts, said means constituting a support for the rods to prevent their falling to the ground or striking the locomotive in the event of any breakage.

1,462,620. TORCH FOR USE IN ELECTRIC WELDING AND HOLDER THEREFOR. CAMERON C. PEELER, Charleston, Wash. Filed Mar. 19, 1921. Serial No. 453,805. 1 Claim. (Cl. 219—14.)

In an electric torch, coating spring-pressed jaws having their coating faces correspondingly radially grooved, one of said jaws having an opening formed therein and a pin carried by the other of said jaws and adapted to enter the opening of the first named jaw when the jaws are in engagement said grooves being tangential to said pin.

1,462,621. APPARATUS FOR DRYING MATERIAL. OSWALD PFEIFFER, Leipzig, Germany. Filed Aug. 24, 1921. Serial No. 495,119. 1 Claim. (Cl. 34—34.)

An improved drying apparatus of the type in which the material is charged between the hurdles and emptied from the same if said hurdles are in vertical position and dried when said hurdles are in horizontal position

comprising in combination with the hurdles, a casing for the hurdles, means for the admission of the drying

air to said casing and means for the escapement of the drying air from said casing, and means for turning said casing with the hurdles around a horizontal axis.

1,462,622. COMBINATION CONCRETE WALL BOARD AND STUDDING. EDWARD J. PHELAN, Los Angeles, Calif. Filed Nov. 21, 1922. Serial No. 602,374. 4 Claims. (Cl. 72—16.)

1. A monolithic wall unit comprising a slab having a web and fire stops extending transversely from said web; said unit having assembling means whereby it can cooperate with similar units to form a cellular wall.

1,462,623. PORTABLE ACETYLENE GENERATOR. STUART PLUMLEY, Westfield, N. J., assignor, by mesne assignments, to Air Reduction Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 11, 1919. Serial No. 276,372. 3 Claims. (Cl. 48—38.)

3. In a portable acetylene generator, the combination with a tank and a hopper with feed means inserted

therein, of a ring joined with the hopper and surrounding the outlet, a hinged valve mounted with the ring for closing the lower end thereof when desired, a tail extending from the valve, and an operating frame mounted in the body of the tank co-operative with the back of the valve to close it, and with the tail for opening.

1,462,624. RESILIENT WHEEL. ALFRED T. PRYOR, Detroit, Mich. Filed June 4, 1920. Serial No. 386,427. 7 Claims. (Cl. 152—36.)

4. A resilient vehicle wheel comprising an inner member, pockets formed integral with said inner member, cushioning members engaging said pockets, and a pair of annular outer members having portions jointly forming pockets and engaging said cushioning members.

1,462,625. ATHLETIC SHOE. JOHN T. RIDDELL, Evanston, Ill. Filed May 5, 1922. Serial No. 558,558. 4 Claims. (Cl. 36—59.)

1. The combination with a shoe, of a stud passing through and clamped to the sole of said shoe and projecting therefrom; a tread member; and a securing member enclosed and imbedded in said tread member and engaging said stud, substantially as described.

1,462,626. INDEX TAB. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to The Globe-Wernicke Company, a Corporation of Ohio. Filed Mar. 31, 1922. Serial No. 548,316. 8 Claims. (Cl. 40—23.)

3. In an index tab, a doubled strip of transparent material, flexible attaching members interlocked with the edge portions of the arms of the strip, by which the strip may be secured to an edge of a thin object, the doubled portion of the strip serving as an open ended pocket to receive and retain an index slip.

1,462,627. APPARATUS FOR UNLOADING BARGES. LELAND S. ROSENER, San Francisco, Calif. Filed Oct. 16, 1919. Serial No. 831,085. 12 Claims. (Cl. 214—2.)

1. A barge in combination with a bucket and hoisting and conveying means for said bucket, a hopper adapted to receive a load from said bucket and discharge said load into a skip; a skip and a frame within which said skip is adapted to travel vertically; a discharge hopper adjacent to the path of the said skip into which a load from the skip may be dumped, and power means for operating the bucket, and power means for operating the skip, said skip and frame being located at substantially the longitudinal center of the barge, said barge constructed with bunker walls sloping towards a flat bottom said bottom having a width substantially equal to the range of bucket sweep.

1,462,628. BLOW-OUT PATCH AND TIRE REENFORCER FOR AUTOMOBILE TIRES AND TUBES. ANTON S. THORESEN and FELIX E. BENOIT, North Attleboro, Mass. Filed Apr. 5, 1922. Serial No. 549,692. 4 Claims. (Cl. 152—24.)

1. A patch for sealing blow-outs and punctures in automobile tires and tubes, the same consisting of a casing having walls of rubberized fabric, and a metallic member disposed within said casing and composed of a plurality of coils of spirally wound wire arranged with their axes parallel with each other, and each coil screwed into its adjacent coil to thereby form a flexible wire mesh strip, all in combination with each other and with means for securing the whole to a tire or tube.

1,462,629. FEEDING MECHANISM. RICHARD WHITAKER, Jr., and WILLIAM H. SNYDER, New Brunswick, N. J., assignors to Bryden-Neverslip Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Mar. 7, 1922. Serial No. 541,691. 6 Claims. (Cl. 10—167.)

1. A feeding mechanism comprising a hopper, a vertically reciprocating feeder, means for actuating the feeder, and means for vibrating the article carrying part of the feeder during its reciprocating movements.

1,462,630. PULLEY BLOCK. BROWN E. BARNES, Portland, Oreg., assignor to Willamette Iron & Steel Works, Portland, Oreg., a Corporation of Oregon. Filed June 8, 1922. Serial No. 566,862. 4 Claims. (Cl. 254—192.)

1. In a pulley block, the combination of a sheave; cheek pieces between which the sheave is journaled; a holding member at one end of the cheek pieces; and a closure member at the opposite end of the cheek pieces formed with spaced blocks and a connecting plate, said connecting plate having an inwardly extending web.

1,462,631. PULLEY BLOCK. BROWN E. BARNES, Portland, Oreg., assignor to Willamette Iron & Steel Works, Portland, Oreg., a Corporation of Oregon. Filed June 8, 1922. Serial No. 566,863. 11 Claims. (Cl. 254-192.)

1. In a pulley block, the combination of a sheave; cheek pieces; a bearing pin for the sheave mounted in the cheek pieces with an undercut connection; and a tie rod extending through the pin securing the pin and cheek pieces.

1,462,632. METHOD AND APPARATUS FOR RECTIFYING POLYPHASE CURRENTS. GEORGE B. COLEMAN, San Francisco, Calif., assignor to Coleman X-ray Company, San Francisco, Calif., a Corporation of California. Filed Oct. 16, 1919. Serial No. 331,033. 4 Claims. (Cl. 175-364.)

2. In a transformer provided with primary coils adapted to be energized from a polyphase electric circuit; secondary coils for the said primary coils, the said secondary coils being divided between the terminals of each, and means interposed at each of said points of division constructed and adapted to periodically complete and alternately therewith to interrupt the corresponding windings and comprising a motor and including a rotary shaft in synchronism with the impressed electromotive force, commutator parts on said shaft and brush means in combination therewith adapted to complete and interrupt the windings aforesaid.

1,462,633. METHOD OF PRODUCING DIRECT CURRENT FROM AN ALTERNATING CIRCUIT AND MEANS THEREFOR. GEORGE B. COLEMAN, San Francisco, Calif., assignor to Coleman X-ray Company, San Francisco, Calif., a Corporation of California. Filed Feb. 26, 1920. Serial No. 361,584. 7 Claims. (Cl. 175-364.)

1. The method of deriving unidirectional current from a transformer secondary which consists of interrupting the winding of said secondary at an intermediate point

during the time of one polarity and simultaneously interrupting an external circuit connected to the terminals

of said secondary, and completing the circuit at the intermediate point and at the terminals during the time of the other polarity.

1,462,634. MEANS AND METHOD OF CONVERSION BETWEEN ALTERNATING AND DIRECT CURRENTS. GEORGE B. COLEMAN, San Francisco, Calif., assignor to Coleman X-ray Company, San Francisco, Calif., a Corporation of California. Filed Dec. 11, 1919. Serial No. 344,101. 2 Claims. (Cl. 175-364.)

1. In a transforming system, a plurality of dephased secondary windings each divided at substantially its center and provided with a commutating device, a second commutating device interposed in each of the dephased secondary windings, means adapted to rotate said commutators in synchronism with an impressed wave, said commutators spaced angularly in accordance with the phase differences of the secondary windings.

1,462,635. EXPANDING GATE VALVE. EDUARD EDLER, Leipzig-Lindenau, Germany, assignor, by mesne assignments, to Albert Karl Iseler and Albert Georg Wilhelm Iseler, both of Leipzig-Plagwitz, Germany. Filed Nov. 19, 1920. Serial No. 425,220. 4 Claims. (Cl. 251-66.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A high pressure slide stop valve with parallel steam-tight surfaces comprising in combination a housing, one obturating disc, a threaded pin on the centre

of said obturating disc, a second obturating disc having a female thread at the centre for the reception of said threaded pin, packing rings, a valve spindle, a yoke for operating said threaded connection, and means for transmitting the motion of said spindle to said yoke.

1,462,636. HIGH-PRESSURE SLIDE-STOP VALVE WITH PARALLEL STEAM-TIGHT SURFACES. EDUARD EDLER, Leipzig-Lindenau, Germany, assignor, by mesne assignments, to Albert Karl Iseler and Albert Georg Wilhelm Iseler, both of Leipzig-Plagwitz, Germany. Filed Oct. 26, 1921. Serial No. 510,619. 2 Claims. (Cl. 251-66.)

1. An improved high pressure slide stop valve with parallel steam-tight surfaces comprising in combination with the housing, the seating rings in said housing, the valve spindle and a yoke operated from said valve spindle and having teeth at its two sides, two obturating disks the one opposite the other having each a cavity at the center, seating rings in said obturating disks opposite said seating rings of the housing, an internally threaded nut in each of said cavities projecting from the inner surface of the corresponding obturating disk, means for securing said nuts in said cavities so that they can freely revolve but are prevented from axial displacement, a screw bolt connecting said nuts, and one-armed levers on the freely projecting rims of said nuts forming together a toothed segment for each nut adapted to be operated from the corresponding teeth of said yoke so that at the beginning and end of the ascent and descent of said yoke said obturating slides are first moved towards or away from each other before the teeth of the yoke begin to act upon the toothed segments and to raise or lower said obturating disks.

1,462,637. SASH FASTENER. STEPHEN R. FETNER, Albany, Ga. Filed Feb. 25, 1922. Serial No. 539,060. 6 Claims. (Cl. 292-227.)

2. In a window latch, the combination with the meeting rails of window sashes, of a keeper carried by one of said sashes, a latch member carried by the other sash and movable into or out of engagement with said keeper, a longitudinally and rotatably movable rod, and a pivotal connection between said rod and the latch

member, whereby the latch member may be moved into or engagement with said keeper through longitudinal movements of said rod, said pivotal connection including co-acting surfaces on the inner end of the rod and outer side of the latch member, engageable and disengageable with each other through reverse rotary movements of said rod.

1,462,638. AUTOMOBILE SPRING EQUALIZER AND SHOCK ABSORBER. WILLIAM J. HACKETT, Reno, and FRED T. ABBAY, Hazen, Nev. Filed Oct. 9, 1922. Serial No. 593,289. 17 Claims. (Cl. 280-104.)

1. In a device of the character described, in combination, front and rear axles of an automobile, a chassis, a spring suspension therefor including leaf springs extending rearwardly from the front axle and forwardly from the rear axle, means supported on the chassis intermediate the front and rear axles and having connection with the rear end of the front spring and front end of the rear spring and adapted to permit the necessary flexing of the springs and positively to communicate substantially all vertical motion of the inner end of either spring relative to the chassis to the other in an opposite direction.

1,462,639. STEEL-HEATING FURNACE. JAMES HUNDELEY, Noblesville, Ind., assignor to New Process Iron and Steel Company, Noblesville, Ind. Filed July 23, 1919, Serial No. 312,749. Renewed Feb. 25, 1922. Serial No. 539,293. 3 Claims. (Cl. 266-10.)

3. In a heating furnace an endless conveyor consisting of hinged connected elements, refractory blocks or bricks carried by said elements, a heating chamber surrounding a portion of said conveyor, means for operating said conveyor and for discharging material therefrom upon a second conveyor within said furnace, an additional conveyor to remove slag and other cinder from said furnace, brushes or other means for removing adhering slag or cinder from said conveyor elements and means for actuating said conveyors, substantially as and for the purpose described.

1,462,640. SHEET-METAL RESERVOIR AND METHOD OF MAKING THE SAME. RUDOLPH HOFFMAN, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed June 19, 1920. Serial No. 390,059. 10 Claims. (Cl. 113-116.)

1. A sheet metal reservoir formed from a blank having a central portion deep-drawn to provide a seamless

lower portion for the reservoir consisting of a bottom wall having upturned edge walls, and wing portions bent

upwardly from and in continuation of said edge walls and joined to provide the side walls of the reservoir.

1,462,641. GAS DISTRIBUTING AND GOVERNING VALVE. HARRY R. JACKSON and HENRY A. MAY, Chicago, Ill. Filed Dec. 2, 1920. Serial No. 427,906. 1 Claim. (Cl. 48—180.)

The combination with the intake duct of an internal combustion engine of a throttle valve in the duct located between the carburetor and the engine, a pair of gates located between the throttle and the engine, said gates extending from the sides of the duct obliquely inward and forward in the direction of flow, a pair of rock-shafts partially embedded in the walls of the duct and carrying said gates to form hinges therefor, and means for yieldingly urging the gates toward each other, the duct having airholes for admitting air into the duct and the rock-shafts having airholes passing through them and adapted to register with the airholes in the duct when the gate is swung away from closed position and to come out of register when the gate is approximately in closed position.

1,462,642. TRANSPORTATION PACKAGE FOR GRAPHOPHONE RECORDS. JOSEPH P. KARST and OLIVER J. KARST, St. Louis, Mo. Filed July 7, 1921. Serial No. 483,016. 2 Claims. (Cl. 206—62.)

1. A transportation package for records and the like comprising separate rigid heads, a record adapted for disposition intermediate said heads, cushioning fillers intermediate the records and heads, said filler and one of said heads having openings therethrough to coincide

with the spindle-opening of the record, a stem extending from the other head removably through said opening, and a tie means adapted to be passed about the package connected to one of said heads and serving to slide the first mentioned head along the stem and thereby compress the filler against the record.

1,462,643. GAS HEATER FOR FURNACES, STOVES, OR APARTMENTS. THEODOR EMIL KREUTZER, Philadelphia, Pa., assignor to The Home Comfort Heater Co., Philadelphia, Pa., a Corporation of New Jersey. Filed Sept. 13, 1922. Serial No. 587,889. 4 Claims. (Cl. 158—113.)

1. In a gas heater, a hollow base comprising a bottom plate having centrally therein a vertical peripheral rim forming a flue, and an exterior rim and a covering plate resting on said rims and secured to said bottom plate, said covering plate having centrally therein a flue coincident with said flue of the base and being provided with gas burner orifices, said base having connected with it a gas supply pipe, perforated plates elevated above said covering plate, bolt-like members connected with said base and rising therefrom and connected with said elevated plates, and tightening nuts adapting said plates to be supported separately from each other and from said base.

1,462,644. WINDOW SASH, SCREEN SASH AND SHUTTER, AND WINDOW FRAME THEREFOR. GEORGE WASHINGTON LANCASTER, Richmond, Va., assignor to Perfected Window Company, Richmond, Va., a Corporation. Filed Feb. 20, 1920. Serial No. 360,151. 25 Claims. (Cl. 20—40.)

1. In a device for the purpose indicated, a window casement, an outer closure swingingly mounted therein and tending to a closed position, a second closure swingingly mounted in the casement, latching connections between the two closures, said closures swinging through intersecting arcs, whereby when the closures are being opened the latching connections may disconnect, and when the outer closure is moving toward a closed posi-

tion, it may move the second closure to a closed position, thereby causing the latching means to reconnect, the second closure being movable to a closed position independently of the outer closure, which may remain open.

1,462,645. COUNTERBALANCING SASHES FOR STATIONARY WINDOW CASEMENTS. GEORGE W. LANCASTER, Richmond, Va., assignor to Perfected Window Company, Richmond, Va., a Corporation. Filed Jan. 5, 1921. Serial No. 435,233. 13 Claims. (Cl. 20—52.)

1. In a window construction, a frame having opposed vertical guides, counterbalancing sashes movable in the guides, a slide frame movable in certain of said guides and provided with means for supporting one of the sashes, said sash being freely removable from said supporting means and a connection between another of the sashes and the slide, whereby the other sash and the slide may be moved simultaneously.

1,462,646. PLURALITY OF COUNTERBALANCING SASHES FOR WINDOWS. GEORGE W. LANCASTER, Richmond, Va., assignor to Perfected Window Company, Richmond, Va., a Corporation of Virginia. Filed Mar. 19, 1921. Serial No. 453,592. 11 Claims. (Cl. 20—52.)

1. In a window, a casement having guides, upper outermost and lower innermost sashes mounted in certain of the guides, counterbalancing means in certain others of

the guides, and means operatively connected to the upper outermost sash and adapted to operatively couple with the lower innermost sash or with the counterbalancing means, whereby the two sashes may balance each other throughout the full height of the casement, or the upper outermost sash may be counterbalanced independently of the lower innermost sash.

1,462,647. COUNTERBALANCING SASHES FOR VARIOUS METAL AND OTHER CASEMENTS. GEORGE W. LANCASTER, Richmond, Va., assignor to Perfected Window Company, Richmond, Va., a Corporation of Virginia. Filed Nov. 22, 1921. Serial No. 517,041. 5 Claims. (Cl. 20—52.)

1. In a window structure, the combination with a casement having opposite perpendicular guides, of uppermost and lowermost sashes, mounted in certain sets of the guides, counterbalancing devices mounted in another set of the guides, spaces connecting the lower ends of certain sets of the guides between the guides for the sashes and those for the counterbalancing devices, an operating device mounted to move selectively in any of the connected sets, by shifting it through said spaces, means operatively connecting said device and the uppermost sash, and means for detachably and operatively connecting said device with the lowermost sash, or the counterbalancing devices, whereby the lowermost and uppermost sashes may be counterbalanced in their movements, or the uppermost sash moved independently and counterbalanced with the counterbalancing devices.

1,462,648. INSULATING WALL. HARVEY B. LINDSAY, Oakland, Calif., assignor to The Dry-Zero Corporation, Oakland, Calif., a Corporation of California. Filed Apr. 5, 1922. Serial No. 549,795. 6 Claims. (Cl. 20—4.)

1. An insulating wall including a wall casing, a packing of kapok in said wall and horizontal superimposed anchor bars in said casing adjacent the side walls thereof.

1,462,649. PERCENTAGE FEEDER AND MIXER. ANGUS D. MACLELLAN, Owensboro, Ky., assignor to MacLellan Mixer Company, Owensboro, Ky., a Corporation of Kentucky. Filed Apr. 5, 1922. Serial No. 549,933. 12 Claims. (Cl. 83—44.)

1. In a feeder of the class described, the combination with a base plate having recesses in its outer periphery, a wheel journaled to said plate, means between said recesses delivering different material laterally to said plate, and means on said wheel for conducting the material to said recesses.

1,462,650. PRESSER-FOOT LATCH. HYMAN MAIMIN and AUGUST FREDDY, New York, N. Y., assignors to H. Maimin Co., Inc., a Corporation of New York. Filed Jan. 4, 1922. Serial No. 526,873. 2 Claims. (Cl. 164—75.)

1. A cloth-cutting machine comprising the combination of a supporting frame, a rack fixed thereto, a presser foot movable relative to the frame, and a double pawl carried by the presser foot and cooperating with the rack.

1,462,651. VALVE MECHANISM. HUBERT A. MYERS, Toledo, Ohio, assignor of one-half to Herman Wiener, Toledo, Ohio. Filed Mar. 17, 1919. Serial No. 283,007. 7 Claims. (Cl. 123—188.)

1. In an engine, a valve comprising a valve-seat, a cast metal valve-head which is moulded upon and has therein a previously formed high temperature heat-resisting and relatively non-deteriorating metal insert permanently and rigidly embedded within the cast metal thereof and

thus anchored against working out of position to engage the valve-seat, said insert having its outer edge formed to engage the valve-seat, and having its inner portion formed with anchoring means cast in the valve-head by molding the metal of the head thereon, so that the cast metal which is subject to deterioration is shrunk upon the previously formed insert, to prevent displacement of the insert in any direction.

1,462,652. GLASS-HANDLING APPARATUS. FRANK O'NEILL, Toledo, Ohio. Filed June 14, 1920. Serial No. 388,724. 8 Claims. (Cl. 49—9.)

1. A glassware manufacturing apparatus comprising traveling sectional molds, driving means to bring a pair of molds into opposing relation open toward each other, and means carried with one of the molds providing a guide toward the other mold, one of said open molds having a pair of ware engaging shiftable members mounted on the guide means for engaging an article in one mold, shifting said article out of said mold by travel of the members along the guide means and member coating means releasing the article into the other mold by opening of the members.

8. Glassware apparatus comprising a traveling carrier, a mold, a rotatable mounting for the mold as to the carrier including a gear, a stationary rack in the line of travel of the gear for rotating the gear, driving means for the carrier providing a station of rest for the mounting, a device movable relatively to the stationary rack and including a toothed section operable to disengage the gear at said station of rest and slow up carrier travel of the mounting as leaving the rack and reaching said device.

1,462,653. GRINDING MACHINE. WILLIAM C. OSTERHOLM, Chicago, Ill., assignor to Osterholm Automatic Machine Co., Chicago, Ill., a Corporation of Illinois. Filed June 10, 1921. Serial No. 476,409. 19 Claims. (Cl. 51—124.)

1. In a grinding machine, a carriage carrying a grinding wheel, means for propelling said carriage, means for changing the position of said carriage relative to said

propelling means, means for communicating a feeding motion to said propelling means to move said carriage, a work table and means for moving said work table with a reciprocatory motion in a plane normal to the line of movement of said carriage.

1,462,654. INTERNAL-COMBUSTION ENGINE AND PARTS THEREOF. CHARLES W. PHILIP, San Francisco, Calif. Filed Nov. 9, 1921. Serial No. 513,983. 4 Claims. (Cl. 74-108.)

2. In an engine of the type set forth, a piston having a closed end with an outwardly extending shoulder formed with an inner face the walls of which converge outwardly, and heat-resisting non-conducting material covering the outer face of the closed end of the piston and conformably engaged with the converging walls of the shoulder, said shoulder being integral with the piston and having its said walls of such inclination as to hold the said material in position by frictional engagement therewith, said material having pins which project outwardly from the inner face thereof and are interlockingly embedded in the material of the piston.

1,462,655. PISTON AND METHOD OF MANUFACTURING THE SAME. CHARLES W. PHILIP, San Francisco, Calif. Filed Aug. 30, 1922. Serial No. 585,177. 7 Claims. (Cl. 74-108.)

1. A piston having a circular cavity in the closed end thereof; a metal cup fixedly secured within said cavity and a circular disc of non-conducting material mounted within said cup.

1,462,656. DENTAL-APPLIANCE UNIT. OSCAR H. PIEPER and ALPHONSE F. PIEPER, Rochester, N. Y. Filed Sept. 14, 1920. Serial No. 410,241. 12 Claims. (Cl. 32-5.)

1. A dental appliance unit comprising a support, a panel mounted thereon for movement toward and from the same to afford access to the rear of the panel, an

instrument bracket extending upwardly from the panel, a plurality of electrical instruments carried by the bracket, controlling devices for said instruments located on the

panel, and electrical connections between said controlling devices and instruments including circuit cords looped in rear of the panel to permit the removal and use of said instruments.

1,462,657. BOX FASTENER. RUDOLPH RAINALTER, Kansas City, Mo. Filed Apr. 13, 1921. Serial No. 461,126. 2 Claims. (Cl. 292-175.)

1. A box fastener comprising a bolt, supporting means to fit over the edge of a box, said means having a stay wire engaging loop, a spring-pressed bolt extending transversely through said means and having a hooked end, and a complementary plate for attachment to the lid of the box and having a lip for engagement with the bolt.

1,462,658. POWER-TRANSMISSION APPLIANCE. HENRY A. RICHARDSON, Colorado Springs, Colo. Filed Oct. 3, 1922. Serial No. 592,086. 1 Claim. (Cl. 74-14.)

In an intermediate power transmission appliance, a rectangular frame, guide bars parallel to each other and rigidly secured in said frame, two separate sets of short tubes slidably mounted on said bars, bearings rigidly secured to top of the longitudinal centers of said tubes, two separate shaftings extending parallel to each other

and transversely to said bars and said tubes and extending through said bearings, pulleys on each of said shafts intermediate their said bearings, belts operating said pulleys or operated thereby and transmitting force from the power unit to the load unit, and transmission means connecting said two shafts to operate them together the power from the one operating the other.

1,462,659. AUTOMOBILE TRAFFIC SIGNAL. AUGUST RICK, St. Louis, Mo. Filed Feb. 16, 1922. Serial No. 536,954. 1 Claim. (Cl. 116—50.)

A traffic signal-lamp having a suspending-bail, and suspended from said bail to swing freely back and forth; in combination with a sliding lamp-bracket from which said bail is suspended, and means by which said bracket is moved, to cause said lamp to swing back and forth, in signaling with the same.

1,462,660. TOY. JACOB W. ROLLERSON, Seattle, Wash. Filed Mar. 23, 1920. Serial No. 368,112. 1 Claim. (Cl. 198—43.)

A toy comprising a base plate, a material receiving receptacle secured to the upper face thereof, an upright casing formed integrally with one end of said material receptacle and communicating therewith, a curved bottom wall in said receptacle adapted for feeding material to said casing, conveying mechanism disposed within said casing, means for driving said conveyor mechanism, a discharge chamber formed integrally with the upper end of said casing and upon the side opposite to the said material receptacle, said discharge chamber having an opening formed in the bottom thereof, a hopper carried by said casing and positioned beneath the opening in said discharge chamber, a trough connecting said hopper with said material receptacle for returning the material to the latter, a discharge spout formed integrally with said hopper and spaced outwardly from said discharge chamber, and a chute pivotally connected to said discharge chamber adjacent its opening adapted to selectively deliver material to either the hopper or discharge spout.

1,462,661. GAS STOVE. JOHN H. SATTLEB, San Francisco, Calif., assignor to The Steiger & Kerr Stove & Foundry Co., San Francisco, Calif., a Corporation of California. Filed Nov. 12, 1921. Serial No. 514,447. 8 Claims. (Cl. 126—225.)

1. In a gas stove, a top stove plate, oven plates enclosing an oven, a solid fuel combustion chamber disposed contiguous to one of said oven plates, said oven plate extending upward to said top plate, a fire box in said chamber spaced from said oven plate, the wall of said fire box adjacent said oven plate being provided with a plurality of apertures and said oven plate being provided below said apertures, with a plurality of apertures for the passage of exhaust products from the oven.

1,462,662. SANITARY TOILET-SEAT COVER. JOHN L. SCHAEFER, Flushing, N. Y. Filed Aug. 11, 1922. Serial No. 581,272. 3 Claims. (Cl. 4—18.)

1. As a new article of manufacture, a sanitary toilet seat cover embodying a sheet of material having a slit extending diagonally from front to rear and arcuate slits in opposed relation at opposite sides of the central diagonal slit, said arcuate slits respectively joining at opposite terminals with the diagonal slit to provide oppositely bendable tabs, as and for the purpose specified.

1,462,663. SLAB FOR BUILDING CONSTRUCTIONS. CLINTON W. SCHALL, Columbus, Ohio. Filed July 15, 1922. Serial No. 575,142. 3 Claims. (Cl. 72—44.)

1. A wall constructed of hollow slabs placed edge to edge, said slabs each consisting of two parallel spaced face sheets of foraminate metal adapted to receive, be penetrated by and retain a plastic material, coats of plastic material applied to and covering said sheets except at the vertical margins thereof, and reinforced vertical spacing fillings of plastic material between and connecting said face sheets within the margins thereof, and plastic fillings between said slabs covering the afore-said margins.

1,462,664. POSITION INDICATOR. WALTER B. SCHULTE, Madison, Wis., assignor to Burgess Battery Company, a Corporation of Wisconsin. Filed Oct. 6, 1921. Serial No. 505,701. 3 Claims. (Cl. 240-1.)

1. Means for attaching position indicators to articles, comprising a strip of flexible resilient material shaped into the form of a split band for clasp ing the article, and provided with translucent beads having backings of luminous materials, said beads being set in openings in the strip of material, the openings being of smaller diameter than the beads.

1,462,665. CONTAINER. JOHN H. SHARP, Chicago, Ill. Filed Nov. 22, 1919, Serial No. 339,907. Renewed Apr. 26, 1923. 9 Claims. (Cl. 217-3.)

1. A knock down interliner of the kind described, adapted to be positioned within a container, said interliner comprising a plurality of sections of suitable material some of said sections adjacent one another being interchangeable and means for detachably securing all of said sections together.

1,462,666. TIRE-CHAIN LOCK AND ELASTIC TAKE-UP. ARTHUR A. SMITH AND HARRY W. PAINE, Eagle Grove, Iowa. Filed June 15, 1922. Serial No. 568,520. 4 Claims. (Cl. 267-72.)

1. The combination of a tire chain lock and elastic take-up, comprising oppositely movable bars in face to face engagement, each bar terminating at its opposite ends in a hook and a T-shaped head, the head of one bar being normally located in the mouth of an adjacent hook on the other bar, a link, connected to the other hook, a spring surrounding the two bars between the heads of the respective bars, and means pivotally mounted on the connection between said link and bar and adapted to engage the head on the other bar to retain the spring compressed and maintain the head out of engagement with the adjacent hook.

1,462,667. AUTOMOBILE BED. ARTHUR STOCKLAND, Minneapolis, Minn., assignor to Charles K. Stockland, Minneapolis, Minn. Filed Aug. 25, 1922. Serial No. 584,244. 1 Claim. (Cl. 5-118.)

In combination with an automobile, a pair of brackets secured on opposite sides of the automobile at the front

thereof, a strip of flexible material, a rod to which one end of said strip is attached, said rod being adapted to extend through holes in said brackets, a pair of brackets secured on opposite sides of the automobile at the rear thereof, a second rod to which the other end of said strip is secured for rotation therewith, said

second rod being rotatably mounted in said second pair of brackets, and means whereby said second rod may be rotated to stretch said strip, said second pair of brackets being secured behind the position normally occupied by the back cushion of the rear seat whereby the device when not in use may be stowed behind said cushion.

1,462,668. MATTRESS. BERT STUART, Seattle, Wash. Filed Aug. 30, 1922. Serial No. 585,239. 1 Claim. (Cl. 5-359.)

A mattress comprising bars forming the edges thereof, a covering for the bars, upper and lower covering walls secured to the bar covering, a plurality of flexible strips secured at their ends to the bar covering, said strips having slits to interfit one with the other where the strips cross each other and arranged to form a plurality of independent compartments, and a mattress filling arranged in each of said compartments, whereby the bars form a stiffened frame to carry the strips, hold them in spaced relation, and substantially taut to prevent disarrangement thereof in the mattress and misplacement of the filling in the compartment.

1,462,669. VALVE LATHE. CHARLES G. TURNER, Harvey, Ill. Filed Nov. 7, 1921. Serial No. 513,375. 2 Claims. (Cl. 82-1.)

2. A valve lathe comprising a body having a bearing member for rotatably supporting a valve to be faced, a feed screw arranged on said body for shifting the valve axially into engagement with a cutting tool supported

on said body, said body having an aperture formed therein, and a pin seated in said aperture and disposed in substantially parallel spaced relation to the axis of said bearing, said pin being arranged for axial adjustment to limit the axial movement of the valve under the action of said feed screw.

1,462,670. SHELF EXTENSION. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 22, 1919. Serial No. 325,286. 5 Claims. (Cl. 211-27.)

5. The combination of shelf framing, including tubular uprights at the corners of rectangular section and having open tops, and extension connectors adapted to be positioned in said open tops of said tubular uprights to permit upward shelf extension, and each comprising a metal sheet folded back upon itself at the center and having flanges extending out from the lateral sides, said flanges fitting neatly within said tubular uprights, the lower ends of said flanges being bent to permit easy insertion of the connectors into snug engagement with the uprights.

1,462,671. PIPE OR CABLE CLAMP. JOHN VRBA, Chicago, Ill. Filed July 5, 1921. Serial No. 482,637. 5 Claims. (Cl. 248-36.)

5. A pipe clamp comprising a single piece of metal bent upon itself to form a loop, and a pair of substantially parallel opposed resilient spaced legs having aligned apertures therethrough to receive a bolt whereby said clamp may be supported from a suitable cooperating member, prongs struck up from the leg adjacent said cooperating member so as to be adapted to forcibly enter the material thereof, and a prong struck up from the body of the other leg and extending in the same direction as said first-mentioned prongs so as to be superimposed on one of said first-mentioned prongs and also entering the material of said supporting member.

1,462,672. SHIPPING BOX FOR CARBOYS. CALVIN S. WEATHERBY, South Westville, N. J. Filed Dec. 2, 1920, Serial No. 427,879. Renewed May 3, 1923. 2 Claims. (Cl. 217-53.)

1. A shipping crate for carboys provided with a plurality of corner pieces, and a plurality of vertically disposed bottle-engaging cushioning members secured to said corner pieces intermediate their centers and their opposite ends, each of said members being composed of spaced independently yieldable strips, whereby they will be permitted to flex freely toward and from the carboy at their ends and at their centers and thereby permitted to conform to the contour of the carboy.

1,462,673. BENDING MACHINE. JOHN S. WHEELER, Dunsmuir, Calif. Filed Feb. 5, 1919, Serial No. 275,164. Renewed Aug. 10, 1921. Serial No. 491,286. 3 Claims. (Cl. 153-48.)

1. A bending machine comprising stationary posts, a frame supported by and extending between said posts, a stationary circular track secured to one end of said frame concentric with the post supporting said end of the frame, a work holder adjustable longitudinally in the frame and disposed eccentrically to the adjacent supporting post and the track, a form block secured on said post and arranged above the frame, a carrier consisting of similar members pivoted to said post respectively above and below the form block, a holder mounted between and held by the carrier members and adjustable longitudinally thereof toward and from the form block, and a presser block seated against said holder and cooperating with the form block.

1,462,674. FLASH-LIGHT CASE. GERALD E. WHITE, Lansing, Mich. Filed Feb. 15, 1921, Serial No. 445,120. Renewed June 6, 1923. 1 Claim. (Cl. 206—1.)

A flash light casing comprising a cylindrical body of non-flexible material, a removable water proof lining for the said non-flexible body, the interior of the body being substantially equal to the exterior diameter of the flash light, one end of the body being open, a removable cap adapted to be mounted on the open end of the body, the said cap having parallel slots in its top, a flexible strap adapted to pass through said slots, one end of the strap being extended over the edge of the cap and fixed to the sides of the said non-flexible body, the other end of the strap being adapted for releasable connection to the opposite side of the said non-flexible body, said water proof lining preventing said strap fastening means from coming into contact with said battery within the non-flexible body.

1,462,675. SPEED-ADAPTER JOINT FOR POWER-TRANSMITTING SHAFTS. FREDERIK G. WHITTINGTON, Evanston, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Apr. 14, 1922. Serial No. 552,766. 5 Claims. (Cl. 74—57.)

1. For combination with a power transmitting shaft and to be interposed therein to change the speed as between the two parts between which it is interposed, a two-part casing, each part having a cavity at one side having a journal bearing for a shaft, and a shaft journaled therein and protruding therefrom at the side opposite the cavity; a gear on each shaft at a non-protruding part thereof, said casing parts being mated for seating one against the other to combine their cavities in a single continuous closed chamber, and a third shaft having its ends carried in the two casing parts respectively, and two gears rigid with each other on said third shaft, intermeshing respectively with the gears of the two shafts first mentioned, the two pairs of intermeshing gears being different in respect to their gear ratios for changing the shaft speed in transmission through the gear system comprising said four gears; the gears of the two shafts first mentioned being interchangeable and the two gears on the third shaft being laterally transposable, and means for detachably securing the two casing members together.

1,462,676. DRAFT GEAR FOR RAILWAY CARS. HENRY I. WRIGLEY, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed June 3, 1919. Serial No. 301,467. 1 Claim. (Cl. 213—48.)

In a draft gear for railway cars, a pair of opposed followers, an integral spring enclosure on each follower, each enclosure comprising side plates and cross members, a pair of spaced arms extending forwardly from each side plate of one of said enclosures, reinforcing ribs extending along said plates and the adjacent marginal edges of said arms, a pair of arms having reinforced ribs extending rearwardly from the side plates of the other enclosure between said first named arms and engaging said flanges, a cross member for each pair of arms, seating plates engaging said cross member, and springs in each enclosure between the followers and the seating plates.

1,462,677. OIL-CONVERTING PROCESS FOR THE CONVERSION AND TRANSFORMATION OF OILS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed June 15, 1916. Serial No. 103,725. 32 Claims. (Cl. 196—25.)

5. A process of converting high boiling hydrocarbon oil into lower boiling products in the vapor phase comprising heating the oil in a preheater under superatmospheric pressure to substantially its corresponding boiling point while maintaining the oil in liquid form, admitting the preheated liquid into a chamber under superatmospheric pressure somewhat less than the pressure under which the oil is preliminarily heated, where it breaks into vaporous form, and subjecting the vapors in the chamber to a cracking temperature to convert them in the vapor phase.

29. A process of converting high boiling hydrocarbon oil into lower boiling products that comprises forcibly delivering oil from a supply tank to one end of a plurality of vertical converter tubes and passing it there-through in flowing streams to be cracked in transit, heating the converter tubes intermediate their ends to a cracking temperature under superatmospheric pressure, withdrawing unconverted liquid oil from the opposite ends of said vertical converter tubes and returning it to mix with the oil in said supply tank for retreatment, removing the vapors evolved in the converter tubes, and collecting below the heating zone carbon and heavy residue formed in said converter tubes and emerging from the lower ends thereof.

1,462,678. OIL-CONVERTING APPARATUS. JOSEPH H. ADAMS, Flatbush, N. Y., assignor to The Texas Company, Houston, Tex., a Corporation of Texas. Filed June 15, 1916. Serial No. 103,726. 23 Claims. (Cl. 196—14.)

19. Apparatus for converting high boiling hydrocarbon oil into lower boiling products comprising a furnace, a plurality of vertically disposed converter tubes located therein and heated to a cracking temperature under superatmospheric pressure and having their respective ends projecting through the upper and lower walls thereof, means for interconnecting the upper ends of said converter tubes above the heating zone, means for interconnecting the lower ends of the converter tubes below the heating zone, a supply tank outside said furnace, means for forcibly delivering oil from the supply tank to one of said interconnecting means whereby the oil is passed through said vertical converter tubes in flowing streams and cracked in transit, means for removing unconverted liquid oil from the other interconnecting means and returning it to the supply tank to be mixed with the oil therein and retreated, and means for removing the vapors evolved in transit through said converter tubes.

1,462,679. SELECTIVE CHANGE MAKER. ALBERT BECK, Chicago, Ill., assignor to McGill Metal Products Company, a Corporation of Illinois. Filed July 20, 1921. Serial No. 486,105. 17 Claims. (Cl. 133—5.)

2. A selective change maker comprising a coin holding tube and an ejector mechanism, said ejector mechanism embracing a bell-crank, a coin retaining member on one arm thereof, and an ejecting means on the other arm.

312 O. G.—48

17. A change maker comprising a casing, coin ejecting means therein, a plurality of coin tubes on said casing, slotted base members secured on the lower ends of said coin tubes into which said ejecting means project, means for operating the ejecting means to cause discharge of coins from said tubes, and mouth pieces integrally formed on said coin tube base members through which the discharged coins are ejected.

1,462,680. BURNER FOR FLUID FUEL. JOHN BLISS, London, England. Filed Sept. 1, 1922. Serial No. 585,654. 9 Claims. (Cl. 158—75.)

1. A burner of the kind described comprising the combination of a fuel-tube through which the fuel is to be passed in an axial direction, a jacket surrounding said fuel-tube with means to lead steam or other fluid into the jacket-space between it and the fuel-tube, forwardly-directed conduits communicating between the jacket-space and the interior of the fuel-tube near its outlet end to lead fluid from the jacket-space into the fuel-tube to mix with the fuel before it leaves said tube, a nozzle enclosing the outlet end of the fuel-tube, and forwardly-directed conduits which are exterior to the bore of the fuel-tube, which are inclined across the axis of the latter and are so disposed as to lead streams of steam or other fluid into said enclosing nozzle whereby it is free to commingle with the fuel-mixture as it issues from the fuel-tube outlet into the said nozzle, said enclosing nozzle directing all of the commingled fluids.

1,462,681. MINING-MACHINE BIT. NEWTON K. BOWMAN, Bowdell, Ohio. Filed Dec. 15, 1921. Serial No. 522,578. 8 Claims. (Cl. 262—33.)

1. The combination of a cutter bar having a longitudinally extending concave seat at its free end and provided with a notch at the end of said seat forming a terminal of the seat, a bit having its sides flared and its back forming a longitudinally extending convex ridge adapted to fit in the said seat, the forward side of the bit being provided with concave arcuate portions merging into the back of the bit to form cutting points, a holder fitting around the bit and the cutter bar, and means carried by the holder to engage the cutter bar and bind the bit in the seat.

1,462,682. ENGRAVING MACHINE. CHARLES C. BRUCKNER, Jersey City, N. J., assignor to Bruckner Mfg. Co., Inc., a Corporation of Delaware. Filed Aug. 17, 1920, Serial No. 404,247. Renewed May 26, 1922. Serial No. 563,990. 39 Claims. (Cl. 90—24.4.)

1. In an engraving machine, the combination of a cutting tool, a work support, a pattern holder, a stylus co-operating with the pattern holder, a driving motor and connections between said motor and said first mentioned parts for simultaneously imparting correlated relative movement to said cutting tool and work holder, and said pattern holder and stylus, respectively, said connections comprising means for varying the amplitude of movement imparted to the operated parts by the driving motor and independent means for varying the speed of movement imparted by said motor.

1,462,683. MEMORANDUM TABLET AND HOLDER. HENRY L. BUSH, Hopkinton, and ABEL M. HAMBLET, Salem, Mass. Filed Feb. 23, 1921. Serial No. 447,259. 22 Claims. (Cl. 281—38.)

1. In a device of the class described, in combination, a memorandum tablet having the sheets thereof divided transversely to form a plurality of tablet sections, each section having a number of memorandum leaves secured along one of their marginal edges to the tablet, a holder enclosing the marginal edges of the tablet, and cooperating projections and notches on the leaves and holder forming interengaging positioning elements between the holder and one end of the memorandum leaves to retain the leaves in place.

8. In a multiple section memorandum tablet and holder combination, interengaging positioning elements in the holder and in the outside end of the sectional memorandum leaves, which retain the latter in place without interfering with leaf withdrawal.

1,462,684. LOCK SWITCH. HARRY A. CLUM, Wauwatosa, Wis., assignor to Clum Mfg. Co., Milwaukee, Wis. Filed Oct. 16, 1916. Serial No. 125,788. 20 Claims. (Cl. 200—44.)

1. A lock switch, comprising a casing provided with a projecting tubular portion, a rotary switch element mounted within the casing, an oscillating switch element mounted within the casing, a member controlling the movement of one of the switch elements positioned to surround the tubular casing portion, a member controlling the movement of another switch element positioned within the bore of the tubular casing portion, and means locking one of the switch element moving members to the casing tubular portion.

1,462,685. DRAFT APPLIANCE FOR TRACTORS. HOWARD E. COUNTER, Leipsic, Ohio. Filed June 23, 1921. Serial No. 479,739. 3 Claims. (Cl. 280—33.44.)

1. A draft appliance for tractors including a member formed for securement to the crank case flange and having a rearwardly projecting tongue, a draw bar secured at one end to the tongue, a pair of cross members engaged with the respective upper and lower faces of the draw bar at the opposite end of the latter, a pair of bolts having their lower ends secured to the said cross members and having their sides engaged with opposite side edges of the last named end of the draw bar, said bolts having their upper ends extending above the upper cross member and formed to extend through the respective clevis receiving openings of the draw bar attaching tongue of the tractor, compression springs encircling said upper ends of the bolts and having their lower ends formed to bear against the tractor draw bar attaching tongue and adjusting nuts on the upper ends of the bolts engaging the upper ends of the springs.

1,462,686. SAW-SET TOOL. NATHANIEL COVELL, Tidioute, Pa. Filed Mar. 30, 1922. Serial No. 548,202. 2 Claims. (Cl. 76—62.)

1. In a saw set of the class described, a vertical bar constituting the main body of the saw set, a cross arm secured to said body and adjacent the upper end thereof, a pair of vertically adjustable gauge boards secured to the cross arm, a swinging hammer arm pivotally se-

casing extending upwardly from the base, a movable cap member slidably mounted on the casing, a reciprocating plunger carried by the cap member and having one end projecting within the casing, a ring carried by the inner end of the plunger, contact members con-

nected with the binding posts and normally engaging said ring whereby downward movement of the cap member will disengage the contacts from the ring and a resistance coil supported around the casing and embedded within an outer casing and having connection with the binding posts, as and for the purpose set forth.

1,462,691. LAMPBLACK BURNER. JOSEPH LOUIS DOSTAL, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Original application filed Sept. 27, 1922, Serial No. 590,913. Divided and this application filed Feb. 17, 1923. Serial No. 619,557. 2 Claims. (Cl. 134—60.)

1. In a burner for depositing lamp black on the surface of molds, a downwardly extending passage, a plurality of upwardly extending passages connected to said downwardly extending passage, a plurality of burners located in said upwardly extending passages.

1,462,692. HOLDER FOR LIGHTING FIXTURES. ROMULUS A. L'ECUYER, Chicago, and LE ROY S. MARKS, Oak Park, Ill. Filed Dec. 31, 1921. Serial No. 526,430. 1 Claim. (Cl. 240—130.)

A shade holder comprising a housing to receive the lip of a bowl to be held thereby; a plate with channels

therein rigidly and horizontally secured in the housing; a second plate with channels therein to register with the channels in the first mentioned plate rotatably secured above the first mentioned plate; depending clamping members loosely secured to the housing; their shafts projecting downwardly through the companion channels in the aforesaid plates; means to rotate the second mentioned plate, the channels in the two plates registering to move, simultaneously, the clamping members outwardly or inwardly according to the direction of the rotating of the second mentioned plate, substantially as shown and described.

1,462,693. GERMICIDE RECEPTACLE AND COVER. JOSEPH C. FISCHER, Milwaukee, Wis. Filed July 2, 1921. Serial No. 482,183. 3 Claims. (Cl. 220—87.)

1. A receptacle of the class described, comprising an inner and an outer casing of different diameters to provide a space therebetween adapted to receive a germicide, the upper end of the outer casing being extended beyond the upper end of the inner casing and then bent inwardly to close the upper end of said space, that portion of the outer casing extension enclosing the space being apertured to provide an outlet into the receptacle for fumes given off by the germicide.

1,462,694. DOOR HANGER. FRANCIS K. FASSETT, Dayton, Ohio. Original application filed June 22, 1914, Serial No. 846,450. Divided and this application filed June 5, 1922. Serial No. 565,971. 8 Claims. (Cl. 16—105.)

4. In a door hanger, a track, a pair of wheels to roll thereon, an axle protruding from each side of said wheels, a pair of links, one on each side of the wheels and having recesses in their upper edges in which the axles lie, the recesses being open at their tops so as to expose the tops of the axles, while connecting and keeping the wheels a fixed distance apart; a pair of rectilinear bars, one on each side of the wheels, their edges resting on the exposed parts of the axles in the same zone the links occupy, means connecting said riders, a pendent attached to each end of one rider and extending downward, its lower end being bent to form feet extending horizontally under the track; said feet being bifurcated to receive the body of a bolt, the pendants having holes near the bend which join the bifurcations, the holes being large enough to admit the head of a bolt, a pair of bolts to screw into the top of a door, their heads being adapted to pass through said holes and hook on the feet

with their bodies in the slots and heads resting on the feet, rectangular washers on said bolts, having flanges to embrace the feet and locate the washers, said washers having slots which permit the bolts to move a limited distance in the feet while preventing the bolts slipping out of the slots, and nuts on the bolts whereby the bolts are rigidly secured to the feet.

1,462,695. COMPRESSOR. CHARLES C. HANSON and JOHN TWARDOWSKY, Chicago, Ill., assignors, by mesne assignments, to Universe Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 13, 1921. Serial No. 469,110. 6 Claims. (Cl. 230—6.)

1. In a compressor, a cylinder, a cap closing one end thereof, and a cylinder head positioned within the cap with freedom for slight movement in all directions, the cap having a head-movement stopping portion in axial alinement with the cylinder and an outlet bore extending through the said stopping portion.

1,462,696. EXPANSION VALVE. CHARLES C. HANSON and JOHN TWARDOWSKY, Chicago, Ill., assignors, by mesne assignments, to Universe Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 21, 1921, Serial No. 471,433. Renewed Feb. 8, 1923. 18 Claims. (Cl. 251—139.)

5. A valve comprising a supporting member, a flexible tube secured intermediate of its ends to the supporting member, the ends of the tube being closed and the supporting member having a pair of ports opening into the bore of the tube, a stiff bar disposed in the tube longitudinal thereof and fastened at its ends to the ends of the tube, a closure element carried by the bar and disposed for closing one of the said ports, and means for moving the tube ends with respect to the supporting member so as to move the bar and the closure element with respect to the last named port.

1,462,697. TYPEWRITING MACHINE. FREDERICK A. HART, New Britain, Conn., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Dec. 13, 1921. Serial No. 522,009. 12 Claims. (Cl. 197—143.)

1. In a typewriting machine in which a paper carriage is included, a paper table having standards with locking devices mounted on and movable with relation to them, the standards being formed to fit on and engage with the frame of the paper carriage, and the locking devices being formed and arranged to engage with said frame and being movable by hand from engagement therewith.

1,462,698. PIPE COUPLING. RODGER F. HAUGHEY, McKeesport, Pa. Filed Sept. 25, 1922. Serial No. 590,239. 3 Claims. (Cl. 285—140.)

1. In a flange pipe coupling, the combination with a pair of pipes having flanges at their meeting ends, of a clamp formed of small segments alternately engaging the opposite outer faces of the flanges and arranged in staggered relationship with each other, the ends of each segment overlapping the adjacent ends of a pair of adjacent segments on the opposite side of the flanges, a rigid retaining ring arranged between the flanges, and clamping bolts extending through the retaining ring and the ends of the clamping segments.

1,462,699. MEANS FOR MEASURING OR MARKING OFF THE SIZES OF HALF SOLES OF BOOTS AND SHOES. DENIS HAYES, Limerick, Ireland. Filed Apr. 27, 1921. Serial No. 464,799. 6 Claims. (Cl. 33—5.)

1. Means of the kind described herein for measuring or marking off half soles of men's and women's boots and shoes to unfinished outlines, comprising a marking off plate 14 having at one end a pair of edges 15 and 16 arranged at a predetermined angle to each other and adapted for marking off on a range of material four outer sides 46, 47, 48 and 49 of a double pair of opposing half soles, forming the opposite end of said plate with a pair of edges 18 and 19 also arranged at a predetermined angle and adapted for marking off corresponding inner

and adjacent sides 50 and 51 of said double pair of opposing half soles, in a line at right angles to the edge 19 aforesaid, notches 20, 21, 22 and 23 formed in said plate and adapted for centering it on a centre line 24 on said range in marking off position, on a line bisecting the

apex of edges 18 and 19 a centering notch 25 in line with centering notches 26, 27, 28, 29 and 30 formed in said plate and adapted for centering it on centre line 24 in marking off position, on said edge 18 marked numbers corresponding to sizes of men's and women's half soles.

1,462,700. TIMER. ARTHUR W. HOLWAY, Los Angeles, Calif. Filed Mar. 20, 1919. Serial No. 283,782. 3 Claims. (Cl. 200—26.)

1. In a device of the character described, a shell split circumferentially into two parts, the opposing edges of the two parts of the shell having registering notches therein, a contact carrying ring within the shell, contacts set in said ring and having radially projecting studs which project outwardly through the ring and through the notches in the two parts of the shell, and means to clamp the two parts of the shell together and clamp their notches around said studs.

1,462,701. METHOD AND MEANS FOR TRUING CHASER BARS. CONRAD JOBST, Toledo, Ohio, assignor to Robert L. Ellery, Toledo, Ohio. Filed Jan. 10, 1921. Serial No. 436,080. 6 Claims. (Cl. 76—101.)

1. The method of truing a thread cutting chaser bar, which consists in placing the threaded end of a chaser

in true interfitting engagement with the thread of a gauge part, then securing the bar in rigid relation to the

gauge part, and then acting on an exposed part of the chaser bar to true the same.

1,462,702. BRACE. EWALD E. JOHNSON, St. Charles, Ill. Filed May 8, 1922. Serial No. 559,234. 2 Claims. (Cl. 145—70.)

1. A brace comprising a chuck member having a counterbored rear end, a U-shaped crank carried by said chuck and operable therewith and having a counterbored outer end, a removable hand grip having latch dogs pivotally carried thereby and adapted, respectively, to engage said respective counterbores, and means for movably securing said crank to said chuck whereby said crank may be adjusted to a position at right angles to its normal position and thereby provide a lever at substantially a right angle to the axis of the chuck.

1,462,703. ELECTRIC WATER HEATER. WALTER S. JONES, Orwood, Calif. Filed Sept. 13, 1921. Serial No. 500,389. 3 Claims. (Cl. 219—39.)

1. An electric water heater comprising a casing adapted to be filled with water and connected at one end to a source of water supply and provided with an outlet at the other end, said casing being divided into

a plurality of compartments between the intake and outlet of the casing, electric heating elements in the casing projecting into the compartments, and means for retarding the passage of the water into and out of the compartments from the intake to the outlet of the casing.

- 1,462,704. FLYING-MACHINE SUPPORTING SURFACE. HUGO JUNKERS, Aachen-Frankenburg, Germany. Filed June 26, 1920. Serial No. 392,141. 11 Claims. (Cl. 244—31.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a flying machine surface in combination, a plurality of longitudinal girders and a sheet-metal covering surrounding the said girder structure and connected therewith in a plurality of places, said sheet metal covering being provided with narrow corrugations substantially uniformly extending in the direction of flight over the entire length of said covering.

- 1,462,705. GAS GENERATOR. JOSEPH M. KIRBY and BERT E. HARTSON, Boulder, Colo. Filed Mar. 3, 1921. Serial No. 449,494. 3 Claims. (Cl. 23—3.)

1. A portable inflating device comprising a container adapted to be inverted having at one end a liquid-receiving chamber and a solid-receiving chamber, the other end being adapted to receive liquid and solid as it falls from said chambers when inverted, and a hose leading from the container to conduct gas generated therein.

- 1,462,706. IGNITION WIRING AND CONDUCTOR FOR INTERNAL-COMBUSTION ENGINES. DONALD H. LADD, Torrance, Calif. Filed Apr. 21, 1921. Serial No. 463,285. 4 Claims. (Cl. 123—146.5.)

1. An ignition wiring and conductor attachment for timers embodying an oscillatory shell, and a series of

binding posts on said shell, and a series of conductors attached to said binding posts and formed to provide a stiff bracket projecting from the end of the shell, and

flexible conductors connecting with said bracket conductors substantially in alignment with the axis of rotation of said shell.

- 1,462,707. SAWHORSE. JAMES M. LAWLOR, Topeka, Kans. Filed June 12, 1922. Serial No. 567,766. 5 Claims. (Cl. 304—5.)

1. A saw horse comprising an elongated, horizontal top member having vertical slots therein inclined toward the longitudinal center of the top member, legs at the respective ends of the top member having tenons received in said slots, and a turnbuckle between each pair of legs, the turnbuckle comprising inwardly extending bolts projecting through complementary legs and provided with aligning threaded ends, the headed portions of the bolts passing through lateral holes in the legs at angles to the axes of the threaded portions and a threaded sleeve for each pair of bolts adapted to be turned to draw the threaded ends of the bolts together to force the tenons into the inclined slots in the ends of the top member.

- 1,462,708. MOVABLE POWER UNIT. MAHLON E. LAYNE, Houston, Tex. Filed Sept. 5, 1922. Serial No. 586,348. 8 Claims. (Cl. 103—87.)

1. A power unit adapted to be secured in a position of operative connection with a driven mechanism, and means for elevating said power unit and translating it laterally away from said mechanism, said means including laterally extended tracks, truck members upon said track, and elevating means operative in one instance to elevate the power unit from position of use and support it upon the trucks for lateral translation, and in another instance to lower the power unit to position of use free from support by said trucks.

1,462,709. METHOD OF PRODUCING REEDLIKE ARTICLES. MARSHALL B. LLOYD, Menominee, Mich., assignor, by mesne assignments, to Levi H. Greenwood and George A. Keyworth, both of Gardner, Mass., and William E. Holman, Leominster, Mass., trustees. Filed Aug. 20, 1920. Serial No. 404,794. 1 Claim. (Cl. 147—48.)

The herein described method of producing reed-like articles that consists in securing a metal binder strip to the edge of a stake and strand reed-like fabric in an enclosing relation thereto, folding the edge portion of the fabric containing the metal binder strip back upon itself to dispose the binder strip wholly upon one side of the fabric, forming thereby an edge and a contiguous portion on one side that discloses only the strands of which the fabric is composed, and in securing the fabric to the frame by separating the outer filler strands, driving the fastening devices through the metallic binder strip and restoring the filler strands to initial position to cover the said fastening devices.

1,462,710. METHOD OF PRODUCING REED ARTICLES. MARSHALL B. LLOYD, Menominee, Mich., assignor, by mesne assignments, to Levi H. Greenwood and George A. Keyworth, both of Gardner, Mass., and William E. Holman, Leominster, Mass., trustees. Filed Aug. 20, 1920. Serial No. 404,795. 4 Claims. (Cl. 147—48.)

1. The method of producing reed articles that consists in providing a frame, in providing an independently woven piece of reed fabric having along one side thereof a portion that is composed only of filler strands and the ends of which are secured by a binder strip, and in securing the fabric to the frame so that the filler strand portion is positioned over the frame member with the binder strip upon the rear side of said frame member.

1,462,711. ENTRANCE FOR HIVES. MICHAEL V. LOVETT, Castanea, Pa. Filed Mar. 18, 1922. Serial No. 544,792. 4 Claims. (Cl. 6—4.)

1. In a device of the class described, a reticulated wall, a thimble member of substantially frusto-conical shape anchored in said wall with its larger end disposed therethrough, and a foraminous open ended cone member secured to said thimble at the inner or smaller end thereof and projecting rearwardly from said thimble member.

3. The combination with the reticulated outer wall of a bee hive separating the interior from the exterior thereof; of cone members open at both ends arranged in said wall with their larger ends disposed upon the exterior of the wall and the smaller inner ends of the cones disposed interior of said wall.

1,462,712. CLAMPING BOLT FOR TIRE MOLDS. EDWARD LUX, San Diego, Calif. Filed Aug. 9, 1921. Serial No. 490,902. 1 Claim. (Cl. 85—7.)

A device of the class described, including a bolt with a large abruptly extending head on each end, the head on one end provided with a tapered slot therein and a conforming wedge reciprocally mounted in said slot.

1,462,713. CENTER DRIVE FOR GASOLINE-PROPELLED CARS. CALVIN R. MANBERT, Oakland, Calif., assignor to California Car Company, Oakland, Calif., a Corporation of California. Filed Oct. 24, 1921. Serial No. 509,955. 3 Claims. (Cl. 105—104.)

1. A driving mechanism for car trucks including a vertical shaft, a shaft journaled on the truck, a ball and socket joint joining the truck and the car body, the vertical shaft extending through said ball and socket joint, intermeshing gears on said vertical shaft and said shaft, sprockets on said shaft, sprockets on the axles of the truck, a chain extending over each sprocket on said shaft and a sprocket on one of said axles, and means for driving said vertical shaft.

1,462,714. PENCIL-HOLDING CLIP. THOMAS E. MARCHAND, Sacramento, Calif. Filed Aug. 5, 1922. Serial No. 579,880. 2 Claims. (Cl. 24—81.)

1. A pencil holding device comprising a spring band adapted to frictionally fit onto a finger of a hand, and a spring clip extending outwardly of the band and whose axis is substantially parallel to that of said band; said clip having a side opening through which the pencil is inserted.

1,462,715. MUSIC-LEAF TURNER. FRANK MASH, Detroit, Mich. Filed Mar. 15, 1920. Serial No. 365,696. 6 Claims. (Cl. 84—486.)

1. In a music leaf turning device, the combination with a ledge, of an arbor carried thereby, a plurality of

spring actuated turning arms carried by said arbor and adapted to be actuated by the springs thereof in one direction, means movably supported from said arbor adapted to cushion movement of said arms, and a re-

storing mechanism for said arms set by said movable cushioning means and adapted to individually or collectively restore said arms to the original position after having been actuated by the springs thereof.

1,462,716. BEARING. JOSEPH MASIN, New York, N. Y. Filed Dec. 2, 1922. Serial No. 604,472. 6 Claims. (Cl. 64—49.)

1. A bearing comprising a bearing member, an adjusting screw movable in said member, a constricted slotted head on said screw, and a cap lock nut having an opening in the end wall thereof to receive said head, screwed to the outside of said member and adapted to engage said adjusting screw at the juncture of said head and said screw by abutting thereagainst when said nut is tightened on said member.

1,462,717. SLICER. LORENZO F. MAUS, Chicago, Ill. Filed July 24, 1922. Serial No. 577,167. 7 Claims. (Cl. 107—20.)

1. In a structure of the class described, the combination of a rectangular holder open at top and bottom, the

side and end walls of said holder having opposed vertical knife guiding slots therein, the slots adjacent one side and end being spaced from such side and end a greater distance than the space between the remaining slots permitting the lateral movement of the material as it is sliced, a positioning block adapted to be mounted upon a table or support to receive said holder, and a bottom loosely fitting within said holder and adapted to rest upon said positioning block in which position it projects above the lower ends of the slots and constitutes a slicing block, said bottom being also adapted as an ejector for the sliced material.

1,462,718. MULTIPLE-METER-TESTER APPARATUS. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Jan. 28, 1920. Serial No. 354,597. 8 Claims. (Cl. 73—51.)

1. In a fluid meter tester, the combination of a table, fluid supply and discharge heads supported by the table, a base supported on one side of the table, with one edge overhanging the top of the table, and adapted to support a plurality of meters, means on the base for establishing communication between the meters supported thereon, and conduits for connecting the end meters of the series on the base with the supply and discharge heads respectively.

1,462,719. MEASURED-SERVICE-TELEPHONE SYSTEM. WILLIAM WALTER OWEN, Oak Park, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1919, Serial No. 304,245. Renewed Mar. 24, 1923. 18 Claims. (Cl. 179—63.)

1. In a telephone system, a line, an automatic progressively movable trunking switch individual to said line, wipers for said switch, said line normally disconnected from said wipers, a relay for connecting said line with the wipers when energized, a coin collector for the line having means for either collecting or refunding a coin, and means responsive to the deenergization of said relay for operating the coin collector to either collect or refund a coin.

1,462,720. WASTE-BURNING FURNACE. CLAUDE REES, San Francisco, Calif. Filed Oct. 12, 1921. Serial No. 507,347. 2 Claims. (Cl. 110—18.)

2. A waste burning furnace, comprising a tower-like wall defining a combustion chamber having an imperforate bottom wall upon which the material to be burned accumulates, said wall being provided adjacent said bottom with a plurality of downwardly inclined air inlet passages and being otherwise substantially imperforate.

1,462,721. PUMP-PLUNGER ROTOR. SUMNER B. SARGENT, Los Angeles, Calif. Filed Apr. 14, 1922. Serial No. 552,730. 12 Claims. (Cl. 255—14.)

1. In a device of the class described, the combination of: a polished rod; a walking beam; a stirrup connecting said walking beam with said polished rod; a ratchet wheel frictionally mounted on said polished rod; pawl means to actuate said ratchet wheel and thereby rotate said polished rod; and means whereby said ratchet wheel may move downward independently of said polished rod.

1,462,722. BRAKE. RICHARD SCHMITZ, Chicago, Ill., assignor to Ferdinand P. Armbruster and Richard Schmitz, trustees, Chicago, Ill. Filed June 8, 1920. Serial No. 387,358. 3 Claims. (Cl. 188—78.)

1. A brake comprising the combination with a brake drum, of an apertured plate, the apertures being located to clear the standard fastenings, means to hold said plate against rotation, a plurality of pivot pins fixedly mounted in said plate, a plurality of brake shoes pivoted on said pins, having arcuate slots therein and friction engaging surfaces to engage the inner surface of the brake drum, a rotatable spider in spaced relation to the axle, pins carried by said spider, a plurality of rollers on said pins which engage the slots in the brake shoes, a link one end of which is pivotally secured to said spider, a lever to which the other end is secured, a bearing in which said lever oscillates, a brake rod, an arm secured thereto, the other end of which is provided with a laterally extending portion

which is fitted to and engages with an elongated slot in the said oscillating lever whereby when the brake rod is

moved, the spider is rotated and the rollers cause the brake shoes to engage the brake drum.

1,462,723. BRAKE FOR AUTOMOBILES. RICHARD SCHMITZ, Chicago, Ill., assignor to Ferdinand P. Armbruster and Richard Schmitz, trustees, Chicago, Ill. Filed June 16, 1920. Serial No. 389,300. 10 Claims. (Cl. 188—79.)

1. The combination with a brake drum of a fixed supporting plate, a plurality of brake shoes pivotally mounted on said plate, a right hand and a left hand spider, rotatable means carried thereby which actuate the brake shoes, means to cause said rotatable means to actuate a portion of said shoes and means to actuate the remainder of said shoes.

1,462,724. GAME BOARD. HARRY R. SEAVEY, Portland, Me., assignor to The C. T. Burrowes Company, Portland, Me. Filed Apr. 27, 1920, Serial No. 376,912. Renewed Apr. 9, 1923. 13 Claims. (Cl. 46—13.)

1. In a game board, a bed, a girder secured to the under surface of the bed, and means passing through the girder and engaging the ends thereof for flexing the same.

1,462,725. CARBURETER CONTROL. JOHN W. SWAN, Stamford, Conn. Filed Aug. 26, 1919. Serial No. 319,878. 7 Claims. (Cl. 74—39.)

1. A control device comprising a base, a lever pivotally connected to the base, an adjustable sleeve extending through the lever and having a transversely extending opening therein, a valve operating member having one end extending through the transversely extending opening of the sleeve, and means for adjusting the sleeve to tightly grip the valve operating member against the lever.

1,462,726. GLARE SHIELD FOR AUTOMOBILES. HENRY W. VOSS and CHARLES A. BALZER, Cincinnati, Ohio, assignors to The Monarch Carriage Goods Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 22, 1920. Serial No. 425,676. 3 Claims. (Cl. 296—95.)

1. In a device of the character described, a shield member, an arm secured to said shield member, a plate secured to the car body, said plate being formed with two sets of hinge knuckles to one of which sets the arm is hinged, and another arm hinged to the other set of knuckles, and adjustable means for securing said other arm to the shield member in desired adjusted positions thereof on said hinge.

1,462,727. FASTENER FOR AUTOMOBILE HOODS. HARRY S. WILLIAMS, Detroit, Mich. Filed Feb. 14, 1921. Serial No. 444,822. 5 Claims. (Cl. 292—60.)

1. The combination of a movable member of an automobile hood, with an anchorage adapted to be secured within the hood and provided with a pair of cooperating yieldable jaws, a fitting adapted to be secured over an opening through the movable member, a latch member longitudinally reciprocable in the fitting through the opening obliquely to the hood for detachably inter-locking with

the jaws of the anchorage and a spring member in compression between the latch member and the fitting for yieldingly forcing the fitting and member in the general direction of the latch toward the anchorage.

1,462,728. SPARK ARRESTER. CHARLES D. WRIGHT, San Francisco, Calif., assignor of one-half to Carl G. Trefz, San Francisco, Calif. Filed Feb. 18, 1922. Serial No. 537,562. 2 Claims. (Cl. 183—66.)

1. A spark arrester embodying in its construction a flue section thru which products of combustion from a furnace and the like are adapted to pass, an upright flue section having communication at a point intermediate of its ends with one end of said first named section being open at its upper end and closed at its lower end, a baffle member extending downwardly and forwardly from the upper side of the first named flue section to a point where said section is connected with the upright section, and a screen extending from said baffle member so as to lie in the path of the products of combustion rising in said upright section.

1,462,729. METHOD OF AND APPARATUS FOR MAKING PHONOGRAPH RECORDS. GIACOMO ALLEGRETTI, Stockton, Calif. Filed Jan. 22, 1921, Serial No. 439,188. Renewed Dec. 28, 1922. 3 Claims. (Cl. 274—32.)

1. An apparatus for the purpose described including a diaphragm adapted to be acted on by the sound-waves produced, a capillary tube containing an etching fluid positioned under the diaphragm, said tube being placed immediately adjacent the record-blank to be etched, and means connected to the diaphragm and acting on the liquid for causing the liquid to be projected from the tube in minute drops bearing a distinct relation to the magnitude and length of the sound-waves causing the diaphragm to vibrate.

1,462,730. MACHINE AND PROCESS FOR REMILLING FINISHED FLOUR TO BLEACH SAME AND OPEN STARCH CELLS. WILLIAM G. ANDREWS, Chicago, Ill. Filed Nov. 19, 1920. Serial No. 425,070. 8 Claims. (Cl. 83—14.)

1. A machine for remilling finished flour comprising two relatively movable members arranged adjacent to each other and made of stones each of uniform hardness throughout but differing from the other in degree of hardness, one of said stones having large pores and the other having small pores, and both of said stones being smooth and being capable of taking a polish at the points of contact with each other.

1,462,731. SHOCK ABSORBER. GIUSEPPE ANTONELLI, Turin, Italy. Filed Apr. 27, 1921. Serial No. 464,828. 1 Claim. (Cl. 267—20.)

A device for resiliently connecting the axle with the frame of a vehicle, comprising an arm having one end pivotally connected to the axle, a rod pivotally connected to the frame and to an intermediate point of said arm, said arm having a slot at its free end; a buffer comprising a rigid member pivotally connected at one end with the frame, a member slidable in said rigid member and engaging the slot of said arm and resilient means between said two members, and a bar connecting the free end of the rigid member of said buffer with the axle of the vehicle.

1,462,732. PRODUCTION OF PHOSPHORUS OXYCHLORIDE. ROLAND L. ANDREAU, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 26, 1920. Serial No. 419,753. 3 Claims. (Cl. 23—10.)

1. The process of making phosphorus oxychloride which comprises bringing phosphene into contact, at a temperature between about 300 and 500° C., with a phosphate of a metal capable of forming a chloride which is fusible at the temperature of the reaction.

1,462,733. COMPOUND PROGRESSIVE PUNCH AND DIES. GEORGE BECHERER, Jr., St. Louis, Mo., assignor to Empire Stamping Tool & Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed June 20, 1921. Serial No. 478,812. 8 Claims. (Cl. 153—2.)

1. A compound punch and die, comprising a punch member having a plurality of punches secured thereto,

some of said punches acting as combined punches and formers, some as punches only, some as formers only, and some having dies formed therein, a die with which

said punches coact, said last mentioned die being equipped with punches to coact with the dies formed in the punches, and means for securing the punch and die to a punch press.

1,462,734. WASHING MACHINE. GEORGE S. BLAKESLEE, Chicago, Ill. Filed July 23, 1917. Serial No. 182,251. 11 Claims. (Cl. 141—9.)

6. A washing machine comprising a tank, a hood extending thereover, means for supporting the articles to be washed over said tank, means in said tank for throwing water upward into contact with the articles to be washed, an overhead deflector in said hood overlying said water throwing means and the articles to be washed, and a depending curtain adjacent to one end of said deflector.

1,462,735. WASHING MACHINE. GEORGE S. BLAKESLEE, Oak Park, Ill. Filed Nov. 10, 1919. Serial No. 337,001. 6 Claims. (Cl. 141—9.)

1. A washing machine comprising a housing open at one end and closed at the other, a track extending into said housing toward the closed end thereof, a tank under the inner end portion of said track, means located beneath said track and rotating about an axis disposed longitudinally thereof for throwing water from said tank upward, and a carriage for the articles to be washed movable back and forth on said track.

1,462,736. LUBRICATING JOURNAL BOX FOR CAR AXLES. HARRY V. BODDY, Marceline, Mo. Filed Feb. 16, 1921. Serial No. 445,426. 4 Claims. (Cl. 64—35.)

3. In a lubricating journal box, an axle journal, a journal box therefor having means at one end for the reception and support of an axle, a bearing plate in the boxing for engagement with said journal, a retaining plate between the upper wall of the boxing and the bearing plate, a lubricant wool waste feed for the journal including a plate, tensioned bolts operatively mounted on the upper wall of the boxing and operatively connected to the plate carrying the wool waste feed, said bolts engaging the sides of the bearing plate, acting to hold the bearing plate in place, and abutments carried by the retaining plate and operatively engaging with the bolts, not only to hold the retaining plate in position with relation to the bearing plate, but at the same time acting to hold the bearing plate in position.

1,462,737. COMBINED SHOCK ABSORBER AND REBOUND CHECK FOR MOTOR-PROPELLED VEHICLES. GEORGE G. F. BOSWELL, Indianapolis, Ind. Filed Aug. 11, 1921. Serial No. 491,501. 12 Claims. (Cl. 267—29.)

1. In a combined shock absorber and rebound check for vehicles the combination with a body spring and means for pivotally suspending the body of the vehicle from said body spring, of yielding means on opposite faces of the body spring for absorbing shock and rebound and a clip slidable over the end of said body spring forming an anchor for said yielding means.

1,462,738. REBOUND-CHECK SHOCK ABSORBER. GEORGE G. F. BOSWELL, Indianapolis, Ind. Filed Apr. 17, 1922. Serial No. 553,662. 6 Claims. (Cl. 267—17.)

1. In a rebound check shock absorber, a combined compressing arm and shackle, means for pivotally connecting said arm and shackle to a perch hanger and body

spring of an automobile, a base member, means for pivotally securing the base member to parts of the compress-

ing arm, a shock absorber spring between said compressing arm and base, and a rebound spring carried by parts of said base and positioned below the body spring.

1,462,739. ANIMAL TRAP. CHARLES A. CHAMPLIN, Hope, Ark., assignor of thirty-five per cent to Richard E. Rutledge, Hope, Ark. Filed Mar. 20, 1922. Serial No. 545,166. 2 Claims. (Cl. 43—81.)

2. An animal trap including a base, a trigger fulcrum upon the base, a spring actuated jaw pivotally secured to the base and normally urged toward the base, an arm extending from the jaw and disposed at an angle thereto, a latch member having one terminal pivotally secured to the trigger and mounted for longitudinal sliding movement upon the base, and means carried at that end of the latch member which is remote from the trigger for operably engaging the arm and moving the latch member into position to engage and hold the arm against the tension of spring which urges the jaw towards the base.

1,462,740. CHANGE-SPEED GEAR MECHANISM. JEAN COTAL, Puteaux, France. Filed June 28, 1920. Serial No. 392,459. 2 Claims. (Cl. 74—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A change speed gear comprising a drive shaft, a driven shaft, a frame having bearings for said shafts, two pairs of sun gears of different diameters loose on said drive shaft and revoluble independently of one another, an element fast to the drive shaft and having bearings, intermediate shafts mounted in said bearings of said element and having pairs of planet gears of different diameters at their ends and which respectively engage the sun gears, armatures, one of which is secured to each of the sun gears for rotation therewith, fixed electro-magnets for coaction respectively with the

armatures of the sun gears of one pair, electro-magnets arranged for rotation with the driven shaft for coaction respectively with the sun gears of the other pair, means

to lock one of said armatures to one of said revolvably mounted electro-magnets, and mechanically actuated braking means for one of the armatures which coacts with the fixed electro-magnets.

1,462,741. SAFETY BRAKE FOR CARS, ETC. SHELTON A. CROW, Glomawr, Ky. Filed Oct. 10, 1922. Serial No. 593,602. 3 Claims. (Cl. 187-13.)

3. In a car brake, a car, a draft cable attached to said car, at its forward end, a brake lever, a fixed centrally disposed brake plate on said car, a pair of spaced longitudinal, vertical flanges secured to said plate, said brake lever being pivoted to, and between said vertical flanges at their upper forward ends, a pivoted brake shoe pivotally mounted on a rearward extension of said brake lever adjacent its pivot, a fixed brake cable passing longitudinally thru said car and disposed between said fixed brake plate and said brake shoe, a rope connected at one end with the upper end of said brake lever and fixed at its other end to said draft cable in advance of said car and adapted to maintain said lever in elevated position to lift said brake shoe, and a tension spring connected respectively at its ends with the upper end of said lever and with a fixed part of the rear of said car, and adapted to urge said lever rearwardly upon a slack in the draft cable, and whereby said brake shoe is permitted to grip said fixed brake cable to said fixed brake plate on said car.

1,462,742. POSITIONING MEANS FOR PISTONS. LEWIS R. DAVIS and ROBERT M. HUGHES, San Francisco, Calif. Filed Oct. 10, 1921. Serial No. 506,795. 5 Claims. (Cl. 77-62.)

1. A drill jig for holding pistons having an internal stud, comprising means for axially supporting the tube

and means engaging the stud for adjusting its position relative to the axis of the tube, said means comprising a fork having two inclined inner surfaces adapted to en-

gage the stud and sliding means for intensifying the engagement whereby the stud is forced into a central position relative to the fork.

1,462,743. YOKE FOR CATTLE. PERRY C. GALLAWAY, De Queen, Ark. Filed Aug. 10, 1922. Serial No. 580,942. 5 Claims. (Cl. 119-139.)

1. A restraining yoke comprising pivoted elements, one having a gripping portion for extending above the nose and the second having a gripping portion for extending beneath the lower jaw of an animal, and means for moving said gripping portions towards each other into position for biting engagement with the nose and lower jaw of the animal.

1,462,744. ATTACHMENT FOR MOTOR VEHICLES. JAMES F. GARVEY, Lincoln, Nebr. Filed June 13, 1922. Serial No. 568,067. 3 Claims. (Cl. 224-29.)

1. In a luggage carrier for motor vehicles, a clamp adapted to be secured to the running board of the vehicle, a standard extending upwardly from said clamp, said standard being provided with a squared portion, a pair of arms having squared openings adapted to be arranged on said standard at right angles to each other, and means for retaining said arms on said standard.

1,462,745. ADVERTISING DEVICE. WILLIAM STEPHEN COX GLOVER, London, England. Filed June 10, 1922. Serial No. 567,390. 5 Claims. (Cl. 40-33.)

1. In an advertising device of the type referred to the combination with the picture groups and the central

pillar about which they rotate of a frame carrying the picture groups rotating about said pillar, a continuously rotating shaft carried by the frame, a pinion on said shaft, a driving pinion for each picture group engaged

in turn by the pinion on the rotating shaft, a crank on the continuously rotating shaft, links connected to said crank, a pawl actuated by said links and a plate affixed to the frame and engaged by the pawl to rotate the frame intermittently.

1,462,746. REENFORCING STRUCTURE FOR DERRICKS. CLYDE J. GOUGLER, Tulsa, Okla. Filed Nov. 11, 1920. Serial No. 423,380. 11 Claims. (Cl. 189—13.)

1. In a reenforcing structure for derricks, the combination with a derrick structure, of auxiliary reenforcing legs, base plates for supporting said derrick structure and auxiliary reenforcing legs, and means detachably connecting said auxiliary reenforcing legs to the derrick structure.

1,462,747. CEMENT. HARRY GARRISON HALL, Cottonwood, Ariz. Filed Oct. 24, 1921, Serial No. 510,087. Renewed May 22, 1923. 2 Claims. (Cl. 106—8.)

1. A sealing material for radiators consisting of Portland cement, glue, rosin, lampblack, and sufficient water to form a plastic.

1,462,748. METHOD OF PREVENTING EMULSIFICATION OF OIL DISCHARGING FROM OIL WELLS. RICHARD GIRARD JONES, Los Angeles, Calif., assignor to Brown Process Company, Los Angeles, Calif., a Corporation of California. Filed July 6, 1920. Serial No. 394,067. 9 Claims. (Cl. 196—25.)

3. The method of preventing emulsification of oil discharging from an oil well, which includes introducing the mixture of oil, water and gas at the well discharge pressure into a column of oil and water under less pressure and under greater pressure than atmospheric below the surface thereof, discharging the gas from the space above the column as it rises, discharging oil and water at different levels from the first column into other liquid columns respectively under the less pressure, and finally discharging the liquids from said other columns.

1,462,749. COLLAPSIBLE SPOUT FOR CANS. ROBERT KEITH HALL, Denver, Colo. Filed Jan. 23, 1923. Serial No. 614,402. 1 Claim. (Cl. 221—11.)

A can having a flat end wall, a spout of thin flexible material consisting of a triangular shaped base member secured to said flat wall, said base member being bounded on two sides by a continuous upstanding wall, said side walls being capable of being folded flat upon said base member.

1,462,750. FUEL-MIXING DEVICE. GEORGE M. HART, Des Moines, Iowa. Filed Jan. 9, 1922. Serial No. 527,936. 1 Claim. (Cl. 48—180.)

A fuel mixing device comprising a plate adapted to be interposed between a carburetor and the intake manifold of an engine, said plate having a pair of openings

therein for attaching it in position and having an enlarged opening adapted to register with the openings in the carburetor and the intake manifold, an inwardly inclined flange formed on the edge of said last opening, said flange being designed to project into said intake manifold, a cone shaped screen secured to said plate and adapted to extend over said last opening, a second screen on said plate on the opposite side of said cone shaped screen, said screen being of different meshes, a web extended across said last opening, a fan blade rotatably mounted on said web and received between said screens, and revoluble by the suction for intake manifold, whereby full mixture will be drawn through the fan blade causing it to revolve and be broken up as stated.

1,462,751. POULTRY FEED BOX. FREDERICK T. HUNTINGTON, North Bennington, Vt. Filed Dec. 4, 1919. Serial No. 342,425. 3 Claims. (Cl. 119—61.)

1. A poultry feed box, comprising a box body open at its top, a fixed guard above the box body comprising fixed reversely inclined upper and lower walls, the lower wall inclining upwardly and forwardly and the upper wall inclining rearwardly and upwardly, and a cover hinged to the guard at or near the juncture of its walls and adapted when open to fold and rest upon the upper guard wall and when closed to lie approximately in the plane thereof.

1,462,752. CARBON CATALYST. CHARLES B. JACOBS, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 22, 1919. Serial No. 312,610. 7 Claims. (Cl. 23—28.)

5. A catalyst consisting essentially of finely subdivided carbon capable of becoming ignited in a current of air at a temperature substantially below 370° C.

1,462,753. DESENSITIZED EXPLOSIVE. WILLIAM HILLES WARD, Swarthmore, Pa., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 31, 1918. Serial No. 247,598. 5 Claims. (Cl. 52—11.)

1. A desensitized explosive composition containing a nitrated carbohydrate, an inorganic nitrate, water, and an oil.

1,462,754. WHEEL. HENRY JEWETT ADAMS, Denver, Colo. Filed Apr. 27, 1921. Serial No. 464,810. 1 Claim. (Cl. 301—64.)

In a wheel construction, the combination of a sectional hub and a rim associated therewith, a body portion including a plurality of sections, each of said sec-

tions comprising a metallic plate, each of said plates having inwardly extended flanges formed along the side edges thereof, said flanges being disconnected from the plate throughout portions of their lengths, the ends of said flanges being bent inwardly to provide supporting surfaces, the outer ends of said plates adapted to be secured to the rim, the inwardly extended outer ends of the flanges adapted to engage the rim, the inwardly extended flanges of the inner ends of the plates adapted to rest on the hub, portions of the inner ends of the plates extending between sections of the hub, and means for securing the plates together.

1,462,755. COMBINATION ANIMAL CRATE. ABRAHAM L. ALLRED, Corydon, Iowa. Filed Apr. 18, 1922. Serial No. 554,917. 2 Claims. (Cl. 119—99.)

1. An animal-catching crate, comprising an enclosure, a pair of doors hinged at their outer margins at one end of the enclosure, a lever arranged for oscillation, an operating bar slidably mounted and having pivotal connections with said lever, flexible connections between said operating bar and the free marginal portions of said doors, a ratchet adapted to be engaged by said lever to permit closing movement of said doors but preventing opening movement thereof, and a cross-head fixed to the forward end of said operating bar and adapted to engage the outer faces of said doors.

1,462,756. GAS BURNER. HENRY GINGER, Hertfordshire, England. Filed Dec. 11, 1922. Serial No. 606,285. 1 Claim. (Cl. 158—9.)

A detachable nozzle for inverted gas burners fitted internally with a three wing partition extending longitudinally from the outlet end up to the usual screw threaded portion to provide three separate jets of gas and air mixture which do not reunite at the nozzle outlet, the ends of said partition being beveled, as described.

1,462,757. IRONING MACHINE. LEON GSCHWIND, Youngstown, Ohio. Filed Mar. 18, 1921. Serial No. 453,256. 3 Claims. (Cl. 68—9.)

2. In an ironing machine, the combination of a roller, driving means for the same, a clutch in the driving means, a pressing head at one side of the roller, a feed table at the other side of the roller, means operated by

the feed table to open the clutch and raise the pressing head from the roller, and a treadle adapted to restore the pressing head and raise the feed table to cause the latter to permit the clutch to close.

1,462,758. ICE TONGS. DOUGLAS HENDERSON, Dallas, Tex. Filed Dec. 6, 1921. Serial No. 520,331. 1 Claim. (Cl. 294—106.)

Tongs including opposed arms pivotally connected intermediate their ends, a bar supported by each arm at a point adjacent to the pivot thereof, said bars having flanges engaging the side edges of the arms to distribute the strain directed to the arms throughout the lengths thereof, each of said arms having a head, the heads being disposed towards each other, link members having connection with the heads, a handle having pivotal connection with the link members, and jaws secured to the opposite ends of the arms.

1,462,759. GATE HINGE. CHARLES W. HINKLE, Rushville, Ind. Filed May 24, 1922. Serial No. 563,362. 1 Claim. (Cl. 16—130.)

In a device of the class described, a main bar provided with suspension means; an auxiliary bar disposed approximately parallel to the main bar and supplied with an angularly disposed arm having an opening wherein the main bar is received slidably, one of the bars being provided with a plurality of openings spaced longitudinally of the said bar; and a bolt mounted in the other bar and adapted to be received in any of the last specified openings.

1,462,760. CUSHION TIRE. FREDERICK A. KRUSE-MARK, Roanoke, Va., assignor to K. F. & C. Tire & Rubber Corporation, Roanoke, Va., a Corporation of Virginia. Filed Dec. 13, 1920, Serial No. 430,438. Renewed Dec. 22, 1922. 8 Claims. (Cl. 152—1.)

8. In a cushion tire, a rim and a tire mass affixed thereto and having an outer series of transverse air-passages as well as an inner series of transverse air-passages.

sages, the passages of the outer series being staggered with reference to the passages of the inner series, an outer series of transverse cord-fabric loops embedded in the tire, and an inner series of transverse fabric loops, the outer series of loops alternating with the passages of the outer series and the inner series of loops alternating with the inner series of passages.

1,462,761. LOCKED ANCHORAGE FOR WINDOW-CLEANERS' HARNESS. BENJAMIN KUGLER, Chicago, Ill. Filed Feb. 19, 1923. Serial No. 619,978. 3 Claims. (Cl. 20—72.)

1. An anchorage for window cleaners' harness comprising a head and a shank, a plurality of swingable members carried by the shank, and means formed on the shank for variably limiting the relative swingability of said members for the purpose set forth.

1,462,762. WINDOW FASTENER. ANTHONY F. LAGERSTROM, Chicago, Ill. Filed Oct. 6, 1921. Serial No. 505,859. 2 Claims. (Cl. 292—194.)

1. The combination with a pair of window sashes arranged to slide relative to one another, of a stationary shaft carried by one of said sashes, a cam roller rotatably mounted on said shaft, said cam roller being adapted, at will, to closely engage one of said sashes when either of said sashes are moved toward one another, and means for locking said cam roller in an inoperative position, said means comprising a spring member supported by said plate and adapted to yieldably grip said roller when said roller is turned back out of engagement with the sash, whereby said sashes may be moved relative to one another.

1,462,763. STEAM BOILER. WAICHI NAKAGAWA, Kitaku, Japan. Filed Nov. 29, 1918. Serial No. 264,775. 2 Claims. (Cl. 122—80.)

1. A steam boiler comprising two lower cylindrical elements having each a furnace, an upper cylindrical element having a nest of fire tubes, a smoke box at the front end of the said elements interconnecting the space between the three elements with the fire tube nest, a combustion chamber at the rear end of the said elements,

a partition wall in the combustion chamber dividing it into an upper and a lower compartment in such a way that the lower compartment is in communication with

the said space and the upper compartment with the rear end of the fire tube nest, drums in the two compartments interconnected in series and fluid connections between the end drums and the said elements respectively.

1,462,764. SAWING MACHINERY. AUGUST R. NYQUIST and CARL AUGUST BRANDT, Roseau, Minn. Filed Apr. 8, 1920. Serial No. 372,203. 7 Claims. (Cl. 143—43.)

1. A sawing machine comprising a frame, a saw shaft and saw thereon, a drive shaft, a drive shaft casing, means for rotatably mounting the casing on the frame to permit movement thereof in a plane parallel with the saw shaft, means for mounting the shaft casing whereby it will pivot on an axis at right angles to the axis of the drive shaft, and means for mounting the casing for swinging movement at right angles to the last-named pivot means.

1,462,765. ENSILAGE HARVESTER. CHARLES W. H. MILLER, Lostant, Ill. Filed Mar. 14, 1921. Serial No. 451,947. 7 Claims. (Cl. 56—61.)

1. An ensilage harvester comprising a two-part hopper, one part of said hopper being curved intermediate its breadth, the other part of said hopper extending behind and around the ends of the first part in spaced re-

lationship thereto, and independent means for gathering crops extending to and arranged on each side of the first

part of the hopper whereby to deliver the gathered material to the hopper through the space between said first part and said second part.

1,462,766. GATE. JOHN E. POST, Durand, Mich. Filed Jan. 24, 1921. Serial No. 439,550. 4 Claims. (Cl. 39—76.)

1. A gate, comprising in combination a pair of substantially U-shaped sections of bent bar material, sleeves connecting the free ends of said sections to form a rectangular structure, spindles projecting from said sleeve connections, and a substantially U-shaped crane support element pivoted at its free ends to said spindles, and extending over and from said first-mentioned gate sections, so as to permit complete rotation of said rectangular structure on its pivot and through said crane.

1,462,767. INTERNAL-COMBUSTION ENGINE. WILLIAM H. PUTNAM, deceased, late of Madison, Wis., by Central Wisconsin Trust Company, executor, Madison, Wis., assignor to Madison Kipp Corporation, Madison, Wis., a Corporation of Wisconsin. Filed Aug. 27, 1919. Serial No. 320,260. 5 Claims. (Cl. 123—25.)

1. In combination with an internal combustion engine; a circulatory water cooling system therefor embodying a radiator for cooling the water; means for

causing a subdivision of the water as it passes through the radiator; and an air intake passage leading to the charge forming device of the engine, said passage leading to and through the means for causing the subdivision of the water whereby the air will be brought into direct contact with the water and washed thereby.

- 1,462,768. ACCELERATOR FOR HOT-WATER HEATING SYSTEMS. GEORGE H. RUSSELL, Florence, Ala. Filed Aug. 14, 1920. Serial No. 403,590. 1 Claim. (Cl. 137—53.)

In a device of the character described, a pipe having a bend at one end, a second pipe having a bend at one end, a valve casing connecting said ends of said pipes and having a valve seat therein, a check valve seatable against said valve seat to close the passage through said casing, a valve casing attached to the bend of the second mentioned pipe and having a valve seat therein, a by-pass tube connecting the second mentioned valve casing and the first mentioned pipe to allow the water to flow through the by-pass tube past the check valve, and a spring pressed valve within the second mentioned valve casing and seatable against the valve seat thereof to normally prevent the flow of water from the second pipe through the by-pass tube.

- 1,462,769. COLLAPSIBLE BOAT. ANTONIO V. SANTARSIERO, New York, N. Y. Filed Aug. 10, 1922. Serial No. 580,981. 6 Claims. (Cl. 9—2.)

1. A boat of the class described comprising a resilient frame, a water-proof body secured thereto, foldable annular ribs mounted in said body, and a keel pivoted to the end of the resilient frame.

- 1,462,770. SLIDE TROLLEY. PAUL SCHULTZ, Des Moines, Iowa. Filed Apr. 17, 1922. Serial No. 553,686. 4 Claims. (Cl. 191—59.1.)

1. A slide trolley, comprising a harp, an elongated slide shoe mounted for oscillation therein, said shoe being adapted to contact a wire on either of its long sides, and means to limit oscillation of said shoe.

- 1,462,771. PHENOLIC CONDENSATION PRODUCT. WALTER O. SNELLING, Allentown, Pa. Filed May 18, 1920. Serial No. 382,359. 2 Claims. (Cl. 260—5.)

2. In the preparation of phenolic condensation products the process which comprises preparing an intermediate body from a phenolic body and hexamethylenetetramine, and preparing a second intermediate body from a phenolic body and anhydrous polymerized formaldehyde, and admixing these two intermediates in such proportions that the excess of ammonia in the first intermediate will just balance the deficiency in ammonia of the second intermediate.

- 1,462,772. ROOF COVERING. EDWARD R. SNYDER, East Orange, N. J., and CHARLES W. MORTIMER, Brooklyn, N. Y., assignors to The Barrett Company, a Corporation of New Jersey. Filed Jan. 26, 1920. Serial No. 354,044. 11 Claims. (Cl. 108—9.)

1. In the process of covering a roof, the steps which comprise laying a row of triangularly shaped pieces of roofing material side by side, with their bases parallel, laying a second row above said first row, and folding the lower part of said first row, over said second row.

- 1,462,773. INSECT-POWDER BLOWER OF THE BELLOWS TYPE. HORACE T. SPENCER, Knoxville, Tenn. Filed Apr. 1, 1922. Serial No. 548,669. 3 Claims. (Cl. 43—147.)

2. An insect powder blower comprising a body portion, a discharge tube positioned within the body portion, said tube having openings formed in spaced relation with each

other and disposed spirally of the tube, means adjacent to the opening for directing material in a spiral path through the tube, and means for operating the bellows.

1,462,774. TOP-ROLLER CLEARER. MARK SUTTON and THOMAS WILLIAMS, Rio de Janeiro, Brazil. Filed May 6, 1922. Serial No. 558,991. 2 Claims. (Cl. 19—139.)

2. In a clearer for the top rollers of machines for treating and spinning fibres the combination with a conical traversing roller of an auxiliary clearer provided with an aperture in which the traversing roller is arranged and adjustable brackets for adjusting the position of the conical traversing roller.

1,462,775. PROCESS FOR THE MANUFACTURE OF NAILS FORMED IN TWO PARTS. ANGELO TRIVELONI, Milan, Italy. Filed Nov. 2, 1920. Serial No. 421,305. 1 Claim. (Cl. 10—27.)

An improved process for the manufacture of nails or studs of the type in which the head of the nail or stud is of a hard metal and is welded to a shank of softer metal, said process consisting in welding together end to end two suitable bars, one of hard metal and the other of soft metal, and then forging or stamping the joined piece so as to form a head of the whole of the hard metal.

1,462,776. DEVICE FOR OPERATING AUTOMOBILE SIGNALS. ZACHARY TAYLOR UBIL, Philadelphia, Pa. Filed July 24, 1922. Serial No. 576,943. 11 Claims. (Cl. 74—39.)

10. In a device of the character described, signalling devices, and means comprising a manually operated tapering member and coacting lever mechanism for operating them independently of each other in the same or in different directions.

1,462,777. SHOE-SEWING MACHINE. FÉLIX EMILE VALOIS, Bridgeport, Conn., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed July 14, 1919. Serial No. 310,718. 20 Claims. (Cl. 112—35.)

1. In a machine of the class described, in combination, sewing instrumentalities including a hooked needle and looper, mechanism for imparting to said needle a thread receiving and a thread drawing movement, and means for severing the thread adjacent the needle hook, said means including devices for insuring the operation of the thread-severing means substantially at the end of a thread drawing movement of the needle.

1,462,778. DYNAMOMETER. GEORGE HENRY WALKER, Worcester, England, assignor to Heenan & Froude, Limited, Manchester and Worcester, England. Filed Mar. 28, 1921. Serial No. 456,088. 4 Claims. (Cl. 265—24.)

1. A rotary reversing absorption dynamometer of the type referred to comprising in combination a casing divided into compartments, a load arm extending therefrom, a rotor arranged in the casing, a shaft carrying the rotor, inlet and outlet pipes from the compartments, valves arranged in said pipes, operating gears mounted on the shaft carrying the rotor and links and levers connecting the operating gears to the valves.

1,462,779. HACK-SAW MACHINE. RALPH WICKSTEED, Kettering, England. Filed Apr. 26, 1921. Serial No. 464,586. 6 Claims. (Cl. 29—73.)

1. In a hack saw machine, the combination of a machine frame, saw frame, a flat sided arm attached to the saw frame, flat sided guide members on said machine frame opposed to the flat sides of the arm and constituting a bearing in which said arm can reciprocate, which bearing is considerably greater in depth than the width of the arm, reciprocating driving mechanism, and a horizontal pivot pin, about the longitudinal axis of which the said arm can swing operatively connecting the arm with said driving mechanism, said bearing and said pivot pin constituting the sole means for guiding said arm whereby the saw frame is free to rock vertically about the pivot pin in all positions of the driving mechanism, substantially as described.

1,462,780. LOCK. JOHN G. YANCHIK, Wilkes-Barre, Pa. Filed Oct. 11, 1920. Serial No. 416,005. 2 Claims. (Cl. 45—94.)

1. In a drawer and door lock, a keeper comprising an attaching and supporting body, a nose pivotally secured to the outer end of the body, spring means normally

retaining the nose spaced from the body, an inwardly extending arm formed on the free end of the nose and

extending toward the body, an angular extension formed on the arm, and a U-shaped guide and retaining member carried by the body for receiving the angular extension.

1,462,781. CASHIER PROTECTOR. JOHN BABIARZ, New Salem, Pa. Filed June 12, 1922. Serial No. 567,854. 1 Claim. (Cl. 20—1.01.)

A device of the class described comprising the combination with a cage having a window, of a protective screen associated therewith adapted to close the window, manually controlled means for moving said screen to closed position, a gas reservoir associated with said cage, a spring actuated piston operable in said reservoir adapted to expel the gas from said reservoir, and means for releasing said piston upon the completion of the closing movement of the screen.

1,462,782. CARBURETOR. MARIUS JEAN BAPTISTE BARBAROU, Paris, France. Filed Nov. 1, 1921. Serial No. 512,142. 3 Claims. (Cl. 123—127.)

3. A carburetting installation for high power engines with a plurality of groups of cylinders, which comprises two main carburetors for each group of cylinders, two intake pipes connecting said main carburetors to the cylinders of said group, one slow speed carburetor for

each of said groups, a slow speed pipe connecting said slow speed carburetor to both intake pipes in the same group of throttle in the slow speed carburetor, a spring which tends to close said throttle, an actuating lever secured to said throttle, means for varying the angular position of said throttle with respect to said lever, and a cam acting upon said lever and being operatively connected to the means for operating the throttles in the main carburetors, the profile of said cam being adapted to fully open said slow speed throttle for a small angle of rotation of the throttles in the main carburetors.

- 1,462,783. STOPPER FOR RESERVOIRS, RADIATORS, AND THE LIKE. MARIUS JEAN BAPTISTE BARBAROU, Paris, France. Filed Apr. 28, 1921. Serial No. 465,279. 4 Claims. (Cl. 220—32.)

1. A stopper for reservoirs, radiators, etc., comprising a pivoted cover adapted to have a tight fit upon the orifice to be closed, a fixed part, a cap pivoted to said fixed part, a flange on said cap adapted to come into engagement with said fixed part and a set screw on the cap adapted to tighten the cover in position.

- 1,462,784. MOTION-PICTURE DEVICE. GEORGE W. BINGHAM, Newark, N. J., assignor to Widescope Camera Co., Newark, N. J., a Corporation of New Jersey. Filed Feb. 11, 1921. Serial No. 444,101. 8 Claims. (Cl. 88—16.6.)

8. In a motion picture device, in combination, a plurality of lenses in angular position with respect to each other; a movable film frame for each lens; means for moving the film frames into the same plane with respect to each other; means for passing a film through the frames when in the same plane with respect to each other; and means for moving the frames parallel to their respective lenses, bringing the film within each frame perpendicular to the optical axis of its lens.

- 1,462,785. LOADING AND GRADING DEVICE. JOHN R. CANON, Austin, Tex. Filed Nov. 7, 1921. Serial No. 513,300. 5 Claims. (Cl. 37—108.)

1. In a loading and grading machine, a rectangular frame, ground wheels on each side at the front and rear of said frame, hanger members at each side of the frame, means on the frame for vertically adjusting the hanger members, a transverse scoop extending under the

frame and having its ends secured to the hanger members, a screw conveyor mounted in the scoop and hav-

ing its ends supported in the hangers, and an elevator mounted on one side of the frame outwardly of the hanger thereat.

- 1,462,786. SAND-BLAST MACHINE. DAVID P. CLEVELAND, Dallas, Tex., assignor of one-half to J. A. Bergfeld, Dallas, Tex. Filed Mar. 20, 1922. Serial No. 545,008. 3 Claims. (Cl. 51—8.)

1. In a sand blast machine, a hopper, a turbine, a housing enclosing the turbine, said housing having means for admitting a fluid under pressure for driving said turbine, means co-operating with said turbine for agitating the sand in the hopper and causing the same to precipitate into said housing, and means for discharging said fluid and sand from said housing.

- 1,462,787. AGRICULTURAL FORK. JOHN DEGENDORFER, San Francisco, Calif. Filed Dec. 19, 1921. Serial No. 523,565. 5 Claims. (Cl. 294—107.)

1. An agricultural fork comprising a pair of opposed and co-operating jaw members, means holding said members in spaced relation while connecting them in a

manner to permit of their swinging relative to each other for open and closing movement, and cable means connected to said members for imparting such movement thereto.

1,462,788. WRENCH. FRANK J. DORSCH, Winona, Minn. Filed May 25, 1922. Serial No. 563,490. 1 Claim. (Cl. 81—157.)

In a wrench, the combination of a shank having a fixed jaw projecting laterally from the end thereof, a shiftable jaw member slidable on said shank, a toothed rack in the edge of said shank opposite said fixed jaw and formed of beveled teeth having one straight side and one inclined side, an elongated lever pivoted at one end to said shiftable jaw member and extending along the edge of said shank opposite said fixed jaw, the other end of said lever being tapered to permit ready engagement of the same so as to facilitate swinging of the lever away from the shank, an adjusting worm rotatably mounted on said lever, the rear faces of the teeth on said worm being substantially parallel to a line drawn radially to the pivotal center of said worm, the front faces of said teeth being beveled, and stop means between said shiftable jaw member and said lever for limiting the outward pivotal motion of said lever to a position at right angles to the shank.

1,462,789. TIRE-CHAIN CARRIER. JOHN J. EYRE, Somerville, Mass. Filed Apr. 21, 1921. Serial No. 463,139. 15 Claims. (Cl. 152—14.)

1. A tire chain carrier comprising a casing adapted to be mounted on a vehicle, said casing having a door, and spring operated means in said casing to engage an ordinary tire chain and move it into the casing and exert a continual inward pull on the same, said door having means to which the end of the tire chain may be attached, whereby the pull of the chain on the door will hold said door closed.

1,462,790. SIGN HOLDER. WILLIAM B. FINK, New York, N. Y. Filed May 19, 1922. Serial No. 562,133. 2 Claims. (Cl. 40—152.)

1. A sign holder, comprising an outer frame element of substantially an L-shape in cross section, an inner frame element also of substantially an L-shape in cross

section, the inner frame element being disposed within the outer frame element so that two corresponding flanges of the elements are in spaced relation, while the other two corresponding flanges of the elements are in lapping arrangement and the free edge of the lapping

flange of the inner frame element being spaced from the elbow of the outer frame element to provide a groove therebetween, means detachably fastening the lapping flange members together, a standard, and means removably mounting the frame elements to the standard.

1,462,791. AUTOMOBILE-LIGHT-DIMMER SWITCH. ALPHEUS D. GASTON, Austin, Tex. Filed Apr. 30, 1923. Serial No. 635,645. 3 Claims. (Cl. 219—48.)

1. In an automobile headlight dimmer, a casing, a pair of spaced contact posts in the casing, a movable contact arm secured at one end to one post, a contact finger connected to the other post for engagement with the opposite end of the contact arm, a substantially U-shaped resistance coil in the casing and disposed to have its sides extend on opposite sides of said contact arm, a finger engaging knob having a stem slidable in the casing, a contact carried by the stem and wiping engaged with a side of the resistance coil, the inner end of the stem being slidably engaged with the contact arm, a contact post electrically connected to one end of the resistance coil and engageable with the contact arm, and means to operate the contact arm into engagement with the last named contact post, the opposite end of the resistance coil being electrically connected to the contact post having said contact finger connected thereto.

1,462,792. RIB TIGHTENER FOR GEM INNERSOLES. THOMAS F. HART, Lynn, Mass., assignor to Hamel Shoe Machinery Company, Lynn, Mass., a Corporation of Massachusetts. Filed May 19, 1917. Serial No. 169,674. 13 Claims. (Cl. 12—20.)

1. A machine of the class described having, in combination, a work support mounted for free rotation about a substantially vertical axis, a feed wheel providing a peripheral work-engaging surface substantially parallel

to the surface of said work support and spaced therefrom, means for imparting rotary movement to said

feed wheel, a tamping tool supported for movement in a plane substantially perpendicular to said support, and means for vibrating said tool in said plane.

1,462,793. HOG TROUGH. WALTER R. HEMELSTRAND, Edison, Nebr. Filed Mar. 13, 1923. Serial No. 624,804. 3 Claims. (Cl. 119—61.)

3. The combination with a hog trough, a support, means for attaching the trough to the support, said means comprising a vertically disposed channelled member, means for attaching the channelled member to the support, a block slidably mounted in the channelled member, means for limiting the downward movement of the block, an eye carried by the block, a band extending around the trough adjacent its upper end, an eye carried by said band and a swivel connecting member connecting the eye of the band and the eye of the block.

1,462,794. MOP HOLDER. HELEN KUMPUNEN, Rye, N. Y. Filed Feb. 11, 1920. Serial No. 357,868. 1 Claim. (Cl. 15—228.)

In a device of the character described, a mop head comprising a flat wooden disk having a screw threaded centrally arranged aperture in one side thereof, and a

screw threaded integral stem extending from the other side thereof, a semispherical rubber butt having a screw threaded aperture to receive the said screw threaded stem of the said disk and a wooden handle provided with an integral screw threaded stud threaded into the disk, and mop material removably and adjustably secured between the under flat side of the wooden disk and the flat upper side of the rubber butt.

1,462,795. ELECTRIC BATTERY. WILLIAM R. LOVE-MAN, Bridgeport, Conn., assignor to The Bridgeport Metal Goods Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 5, 1921, Serial No. 435,135. Renewed Dec. 6, 1922. 10 Claims. (Cl. 204—38.)

1. An electric battery comprising a negative electrode consisting of a zinc shell, a positive electrode therein and two separate portions of depolarizing agent having different depolarizing value.

1,462,796. SWING. JOHN L. MARTIN, Buffalo, N. Y. Filed Aug. 12, 1921. Serial No. 491,838. 8 Claims. (Cl. 155—65.)

2. In a non-suspension or vaulting swing, a supporting structure, a plurality of combination legs and levers connected transversely in pairs and fulcrumed to rock on the supporting structure, a carrier hung to swing on the combination legs and levers intermediate to their terminals parallel with the supporting structure, anti-gravity springs mounted and interposed in such manner that the oscillation of the carrier may be limited in amplitude, and hinge or pivot connections between the carrier and the combination legs and levers whereby moving and lifting power may be applied to said levers to swing the carrier to and fro in a vaulting curve and in unstable equilibrium as set forth.

1,462,797. THERMOMETER. HERBERT P. MILKER and ALFRED ROESCH, Brooklyn, N. Y., assignors to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 6, 1919. Serial No. 336,101. 3 Claims. (Cl. 73—52.)

1. A thermometer comprising a back provided with at least one hole and having a scale thereon, a tube on said back, a screw-threaded stud in said hole, a band extending about said tube and projecting into said hole and connected with said stud, and a nut on said stud whereby said band is drawn into conformity with the top and side surfaces of said tube unrestrained by any portion of said back and the tube is clamped on said back against movement relatively to said scale.

1,462,798. SHANK STIFFENER. WILLIAM H. NICKERSON, Brookline, Mass. Filed Jan. 21, 1922, Serial No. 530,876. Renewed May 21, 1923. 2 Claims. (Cl. 36—76.)

1. For use in a shoe which includes an outer sole having an approximately V-shaped ridge defining the salient rear end of the tread portion and the forward end of the shank portion of the sole, a wedge piece bearing on the inner surface of the outer sole, and having a salient thickened edge conforming to a portion of said ridge, and an inner sole conforming to the inner side of said wedge piece; a molded sheet metal shank stiffener, shaped at its forward end portion to bear on the inner side of the thickened rear portion of the wedge piece, and having a recess in its forward edge conforming approximately to the salient edge of the wedge piece, the stiffener having a longitudinal ridge between its front and rear end portions, adapted to support a longitudinal ridge on the under surface of the shank portion of the outer sole, said recess imparting transverse flexibility to the forward end portion of the stiffener.

1,462,799. LUBRICANT. JAMES A. BURTON, Brooklyn, N. Y. Filed May 25, 1922. Serial No. 563,684. 1 Claim. (Cl. 87—9.)

A lubricant for leaf springs and the like comprising: 3 quarts of crude petroleum, 18 ounces of kerosene, 6 ounces of comminuted graphite, 7 ounces of ethyl ether, 3 drachms of amyl acetate, 3 drachms of ethyl acetate, 2 drachms of ethyl butyrate, 5 minims of oil of cassia.

1,462,800. FOLDABLE BOAT. JULIUS N. CLEMMER, Omaha, Nebr. Filed Feb. 20, 1923. Serial No. 620,177. 1 Claim. (Cl. 9—2.)

A boat comprising a bow section, a midship section and a stern section, said sections having their adjacent ends provided with transversely disposed walls adapted to engage each other, hinges pivotally connected in the bottoms of the midship section and the stern section, said hinges extending upwardly and terminating in angularly disposed portions hingedly connected to brackets carried by the midship section and the bow section and hinged at a point above the walls, the upwardly extending hinges being formed from hingedly connected sections hingedly connected intermediate the ends of the hinges, and apertured lugs carried by the adjacent ends of the sections and adapted to overlie each other when the sections are in extending portion and receive securing means.

1,462,801. FRUIT CRUSHER. PETER C. DE LUCA and MATTHEW L. INSOONA, Dorchester, Mass., assignors to Corona Machine Company, Malden, Mass., a Corporation of Massachusetts. Filed June 25, 1921, Serial No. 480,341. Renewed May 7, 1923. 13 Claims. (Cl. 146—184.)

7. A portable crusher comprising a hopper having a discharge opening, a series of crusher fingers projecting from opposite sides of said opening, and a crusher roll having teeth cooperating with said fingers, said roll being adjustable relative to said fingers.

1,462,802. RAT TRAP. EDWARD DUDLEY CLARK, Achille, Okla. Filed Mar. 27, 1923. Serial No. 628,068. 2 Claims. (Cl. 43—67.)

2. A rat trap for use in connection with buildings, said trap comprising telescopically engaged sections, said sections being divided into upper and lower compartments by a horizontally disposed partition, trap doors in said partition, entrances in the sections in registration with the upper compartment, the lower compartment

terminating outside of the building and having its end screened, a trap door in the lower compartment adjacent the screened end thereof and a water receiving receptacle below said last named trap door and located outside of the building.

1,462,803. COMBINED SHELF AND HANGER RACK.

ALEXANDER S. DESERTY, New York, N. Y., assignor to Alexander Aderer, New York, N. Y. Filed Oct. 11, 1922. Serial No. 593,714. 2 Claims. (Cl. 211—14.)

1. In a unit for use in clothes closets, showcases or the like, a shelf member having in its lower face a groove with a restricted mouth, and a hanger-supporting element in strip form, comprising a tubular section having in its side keyhole slots for the insertion and retention of headed stems of clothes hangers, said supporting element having a portion conforming in shape to said groove in said shelf member and lying therein throughout its length, whereby the supporting element is mounted and braced in close proximity to the lower face of said shelf member.

1,462,804. SIEVE. EDWARD JAMES EVANS, Briercrest, Saskatchewan, Canada. Filed Apr. 18, 1922. Serial No. 554,942. 4 Claims. (Cl. 130—19.)

1. A sieve comprising a frame, spaced apart spindles in said frame, supporting plates having angularly bent portions, perforations in said plates and said angular portions substantially perpendicular to their surfaces for preventing eddies collecting between the perforations, and means connected to said plates for actuating the same.

1,462,805. LOCK. OLIVER E. GIBSON, Mechanicsburg, Pa., assignor to Potts Manufacturing Company, Mechanicsburg, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 554,526. 7 Claims. (Cl. 292—140.)

1. In combination with a closure having an opening therein, of a lock casing secured to one face thereof, a bolt in said casing, and an operating member for said bolt adapted to be reversed in its position relative to said bolt and casing to enable it to be grasped from either face of the closure, providing either an inside or an outside lock for said closure.

1,462,806. DOOR. OLIVER E. GIBSON, Mechanicsburg, Pa., assignor to Potts Manufacturing Company, Mechanicsburg, Pa., a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 554,527. 12 Claims. (Cl. 94—34.)

1. In a door comprising a swinging closure leaf, a reinforcement for the edge of said leaf comprising a lock casing having projecting lugs at its sides, bracing elements extending from said casing to the ends of the leaf, and means for rigidly connecting said bracing elements to said lock casing and to said leaf.

1,462,807. SPEED-CONTROLLING MECHANISM. CHARLES H. GILL, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 456,195. Renewed June 8, 1923. Serial No. 585,073. 29 Claims. (Cl. 74—97.)

1. In speed controlling mechanism, the combination of a motor driven shaft, a threaded member driven by said shaft, a member rotatable at constant speed, a threaded element driven by said member rotatable at constant speed and engaging with the said threaded member, a motive power supply governing member adapted to regulate the supply of fuel or power to the motor driving the said motor driven shaft, and means controlled by differences in the respective rotary speeds of the said threaded member and the said threaded element for automatically regulating the said motive power supply governing member to maintain the said motor driven shaft at a given ratio of speed to the speed of the said member rotatable at constant speed.

1,462,808. MACHINE-CONTROL MECHANISM. CHARLES H. GILL, Chicago, Ill. Filed Mar. 21, 1921. Serial No. 454,200. Renewed June 8, 1923. Serial No. 552,596. 19 Claims. (Cl. 74—97.)

1. In machine control mechanism, the combination of a driven shaft, a driving shaft, automatic means for varying the ratio of the rotary speed of the said driven shaft to the rotary speed of the said driving shaft in inverse proportion to the degree of resistance offered to

the rotation of the said driven shaft, automatic means for varying the rotary speed of the said driving shaft in such manner as to maintain a given rate of rotary speed of the said driven shaft throughout all variations in the ratio of the rotary speed of the said driven shaft

to the rotary speed of the said driving shaft, a control lever adapted to be positioned at the will of the operator, and means controlled by the position of the said control lever for changing the said given rate of rotary speed of the said driven shaft.

1,462,809. SELF-ADJUSTING-TRANSMISSION MECHANISM. CHARLES H. GILL, Chicago, Ill. Original application filed Dec. 29, 1920. Serial No. 433,930. Divided and this application filed July 7, 1921, Serial No. 483,106. Renewed Apr. 14, 1922. Serial No. 552,597. 30 Claims. (Cl. 74-26.)

1. In self adjusting transmission mechanism, the combination of a friction driving disk, a friction wheel driven by said friction driving disk, a driven shaft, a member rotatable with said driven shaft, means for yieldably engaging the said member and the said friction wheel, and means controlled by the degree of yield of the said member and the said friction wheel in their engagement with each other for varying the ratio of the rotary speed of the said driven shaft to the rotary speed of the said friction driving disk inversely to variations in the degree of resistance offered to the rotation of the said driven shaft.

1,462,810. AUTOMATIC CRANK TRANSMISSION MECHANISM. CHARLES H. GILL, Chicago, Ill. Original application filed Jan. 17, 1921, Serial No. 437,801. Divided and this application filed Apr. 4, 1921, Serial No. 458,638. Renewed Aug. 10, 1922. Serial No. 585,074. 14 Claims. (Cl. 74-38.)

1. In automatic crank transmission mechanism, the combination of a driving shaft, a driven shaft, a rotatable member carried by said driven shaft, a friction element secured upon said driven shaft, a radially movable wrist pin carried by said rotatable member, a friction member

rotatable by said driving shaft and frictionally engaging the said friction element, and means controlled by the slippage of the said friction member and the said friction

element in their engagement with each other for automatically varying the position of the said wrist pin with respect to the axis of the said rotatable member.

1,462,811. EMERGENCY DRUM FOR AUTOMOBILES. CHARLES J. JOHNSON, Canton, Ohio. Filed Apr. 18, 1922. Serial No. 555,168. 2 Claims. (Cl. 242-95.)

2. An attachment for driving wheels of motor vehicles including a cable winding drum, radially extending arms upon the drum, an inturned end upon each arm for engagement with the adjacent spoke of the driving-wheel and a clamping finger upon each arm for engagement with the next adjacent spoke.

1,462,812. BATTER. FRANK M. KINNARD, Sebring, Ohio, assignor of one-half to Charles L. Sebring, Sebring, Ohio. Filed Aug. 4, 1920, Serial No. 401,164. Renewed June 11, 1923. 3 Claims. (Cl. 25-27.)

1. In combination with a stationary block, a lever pivoted at one side of the block, a batter mounted upon the lever and arranged to be brought into forceful contact with a ball of clay placed upon the block to produce a bat, a bumper arranged to be engaged by the lever to limit the downward movement thereof and a counter weight arranged to normally hold the lever in the raised position.

1,462,813. IMPACT-TESTING MACHINE. DUNLAP J. MCADAM, Jr., Annapolis, Md., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 7, 1919. Serial No. 336,413. 8 Claims. (Cl. 265—15.)

1. The combination in an impact testing machine of means for supporting a test specimen; a hammer; a rotary member; a tappet on said member positioned to raise and thereafter release the hammer to permit it to fall upon a test specimen; means for adjusting the tappet to vary the drop of the hammer; with means for adjusting the position of the rotary member to regulate the point of release of the hammer.

1,462,814. DUMP BODY. ANDREW B. MCKINLEY, Louisville, Ky., assignor to Continental Car Company of America, a Corporation of Kentucky. Filed June 7, 1922. Serial No. 560,592. 2 Claims. (Cl. 296—51.)

1. In a vehicle, a body, a tail gate for said body, pivotal and releasable means for securing the upper part of the tail gate to the upper part of the body, and latches each comprising a single hook element arranged to constitute means for pivotally connecting the lower part of the tail gate to the body and for holding the same releasably against outwardly swinging movement.

1,462,815. ROLLS FOR CORN-HUSKING MACHINES. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to The New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed Aug. 1, 1922. Serial No. 579,049. 6 Claims. (Cl. 130—5.)

1. In a corn-husking machine, a pair of husking rolls each provided upon its circumferential surface with a spiral rib and longitudinal breaker bars, the breaker bars

connecting the successive convolutions of the spiral rib and the ribs on mating rolls being reversed relative to each other and so arranged as to have their circumferential surfaces constantly in contact in the bight of the rolls, the opposed breaker bars meeting in the bight of the rolls.

1,462,816. GAS GOVERNOR FOR TYPESETTING MACHINES. HOWARD W. PARTLOW, Utica, N. Y. Filed May 21, 1921. Serial No. 471,518. 12 Claims. (Cl. 236—102.)

9. A thermostatic governor comprising a body, heater-controlling means, and means for controlling the first means and including a lever pivotally mounted on the body, a thermostatic element extending from the body laterally of the plane of movement of the lever, and a movement-increasing leverage connecting the element to the lever.

1,462,817. SHOCK COMPRESSING AND BINDING DEVICE. JOHN F. PATTERSON, Merchantville, N. J. Filed July 11, 1922. Serial No. 574,226. 4 Claims. (Cl. 100—31.)

1. A binding device including a spear having means providing a drum; a member rotatably mounted on said spear; a cord cooperating with said drum and said member to provide binding means; and an adjustable friction brake carried by said member and arranged to bear directly upon means connected to said spear to prevent movement between said spear and said member.

4. A binding device comprising a spear having means providing a drum; a collar secured on said spear and spaced from said drum; a member rotatably mounted between said collar and said drum; and a set screw mounted on said member and having friction means adapted to engage said collar.

1,462,818. COOKING UTENSIL. JOSEPH AUDLEY PIERCE, Dravosburg Borough, Pa. Filed Jan. 12, 1923. Serial No. 612,188. 5 Claims. (Cl. 53—1.)

1. A steam cooker comprising an outer vessel adapted to contain water for the generation of steam, a steam ring provided with an exterior annular shoulder adapted to fit down on the top of said outer vessel with the

lower portion of said steam ring depending into said outer vessel and holding the steam ring against lateral displacement, said lower portion of the steam ring being provided with an internal annular shoulder having a substantially horizontal supporting portion, an inner vessel adapted to be supported within the outer vessel,

a plurality of spaced shoulders on the exterior of said inner vessel, said shoulders being intermediate of the vertical extent of said inner vessel and being arranged in annular series around the same, and said shoulders resting upon the supporting portion of the internal annular shoulder of the steam ring, and a lid for the top of said steam ring.

1,462,819. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 31, 1920. Serial No. 407,173. 12 Claims. (Cl. 179—18.)

1. In a telephone system, a subscriber's line, a plurality of trunks arranged in groups, an automatic non-numerical switch for the use of said line, means for causing said switch to simultaneously test a trunk in each group, means for preventing the seizure by said switch of more than one of the trunks which are being simultaneously tested, and releasing means for said switch.

1,462,820. CAN SPOUT. CLYDE KYRLE RABER, Newcastle, Ind. Filed Dec. 14, 1922. Serial No. 606,863. 2 Claims. (Cl. 221—23.)

1. The combination with the wall of a can, of a removable spout therefor, said spout comprising a hollow cylindrical member having its ends open, one end of the hollow cylindrical member being cutaway at an angle, thereby forming inclined cutting edges adapted to form a hole

in the can wall when forced therethrough, an annular flange carried by the cylindrical member, piercing lugs carried by the flange at opposite sides of the cylindrical

member and provided with notches for the reception of the end walls of apertures formed by the members upon a partial rotation of the cylindrical member.

1,462,821. AUTOMATIC AIR-HOSE COUPLER. SAMUEL J. W. RADER, Alfalfa County, Okla. Filed Sept. 25, 1919. Serial No. 326,260. 2 Claims. (Cl. 285—58.)

1. An air hose coupler comprising a pair of cone-shaped shells adapted for abutment, means for connecting a hose to the apex of each shell, brackets surrounding the shells in spaced relation thereto, radiating coiled springs connected to each shell and its respective bracket for resiliently suspending the shell, and a tubular shaft resiliently mounted in one of said shells and adapted to extend therethrough and through the other shell when the cars are in coupled relation.

1,462,822. INDEX DEVICE. JAMES H. RAND, North Tonawanda, N. Y. Filed May 26, 1921. Serial No. 472,726. 8 Claims. (Cl. 40—64.)

4. An index device having a back, and a marginal flange attached to the back comprising two independent leaves of flexible, resilient, sheet material, the free margin of the outer leaf being folded around the free edge of the inner leaf.

1,462,823. FOREPART-TURNING MACHINE. FRED A. REARDON, Bradford, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed Apr. 9, 1919. Serial No. 288,706. 23 Claims. (Cl. 12—57.)

11. A shoe turning machine having, in combination, members including a turning implement and a form, means for adjusting the angle to the horizontal of said members, a body abutment, and means whereby it may be adjusted angularly with relation to said members.

1,462,824. COUPLING OR TOOL JOINT. CLARENCE E. REED and MAX CZEFTCZICK, Houston, Tex.; said Czefczick assignor to said Reed. Filed Oct. 29, 1919. Serial No. 334,273. 3 Claims. (Cl. 285—175.)

2. In combination, a socket member having an inwardly extending flange at its top with gate-ways, a second member having a projection with laterally extending lugs to pass through said gate-ways and to be turned under said flange, and a pin carried by the second member to drop into one of the gate-ways when the two members have assumed a certain relation to each other, substantially as described.

1,462,825. ADJUSTABLE PRICE MARKER. WILLIAM A. RINGLER, Philadelphia, Pa., assignor of one-half to Henry C. Yelser, Cincinnati, Ohio. Filed Sept. 22, 1922. Serial No. 589,740. 11 Claims. (Cl. 40—63.)

1. A price marker, comprising a frame having a body portion with forwardly extending flanges at the sides and

having a flexible back, a transparent cover secured at one end to said body portion and having means to engage

the upper edge of said body portion, and price markers between said transparent cover and body portion.

1,462,826. LOCK. OSCAR C. RIXSON, New Rochelle, N. Y., assignor to The Oscar C. Rixson Co., a Corporation of Illinois. Filed June 23, 1921. Serial No. 479,729. 13 Claims. (Cl. 70—46.)

1. A lock comprising, in combination, a lock case, a face plate carried thereby, a lock operating mechanism pivoted to the lock case and adjustable toward and from the face plate and operative in all positions upon the lock.

1,462,827. LOCK. OSCAR C. RIXSON, New Rochelle, N. Y., assignor to The Oscar C. Rixson Co., a Corporation of Illinois. Filed Feb. 21, 1922. Serial No. 538,181. 9 Claims. (Cl. 292—348.)

1. A lock construction for doors having a mortise and a transverse orifice therein for receiving a knob spindle, which construction comprises a lock case adapted to be received within the mortise and having in its side wall a hole for a knob spindle, an attaching member adapted to be secured to the side wall of the lock case within the transverse orifice in the door and having a screw hole, a plate adapted to cover said orifice in the door and having

a hub for a knob spindle, said plate being provided with a screw hole arranged to register with that in the attaching member when the said hub is aligned with the said hole in the lock case.

1,462,828. LOCK. OSCAR C. RIXSON, New Rochelle, N. Y., assignor to The Oscar C. Rixson Co., a Corporation of Illinois. Filed Mar. 28, 1922. Serial No. 547,387. 10 Claims. (Cl. 20—46.)

1. A lock mechanism comprising a case, a bolt slidable in the case, a roll-back for actuating the bolt in both directions, and a stop device movable into and out of the path of the roll-back by the relative movement of the bolt and case.

16. A lock comprising a lock case adapted to be secured to the face of a door, a bolt slidable in said case and arranged to protrude from one end thereof in locked position, the outer wall of the case having an extension at the bolt protruding end, a raised part on the inner face of the extension spaced from the end wall of the case and having a hole therein to receive the bolt in locked position, and a strike having a rectangular head adapted to be set into a rectangular cut in the trim and recessed to receive the raised part on said extension when the door is closed, the wall of the recess adjacent the end of the case having a hole adapted to receive the bolt when in locked position and the other three walls of the head serving to cover the raw cuts in the door trim and the bottom wall of the recess being provided with two angularly disposed diverging screw holes.

1,462,829. SCRAPER ATTACHMENT FOR BROOMS. WILLIAM ROBERTS, Los Angeles, Calif. Filed Apr. 1, 1922. Serial No. 548,627. 4 Claims. (Cl. 15—111.)

1. A scraper attachment for broom heads, comprising an angular base plate adapted to be secured to one of the upper side edges of a broom head, end plates formed integral with said base plate one at each end thereof, a scraper blade holding means formed on said base plate, and a scraper blade detachably mounted on said holding means.

1,462,830. FLOATING DISCHARGE PIPE FOR HYDRAULIC DREDGES. ARTHUR W. ROBINSON, Montreal, Quebec, Canada. Filed Dec. 10, 1920. Serial No. 429,654. 2 Claims. (Cl. 285—94.)

1. In a floating discharge pipe for dredges a ball and socket joint in the discharge pipe in combination with a link pivotally connected to one of the pipe sections, a spring cushioning device on the adjoining pipe section, the link engaging with the spring, and spherical

washers having spherical seats, which act respectively as abutments for the spring against pressures in either direction and as centering devices for the spring and the link.

2. In a floating discharge pipe for dredges a pipe section provided with a socket having a plurality of lugs attached at one end and a single casting on the other end, a spring cushioning device supported by the casting, means to detachably attach the casting to the pipe, and a link for the spring cushioning device, adapted to interchangeably engage said lugs.

1,462,831. CARRIER FOR SUIT BOXES. SOLOMON SCHUMAN, Denver, Colo. Filed July 31, 1922. Serial No. 578,801. 1 Claim. (Cl. 224—49.)

A suit box carrier comprising a side member formed from a wire having the intermediate portion thereof bent to form a handle, the free ends thereof being bent to form hooks; an intermediate U-shaped portion having its free ends formed into hooks, the hooks of the side member engaging the base portion of the intermediate member to form a hinged connection; a second side member bent intermediate its ends and hingedly connected to the hooks in the ends of the intermediate member, the free ends of the second side member being bent substantially at right angles to form means for connecting the two side members together.

1,462,832. HUMIDOR. HOWARD A. SHAW, Yonkers, N. Y. Filed Oct. 30, 1920. Serial No. 420,768. 3 Claims. (Cl. 131—30.)

2. A humidifier comprising a receptacle, a perforated closure therefor, outwardly pressed portions in opposite sides of the closure to form recesses on the interior of the closure, a resilient perforated plate slightly longer than the width of the receptacle adapted to have its opposite ends snapped into said recesses, and absorbent material disposed between the plate and the top of the closure and extended entirely across the same and retained in engagement with the top.

1,462,833. PISTON ROD. HAROLD A. SOULIS, New York, N. Y., assignor to Wilbur T. Soullis, New York, N. Y. Filed Jan. 31, 1917. Serial No. 145,575. 19 Claims. (Cl. 74—17.)

3. A connecting rod having a hollow shank portion formed from pressed metal and provided with reinforcing ribs extending longitudinally thereof, one of said ribs being formed by permanently united integral flanges.

1,462,834. VALVE. ALFRED STENWALL, Kewanee, Ill., assignor to Walworth Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed July 3, 1922. Serial No. 572,691. 4 Claims. (Cl. 286—31.)

1. In a valve having a valve stem, packing around the stem and a packing-retaining member movable into an out-of-the-way position on the stem during the packing of the valve, the combination therewith of means for holding said member in an out-of-the-way position on said stem during the packing of the valve.

1,462,835. COMBINED BOARD AND METHOD OF MAKING THE SAME. WILLIAM STERICKER, Pittsburgh, Pa., assignor to Philadelphia Quartz Company, a Corporation of Pennsylvania. Filed Jan. 4, 1921. Serial No. 434,958. 2 Claims. (Cl. 154—40.)

1. The process of forming a combined board having a plurality of plies of material which consists in coating one of the adjacent surfaces of said plies with an adhesive comprising a 34° BÉ. solution of sodium silicate in which the proportion of sodium oxid to silica is as 1 to 4, bringing said plies together, and applying pressure thereto to cause said adhesive to unite said plies.

1,462,836. ROLLS FOR TENSIONING, LEVELING, AND STRAIGHTENING BAND SAWS. RICHARD K. THOMAS, Vicksburg, Miss. Filed July 13, 1921. Serial No. 484,364. 1 Claim. (Cl. 76—27.)

In a machine for treating band saws, the combination of upper and lower rolls, one of said rolls having a single working surface which is convex in cross section to engage the saw and the other of said rolls having a working surface which is concave in cross section and also a working surface which is convex in cross section, and means for shifting one of the rolls endwise whereby either the concave surface or the convex surface of the second-mentioned roll may be brought into operative relation to the convex surface of the first-mentioned roll.

1,462,837. TIRE FILLER. SALVATORE VITALIANO, Hazleton, Pa. Filed June 30, 1922. Serial No. 571,869. 1 Claim. (Cl. 152—2.)

A tire filler comprising a substantially annular hollow body of cork, and a substantially compact core of feathers and chaff occupying the interior of the said body.

1,462,838. GUMMING MACHINE. ALBERT T. WALRAVEN, Dallas, Tex. Filed Oct. 18, 1921. Serial No. 508,459. 5 Claims. (Cl. 91—47.)

1. In a gumming machine, a support, an endless belt mounted on the support, retaining means disposed over the belt and moving therewith, a revolving imprinting device mounted immediately over the belt, means for supplying said device with glue, and a plurality of diverging conveyors receiving the work in sequence after it passes from the belt.

- 1,462,839. PHONOGRAPH REPRODUCER DIAPHRAGM. CHARLES WHITEFIELD, Victoria, British Columbia, Canada. Filed Mar. 25, 1920. Serial No. 368,795. 2 Claims. (Cl. 181—32.)

1. A reproducer diaphragm, composed of a plurality of sectors, mounted on a parchment or like base, all sectors cross sectionally tapering in thickness toward the center and consisting of quarter-sawn wood to enable the convergence of the grain toward the center for uniform vibration.

- 1,462,840. METHOD OF DETERMINING FREE PHOSPHORIC-ACID CONTENT. JAMES F. WILKINSON, Savannah, Ga. Filed Apr. 17, 1922. Serial No. 553,739. 2 Claims. (Cl. 23—30.)

1. The process of determining the free phosphoric acid content of acid phosphate which comprises extracting the acid from a known amount of acid phosphate with a known quantity of alcohol, and titrating the solution obtained with an alkalimetal hydroxid.

- 1,462,841. BUILDING CONSTRUCTION. FRANK YOKEL, Pittsburgh, Pa. Filed Sept. 20, 1919. Serial No. 325,090. 3 Claims. (Cl. 72—39.)

1. A building wall comprised of parallel outer and interior tiers of bricks laid one upon the other in staggered relation, the bricks in each tier all being alike and like the bricks in the other tier, each brick having its inner side face provided with a recess disposed between flanges at opposite ends of the brick, the recess extending across the thickness of the brick and having a length substantially greater than half the length of the brick, whereby communicating flues are formed between the two tiers of bricks.

- 1,462,842. PNEUMATIC SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1921. Serial No. 493,566. 30 Claims. (Cl. 230—24.)

1. In combination, a compressor, a reservoir, an automatic controller for the compressor connected to the reservoir, and a control valve in communication with said connection for making a reduction in pressure in said connection to start the compressor said reduction being temporary only.

- 1,462,843. WHEEL PULLER AND EMERGENCY HUB. EARNEST D. AINSWORTH, Boneta Springs, S. Dak. Filed Dec. 31, 1921. Serial No. 526,440. 3 Claims. (Cl. 29—85.)

1. A device of the class described including a nut for engagement with the thread of a wheel hub and equipped with spoke embracing means, and a feed screw movable through the nut to impinge the wheel axle.

- 1,462,844. CHARGE PREHEATING AND VAPORIZING DEVICE. JOHN OSCAR ANDERSON and OSCAR P. PETERSON, Ely, Minn. Filed May 10, 1922. Serial No. 559,962. 5 Claims. (Cl. 123—122.)

1. The combination with an exhaust manifold of an internal combustion engine, an intake manifold, a fuel supply device, of means for volatilizing, vaporizing and preheating the fuel as it passes from the fuel supply device to the intake manifold, said means comprising a valve casing adjacent the exhaust manifold, a pipe carried by the valve casing and extending into a preheating chamber carried by the exhaust manifold, spaced needle valves cooperating with valve seats, a three way plug valve rotatably mounted in the valve casing and cooperating with a fuel supply port and ports controlled by the needle valves, a pipe connection direct to the intake mani-

fold from the port controlled by one of said needle valves, means for admitting air through a port in the plug valve to the last named needle valve, and means whereby by

rotating the plug valve fuel will pass by the other needle valve to the preheating chamber and a pipe connection between the preheating chamber and the intake manifold.

1,462,845. CARBURETING APPARATUS FOR INTERNAL-COMBUSTION ENGINES. JOHN B. BARTHOLOMEW, Peoria, Ill., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Filed Apr. 23, 1913, Serial No. 763,115. Renewed May 29, 1920. Serial No. 385,387. 3 Claims. (Cl. 261—18.)

1. The combination with the engine duct 19 and the ducts 14, 14^a, of two fuel carbureters respectively connected to ducts 14, 14^a, one carbureter adapted to volatilize light hydrocarbon fluid, and the other adapted to volatilize heavier hydrocarbon fluid, the last said carbureter having a reduced passage through which air is drawn as a reduced stream past the fluid supply, means for supplying water to said passage, a duct leading air to said passage which under suction vaporizes the water and the hydrocarbon fluid, supplemental adjustable automatically acting devices for admitting air and commingling it with the mixture from said passage, a throttle valve in each of said ducts 14, 14^a, manually controllable means connecting said valves together for holding them in predetermined relative positions and simultaneously operating them, and a cut off valve for the duct 19 adapted to cut the ducts 14, 14^a either partially or entirely off from communication with the duct 19.

1,462,846. WATERPROOF CIGARETTE CASE. ELWOOD G. BELL, Chicago, Ill. Filed Nov. 18, 1921. Serial No. 516,122. 2 Claims. (Cl. 206—38.)

1. A cigarette case including a casing having a rounded side and an opening in one end adjacent said rounded side, a partition in the casing extending across the opening defining two compartments, a match container sub-

stantially semicylindrical located in the smaller of the two compartments, said container having an opening in

one side wall, a pair of flanges on the flat side of the container, a strip of abrasive material held between said flanges, and a closure for opening the casing.

1,462,847. DEVICE FOR DISTRIBUTING PULVERULENT OR GRANULAR MATERIAL CONTINUOUSLY SUPPLIED IN A CONTROLLED STREAM. HEINRICH BEHRENS, Brunswick, Germany. Filed Mar. 14, 1923. Serial No. 625,094. 4 Claims. (Cl. 221—121.)

1. Device for distributing pulverulent or granular material continuously supplied in a controlled stream, consisting of a plurality of tubular sections disposed substantially tangentially around a circle and forming a drum, said drum being rotatable and having an inlet through which a stationary supply spout projects, each of said tubular sections constructed to intercept the supply of material into the preceding tubular section shortly before said preceding tubular section is in discharging position.

1,462,848. INTERNAL-COMBUSTION ENGINE. GASPARD BERRY, Brussels, Belgium. Filed Sept. 2, 1921. Serial No. 498,033. 6 Claims. (Cl. 123—8.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. In an internal combustion engine of the drum type having crescent-shaped chambers, the combination of three drums of different lengths and diameters of which the central drum is the smallest one, said drums being arranged so, that the inner faces of the bases of the middle drum abut against the outer faces of the bases of the central drum and the outer faces of the bases of the middle drum abut against the inner faces of the bases

of the outer drum and that the inner circumference of the middle drum abuts on one side tangentially against the outer periphery of the central drum and on the opposite side with its outer periphery tangentially against the inner circumference of the outer drum, a hollow concentric shaft, a hollow piston fixed on the said shaft driving the rotary drums, a rockable joint member provided on the eccentrically mounted central drum and an automatic obturator for the piston fixed to the said rockable joint member, a constantly open fuel opening in said shaft and a constantly open exhaust port in the outer drum.

1,462,849. ILLUMINATED SIGN. SAM CHRISTENSON and ARTHUR E. CHRISTENSON, Fergus Falls, Minn. Filed Feb. 16, 1923. Serial No. 619,529. 3 Claims. (Cl. 40—130.)

1. A sign comprising a housing having an open front wall, a transparent plate in said open front wall, an angularly positioned reflector within said housing, a second reflector positioned adjacent the top of the housing parallel thereto, and a stencil plate arranged immediately below said second reflector in parallelism thereto.

1,462,850. PROFILE-DEFINING APPARATUS. EGBERT N. CLARK, Rochester, N. Y. Filed Feb. 28, 1922. Serial No. 539,894. 11 Claims. (Cl. 25—12.)

1. A profile defining apparatus comprising a plurality of relatively adjustable members, each having a section of a profile thereon, two proximate members being mounted to turn about a common axis at the junction of the profile sections thereon, and the other members being shiftable bodily with reference to said two members.

1,462,851. PROCESS FOR UTILIZING RESIDUAL HEAT. AUGUSTUS S. COOPER, Santa Barbara, Calif. Filed Oct. 7, 1921. Serial No. 506,053. 3 Claims. (Cl. 94—42.)

1. A process of the class described consisting of first beating the road surface, placing bituminized sand rock over the heated surface, covering the same with hoods that will confine the heat, and allowing the hoods to

remain in place until the asphalt in the sand rock is softened by the heat retained in the surface of the road, raking the bituminous sand rock to a uniform thickness

over the surface of the road, and when in a spongy condition strewing the surface with hot broken stone and afterwards rolling so as to form a smooth surface.

1,462,852. AUTOMATIC GUN. ARTHUR TREVOR DAWSON, GEORGE THOMAS BUCKHAM, and CARL ALFRED LARSSON, Westminster, London, England, assignors to Vickers Limited, London, England. Filed May 22, 1923. Serial No. 640,717. 6 Claims. (Cl. 89—3.)

1. In an automatic gun of the barrel recoiling type having a lock provided with an extractor, the combination of a rotary cartridge-holding member and means for moving the cartridges one at a time by the movements of the barrel, into a position for engaging with the extractor of the lock.

2. In an automatic gun of the barrel recoiling type having a lock provided with an extractor, the combination of a cartridge drum, means for angularly displacing said drum step by step by the movements of the barrel, a feed member operated by the movements of the barrel and means for depositing a cartridge from said drum into said member.

1,462,853. WASTE CONTROL FOR BASINS. WILLIAM H. DEHN, Cleveland, Ohio. Filed Nov. 30, 1921. Serial No. 518,841. 2 Claims. (Cl. 4—24.)

1. In a device of the character described, the combination with a bowl having a waste outlet and a stopper for closing the said outlet of a fitting extending down from said waste outlet, a pipe section mounted in the side connection of said fitting, a casing supported by said pipe section, said casing comprising a cylindrical portion and a head portion, a stopper lifting lever mounted in said cylindrical portion; said lever having a spherical shaped body portion, a sleeve mounted in said casing and surrounding the spherical portion of said lever, said sleeve having an internal flange at its forward end of less diameter than the diameter of the

spherical portion of said lever, a coiled spring mounted in said casing and exerting a constant pressure against said sleeve, a gland mounted at the opposite end of said casing and carrying a packing ring adapted to bear against the spherical portion of the stopper lifting lever and means for operating said lever.

1,462,854. WASHING MACHINE. FREDERICK FENSELAU and GEORGE W. THOMPSON, Detroit, Mich. Filed Feb. 7, 1920. Serial No. 356,905. 1 Claim. (Cl. 74—101.)

In a washing machine, the combination of a support, a casing secured to one side of the support and a cover for the casing, a three part vertical shaft, the upper and lower parts thereof extending out through the ends of the casing, couplings within the casing and accessible when the cover is removed, which couplings normally connect the parts of said shaft but permit the removal of the intermediate part thereof when disconnected, a worm on the intermediate part of the shaft, and a driving mechanism including a worm wheel in mesh with the worm.

1,462,855. METHOD OF TREATING PISTONS, PISTON RINGS, AND CYLINDERS, AND SPECIALLY-PREPARED PISTON RINGS. OSCAR W. GERLEMAN, St. Louis, Mo. Filed Dec. 7, 1921. Serial No. 520,537. 3 Claims. (Cl. 74—109.)

1. As an article of manufacture, a piston ring having a circumferential groove formed on its lateral sur-

face filled with graphite not to exceed one grain by weight per inch of cylinder diameter held in suspension by paraffine.

1,462,856. PORTABLE TABLE. ARTHUR A. HARTMAN and WILLIAM C. SCHWARZBACH, Janesville, Wis. Filed Oct. 12, 1922. Serial No. 593,998. 4 Claims. (Cl. 45—82.)

1. A portable table comprising means for adjustably engaging a vertical support, an arm extending horizontally outwardly therefrom, a second arm telescopically associated with said first mentioned arm and having a horizontally positioned angularly arranged extension, collars adjustably mounted upon such extension, a table pivotally secured to said collars and adapted to occupy either a horizontal position or an upwardly slanting position, and means upon the under side of said table for engaging a book, said collars having means carried thereby for supporting said table either in its horizontal or upwardly slanting position, whereby said table may be freely rocked into the two positions and retained therein.

1,462,857. VALVE BLOCK FOR COMPRESSORS OR PUMPS. NICOLAI H. HILLER, Carbondale, Pa. Filed Dec. 8, 1921. Serial No. 520,831. 10 Claims. (Cl. 103—3.)

1. A valve block adapted to be secured to a pump cylinder port and having a main passage therethrough for registry with said port, a valve within said block for controlling said passage, and a pair of branch passages leading from said main passage at opposite sides of said valve, and a second valve in said block for controlling one of said branch passages.

1,462,858. APPARATUS FOR THE PRODUCTION OF WEFTLESS RUBBERIZED CORD FABRIC. ERNEST HOPKINSON, New York, N. Y., and ALFRED E. JURY, Rutherford, N. J.; said Jury assignor to Morgan & Wright, a Corporation of Michigan. Filed Oct. 29, 1921. Serial No. 511,498. 3 Claims. (Cl. 154—1.)

3. An apparatus for manufacturing weftless fabric comprising a source of supply of independent cords, means for treating the cords with latex, heated metallic de-

vices for drying the treated cords including a plurality of rows of cans, in combination with, a flexible carrier for maintaining the cords in parallel relation while dry-

ing them, said cords on the carrier being conducted through the two rows of drying cans with their opposite faces alternately in contact with the cans.

1,462,859. STITCHING MACHINE FOR JOINING RUBBER. THOMAS B. HUESTIS, Bristol, R. I., assignor to National India Rubber Company, Bristol, R. I., a Corporation of Rhode Island. Filed Sept. 20, 1922. Serial No. 589,456. 6 Claims. (Cl. 154-1.)

1. A stitching machine comprising a pivotally mounted stitching tool, means independent thereof for rapidly vibrating the same, and means for operatively connecting them upon pressing an article to be stitched against said tool.

1,462,860. IGNITION TIMER. JOHN H. HUNT, Dayton, Ohio, assignor to The Dayton Engineering Laboratories Company, a Corporation of Ohio. Original application filed Jan. 2, 1918, Serial No. 209,845. Divided and this application filed Dec. 11, 1919. Serial No. 344,204. 5 Claims. (Cl. 200-30.)

1. In a timer mechanism, the combination with a support; of a pivoted arm having a hub mounted upon the

support, but insulated therefrom; a contact carried by the arm; a second contact carried by the support; a cam member cooperating with the arm to separate the contacts; a bracket mounted upon the support, but insulated therefrom; a leaf spring having one end thereof attached to the insulated bracket, and another portion partly encircling the hub of the arm, and the free end extending alongside the arm; a block of elastic material exhibiting elastic hysteresis located between the free end of the spring and the arm; and a clip attached to the spring and bearing upon the arm hub.

1,462,861. PLANT-VERMIN-EXTERMINATING STRUCTURE. JOHN M. JORDAN, Summit, Ga.; T. M. Jordan administrator of said John M. Jordan, deceased. Filed Apr. 24, 1920. Serial No. 376,387. 1 Claim. (Cl. 43-148.)

A vermin-destroying structure including a wheel-supported sulky comprising a frame, an axle mounted in the frame, wheels attached to the axle, gearing associated with the axle, a fan device carried by the frame, a poison-containing hopper also carried by the frame, a distributing member associated with the hopper and communicating with the fan device, tubular elements extending from the distributing device, yieldable plant-covering hoods attached to the tubular members and arranged in spaced-apart relation, means for adjusting the hoods laterally, and means for raising and lowering the hoods to different planes in respect to the frame of the sulky.

1,462,862. COMBINATION BOILER. CHARLES R. KLINE, Reading, Pa. Filed Sept. 9, 1920. Serial No. 409,079. 2 Claims. (Cl. 122-225.)

1. In a device of the character stated, a plurality of water holding sections, provided with transverse flues and communicating water passages, and a grate for the reception of solid fuel, in combination with a water holding section adapted to be heated by gas, said latter section having a water connection to said other sections, and a flue in communication with said transverse flues, a gas burner located in the lower portion of said gas heated section, upright water jacketed walls in said gas heated section located on each side of said gas burner, and a support for said gas burner having vertically extending air inlet passages leading from a chamber below said gas burner to the combustion chamber above the latter.

1,462,863. CHEESE PRESS. GUST KOHLMEIER, Manitowoc, Wis. Filed Sept. 18, 1922. Serial No. 588,905 5 Claims. (Cl. 100—55.)

1. In a device of the class described, the combination of a pair of sides having grooves therein, a pressure bar having its ends received in said grooves, heads on said pressure bar, a pair of pulleys, one of said pulleys being mounted on one of said sides, the other of said pulleys being mounted on the other of said sides, a pair of flexible members, one of said members being secured to one end of said pressure bar, the other being secured to the other end of said pressure bar, said flexible members passing over said pulleys and extending directly in the path of travel of said pressure bar, and means for imposing the weight of one end of said sides upon said flexible members.

5. In a device of the class described, the combination of a pair of sides having grooves therein, legs supporting one end of said sides, a pressure bar having its ends slidable in said grooves, resilient means urging said pressure bar in one direction, a pair of flexible members, each secured to an end of said bar, a pulley on each of said sides, each of said flexible members passing over one of said pulleys, and means for imposing the weight of said sides on said flexible members, whereby said pressure bar is moved against the action of said first mentioned means.

1,462,864. CHECK-WRITING FOUNTAIN PEN. MARTIN M. LANG, Brooklyn, N. Y. Filed Aug. 29, 1921. Serial No. 496,217. 6 Claims. (Cl. 120—43.5.)

6. A device of the class described embodying an ink reservoir, a perforating device mounted for reciprocation and adapted to be supplied with ink from the reservoir, and means adapted to roll over the surface of the paper to cause reciprocation of the perforating device.

1,462,865. RESILIENT WHEEL. ERNEST F. LIECKFELT, Detroit, Mich. Filed Mar. 10, 1921. Serial No. 451,394. 11 Claims. (Cl. 152—50.)

1. In a resilient wheel, the combination of a hub, a series of spokes having their inner ends lying against the hub, a series of substantially V-shaped springs between the inner ends of the spokes, wedges, and means to force the wedges between the sides of the springs to press the springs into the spaces between the spokes.

1,462,866. CURTAIN ROLLER. CHARLES O. MATHEWS, Devon, Conn. Filed Jan. 23, 1923. Serial No. 614,355. 6 Claims. (Cl. 156—36.)

1. In a curtain roller, a barrel having a spring tensioned rod therein, end caps for the barrel including inner and outer abutting disks the inner ones received in the barrel ends, bushings receiving the rod ends, said disks having registering central perforations, through which the bushings are passed, the ends of the bushings being headed into engagement with the outer faces of the disks one of the bushings having an oval-like head to clamp the outer convolution of the spring to the inner disk of the adjacent end cap, pawls, and posts for the pawls having ends passed through the inner disk of the other end cap and headed with their heads engaged against the outer disk of the said other end cap.

1,462,867. PHONOGRAPH. WILLIAM VICTOR MEYER, Milwaukee, Wis. Filed July 22, 1922. Serial No. 576,722. 5 Claims. (Cl. 274—9.)

1. The combination of a record and a phonograph located entirely above said record and operable on said

record while said record is stationary for reproducing the sound recorded by said record said phonograph being supported entirely by said record.

1,462,868. PASSENGER TRAIN AND PLATFORM. LOUIS NEWMAN, Chicago, Ill. Filed Dec. 15, 1917. Serial No. 207,372. 24 Claims. (Cl. 104—30.)

4. A passenger train and a platform at which said train may stop to receive and discharge passengers, said train and said platform both having entrances and exits, a platform separator directing persons leaving the train directly to the platform exits thereby preventing them from mingling with persons boarding the train.

1,462,869. LOCK. ADAM PRIMAK, Kenosha, Wis. Filed Apr. 25, 1922. Serial No. 556,396. 5 Claims. (Cl. 70—96.)

1. The combination of a casing, a shackle pivoted thereto and having a transversely slotted locking end, said casing having an opening to receive the locking end of said shackle, a series of slidable spring urged tumblers within said casing, a cylinder provided with a key slot and a series of apertures adapted to receive said tumblers, said cylinder being rotatably mounted within said casing, a slidable block operably coupled to said cylinder and having a tooth adapted to enter the slot in the locking end of said shackle, and a key adapted to enter the slot within said cylinder and to press the tumblers outwardly from the recesses in said cylinder, whereby when the key is inserted the cylinder may be rotated and moved axially to withdraw the tooth from engagement with the slot in said shackle.

1,462,870. MATHEMATICAL TOP. JAMES B. ROGERS, Chicago, Ill. Filed Jan. 7, 1922. Serial No. 527,565. 6 Claims. (Cl. 35—2.)

1. A top comprising a spinnable body provided with a circular ball race, and a ball mounted to travel in said race as the top spins and means for preventing the ball from escaping outwardly beyond the confines of said circular ball race.

1,462,871. MEASURING AND CUTTING DEVICE. IRVING ROSENBERG, East Orange, N. J. Filed June 2, 1921. Serial No. 474,558. 6 Claims. (Cl. 164—41.)

1. A combined measuring and cutting device comprising: cutting means, a measuring scale, and a guide, movable with respect to said measuring scale, for passing a length of material through the plane of the cutting means.

1,462,872. DOORCHECK. ALBERT SCHMIDT, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed Feb. 1, 1922. Serial No. 533,296. 6 Claims. (Cl. 292—275.)

1. A door check, comprising a post fixture which consists of two plates secured together, one of the plates provided with a loop formation forming a knuckle, a T-bolt having a head portion secured in the knuckle when the said two plates of the fixture are secured together, a door fixture through which the stem of the T-bolt slidably engages, and an abutment on the end of the T-bolt for striking the door fixture.

1,462,873. FLY-CATCHING APPARATUS. HENRY C. SHOCKEY and THOMAS FENNELL, Casa Grande, Ariz. Filed Sept. 7, 1921. Serial No. 499,010. 1 Claim. (Cl. 43—111.)

In fly catching apparatus, a main casing having an opening in one side thereof, a holding socket in the main casing in alignment with said opening, guide bars carried by said holding socket, a guide casing carried by said guide bars, tapered elements arranged in said guide casing, a support adapted for insertion in and through the opening in the main casing and having its forward

end removably mounted within said holding socket, a conveyor element bodily mounted upon said support, and means to drive conveyor element.

1,462,874. ROTARY-CYLINDER MOTOR. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 19, 1922. Serial No. 530,481. 5 Claims. (Cl. 121—59.)

1. In a reversible rotary fluid actuated cylinder motor, a main bearing for the cylinder member having three motive fluid distribution passages, one of said passages always being in communication with the atmosphere, and reversing means for causing either one of the remaining two passages to act as an inlet when the other of said two passages is caused to be open to atmosphere, a rotary cylinder member having at least one cylinder mounted to rotate on said bearing, and a port adapted to successively connect the cylinder with the said three passages as the cylinder rotates, whereby properly timed admission to the cylinder through that passage acting as an inlet and early cut-off of the supply and then exhaust from the cylinder is obtained in either direction of rotation of the cylinder member as controlled by the said reversing means.

1,462,875. ELECTRICAL DISPLAY SYSTEM. RAY F. STODDARD, Dayton, Ohio. Filed Oct. 27, 1919. Serial No. 333,833. 13 Claims. (Cl. 177—350.)

3. In an electrical display system, a field of incandescent lamps, two fields of contact couples, one couple

in each field adapted to control one and the same lamp in said field of lamps; a single strip of insulating material adapted to pass between the members of each field having perforations which permit only predetermined couples to contact, means for moving said strip intermittently to bring new sections thereof successively between the fields of contact couples, and means for holding the strip stationary between either of the fields of contact members while it is moving with reference to the other field of members.

1,462,876. METHOD OF MANUFACTURING CONNECTING PINS. ELMER M. SUMMERHAYS, Hammond, Ind., assignor to Frederic Schaefer, Pittsburgh, Pa. Filed Jan. 27, 1922. Serial No. 532,320. 2 Claims. (Cl. 29—164.)

1. The method of forming a cylindrical blank and in a single operation a headed pin having a forged entering end, which comprises spreading laterally, by the same dies used for forging the entering end of the pin, the other end of the blank to form an elongate head overhanging the body of the pin.

1,462,877. DISPLAY-RACK ATTACHMENT. EDWARD B. WESTON, Dayton, Ohio. Filed Apr. 16, 1923. Serial No. 632,362. 5 Claims. (Cl. 811—14.)

1. In combination with a display rack having an inclined shelf, and an open metallic frame as a back support, in which containers are displayed, a bracket for supporting at the back a container shallower than other containers on the shelf, comprising a member to be attached to the back support, a member to support the back of the shallower container and a member to engage the upwardly facing side of the said container.

1,462,878. JACK. GEORGE WARREN WILLIAMSON, Indianapolis, Ind. Filed Mar. 30, 1922. Serial No. 547,979. 7 Claims. (Cl. 254—106.)

1. A lifting jack comprising a main stem, a load-engaging member slidably mounted on the stem, a pair of

climbing members mounted on the stem and movable longitudinally and laterally, a pivoted operating lever carried by the load-engaging member, interengaging means between said lever and climbing members for causing relative reciprocation of the climbing members upon oscillation of the lever, means for normally causing the

climbing members to actively interengage with the stem in one direction of movement while permitting freedom of movement in the opposite direction, and means permitting lateral movement of the lever to cause lateral shifting of the climbers to permit reverse movement of the climbers on the stem.

1,462,879. CLUTCH FOR DIFFERENTIAL-GEAR-CONTROL MECHANISM. IRVING C. WOODWARD, Syracuse, N. Y. Filed Oct. 22, 1921. Serial No. 509,660. 2 Claims. (Cl. 192—93.)

1. The combination of a clutch operating mechanism, with a clutch comprising a pair of elements having coacting shoulders on their opposed faces, yielding means normally holding said elements in driving relation to each other, a pair of rotatable members having opposed cam surfaces, one of said rotatable members being axially stationary, the other of said rotatable members being axially movable and connected to one of said clutch elements by rods extending through said one member, and wedging means coacting with said cam surfaces for moving said other member away from said one member to disengage said clutch elements.

1,462,880. HANDLE FOR PIE PANS. HELEN SOPHIA ALTMAN, Elcho, Wis. Filed Mar. 24, 1923. Serial No. 627,525. 1 Claim. (Cl. 53—6.)

A pie pan having its peripheral wall provided with a bead at its upper edge, a handle formed of a doubled strand of wire having its inner ends turned into the

bead, said handle bent upwardly at a distance from the bead and also bent outwardly a distance from the top of the pan edge.

1,462,881. METHOD FOR PRODUCING FLUID-SEPARATING MEDIUMS AND FLUID-SEPARATING MEDIUM PRODUCED THEREBY. THOMAS M. CHANCE, Philadelphia, Pa. Filed Jan. 25, 1922. Serial No. 531,770. 6 Claims. (Cl. 83—85.)

1. The method for producing composite separating mediums for use in the separation of materials of unlike physical properties which consists in suspending in a liquid a plurality of intermixed comminuted solids substantially insoluble therein and of different specific gravities and in so proportioning the volumetric percentages of said solids and of said liquid as to attain the desired specific gravity of said medium.

1,462,882. RECEIVING SYSTEM. HENRI CHIREIX, Paris, France. Filed Mar. 24, 1922. Serial No. 546,465. 12 Claims. (Cl. 250—2.)

1. In signaling systems, a calling device, comprising a circuit adapted to oscillate, means responsive to signals adapted to control the oscillation of said circuit, a vibrator cooperating with said circuit and an integrating device having a portion adapted to be alternately utilized in response to the actuation of said vibrator to control an indicating device.

1,462,883. PROCESS AND APPARATUS FOR MAKING CONFECTIONS. WILLIAM S. CLOUD, Peoria, Ill., assignor to James D. Roszell, Peoria, Ill. Filed May 2, 1923. Serial No. 636,071. 12 Claims. (Cl. 107—1.)

1. The process of coating candy centers and enveloping said coated centers with materials, which consists in continuously moving said centers and during such movement subjecting the same, first to a coating of plastic material to enrobe said centers and then without appreciably cooling enveloping said enrobed centers with a multiplicity of edible units.

6. In an apparatus of the character described, in combination, means for moving candy centers, means for enrobing said centers with a coating of plastic material as they are moved, and means for enveloping the enrobed centers with a multiplicity of edible units during the movement of said centers.

11. In an apparatus of the character described, in combination with a continuously operating coating means

for enrobing sandy centers with a plastic material, of means for enveloping said enrobed centers with a multiplicity of edible units, and means to separate the enveloped centers and the surplus edible units.

1,462,884. WHEEL. EDWARD J. DOTTERWEICH, Syracuse, N. Y., assignor to Oliver Frederick Cabana, Buffalo, N. Y. Filed Jan. 4, 1922. Serial No. 526,975. 20 Claims. (Cl. 301—65.)

14. A hollow cast metal wheel comprising substantially sector shaped sections each including a hollow felly section, a hollow spoke and a hollow hub section cast integrally with each other, the spoke section extending in a generally radial direction and opening directly into the felly and hub sections, a channel shaped connecting member arranged within adjacent end portions of adjoining felly sections and having a brace extending across the open side thereof, and means for holding said member and the coating felly section in proper relation to each other including an integral projection on one of said coating parts in interlocking engagement with the other, said parts being welded together adjacent said projection.

1,462,885. SADDLE. ARCHIE W. HAWKINS, St. Louis County, Mo., assignor to Simmons Hardware Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 8, 1921. Serial No. 459,687. 5 Claims. (Cl. 54—44.)

2. A saddle provided with a saddletree having side bars, an abruptly depressed semicircular portion being formed in the rear portion of each of said side bars at its inside margin, said depressed portion being in the top face of the bar, and stirrup straps secured to said saddletree.

1,462,886. TYPEWRITING MACHINE. WILLIAM H. HULSE, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed June 12, 1920. Serial No. 388,401. 14 Claims. (Cl. 197—83.)

1. In a typewriting machine, the combination with a traveling carriage, of letter-feeding type-keys, silent keys, an escapement-actuating device universal to said letter-feeding keys and said silent keys, a device tending to lock said escapement-actuating device in actuated posi-

tion when moved thereto, and means, universal to said letter-feeding keys but not to said silent keys, for pre-

venting the locking action of the locking device when the escapement-actuating device is actuated by the letter-feeding keys.

1,462,887. TEMPERATURE ALARM. OSCAR H. LUDEMAN, Glen Ridge, N. J. Filed Dec. 20, 1921. Serial No. 523,792. 9 Claims. (Cl. 116—102.)

2. A signal comprising a hollow support adapted to receive a fluid, a sounding device loosely mounted on said support for movement thereon to sound an alarm, a device movably affected by changes in temperature and located within said support to be affected by the temperature of the fluid therein, and a controller operatively connected with said device and with said sounding device to control the movements of the latter.

1,462,888. DENTAL SUCTION PLATE. JACOB PETRY, Pittsburgh, Pa. Filed Apr. 18, 1922. Serial No. 554,386. 3 Claims. (Cl. 32—4.)

1. The combination of a plate having a seat formed therein with an undercut groove, and a suction element having upper and lower reversed cup-sections, one cup-section engaging said seat.

1,462,889. BICYCLE SLED. ADELBERT T. SLATER, Bay City, Mich. Filed Nov. 1, 1922. Serial No. 598,330. 1 Claim. (Cl. 280—16.)

As a new article of manufacture, a runner for the device of the class described including a body having overhanging shoulders extended along its upper longitudinal edges, plates disposed under the shoulders and extending below the underface of the body said body provided on its underface with a centrally located longitudinally extending channel.

1,462,890. SPIRAL CASING. HARVEY BIRCHARD TAYLOR, Philadelphia, Pa. Filed Apr. 30, 1920. Serial No. 377,735. 28 Claims. (Cl. 253—120.)

1. A volute casing for a turbine or pump subdivided into a plurality of separate cast sections by a series of transverse planes, at least one of which sections is further subdivided into two smaller sections by two planes diagonal to the axis.

1,462,891. RESILIENT WHEEL. GEORGE E. VINNEDGE Portland, Oreg. Filed Sept. 25, 1922. Serial No. 590,534. 5 Claims. (Cl. 152—28.)

2. A vehicle wheel comprising a disk hub member provided upon its periphery with a plurality of radial projections integral with it and having mounted thereon and interlocked in position by means of said projections a plurality of concentric metal bands having similar radial projections integral with them, the said bands alternating with a corresponding number of resilient bands acting as separators between said metal bands, an outer band or felloe provided upon its inner surface with a plurality of depressions corresponding with the number of projections upon the bands and fitting closely over the outer separator band of resilient material and interlocked thereon, and upon its outer face a tire.

1,462,892. FRICTION DRAFT GEAR. EDWIN C. WASHBURN, Englewood, N. J. Filed Feb. 5, 1921. Serial No. 442,658. 11 Claims. (Cl. 213—23.)

1. A draft gear having in combination a longitudinal compressible volute plate spring, means for compressing said spring and frictional radially movable means for expanding the same.

1,462,893. VEGETABLE FEEDER FOR POULTRY. WILLIAM WINGROVE, Edgewater, Colo. Filed Feb. 19, 1923. Serial No. 620,069. 1 Claim. (Cl. 119—60.)

A feed container for poultry comprising a strip of sheet metal bent at its extremities to form two wedge shaped

end members; a series of slots formed in said strip between said end members; a rod secured along the upper edge of said strip, said rod terminating at its ends in

downward turned hooks; a second rod secured along the lower edge of said strip with its ends similarly terminated and staples adapted to be fixed in a vertical wall and engaged by said downward turned hooks.

1,462,894. COMBUSTION-ENGINE-LUBRICATING MECHANISM. GOTTLIEB F. ZUCKER, Chicago, Ill. Filed Dec. 19, 1921. Serial No. 523,508. 4 Claims. (Cl. 184—13.)

3. In mechanism of the class described, the combination of a crankshaft carrying a plurality of crank pins to be lubricated, a plate below the crank shaft provided with a plurality of oil pots, one for each crank pin mechanism, separate pipe connections leading from the lower portions of said oil pots to an oil chamber, mechanism carrying oil from said oil chamber and delivering it onto said plate to maintain oil in said oil pots, and means in connection with each oil pot for independently regulating the amount of oil returning from each oil pot to said oil supply means, for the purposes set forth.

1,462,895. PISTON-RING-GROOVE CARBON SCRAPER. CARL AMUNDSON, Spring Grove, Minn. Filed Dec. 7, 1922. Serial No. 605,514. 4 Claims. (Cl. 15—104.01.)

2. A device of the class described comprising a frame of substantially semi-circular shape having a handle at

one end thereof, a radially adjustable tool removably held in one end of said frame, and spaced radially adjustable

guiding means carried by said frame adapted to travel in the piston ring groove.

1,462,896. AUTOMATIC ROVING CHECK. GEORGE R. BARKSDALE and PAUL B. WILSON, Greenwood, S. C.; said Wilson assignor to said Barksdale. Filed Oct. 28, 1922. Serial No. 597,661. 38 Claims. (Cl. 117—28.)

1. In an automatic roving check, means controlled by the roving after it passes the third drawing roll to cause said roving to break between the first and second drawing rolls in the event the roving first breaks after passing said second drawing roll.

1,462,897. CARRIER. ALPHONSO V. BARTO, Bronxville, N. Y. Filed July 3, 1920. Serial No. 393,795. 12 Claims. (Cl. 224—45.)

1. A carrier adapted to support children comprising a flexible means held in extended position, a small area of said means being held at an angle to the remaining area of said means to form a saddle which functions to prevent a child from sliding from said carrier, and a handle associated with said means for transporting said carrier.

1,462,898. STITCHING MACHINE. GOTTFRIED P. BAUMANN, Chicago, Ill., assignor to Ideal Stitcher & Manufacturing Company, Chicago, Ill. Filed June 27, 1921. Serial No. 480,742. 10 Claims. (Cl. 1—15.)

8. In a stitching machine, a clincher-block post base bracket for mounting on the base of the stitcher, a clincher-block post pivotally mounted on said bracket so as to tilt forward from a normal upright position, a treadle pivotally secured to said bracket, interengaging locking plates on said treadle and post to normally lock the post in its upright position, and a link connecting said treadle and post but having lost motion so as to permit a preliminary movement of the treadle to unlock said plates and a further movement to tilt the post.

1,462,899. FURNACE FOR MELTING AND CASTING. GEORGE HILLARD BENJAMIN, New York, N. Y., assignor to Anatmos Metals and Furnace Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1921. Serial No. 507,960. 10 Claims. (Cl. 263—28.)

1. In a structure of the class described, the combination of a tunnel kiln, means for heating the interior of the kiln, a series of melting furnaces, means for leading the melting furnaces, said means being independent of the means for heating the interior of the kiln, and means for moving the melting furnaces through the kiln.

1,462,900. TRANSMITTING AND REVERSING GEAR. RICCARDO BONINSEGGNI, Florence, Italy. Filed Sept. 2, 1921. Serial No. 497,830. 5 Claims. (Cl. 74—34.)

1. Motion transmitting mechanism, comprising, in combination, a driving shaft and a driven shaft, an eccentric carried by the driving shaft, a drum carried by the driven

shaft in concentric relation to said driving shaft, rotatable members carried by said drum and adapted to

be rotated by said eccentric, and means disposed in concentric relation to said shafts and adapted to restrain the rotation of said rotatable members.

1,462,901. SNOWPLOW. GEORGE S. BRECHT, Baltic, S. Dak., assignor to A. L. Stewart, Canton, S. Dak. Filed Dec. 9, 1922. Serial No. 605,960. 6 Claims. (Cl. 37—45.)

1. A snow plow attachment for tractors comprising a frame adapted to be placed in embracing relation to a tractor inwardly of the wheels thereof and equipped with clamps engageable with the front axle and means for connection with the draw-bar mounting, a transverse frame carried by the forward end of said main frame and located in advance of the tractor, a scraping blade carried by said transverse frame and a conveyor mounted within said transverse frame and driven from the power pulley of the tractor.

1,462,902. METHOD OF TREATING ROADWAYS. SAM EVERETT FINLEY, Atlanta, Ga. Filed Nov. 7, 1919. Serial No. 336,453. 3 Claims. (Cl. 94—23.)

1. The method of constructing road surfaces which comprises applying a layer of broken stone or other mineral aggregate to the foundation, wetting the aggregate sufficiently to wash adhering loose foreign matter therefrom and coat and partially impregnate the aggregate with the wetting medium, and covering the wetted aggregate with a penetration coating of heated bituminous binding medium; whereby a better penetration and incorporation of the binder with the aggregate is effected.

1,462,903. APPARATUS FOR APPLYING BINDING MEDIA TO ROAD SURFACES. SAM EVERETT FINLEY, Atlanta, Ga. Original application filed Sept. 21, 1921, Serial No. 502,264. Divided and this application filed Mar. 20, 1922. Serial No. 545,237. 4 Claims. (Cl. 299—34.)

2. Means for applying a coating of binding medium to a road surface including the marginal edges thereof,

comprising a header having a longitudinal series of spray nozzles delivering overlapping sprays of the medium to

the road surface, and a transverse series of spray nozzles at the end of the header to deliver overlapping sprays at the lateral edge of the road surface.

1,462,904. METHOD OF PREPARING BITUMINOUS-CEMENT-AGGREGATE COMPOSITION. SAM EVERETT FINLEY, Atlanta, Ga. Filed July 18, 1922. Serial No. 575,864. 8 Claims. (Cl. 94—23.)

1. The method of preparing bituminous cement-aggregate composition which comprises distributing the various sizes of aggregate uniformly throughout the mass by agitation, and applying a predetermined proportion of binding medium to the mass while the latter is in agitated condition in the form of a uniform spray.

1,462,905. SMOKING PIPE. JOHN B. FROST, Buckley, Wash. Filed Apr. 16, 1921. Serial No. 461,911. 1 Claim. (Cl. 131—12.)

In a pipe for smoking tobacco and the like a plurality of telescoping bowls the innermost bowl adapted to contain the burning tobacco being spaced from the next adjacent bowl throughout except for a supporting annular rim and the outermost bowl being spaced from the next adjacent inner bowl by a helical flange defining a helical passage, said helical passage communicating with the space adjoining the innermost bowl adjacent the supporting annular rim and said latter space communicating with the cavity of the innermost bowl by passages formed in the latter's bottom.

1,462,906. SUPPORT FOR USE IN PACKING BASE-BALL GLOVES FOR SHIPMENT. WALTER L. GRAEFF, Philadelphia, Pa., assignor to George A. Reach, Philadelphia, Pa. Filed Dec. 11, 1922. Serial No. 606,327. 3 Claims. (Cl. 206-7.)

1. A support for use in packing base ball gloves in shipping boxes, comprising a blank having triangular ends bent to one side of the blank into planes perpendicular to said blank, and having integral spaced wings extending from the opposite face of the body of the blank.

1,462,907. BEET-TOPPING MECHANISM. CLARENCE L. GREENING and CHARLES W. GREENING, Breckenridge, Mich. Filed May 24, 1920. Serial No. 383,832. 6 Claims. (Cl. 55-107.)

1. In a beet harvester, a beet topping mechanism including a stationary knife, a rotatable knife, means for rotating the knife, and means for permitting the rotating knife to slide in relation to said stationary knife when a hard object is struck.

3. In a beet harvesting mechanism, a frame, cutting knives carried by the frame, means carried by the frame and arranged in rear of said cutting knives for moving the severed tops therefrom, and an endless conveyor arranged to engage said beet tops and move the same to one side of said frame.

1,462,908. BEET HARVESTER. CLARENCE L. GREENING and CHARLES W. GREENING, Breckenridge, Mich. Filed May 24, 1920. Serial No. 383,833. 4 Claims. (Cl. 55-106.)

1. In a beet harvesting device, a frame, a pair of ground wheels for the frame, a depending U-shaped frame secured to the supporting frame, a pair of inclined pulling bars carried by the lower terminals of the U-shaped frame, an elevating mechanism carried by the supporting frame and including an endless belt and supporting shafts therefor, a second depending U-shaped frame carried by the supporting frame, side bars carried by the terminals of the second U-shaped frame, a rotatable shaft carried by the side bars, arcuate penetrating teeth carried by the shaft and extending radially

therefrom, said shaft being arranged intermediate the pulling bars and the conveyor belt, and means for operatively connecting the ground wheels with the conveyor belt supporting shafts and with the rotatable shaft carried by the side bars.

1,462,909. ROTARY NOZZLE BRUSH. STANLEY F. GULBA, Shamokin, Pa. Filed Sept. 27, 1922. Serial No. 590,936. 3 Claims. (Cl. 15-23.)

1. In a rotary brush, the combination of an ellipsoidal casing having a passage therethrough, said casing constituting two separable halves, and said passage occurring in only one of said halves and comprising two channels passing around an abutment, a water wheel disposed in each of said channels, a shaft joining said wheels, a shaft extending transversely of the said shaft and adapted to support a brush, gearing between said shafts, and the other of said halves having cavities therein for partially receiving said shafts and wheels.

1,462,910. BUMPER FOR AUTOMOBILES. GEORGE HAINLEN, Philadelphia, Pa. Filed Feb. 14, 1923. Serial No. 618,975. 4 Claims. (Cl. 293-55.)

1. The combination of a side frame of an automobile; a bearing mounted on said frame; a bell crank lever pivotally mounted in the bearing; a bumper bar carried by one arm of said lever; and a spring located between the other arm of the lever and the upper surface of the frame.

- 1,462,911. WASHING MACHINE. ADOLF K. HANSON, Chicago, Ill. Filed Aug. 31, 1920. Serial No. 407,239. 1 Claim. (Cl. 68—18.)

In means of the character set forth, the combination of a casing, two pairs of foldably mounted arms connected with the top of said casing and adapted to support the casing in a bath-tub, one of said pairs being laterally adjustable, a rotary member mounted in the casing, and actuating mechanism for said member mounted on one end of said casing.

- 1,462,912. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 17, 1921. Serial No. 515,842. 6 Claims. (Cl. 197—30.)

1. In a typewriting machine the combination of key levers of the second order having upwardly extending arms, type bars, links of different lengths connecting the type bars with the upwardly projecting arms of the key levers, and springs of the same length connected with the type bars in front of their pivots and with the links behind the arms of the key levers.

- 1,462,913. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed July 15, 1922. Serial No. 575,153. 5 Claims. (Cl. 197—183.)

2. In a typewriting machine the combination of a type action comprising a train of positive connections

between the key lever and the type bar, a spring pressed plunger underlying the key lever which at first retards the downward movement of the key lever and finally stops it before the type bar has reached the platen, and a movable support in which said plunger is mounted.

- 1,462,914. VEHICLE HANDHOLD. THEODORE K. JACKSON, Mobile, Ala. Filed Aug. 14, 1920. Serial No. 403,601. 1 Claim. (Cl. 280—150.)

In a vehicle, the combination, with a seat, of a handhold extending transversely of the vehicle on the front portion of the seat-structure below the occupant-bearing portion thereof arranged to be grasped by a person on the seat when inclining forwardly whereby he may prevent himself from being thrown upwardly.

- 1,462,915. TIMEPIECE HOLDER. GEORGE STEELE LOWNDES, Jr., Atlanta, Ga., assignor of one-half to T. T. Flagler, Atlanta, Ga. Filed Nov. 30, 1921. Serial No. 518,890. 7 Claims. (Cl. 58—56.)

2. The combination of a casing adapted to inclose a time piece with its face exposed, and a resilient plate supported by its edge within said casing and adapted to bear against the back of the time piece.

- 1,462,916. LOCK FOR FREIGHT-CAR DOORS. FRED MATHEWS, Chicago, Ill. Filed Mar. 1, 1922. Serial No. 540,146. 10 Claims. (Cl. 292—219.)

1. The combination with the frame of a doorway and a lock secured in a vertical member thereof, of a sliding door for closing the doorway and a counterpart for said lock in its inner surface out of which the lock is kept by said door when the latter is opened, and which interlocks therewith when the door is closed.

- 1,462,917. BARREL-WASHING MACHINE. JOHN H. MILLER, Chicago, Ill. Filed Dec. 17, 1921. Serial No. 522,975. 4 Claims. (Cl. 141—6.)

1. A barrel washing machine comprising a frame, aligned trunnions at the sides of said frame, means for

releasably supporting a barrel in said frame with its axis at right angles to said trunnions, means for turn-

ing said frame about its trunnions and means operating through one of said trunnions for simultaneously rotating said barrel about its own axis.

1,462,918. AUTOMOBILE BRAKE. CHARLES E. NORTON, Loveland, Colo., assignor of one-half to Harry P. Norton, Loveland, Colo. Filed Jan. 23, 1922. Serial No. 531,258. 1 Claim. (Cl. 188—162.)

In a brake operating mechanism, a brake rod, means normally urging the brake rod in one direction, means for moving the brake rod in the opposite direction including a bar provided with a ratchet rack, a plate having spaced ears, a bolt slidably mounted in the ears of said plate and provided intermediate the ears with an enlargement, a spring extending intermediate the enlargement of the bolt and one of said ears and urging said bolt into engagement with said ratchet rack, a pivoted bell crank, a line connection between one arm of said bell crank and the enlargement of said bolt, and a depressible foot pedal including a stud pivotally connected to the other arm of said bell crank.

1,462,919. BUNCH BUILDER. FRANK K. PETREA and WILL J. JORDAN, Columbus, Ga. Filed Dec. 15, 1921. Serial No. 522,587. 6 Claims. (Cl. 242—43.7.)

1. In a bunch builder for bobbin winding machines, the combination with the fulcrum shaft lever of said machine, of a trip-lever for holding said fulcrum shaft lever during the bunch building period, and means for actuating said trip-lever to release the fulcrum shaft

lever, said means embodying a worm shaft driven by an element of the winding machine, a trip-wheel driven by

said worm shaft, and a slidable tripping member adapted to throw said trip lever and operated by said trip wheel at a predetermined point in the rotation thereof.

1,462,920. WIRE HEAD FOR LOOMS. OLIVER J. PICKARD and FRED PICKARD, Philadelphia, Pa., assignors to Joseph Pickard's Sons, Philadelphia, Pa., a Firm consisting of Oliver J. Pickard and Fred Pickard. Filed Feb. 21, 1922. Serial No. 538,269. 4 Claims. (Cl. 139—44.)

3. A wire head comprising a body portion having therein a groove for the reception of a pile wire, and an element adapted to overlie the groove and having a perforation registering with the groove and affording a passage for a flow of solder against the side of the pile wire, substantially as described.

1,462,921. COUPLER DEVICE. FRANK J. REICHMANN, Chicago, Ill. Filed Jan. 24, 1921. Serial No. 439,442. 3 Claims. (Cl. 280—33.44.)

1. A coupler device formed at one end with a depending portion and a portion in the rear of said first-referred-to portion between which a recess is presented, said recess opening through the bottom of the coupler device and at which portion the device is adapted to receive a keeper, the opposed surfaces of said portions being generally upwardly divergent and the lower end of one of said portions extending below the lower extremity of the other of said portions and extending across and beyond the vertical plane occupied by the inner surface of the latter.

1,462,922. FURNACE ATTACHMENT. GEORGE F. SEITZ, Philadelphia, Pa. Filed May 15, 1920. Serial No. 381,691. 4 Claims. (Cl. 110—60.)

1. A furnace attachment comprising a casing located within a furnace in position to be heated by fire therein, a pipe leading from the outside of the furnace into said

casing, means for feeding water into said pipe, a pipe leading from said casing, a mixing nozzle carried by said second named pipe, an air inlet pipe leading from

the outside of the furnace to said mixing nozzle, and a perforated discharge nozzle connected with said mixing nozzle and located immediately above the bed of fire.

1,462,923. SHEET GRIPPER. FRANK C. STEVENS, Cohasset, Mass., assignor to United Printing Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed July 2, 1921. Serial No. 482,166. 15 Claims. (Cl. 271-75.)

1. A gripper for the purpose specified comprising a supporting member adapted to be detachably attached to the belt, and a spring member extending from the free end of the supporting member and having a bend and a portion extending from the bend through an opening in the belt provided with a sheet engaging part, substantially as described.

1,462,924. VENTILATOR. GROVER C. WALKER, Chicago, Ill. Filed Nov. 26, 1921. Serial No. 517,850. 4 Claims. (Cl. 98-22.)

4. A ventilator of the character described including a tubular duct having flaring open ends and having a longitudinally extending opening at its rear wall, a rectangular casing extending from said opening and engaged with the rear wall, a hollow supporting frame through which the outer end of said casing extends and to which it is connected, a series of pivotally supported shutters mounted within said casing, and means for coincidently adjusting the shutters, the supporting frame having parallel, downwardly extending flanges on its lower edge adapted to receive a window between them.

1,462,925. SPRING BINDER POST. WILLIAM WILBURGER, Brooklyn, N. Y. Filed Dec. 12, 1921. Serial No. 521,782. 2 Claims. (Cl. 129-13.)

1. A binder post of the character described formed of a single piece of coiled wire having one end portion of reduced diameter, and a cap having an internally threaded socket to screw over said reduced end of said shank.

1,462,926. CONNECTING-ROD AND PISTON ALIGNING MACHINE. JULIUS C. WILKIE, Winona, Minn. Filed June 7, 1922. Serial No. 566,652. 3 Claims. (Cl. 33-180.)

1. In combination, a base, a pair of straight edges thereon, said straight edges being disposed in the same plane, a shaft saddle on the base, a post extending from said base adjacent said saddle perpendicularly to the plane of said straight edges, a slide adjustably mounted on said post, a pair of projecting straight edges carried by said slide, said projecting straight edges being in a plane parallel to the plane of the straight edges on the base.

1,462,927. DRAFT MOTOR. JOHN YATES, San Francisco, Calif. Filed June 6, 1921. Serial No. 475,223. 2 Claims. (Cl. 253-38.)

1. The combination with an outlet flue, of a casing remote from the flue, an intake pipe leading off from the flue to the casing, an outlet pipe leading from the casing back to a point in the flue above the casing, a rotor in the casing, and a helical conduit extending around and communicating at spaced points between its ends with the exterior of the casing and at its ends with the intake and outlet pipes respectively.

1,462,928. SAFETY FENDER FOR AUTOMOBILES. JOSEPH E. AMADOR, New York, N. Y. Filed Oct. 17, 1921. Serial No. 508,182. 2 Claims. (Cl. 180-83.)

1. A safety device for motor vehicles comprising the combination with the brake setting pedal, of an anvil member carried by the pedal, a hammer member pivoted intermediate its ends and having one end engageable with said anvil, springs engaging the other end of the

hammer for urging the first mentioned end forcibly against the anvil, a slotted guide for the second mentioned end of the hammer, a catch device pivotally

mounted on said guide and engaging behind the second named arm of the hammer device, and collision released means for withdrawing said catch device from engagement with the hammer.

1,462,929. SECTIONAL JOURNAL BOX AND HUB LINER. CHARLES N. BARTON, Indianapolis, Ind., assignor of one-fourth to Fred N. Reynolds, one-fourth to Fred K. Murphy, one-twelfth to Martha E. Davis, and one-twelfth to May E. Reynolds, all of Indianapolis, Ind., and one-twelfth to Evelyn M. Dinnin, New York, N. Y. Filed July 5, 1921. Serial No. 482,514. 9 Claims. (Cl. 64—25.)

5. In a sectional journal box and hub liner, the combination of a wheel hub having a circumferential guide rib on an end thereof, the rib having lock shoulders thereon, and a plurality of segmental liner sections covering the end of the hub and having lateral rim portions embracing the rib, the rim portions being provided with lips engaging the back of the rib and provided also with lugs engaging the lock shoulders on the rib to secure the sections to the wheel hub.

1,462,930. TRACTOR HITCH. GROVER E. BOLLMAN, Sugarcreek, Ohio. Filed Oct. 13, 1921. Serial No. 507,537. 1 Claim. (Cl. 280—33.10.)

A tractor hitch comprising a frame having front and rear transverse bars and end connecting members secured thereto, a bifurcated hitch straddling said rear bar and provided with a bearing roller, a longitudinally rotatable shaft and worm gearing for operating the same disposed at one side of the frame, a sprocket mounted on said shaft and rotatable in a recess formed in the end of

the rear transverse bar, a second sprocket rotatable in a recess in the opposite end of said bar, a sprocket chain trained over said sprockets and connected to the hitch member and a vertical shaft for operating said worm gearing whereby the hitch may be moved to various adjusted positions.

1,462,931. CONTROL MECHANISM FOR MOTION-PICTURE-PROJECTING MACHINES. NORMAN T. BURGESS, Santa Ana, Calif. Filed Dec. 22, 1920. Serial No. 432,611. 4 Claims. (Cl. 88—17.)

1. A motion picture projecting apparatus comprising projecting machines arranged to alternately function, each machine including a rotatable reel having a film strip wound thereon, an electric motor for said reel, electric lighting for said machine, a main switch adapted to close the light and motor circuits for one machine and open said circuits for the other machine, an electric circuit for each machine controlling said main switch, a switch for each of said circuits closed when the film strip of the machine with which it is associated has been unwound from its reel, whereby the main switch is thrown to stop said machine and start the other machine.

1,462,932. BRAKE-ROD ATTACHMENT. JOHN WESLEY CONNELL and JOHN ARMSTRONG, Centralia, Wash. Filed Dec. 15, 1921. Serial No. 522,561. 1 Claim. (Cl. 74—48.)

The combination of a pair of overlapped slidably connected sections, each of which consists of a length of metal bent intermediate its ends to provide a loop and a pair of spaced parallel side rods, the terminal portions of each pair of side rods being extended laterally to form stops, a coiled spring confined between said stops, all of said side rods being received within said coiled spring and held in position thereby, a head having a socket receiving one of said loops, said head being provided with means whereby the same may be connected to a brake operating mechanism, and a link having an offset portion extending through the loop at one end of one of the sections, said offset portion and said head being in the line of said laterally projecting stops to limit the sliding movement of the same.

1,462,933. COLLAPSIBLE QUEEN AND DRONE TRAP. JOHN B. COTTAM, Montecito, Calif. Filed July 21, 1922. Serial No. 576,575. 12 Claims. (Cl. 6—9.)

1. A queen and drone trap comprising a plurality of collapsible sections adapted to be erected in cage forming position and applicable to the front of a beehive to cover the opening thereof.

8. A queen and drone trap comprising a plurality of collapsible sections adapted to be erected in cage forming position and applicable to the front of a bee-hive to cover the opening thereof, and queen holding cells in said trap.

11. A collapsible bee trap comprising a front foraminous panel structure, a top section foldably connected to said structure, a back section foldably connected to the top section, and a floor section foldably connected to the back section and adapted to be folded into co-operative relation to the front structure to provide a separate trapping chamber for queen and drone bees, and end panels for the trap and being hingedly connected to associated elements thereof.

1,462,934. WALL AND METHOD OF MAKING SAME. JOHN SIMON FLUOR, Santa Ana, Calif. Filed Oct. 26, 1922. Serial No. 597,057. 3 Claims. (Cl. 25-131.)

1. The method of building a concrete structure which consists of setting a framework and applying to this a wire fabric and on this supporting a substantially impervious mold side forming paper sheeting, erecting in spaced relation to the said paper sheeting means a temporary concrete mold member, and filling the mold chamber with concrete and permitting the same to set after which the temporary mold work is removed.

1,462,935. MACHINE FOR BENDING PIPE. CARL GABRIELSON, Syracuse, N. Y., assignor to Newell Manufacturing Company, Ogdensburg, N. Y., a Corporation of Maine. Filed June 21, 1922. Serial No. 569,901. 13 Claims. (Cl. 153-46.)

1. In a pipe bending machine, a stationary die, a locking die movable towards and away from the stationary die, a shaft for supporting the locking die, a

bending die rotatable on an axis that is eccentric to the axis of the locking-die shaft, gears for intermittently ro-

tating said shaft for first locking and then releasing a pipe, and a train of gears for rotating said bending die while the locking die is held stationary.

1,462,936. MEANS FOR UTILIZING POWER OF AUTOMOBILES. LORAN J. GOULD, Acme, Wash. Filed Dec. 6, 1922. Serial No. 605,281. 5 Claims. (Cl. 74-106.)

1. In an apparatus for the purpose set forth, the combination of parallel spaced runways, means carried by the rear ends of the runways for transmitting motion, a tongue pivotally mounted between the runways and adapted to be secured fixedly thereto or to depend therefrom whereby to support the runways in an elevated position, and a chock block engageable between the tongue and the runways whereby to lock the runways in the elevated position.

1,462,937. PRESSURE-REGULATING VALVE. BIRCHARD E. HOLTON, Los Angeles, Calif. Filed Apr. 15, 1922. Serial No. 552,952. 1 Claim. (Cl. 50-23.)

An automatic pressure regulating device including a shell, a spring pressed diaphragm therein, a frame secured to the diaphragm, said shell having an end portion forming an elongated bearing part, said frame having a hol-

low stem operatively fitting said bearing and being prevented thereby from having side play; a bushing plug adjustably mounted in the said bearing part, a spring engaging the near end of said stem and the bushing, a valve plug adjustably threaded in said stem, and a lock plug in the stem, and a port member engaged by the valve plug.

1,462,938. COMBINED GEAR AND THRUST BEARING. FLOYD E. KNAPP, Allerton, Iowa. Filed Mar. 26, 1921. Serial No. 455,792. 2 Claims. (Cl. 64—49.)

2. The combination with an engine crank shaft and spaced elements surrounding the shaft and having confronting parallel faces at a right angle to the axis of the shaft, one of said elements constituting a bearing and the other a gland for said shaft, of a timing gear mounted upon the shaft between said elements, anti-friction devices at opposite sides of the gear, and thrust rings bearing between said anti-friction devices and said elements centering the gear between the elements and having flat faces resting against said first mentioned faces directly sustaining and thrust upon the shaft in opposite directions.

1,462,939. WRINGER AND MOTOR SUPPORT FOR WASHING MACHINES. NATHANIEL LOMBARD, Worcester, Mass., assignor to The Lombard-White Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1920. Serial No. 433,314. 2 Claims. (Cl. 74—101.)

1. In a device of the character described, the combination of a bracket adapted to be applied to a washing machine or the like, having a vertical bearing, a casing located above the bearing and having a downwardly projecting sleeve of circular cross-section with a long bearing surface, a vertical shaft extending up through the center

of said sleeve and into the casing, said shaft being in two parts separable by raising the upper one, the lower part of said shaft having a motor armature mounted on and fixed to it, said bracket having the motor magnets fixed in position thereon and depending therefrom, and means in the casing operated by said shaft for transmitting power.

1,462,940. WIPING-DOWN DEVICE. CHARLES H. OSLUND, Worcester, Mass., assignor to The O & J Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 7, 1920. Serial No. 394,467. 8 Claims. (Cl. 216—13.)

2. In a labeling machine, the combination with means for wiping a label on an article, and lapping one end over the other, of a label pressing device, and means for moving said pressing device up and down along the overlapping end from one edge of the label to the other.

1,462,941. BURGLAR ALARM. ALPHONSE PELLETIER, Norwalk, Calif. Filed Oct. 6, 1921. Serial No. 505,704. 7 Claims. (Cl. 116—81.)

5. In a burglar alarm, a base plate, a plate projecting upwardly from said base plate, there being an opening formed in said upwardly projecting plate, a barrel pivotally connected to the base plate, and adapted to swing in a horizontal plane, the rear portion of said barrel being provided with a cartridge receiving chamber, the rear end of which communicates with the opening in the vertically disposed plate, a spring actuated hammer pivotally mounted on the base plate to the rear of the vertically disposed plate, which hammer is provided with a portion that is adapted to pass through the opening in said vertically disposed plate, a hammer retaining member pivotally mounted on the base plate for engaging and retaining said hammer in set position, and a flexible member connected to said hammer retaining member for moving the latter to releasing position.

1,462,942. PNEUMATIC TIRE. JOSEPH A. ROGERS, New York, N. Y. Filed Oct. 11, 1920. Serial No. 416,161. Renewed Feb. 12, 1923. 2 Claims. (Cl. 152—22.)

2. An inner tube including an endless tubular casing of elastic material, a plurality of circumferential partitions located therein defining a plurality of compartments, an

inflating device including a cylindrical casing, a disc formed at one end of said casing having an annular groove to be received between the clincher beads of a tire casing,

said inflating device having a plurality of longitudinal channels therein, a tube formed integrally with the disc and communicating with each channel, and a spring press valve in each channel controlling the passage thereof.

1,462,943. BLOTING APPLIANCE. HENRY ROTTENBURG, Cambridge, England. Filed Apr. 14, 1922. Serial No. 552,567. 3 Claims. (Cl. 120—25.)

3. A blotting appliance comprising a support for blotting material, said support having a concavely shaped inner surface, and means for securing said appliance with its concavely shaped inner surface bearing upon the back of a person's hand, said means comprising a band adapted to pass around the hand of the wearer, one part of said band being fixed to said appliance, a slider and means for supporting the same upon said appliance, means of connection between said slider and another part of said band, and means for adjustably positioning said slider whereby the band may be released or tightened as occasion may require.

1,462,944. CALCULATING MACHINE. KARL VIKTOR RUDIN, Stockholm, Sweden. Filed Mar. 26, 1918. Serial No. 224,822. 6 Claims. (Cl. 235—73.)

1. In a calculating machine, the combination with a setting mechanism including setting discs having shoulders, intermediate gear wheels and a registering mechanism, of

locking members arranged to be actuated by said shoulders mounted on the setting discs and at predetermined times to lock the registering mechanism, said locking members being arranged by the side of the intermediate gear wheels in such a manner that the locking members and the intermediate gear wheels have an approximate common point of contact with the registering mechanism.

1,462,945. AUTOMATIC CARBURETOR CONTROL. WALTER J. SPIRO, White Plains, N. Y. Filed Sept. 22, 1922. Serial No. 589,868. 10 Claims. (Cl. 123—107.)

1. In a carburetor control, an engine provided with intake and exhaust manifolds, a fuel feed controlling device communicating with the intake manifold, and suction and pressure operated mechanism communicating with the intake and exhaust manifolds and connected to actuate said device.

1,462,946. ANTIGLARE DEVICE. CLARENCE STEPHENS, Clay City, Ind. Filed Dec. 28, 1921. Serial No. 525,429. 3 Claims. (Cl. 240—41.)

1. A lamp reflector comprising a concave inner face having an inner circular zone and an annular outer zone, the inner circular zone having a non-reflecting surface formed in the upper half thereof, and the outer annular zone having a non-reflecting surface formed in the lower half thereof.

1,462,947. FLOWER HOLDER. WILLIAM R. STUCK, Los Angeles, Calif., assignor, by mesne assignments, to The Dazey Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 21, 1922. Serial No. 530,804. 4 Claims. (Cl. 47—18.)

1. The combination with a container provided with internally arranged ledges, one of which occupies a plane a short distance above the bottom of the container, of reticulated members positioned upon said ledges.

1,462,948. BEET PULLER. OSCAR A. THOMAS, Oxnard, Calif. Filed Feb. 3, 1921. Serial No. 442,209. 1 Claim. (Cl. 55—106.)

A device for pulling beets and the like comprising dished rotating discs having their convex surfaces facing toward one another and converging rearwardly, said convex surfaces also converging downwardly at their upper portions and then diverging at the lower portions of the peripheries of said discs.

1,462,949. ARTIFICIAL BAIT. HAROLD H. WALLS, Jackson, Mich. Filed Dec. 23, 1919. Serial No. 346,868. 2 Claims. (Cl. 43—35.)

2. A fish decoy comprising a decoy body having a single catch bar, a spring member having limited sliding movement longitudinally of the said body and flexed to provide oppositely disposed hook bearing arms, and a hook member attached to each arm adjacent its inner end, said hook member having its inner end offset to provide a catch member for engaging over the said catch bar, when the said longitudinal adjustable member is moved inwardly of the bar, said arms being tensioned to disengage the bar and spring laterally from the body when the spring member is moved outwardly therefrom.

1,462,950. PLANETARY GEARING. EMILE JOHN WELFFENS, Withington, Manchester, England. Filed July 3, 1922. Serial No. 572,705. 12 Claims. (Cl. 74—34.)

1. Planetary gearing, comprising a drive shaft, a stationary orbit wheel arranged on the drive shaft, a rotary member mounted on and actuated by the drive shaft, a rotary driven element loose on the drive shaft, a set of planetary pinions carried by the rotary member, certain

of the pinions meshing with the orbit wheel and the driven element, a second set of planetary pinions meshing with pinions of the first set, and planetary clutch

mechanism for controlling the pinions to vary the speed and change the direction of rotation of the driven element.

1,462,951. PLANETARY GEARING. EMILE JOHN WELFFENS, Manchester, England. Original application filed July 3, 1922, Serial No. 572,705. Divided and this application filed Mar. 27, 1923. Serial No. 628,124. 9 Claims. (Cl. 74—34.)

1. Planetary gearing comprising a stationary wheel, a drive shaft, a rotary element mounted on the drive

shaft, a planetary pinion meshing with the stationary wheel and having a spindle mounted on the rotary element, spaced planetary pinions carried by the spindle, a wheel housing the said parts and having gear elements meshing with the pinions of the spindle, and planetary clutch mechanism for connecting the pinions of the spindle with the first mentioned pinion.

1,462,952. LAUNDRY RECORDER. HERBERT T. WHALER and WILLIAM A. BRYANT, Miami, Fla. Filed Aug. 18, 1922. Serial No. 582,687. 5 Claims. (Cl. 234—1.)

1. In a recorder of the class described, a plurality of duplicate slips having spaces printed with indicia representing articles and numerals to designate the number of the article, and a holder for the duplicate slips provided with perforations adapted to aline with the numerals on the slips, whereby the slips may be similarly punched or mutilated when a hard pointed instrument is forced through the slips and into a perforation in the holder opposite a certain numeral.

1,462,953. COMBINED SIGNAL AND LICENSE DISPLAY DEVICE. FLOYD BISCH, Philadelphia, Pa. Filed Jan. 26, 1922. Serial No. 531,832. 6 Claims. (Cl. 40—132.)

3. A device of the character described including a box portion having a viewing aperture; integral extensions on the top and bottom of said box portion provided with lenses and a lamp in rear of each lens; and a partition detachably secured between one of said extensions and said box portion, said partition being arranged in position to be reached through said viewing aperture.

1,462,954. ALLOY AND MERCURY DISPENSER. IRA A. BURNETT, Chicago, Ill. Filed Dec. 23, 1921. Serial No. 524,440. 2 Claims. (Cl. 221—96.)

1. In a device of the class described, the combination with a body having a plurality of longitudinally disposed compartments therein and a guideway between

a pair of said compartments, said body also having a transversely disposed opening near one of its ends, the said opening having communication with the said compartments and provided with outlet openings, a valve rotatably mounted in said transverse opening and having a plurality of chambers adapted for alternate com-

munication with said compartments and said outlet openings, radially disposed spaced teeth on the valve in register with said guideway, a spring actuated rack bar mounted in said guideway in engagement with the teeth of the valve and having an extension projecting through the guideway.

1,462,955. DEVICE FOR STRAIGHTENING BENT OR IRREGULAR AXLE HOUSINGS. DAVID CAMP, Cumberland County, N. J. Filed Mar. 6, 1922. Serial No. 541,294. 3 Claims. (Cl. 153—38.)

1. In a straightening device of the character stated, a beam having on opposite end portions respectively an anchor and a straightening member, and an intermediate strut, one end of the latter being adapted to be seated on the article to be straightened, and the other end thereof being provided with a T-head adapted to be seated on said beam, said head having lateral extensions projected beyond the opposite sides of said beam, a plate adapted to be placed on said beam opposite to said head, said plate having lateral extensions projected beyond the opposite sides of said beam, and tightening bolts adapted to be passed through the extensions of said plate and head exterior of said beam.

1,462,956. AUTOMOBILE SHIELD. WILLIAM G. COX, Cleveland, Ohio, assignor to Cox Brass Manufacturing Company, Albany, N. Y., a Corporation of New York. Filed Jan. 2, 1923. Serial No. 610,155. 14 Claims. (Cl. 293—55.)

14. A bumper-clamp for an automobile comprising a pair of separable members, one having a transverse clamping face for the front side and the other a correspond-

ing clamping face for the rear side of a plural number of transverse bumper bars and each member having a longitudinal clamping face for engaging the automobile frame.

1,462,957. METAL WHEEL. LEWIS FINE, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 30, 1919. Serial No. 320,865. 9 Claims. (Cl. 301—66.)

9. In a wheel the combination with a hub, a plurality of spokes radiating therefrom, and a metal channel mounted on the ends of said spokes and constituting a felloe, the edges of the side walls of said channel being turned laterally towards each other, of a plurality of T-bars seated on the base of said channel with their webs extending radially, said webs being notched at their ends to receive the inturned edges of said channel wall, and a felloe-band seated on the webs of said T-bars and said inturned edges.

1,462,958. GAS-PRESSURE REGULATOR. ROBERT GILMOUR and ERNEST E. COOK, Pawtucket, R. I. Filed Mar. 30, 1922. Serial No. 548,252. 3 Claims. (Cl. 50—28.)

1. A gas regulator of the type described comprising an elongated hollow casing having an axial relatively smaller outlet pipe at one end and a similar inlet pipe at the other end, said inlet pipe projecting into the casing axially of the latter for a distance, an inverted cup shaped member loosely fitted in the casing with its side walls in spaced relation to and surrounding the inwardly

projecting end of the inlet pipe and including an upper wall member normally adapted to rest upon the upper end of the inlet pipe within the casing, said side walls of the inverted cup shaped member being provided with a series of horizontal rows of perforations and the upper wall of the same being imperforate and said casing having a body of liquid therein of a depth to extend above the highest row of perforations in the inverted cup member when the latter is normally positioned, said casing comprising a pipe section externally threaded at each end, bushings of similar diameter each having an end edge abutting an end edge of the pipe section and being externally threaded, and internally threaded coupling sleeves connecting the bushing to the pipe section with the joints between the bushings and the pipe sections air tight, said inlet and outlet pipes being threaded centrally through the bushings.

1,462,959. CONVERTIBLE CHAIR. BOYD W. GOEBEL, Jonesville, S. C. Filed Sept. 13, 1922. Serial No. 588,027. 2 Claims. (Cl. 155—45.)

1. A convertible chair comprising a main frame formed of vertical rear posts and vertical front posts of less height than said rear posts, arm rests between said rear and front posts respectively, side panels between said rear and front posts and below said arm rests, a movable receptacle within the space between said panels and designed to form a receptacle for bed clothing, a frame connected to the rear of said receptacle and comprising vertical side bars lying parallel with said rear posts respectively, cross bars connected with said vertical bars, trunnions projecting outwardly from said vertical side bars, guideways carried by the inner sides of said panels and receiving said trunnions whereby said frames and receptacle may be swung to provide a reclining chair and also swung to horizontal position and moved forwardly to provide a bed, such receptacle having a foraminous bottom wall and foraminous side walls and also a foraminous screen carried by each said foraminous side wall respectively and cooperating therewith and with the bottom wall to provide a screened hood for said bed.

1,462,960. MACHINE FOR APPLYING BOX STRAPS. ARTHUR G. G. GUENTHER, Chicago, Ill., assignor to Signode System Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 5, 1920. Serial No. 371,264. 20 Claims. (Cl. 100—15.)

20. A strapping appliance for facilitating the application of tensional banding material to boxes and packages, comprising a roller trackway along which boxes or packages may be trundled, a channel guide for banding material arranged to pass under a box or package on said trackway and to direct banding material, fed endwise into said guide, around the box or package, said guide having two sides normally spaced apart sufficiently

to permit the box or package to pass between them and having a telescoping bottom section, whereby the said sides may move toward and away from each other, without interfering with the continuity of the path for band-

ing material established by the guide, a treadle and connections for causing the two sides of said guide to move together to contact with and exert pressure on two sides of the box or package, and resilient means causing said two sides to recover their normal position.

1,462,961. VALVELESS AIR HAMMER. JOSEPH E. HAGSTROM, Chicago, Ill. Filed Feb. 2, 1920. Serial No. 355,807. 24 Claims. (Cl. 121-17.)

1. In an air hammer, the combination of a barrel providing a tool mounting in its forward end, a rod fixed axially in the barrel and having thereon an enlargement with a forwardly coned face, the rod having an air passage therethrough with ports opening to its face, a cup-like piston guided within the barrel in advance of the enlargement, a spring forcing the piston rearwardly and means to control the air supply to the ports.

1,462,962. ROUTING MACHINE. THEODORE C. HANSEN, Chicago, Ill. Filed Apr. 10, 1922. Serial No. 551,303. 17 Claims. (Cl. 90-15.)

1. In a routing machine, the combination of a laterally-swinging pivoted arm, a vertical head at the forward end thereof, a vertically-movable head connected with said first-named head, cooperating guiding devices carried by said heads, respectively, a cutter-carrying spindle attached to said movable head, means for normally holding said movable head in raised position relatively to said first-named head and means supported by said arm for rotating said spindle.

1,462,963. TOOL. OSCAR D. HAPGOOD, Montague, Mass., assignor to Goodell-Pratt Company, Greenfield, Mass. Filed Sept. 15, 1922. Serial No. 588,304. 13 Claims. (Cl. 74-59.)

1. A tool, comprising, in combination, a frame, a spindle mounted for rotation in said frame, an operating handle mounted for rotation on the frame, gearing be-

tween said spindle and handle and adapted to be actuated by the handle for rotating the spindle at different speeds, and means adjustable in one operation for changing the

relative motion of the gearing and spindle thereby to impart to the spindle alternately a fast motion and a slow motion when the handle is rotated forward and backward respectively.

1,462,964. SEPARABLE FASTENER. ABRAHAM L. HESS, Hesston, Kans. Filed Jan. 8, 1923. Serial No. 611,287. 1 Claim. (Cl. 24-88.)

A garment hook adapted for the use with an eye, said hook formed from a single length of wire and having the usual body portion and bill, one of the free ends of said wire bent to form a coil with a transverse pin extending therefrom, the other end of said wire bent to provide a hook to receive the free end of the pin and then bent back to extend between and parallel to the members of the body portion and forming a central member, a hump formed in the free end of the central member at the entrance to the loop of the bill and extending in close proximity to the bill, the free end of the central member terminating at the outer ends of the members of the body portion.

1,462,965. BALL BEARING. BENJAMIN W. HURD, San Francisco, Calif., assignor to Turbine Fuel Oil Burner Co., San Francisco, Calif., a Corporation of Nevada. Filed July 20, 1921. Serial No. 486,203. 3 Claims. (Cl. 64-58.)

2. The combination, in a ball bearing, of two duplicate discs of different diameters mounted on the inner race of an open side ball bearing, the opening between the outer diameters of the disc being less than the diameter of the balls in the bearing, and the opening between the

discs at their smallest diameter being greater than the balls, to allow free movement of the balls when they are in running position, in connection with an outer ball race and balls.

1,462,966. BRASSIÈRE. INEZ SCOTT JEROME, Chicago, Ill. Filed Apr. 21, 1921. Serial No. 463,247. 5 Claims. (Cl. 2-73.)

5. A brassière comprising in combination a front piece of woven fabric having integral rearwardly extending extensions, strings connected to the ends of said extensions, and means connecting said strings to the sides of the front piece located substantially under the arm pits of the wearer, said connections comprising loops through which the strings pass freely, the ends of the strings extending rearwardly and being secured together intermediate said loops.

1,462,967. BRAKE SHOE. HARRY JONES, Suffern, N. Y., assignor to The American Brake Shoe & Foundry Company, Wilmington, Del., a Corporation of Delaware. Filed May 6, 1920. Serial No. 379,199. 3 Claims. (Cl. 188-257.)

3. A brake shoe comprising a body having a plurality of elongated insert blocks or sections embedded transversely in the body and spaced apart longitudinally of the body, said inserts being substantially dome-shaped in cross section, and a plurality of reticulated metal strips embedded in said blocks or sections and in said body on edge to the wearing face of the shoe for holding the blocks or sections in the body.

1,462,968. REFRIGERATOR. CHARLES A. KETTERER, East St. Louis, Ill. Filed Aug. 9, 1920, Serial No. 402,175. Renewed Feb. 1, 1923. 2 Claims. (Cl. 62-37.)

1. A refrigerator comprising a storage chamber, a refrigerator chamber communicating therewith, a drip pan located in said refrigerating chamber, a liquid container supported in said refrigerating chamber above said drip

pan, an ice container supported above said liquid container and spaced apart therefrom, a perforated lid for said ice container, dampers having graduated openings pivotally secured to said lid for regulating the size of perforation, and plugs for closing predetermined portions of the space between the liquid container and ice chamber.

1,462,969. COMBINATION TAIL LIGHT AND SIGNALING DEVICE. DANIEL A. KRICK, Chicago, Ill. Filed Dec. 7, 1922. Serial No. 605,442. 12 Claims. (Cl. 116-47.)

1. A device of the class described including a casing, a member within the casing and fixed thereto, a movable support within the casing and having a portion extending exterior thereof, a member surrounding the first named member and having one end attached thereto and having the opposite end attached to the support adapted to influence the movement of the support in one direction, means for moving the support in the opposite direction, and a signal head carried by the support and fixed to the exterior portion thereof.

1,462,970. SPRAYER. HARRY D. LATHROP, Chicago, Ill. Filed Sept. 23, 1920. Serial No. 412,316. 4 Claims. (Cl. 299-87.)

1. The method of producing a spray of hot water which consists in delivering intersecting jets of steam and cold water into a body of water and delivering the commingled water and condensed steam under the action of the steam, through a spray nozzle, substantially as described.

1,462,971. CONTAINER FOR MATCHES. SIDNEY ALFRED LEANE, Farrell's Flat, South Australia, Australia. Filed May 16, 1921. Serial No. 470,130. 3 Claims. (Cl. 206-33.)

2. In an improved container for matches wherein an opening is formed in the fixed floor of the match drawer for the admission of a partially consumed match a mov-

able or false bottom for the drawer of slightly less width and length than the interior of the drawer for the purpose of supporting unconsumed matches and separating them from consumed matches which are inserted through openings in the floor of the drawer substantially as described and as indicated in the drawings.

1,462,972. CARTRIDGE MAGAZINE. ISAAC N. LEWIS, Montclair, N. J. Filed Jan. 24, 1919. Serial No. 272,950. 9 Claims. (Cl. 42—50.)

1. A cartridge magazine, comprising a casing having a width sufficient to hold two parallel rows of cartridges in staggered relation with the cartridges of each row in contact with each other and with the cartridges of the other row, and at its upper end symmetrically decreased in width to form opposite guiding surfaces terminating in extremities shaped to partially surround and contact with opposite side portions of a cartridge to exactly position and rigidly hold said cartridge centrally of the casing, and cartridge elevating and supporting means within said casing, the guiding surfaces alternately acting, at successive elevations of said cartridges, to move the uppermost cartridge inwardly upon the uppermost cartridge of the other row, and the latter under the action of said elevating means directly pressing said uppermost cartridge into place between the extremities of the casing.

1,462,973. ENGINE STARTER. WILLIAM L. McGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Oct. 1, 1919. Serial No. 327,754. 20 Claims. (Cl. 290—38.)

1. In an engine starter the combination of an electric motor and its electrical connections including a switch, a rotatable shaft driven by the motor, a driving member adapted to engage a member of the engine to be started and mounted on the shaft for automatic longitudinal movement thereof when rotated to thereupon engage such engine member and for rotary movement therewith when in engagement with the engine member, and manually operated means for initially rotating the shaft to cause

said driving member to so move longitudinally and thereby cause engagement of said members and for subsequently closing said switch to start the motor.

1,462,974. AUTOMATIC CLUTCH-SHIFTING MECHANISM FOR WASHING MACHINES. PETER MAKOWSKI, Chicago, Ill. Filed Mar. 3, 1923. Serial No. 622,482. 6 Claims. (Cl. 74—50.)

1. In a clutch reversing mechanism for washing machines, wherein the said washing machine includes a drive shaft and a reversing shaft together with a pair of clutch elements upon said reversing shaft, and wherein the washing machine further includes a pair of throw collars upon the reversing shaft for the said pair of clutch elements, a swinging member actuated by said drive shaft and being disposed between said throw collars, and means for withdrawing said swinging member from between the said throw collars.

1,462,975. WELL-DRILLING APPARATUS. SAMUEL J. MATHEWS, Sapulpa, Okla., assignor to B-B Manufacturing and Drilling Company, a Corporation of Delaware. Filed Apr. 9, 1920. Serial No. 372,397. 5 Claims. (Cl. 255—4.)

1. In apparatus of the class described, the combination of a well casing, a cutting tool, means forming a well container communicating with the interior of the well casing and discharging adjacent the cutting tool, and means preventing reentrance of discharged water into the well casing.

1,462,976. SADDLE. FREDERICK MESINGER, New York, N. Y. Filed Sept. 7, 1922. Serial No. 586,577. 3 Claims. (Cl. 208—15.)

1. In combination with a vehicle saddle seat having a body plate upholstered on one side and upwardly curved at its rear end, a back rest for said seat also having a

body plate upholstered on one side and the upholstery thereof along one of its marginal edges corresponding in contour to the upper rear edge of the body plate of said seat, and means for detachably and rigidly securing said

back rest to the body plate of the seat with said marginal edge of the upholstery thereof in close proximity to the rear upper end of the upholstery of the saddle seat, whereby the back-rest when applied, constitutes in effect a continuous part of the seat structure.

1,462,977. SASH LOCK. CLYDE S. MORSE, De Kalb, Ill. Filed Mar. 9, 1922. Serial No. 542,287. 1 Claim. (Cl. 292—228.)

In a sash lock, the combination with a base-plate having means to secure it to a sash and provided with a pair of spaced and apertured uprights, of a locking member having a socket at one of its ends and an up-turned portion at its other end, said member being provided with depending and apertured side flanges co-acting with said uprights to support said member, a pivot pin located in the openings of said flanges and uprights, a resilient plug located in said socket and extended outwardly therefrom, a catch member rotatably mounted on the base-plate near the up-turned portion of the locking member, and a spring surrounding said pivot pin and resting at one end against the base-plate and at its other end against the lower surface of the locking member near its end opposite its socket.

1,462,978. MATCH-IGNITING DEVICE. WILLIAM J. MOSHIER, Rochester, N. Y. Filed Apr. 1, 1922. Serial No. 548,869. 8 Claims. (Cl. 44—48.)

1. In a match scratching device, a movable friction device for engaging the head of a match to scratch it,

means for setting said friction device in an initial position by the insertion of the match, said device moving to scratch the match on the withdrawal of the match.

1,462,979. COMBINED CRANK-SHAFT-TURNING TOOL AND AUTOMATICALLY RECIPROCATING MECHANISM FOR SUPPORTING AND OPERATING THE SAME. FRANK H. PETERSEN and ALFRED S. WESTON, Denver, Colo. Filed Sept. 2, 1921. Serial No. 498,001. 6 Claims. (Cl. 82—9.)

1. In a device of the character described an adjustable support, a swivel block mounted thereon, a slide bar mounted in said block having an open head on its forward end adapted to surround a pin of a crank shaft, V-clamp in said head for engaging said pin to maintain a fixed relation between the axis of said pin and the axis of said bar, a swiveled support, a bar mounted therein and pivotally connected at one end to the said open head to prevent lateral variations of the same; a chuck slidably mounted in said open head; a rod extending through the first mentioned slide bar and connected to said chuck; threaded means for moving said rod back and forth, and a cutter in said chuck adapted to engage said pin.

1,462,980. TYPEWRITING MACHINE. MORRIS W. POOL, Brooklyn, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed May 19, 1921. Serial No. 470,818. 31 Claims. (Cl. 197—60.)

1. In a typewriting machine, the combination with a front strike printing mechanism, of means for holding the paper opposite the printing point and for providing a backing for the paper when the printing mechanism is operated, said means and said printing mechanism having an unvarying normal relationship in a fore and aft direction but being relatively separable, the elements composing said holding and backing means remaining unaffected when such separation takes place.

1,462,981. BELT BUCKLE. SAMUEL M. RIKER, Chester, N. J. Filed Aug. 15, 1922. Serial No. 581,997. 5 Claims. (Cl. 24—194.)

1. A belt buckle comprising a face plate transversely slotted adjacent to its respective ends for threading the free end of a belt adjustably therethrough, a pair of laterally spaced guide-lugs inwardly projecting from said face plate intermediate said slots, said guide lugs terminating in keeper lugs spaced in parallel plane from said face plate, a clamp plate having its rearward end doubled back upon itself to provide a forwardly projecting gripping tongue spaced in parallel plane from the main portion of said clamp plate, said gripping tongue having an opening to receive said guide lugs of said face plate, means associated with said opening to engage said guide lugs and keeper lugs to hold said clamp plate operatively attached to face plate, and means for connecting the fixed end of a belt with the forward end of said clamp plate.

1,462,982. MACHINE FOR MAKING LINK MESH AND SIMILAR FABRIC. KARL F. A. ROLLE, Vauxhall, N. J., assignor to Carl A. Binder, Newark, N. J. Filed Aug. 13, 1921. Serial No. 492,025. 25 Claims. (Cl. 140—3.)

1. In a link-mesh machine, the combination of a mesh-fabric support, a wire feed, a cutter for the wire, means for forming links of the cut portions and connecting them to the fabric, consisting essentially of an initial bending pin, a holder for the U-shaped wire, said holder having a vertical and a longitudinal movement, a shaping mandrel on which the link is completed, and a rear forming device that cooperates with the holder.

1,462,983. COMBINATION BAG RACK AND AUXILIARY PLATFORM FOR SCALES. HARRY C. SCHAPER, St. Louis, Mo., assignor to The General Automatic Scale Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 13, 1920. Serial No. 410,047. 6 Claims. (Cl. 265—51.)

1. The combination with a scale and its platform, of a supporting frame projecting upwardly from the scale platform, a hinged auxiliary platform arranged on said

supporting frame and vertically adjustable thereon, and means carried by said auxiliary platform and adapted

to engage said supporting frame for securing said auxiliary frame to the upright platform in its adjusted position.

1,462,984. TIRE CASING. FRANK G. SCHENUIT, Baltimore, Md. Filed Nov. 15, 1922. Serial No. 600,992. 3 Claims. (Cl. 123—13.)

1. An annular casing for vehicle tires having a thickened tread around its outer circumference and provided with side walls each of which has an annular flange or bead around its inner circumference, said casing also having a series of ribs projecting from its outer side wall surface which ribs extend in a direction from the base of the flange or bead toward but terminate at the side edge of the thickened annular tread.

1,462,985. GEAR-GRINDING APPARATUS. CHARLES H. SCHURE, Cleveland, Ohio, assignor to The Lees-Bradner Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 23, 1922. Serial No. 546,076. 22 Claims. (Cl. 51—95.)

1. In apparatus of the class described, the combination of a pair of elements one of which slides relative to the other, a tool rotatably carried by the fixed element, a spindle carried by the slide element and supporting a

work piece for operative engagement by said tool, and means for oscillating said spindle and moving said slide, whereby rolling movement is imparted to said work piece, said means including a pair of abutments fixed in spaced relationship carried by one of said elements and a cam-device having cam-surfaces co-acting with said abutments carried by the other element.

1,462,986. CONVEYER CARRIAGE. ARTHUR L. SHAW, Chicago, Ill., assignor to Chicago Automatic Conveyor Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1918. Serial No. 260,963. 5 Claims. (Cl. 198—73.)

1. An apparatus of the character described for portably supporting a conveyer including in combination with a conveyer, a wheeled frame comprising a main frame, composed of a pair of side members each bent at an intermediate point to provide an upwardly extending part and a laterally extending part, the ends of said parts arranged to receive means for securing the frame to a conveyer; a discharge chute; means to hingedly support the discharge chute on the discharge end of the conveyer; an additional frame adjustably connected to the main frame, having its extended end supporting the discharge chute and link members for pendantly supporting said additional frame from the discharge end of the conveyer.

1,462,987. PROCESS FOR PRODUCING NITRIC ACID BY MEANS OF THE ELECTRIC ARC. WERNER SIMBERT, Laufenburg, Aargau, Switzerland, assignor to Nitrum Aktiengesellschaft, Zurich, Switzerland, a Corporation of Switzerland. Filed May 13, 1922. Serial No. 560,731. 8 Claims. (Cl. 204—31.)

1. The cyclical process of producing nitric acid by means of the electric arc which consists in treating a nitrogen-oxygen mixture in an electric arc furnace, cooling abruptly the gases leaving said electric arc furnace and conserving the heat contained in said gases, absorbing the nitric oxides thus formed by nitric acid in absorption towers, leading the non-absorbed portion of the gases after a treatment adapted to keep their content of moisture below a determined limit back into the electric arc furnace, and feeding pure oxygen and nitrogen continuously in such quantities to the returned gas-mixture that the gas-mixture treated in the furnace contains 50% of oxygen and 50% of nitrogen.

1,462,988. INSTANTANEOUS HOT-WATER HEATER. HYMAN SIROT and HARRY SIROT, New York, N. Y. Filed Oct. 25, 1920. Serial No. 419,555. 3 Claims. (Cl. 122—250.)

1. A water heater comprising a cap, means for attaching said cap to a water pipe, an arcuate flange rigid

with said cap, a core rigid with and depending from said flange, a pair of hollow coils surrounding said core, one of

said coils being rigid with said core, its lower wall being upwardly concave, and the other of said coils provided with a plurality of spaced ignition openings.

1,462,989. KNOCKDOWN MOLD FOR CEMENT GARAGES. LOUIS LE ROY SPELSHOUSE, Baltimore, Md. Filed Apr. 7, 1923. Serial No. 630,467. 8 Claims. (Cl. 25—131.)

1. In a form of molding concrete structures, spaced vertically extending members, horizontally extending members for forming a side of the mold and adapted to be assembled in superposed relation, vertically spaced connecting elements on the vertical members, cooperating connecting elements on the ends of the horizontal members, and brace elements carried by the horizontal members and projecting vertically therefrom to engage an adjacent horizontal member.

1,462,990. SPRING MOUNTING. MATHIAS STADTLER, Chicago, Ill. Filed Sept. 14, 1922. Serial No. 588,125. 4 Claims. (Cl. 5—264.)

1. A spring structure having a coiled spring, a supporting strip beneath it and a clip formed of resilient wire, said clip having a central bend adapted to hold the end

turn of the spring in contact with one surface of the strip, said clip also having integral prongs adapted to engage the opposite surface of the strip and having short up-turned fingers adapted to be sprung into engagement with the edge of the strip.

1,462,991. BUILDING BRICK AND PROCESS OF MAKING SAME. ROBERT L. TAYLOR, Midway, Pa., assignor, by mesne assignments, of one-half to Charles L. McKenzie, Pittsburgh, Pa. Filed Mar. 31, 1922. Serial No. 548,520. 9 Claims. (Cl. 18—47.5.)

2. The process of making building blocks or the like consisting in first crushing ferro manganese slag to a proper consistency, mixing the mass with water to form an intimately associated plastic mixture, holding unitary portions under pressure, and then subjecting the compressed and molded units to steam and drying them, substantially as set forth.

9. A building block or the like composed principally of ferro manganese slag.

1,462,992. VEHICLE SIDE-CURTAIN CONSTRUCTION. HARRIS W. TINKER, Jr., Birmingham, Ala. Filed Mar. 6, 1922. Serial No. 541,366. 11 Claims. (Cl. 296—45.)

1. The combination with a vehicle top and a body having conventional doors, of side curtains movable into and out of operative position and comprising horizontally foldable door sections provided with means for connection to a door for swinging movement therewith, and permanent supporting means for said sections adjacent the top and constructed to permit of folding of the sections beneath the top and providing a vertical axis for the sections to permit a swinging thereof with the door as the latter is opened or closed.

1,462,993. GLASS-MELTING TANK. HARRY G. WILLETTTS, Crafton, Pa., assignor to The Willetts Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 4, 1922. Serial No. 558,378. 2 Claims. (Cl. 49—53.)

1. A glass-melting tank having its lateral walls containing refractory bricks, some having one face provided with ribs, the latter being on the outer surface of said tank.

1,462,994. FURNACE GRATE. THOMAS OWSTON WILTON, London, England. Filed Feb. 2, 1922. Serial No. 533,597. 2 Claims. (Cl. 126—163.)

1. A furnace grate, comprising a plurality of bars secured together, each of said bars having a plurality of apertures adapted to register with the apertures of adjacent bars thereby to form a passage through the grate for conducting air and steam longitudinally thereof, and

baffle plates placed at intervals between adjacent bars, said baffle plates having restricted apertures opening to the apertures of the bars.

1,462,995. CLOSURE DISK. WILBUR L. WRIGHT, Fulton, N. Y., assignor, by mesne assignments, to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed Apr. 15, 1922. Serial No. 552,990. 7 Claims. (Cl. 215—51.)

1. A one-piece pull-tab paper-material closure disk having a vertical cut extending down throughout the major portion of the thickness of the disk but stopping short of its bottom surface to form a very thin bottom wall below the cut, said paper material readily splitting in planes parallel with its upper and lower surfaces, said cut outlining a pull tab, said very thin wall forming the floor of the recess normally occupied by the pull tab and being formed for the passage of a suction tube intermediate the length and width of the floor when said tab is elevated.

1,462,996. MANURE-SPREADER-BODY CONSTRUCTION. GEORGE NORWOOD ALLEN and EUGENE H. BENWAY, Hoosick Falls, N. Y., assignors to Walter A. Wood Mowing & Reaping Machine Company, Hoosick Falls, N. Y., a Corporation of New York. Filed Feb. 2, 1922. Serial No. 533,721. 8 Claims. (Cl. 296—28.)

1. A manure spreader comprising a body having a sill, a bottom cleat arranged below and transversely to said sill, a side-board resting on and above said cleat, a brace

having one end connected to said side-board and its other end passing under said bottom cleat, and a tie bolt passing through said sill, bottom cleat and brace under the bottom cleat, whereby said sill, bottom cleat and brace are rigidly and immovably clamped together and said side-board is firmly secured to said sill and braced against a spreading action due to any weight of material carried within the body.

1,462,997. TUNNELING MACHINE. LOUIS W. ANDERSON, Grand Rapids, Mich., assignor to The Tunnel & Sewer Machine Engineering Company, Buffalo, N. Y., a Corporation of New York. Filed July 21, 1919. Serial No. 312,325. 20 Claims. (Cl. 262—7.)

1. A tunneling machine comprising a rotatable boring head for freeing the material, and a pick-up mechanism for picking up the freed material from the bottom of the bore, comprising a central rotatable receiving chamber to which the material is to be delivered, a chute having a quick-detachable connection with respect to said rotatable central chamber, and a pick-up bucket adjustably secured to said chute.

1,462,998. MOUNTING FOR ELECTRIC MOTORS. ASA F. BATCHELDER, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 26, 1922. Serial No. 577,698. 4 Claims. (Cl. 105—5.)

1. In combination, a shaft, an electric motor for driving said shaft comprising an armature surrounding said shaft, said armature having a nub of greater internal diameter than the external diameter of said shaft, and a yielding support and driving connection between said armature and said shaft comprising members of non-metallic cushioning material surrounding said shaft, said members being fastened to said shaft and to said armature.

1,462,999. LOCKING DEVICE FOR AUTOMOBILES. WILLIAM O. BAYLESS, Knoxville, Tenn. Filed Mar. 3, 1921. Serial No. 449,313. 3 Claims. (Cl. 70—126.)

2. The combination with a steering wheel, controlling levers and quadrants of a motor vehicle, of a pair of members adapted to be interlocked with said quadrants having projections arranged in the path of travel of

said levers, said members being provided with notches to receive one of the spokes of the steering wheel, a

pivoted yoke carried by one of the said members adapted to embrace the other member and means for locking said pivoted yoke in position on said member.

1,463,000. PROCESS OF MAKING PAPER PULP. BURT J. BELLINGER, Dexter, N. Y. Filed July 2, 1921. Serial No. 482,180. 6 Claims. (Cl. 92—20.)

1. The process of making paper pulp comprising digesting the chipped wood and then subjecting the digested pulp directly to carding to separate the fibers.

1,463,001. SPEED-CHANGE WORM TRANSMISSION. MAURICE O. BERG, Chicago, Ill. Filed Mar. 20, 1922. Serial No. 544,980. 14 Claims. (Cl. 74—58.)

1. A variable speed transmission, comprising a driving shaft having a plurality of worms of different inclinations longitudinally spaced thereon, a driven shaft carrying an equal number of worm wheels respectively adapted to engage the said worms, means for tilting the driving shaft to bring a worm into or out of engagement with a worm wheel, means including a slidable shifting rod for sliding the worm wheels on the driven shaft, means actuated by the sliding of the shifting rod, for sliding the worms on the driving shaft to bring any one of the worms opposite the driven shaft, and means actuated by a rotational movement of the shifting rod for operating the said tilting means.

1,463,002. MOTH-PROOF BAG. BARNET BERNSTEIN, Gloucester, Mass. Filed Dec. 20, 1922. Serial No. 608,004. 1 Claim. (Cl. 206—10.)

A moth-proof bag having its front composed of two members, the margin of one member having openings therethrough, and the other member having a pocket formed at its margin, said pocket comprising an inner

and an outer flap between which the margin of the first mentioned member is received, and fastening devices carried by the flaps and engaged through the openings in

said marginal portion and with the opposite flaps, whereby to secure the flaps and the marginal portion closely together.

1,463,003. COMBINATION CLOTHES HANGER AND TROUSERS CREASER. EDWARD V. BOWE, San Diego, Calif. Filed Mar. 20, 1922. Serial No. 545,079. 4 Claims. (Cl. 223—19.)

1. In a device of the class described, a hanger member, creasing members shiftably mounted on the lower portion of said hanger member, other creasing members oppositely disposed to said former creasing members and movable therewith, a handle, tension members secured in each of said oppositely disposed creasing members at one end and pivotally and eccentrically mounted in said handle at the other end and means in connection with said tension members adapted to secure said creasing members in clamped position with each other.

1,463,004. ELECTRICAL RECORDING INSTRUMENT. FRANCIS H. BOWMAN, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,426. 7 Claims. (Cl. 234—5.5.)

1. In a recording instrument, a vertically disposed disc type record chart, a capillary tube bent into a right angle, forming a stylus, a well for holding ink, one of the legs of said capillary tube being adapted to dip within the well, means for moving the capillary tube in accordance with the quantity being measured, and an ad-

justable hinged support for said well whereby its vertical position is rendered adjustable, and whereby it may be swung in a horizontal plane away from the record chart to facilitate the removal of the latter.

3. In an electrical recording instrument, a plurality of flat coils forming the stationary element of the instrument, a plurality of movable coils coacting therewith, a pivoted shaft serving as a common support for the movable coils, control springs each having one end fastened to a stationary part of the instrument, and the other end to the pivoted shaft, a damping device including a rotatable member, a mechanical connection between the movable coils and said rotatable member, a recording stylus carried by said rotatable member, and a chart cooperating with said stylus.

4. In an electrical recording instrument, a stationary element, a movable element, a recording stylus, a rotatable shaft supporting said stylus, a connection comprising a slot and a pin freely movable in said slot between the movable element and said shaft whereby said shaft is rotated in response to the movement of said movable element, and means for adjusting said slot and pin connection for varying the ratio of motion between said shaft and said movable element.

6. In an electrical recording instrument having a stationary element and a rotatable element, a manually operable cam, and means for locking the movable element comprising a rod having its axis at an angle with the axis of rotation of the rotatable element, a pair of spring pressed block cooperating with the ends of said rod to restrain its movement, and a common movable support for said blocks, said manually operable cam being adapted to move said movable support to free the rod.

1,463,005. HEATING UNIT. WILLIAM H. DALTON, Salem, Mass. Filed Nov. 1, 1921. Serial No. 512,080. 6 Claims. (Cl. 219—67.)

1. A heating coil comprising a shell of insulating material having a relatively small bore extending from one end to the other thereof, a heating coil within said bore, a lead wire connected to each end of the coil outside the bore, and means other than the coil for anchoring each lead wire to the shell.

1,463,006. GASOLINE FILTER. MARTIN E. E. DARDANI, Fairfield, Conn. Filed Sept. 7, 1921. Serial No. 499,031. 5 Claims. (Cl. 210—165.)

1. A filter comprising a casing, an inlet at one end thereof, an outlet pipe at the other end and extending into the casing and spaced therefrom to provide a sediment chamber, a screen surrounding said pipe and spaced from it and the casing, and an imperforate cap carried by the screen in alignment with the inlet.

1,463,007. MOLD FOR MAKING BUILDING BLOCKS. JAMES G. DAVIS, Buffalo, N. Y. Filed Apr. 28, 1920. Serial No. 377,371. 6 Claims. (Cl. 25—41.)

1. A mold for making building blocks comprising a stationary horizontal bottom plate, a mold bar movable toward and from the upper rear part of said bottom plate, a fixed inner wall depending from the front edge of said bottom plate, a fixed bottom flange projecting forwardly from the lower edge of said inner wall, an outer wall movable toward and from said inner wall and flange, and two side plates movable toward and from said bottom plate, mold bar, outer and inner walls and said flange.

1,463,008. SOUND-EMISSION DEVICE. MATTEO DE CESARE, Newark, N. J., assignor to The Toy Devices, Inc., Newark, N. J., a Corporation of New Jersey. Filed Sept. 20, 1922. Serial No. 589,290. 11 Claims. (Cl. 46—46.)

3. In a device of the kind described, a bellows having a movable member and a stationary means, a sound emission device having an outlet orifice carried by said movable member and actuated by compression of air in said bellows, a pivoted flap-valve normally closing said orifice and capable of both outward vertical swing and

limited lateral play, a resilient tension means for holding said flap-valve in normal initial closed position, a tripper abutment on said stationary means, and a tripping means on said flap-valve adapted to swing open the latter

when engaging said tripper abutment in one direction and adapted to produce a lateral yielding movement thereof when engaging said tripper abutment in the opposite direction.

1,463,009. PRESSER-BACK MECHANISM FOR PHOTO-PRINTING MACHINES. GLEN M. DYE, Minneapolis, Minn., assignor to Pako Corporation, Minneapolis, Minn., a Corporation of Delaware. Filed Sept. 10, 1921. Serial No. 499,723. 9 Claims. (Cl. 95—77.)

2. In a photo-printing machine, the combination with a transparent plate and its support, of a co-operating presser back mechanism comprising a presser lever, laterally spaced saddle bars yieldingly connected to said lever, and front and rear presser boards, the former being firmly connected to the front ends of said saddle bars and the latter having a yielding connection to said lever.

1,463,010. PROTECTOR FOR CAR GRAIN DOORS AND THE LIKE. HERBERT S. ECKHOUSE, Indianapolis, Ind. Filed July 11, 1922. Serial No. 574,256. 10 Claims. (Cl. 20—30.)

1. In combination with a car having a grain door across the door opening thereof on the interior of the car, a cushioning material protecting strip secured to the

inner wall of the car adjacent an end of said grain door and inclined over and across said grain door end to provide a smooth surface between and connecting the inner face of said grain door with the inner wall of the car.

1,463,011. CONVEYER. ISAAC W. ENGLAND, Passaic, N. J., assignor to Passaic Metal Ware Co., Passaic, N. J., a Corporation of New Jersey. Filed Dec. 1, 1921. Serial No. 519,036. 5 Claims. (Cl. 198—134.)

1. A conveyer comprising spaced chains having side links and connecting pins, supplemental links upon said pins adjacent to corresponding side links of the pins, and supports carried by and extending between opposing supplemental links of the spaced chains.

1,463,012. APPARATUS FOR THE MANUFACTURE OF HORSESHOES. JOHN HANBURY FARRER, Neutral Bay, near Sydney, New South Wales, Australia. Filed Jan. 26, 1923. Serial No. 615,133. 21 Claims. (Cl. 59—37.)

1. In apparatus of the class specified, the combination with forging mechanism and a heating furnace, of a pedestal interposed between the furnace and forging mechanism, a frame mounted on said pedestal for adjustment toward and away from the furnace, a feed trough secured to said frame, grip rollers supported by said trough, a rotatable feed roller beneath said grip rollers, means for intermittently rotating said feed roller, a vertically reciprocating ram mounted in said frame carrying a shear blade, a second trough in alignment with and in spaced relation to the first trough, a shear blade fitted to said second trough, a spring actuated plate hingedly mounted on said second trough to constitute the bottom thereof, and a bearer bar extending transversely of said second trough in the rear of the bottom plate.

1,463,013. CURTAIN, DRAPERY, AND THE LIKE. EDWIN H. FLAGG, Los Angeles, Calif. Filed Apr. 1, 1922. Serial No. 548,872. 2 Claims. (Cl. 41—26.)

1. A curtain or the like made of a body fabric having short projecting strands standing at substantially right angles to the plane of said body, in close relationship to

each other, said body being colored and decorated in figures inwardly of said projecting strands, and the

outer ends of said projecting strands being provided with an adhering bronze-like matter for decorative purposes.

1,463,014. PROCESS FOR MAKING CURTAINS, DRAPERIES, AND THE LIKE. EDWIN H. FLAGG, Los Angeles, Calif. Filed Apr. 1, 1922. Serial No. 548,873. 4 Claims. (Cl. 41—26.)

1. The process of manufacturing curtains and the like which consists in using a fabric having loops of the material projecting from the surface thereof, coloring the fabric through a stencil by means of an air gun for forcing a liquid coloring into the fabric, and applying a decorative matter to the ends of the loops, whereby said decorative matter stands outermost.

1,463,015. ACTUATING DEVICE AND METHOD OF MAKING THE SAME. EMILE J. GUAY, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 4, 1919. Serial No. 335,775. 18 Claims. (Cl. 154—2.)

10. A device of the character described, comprising a tube which is filled with spinable fibers extending lengthwise thereof and held under heavy compression by the wall of the tube, and a holder containing a socket in which the tube and its filler are seated, said filler extending slightly beyond one end of the tube.

11. The method of making devices of the character described which comprises filling an elongated shell with spinable textile fibers and compressing the same by reducing the size of the shell.

1,463,016. WASHING MACHINE. ALONZO HUMBERGER, Chicago, Ill. Filed June 29, 1921. Serial No. 481,221. 8 Claims. (Cl. 68—18.)

8. The combination with a washing machine comprising a tub and a passageway connected therewith at top and bottom for the circulation of washing water or drying air, of a heating chamber below said passageway, a heat producing device in said chamber, flues extending upwardly from said chamber through said passageway, a valve housing connecting the upper ends of said flue, a valve shiftable in said housing, means tending to shift said valve outwardly to connect the upper ends of said flues to the exterior of said passageway, a lid for said passageway, and mechanism between said valve and lid operable to shift said valve inwardly when the lid is closed to then connect the upper ends of said flues with the interior of said passageway.

1,463,017. DYNAMO-ELECTRIC MACHINE ADAPTED FOR SYNCHRONOUS WORKING. LOUIS JOHN HUNT, London, England, assignor to General Electric Company, Schenectady, N. Y. Filed Apr. 19, 1921. Serial No. 462,584. 15 Claims. (Cl. 172—274.)

1. A dynamo-electric machine having windings on the stationary part adapted to produce fields of two different pole numbers, and windings on the revolvable part also adapted to produce fields of said two different pole numbers, the windings on one of said parts being of a type wherein currents flow through some of the same coils with different terminal connections for producing fields of the two different pole numbers, in combination with

means for supplying direct current to the windings on the last mentioned portion of the machine in such manner as to produce fields of either of the two said pole numbers.

1,463,018. SHAFT BEARING. OSCAR JUNGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 15, 1921. Serial No. 437,565. 5 Claims. (Cl. 64—22.)

1. The combination with a shaft and a bearing therefor, of a bearing housing which projects beyond the end of the bearing and through the end of which the shaft projects, and means for preventing leakage from the end of the bearing along the shaft comprising a member carried by the bearing housing and providing two annular chambers having open sides facing the shaft, an impeller carried by the shaft and running in the outer chamber, and conduit means connecting the delivery side of the impeller chamber to the inner chamber, said impeller serving to take air from the outside and build up a pressure in the inner chamber to produce a flow of air along the shaft toward the bearing.

1,463,019. THREAD-CUTTING MACHINE. FRANK H. MOONEY, Hinsdale, Ill., assignor to Clarence E. Barrett, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,276. 10 Claims. (Cl. 10—154.)

2. In a threading machine, a pair of aligned socketing means respectively engaging opposite ends of the stock, means for spirally advancing the stock while thus engaged, a circular saw, and sequentially operative means for moving one of the socketing means transversely of

the stock so as to bring the latter into engagement with the edge of the saw, for moving the last named socketing means in the opposite direction, and for increasing the spacing between the two socketing means to cause the latter to release the stock.

5. In a threading machine, a circular saw, a support for the same, a rocker frame pivoted on the support, stock-manipulating means carried partly by the support and partly by the rocker frame and including means for rotating the stock and means for longitudinally moving the stock, and speed reducing means carried by the rocker frame and operatively interposed between the said stock-rotating and stock-moving means.

- 1,463,020. ADJUSTABLE FISHING-LINE BOBBER. OLAF OLSON, St. Paul, Minn. Filed Mar. 18, 1922. Serial No. 544,772. 4 Claims. (Cl. 43—49.)

1. A fishing bob comprising a float body and a releasable clamping means for the line at one end thereof yieldingly held in clamping position by means at the other end of said float body.

- 1,463,021. WALL CONSTRUCTION. CHARLES V. PIERSON, Duluth, Minn. Filed Mar. 16, 1923. Serial No. 625,480. 7 Claims. (Cl. 72—39.)

7. A hollow wall corner construction comprising four coating blocks forming an L-shaped space within said wall about the corner, the terminals of said space being unequal in distance from the corner, and said blocks being reversible in their assembled relation about the corner.

- 1,463,022. DRAFT APPLIANCE FOR AUTOMOBILES. MIKE SEPELYAK, Verona, Pa. Filed Apr. 12, 1922. Serial No. 551,943. 3 Claims. (Cl. 242—95.)

1. A draft attachment for automobiles, comprising a drum secured to the hub of the driving wheel, and including side flanges, one of said flanges having a recess therein opening at the periphery of the flange and a tensioned bolt closing the outer side of said recess.

- 1,463,023. COLLAPSIBLE STEPLADDER. LOUIS SIMONICH, L'Anse, Mich. Filed Dec. 19, 1922. Serial No. 607,806. 1 Claim. (Cl. 228—2.)

In a collapsible step ladder, front and rear frame structures embodying side bars hingedly connected at their upper ends, a top plate removably secured to the upper ends of the side bars, a tensioned spacer removably positioned between the front and rear frames, the side bars, each being formed of upper and lower sections hinged at adjacent ends, cooperating means carried by the sections for maintaining alinement thereof, the hinge connection between the sections including a hinge plate carried by the adjacent ends of each section, and a barrel carried by each hinge plate adapted to receive an end of the tensioned spacer.

- 1,463,024. AUTOMOBILE HEADLIGHT. WILLIAM R. STEINHAEUER and JACOB N. PRUTZMAN, Mount Vernon, Wash. Filed Jan. 24, 1921. Serial No. 439,481. 1 Claim. (Cl. 240—48.4.)

A light deflecting attachment for automobile head lights comprising a metal frame adapted to fit within the headlight, filler blocks mounted transversely in said frame at the top and bottom thereof, parallel horizontal partitions extending transversely of said frame and positioned substantially midway the height of the frame, a series of downwardly inclined partitions extending transversely of the frame above and below the said parallel partitions, said partitions having a non-reflecting upper face and a lower reflecting face, and obstructors extending upwardly at an angle from the rear edge of some of said inclined partitions.

- 1,463,025. BLOTTER. JOHANN STICH, Augsburg, Germany. Filed Dec. 13, 1922. Serial No. 606,765. 4 Claims. (Cl. 120—24.)

3. A blotter comprising a pad of vertically disposed strips of absorbing material, resilient strengthening means passed through and protruding beyond the said

pad, a handle having depending brackets at each end, apertures to conform with and to receive the protruding

end portions of the resilient strengthening means so as to impart to the pad a downwardly directed curvature.

1,463,026. FLUID-PRESSURE BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 3, 1919. Serial No. 301,513 3 Claims. (Cl. 303—18.)

1. In a remote controlled fluid pressure brake, the combination with an application valve device comprising a piston normally subject on opposite sides to fluid under pressure and valve means operated by said piston for effecting an application of the brakes, of a timing reservoir, a magnet controlled valve for venting fluid from one side of said piston to said timing reservoir to effect the movement of the piston to application position, and a by-pass adapted to be opened in the application position of the piston for quickly equalizing the fluid pressures on opposite sides of the piston.

1,463,027. VACUUM-WALLED CONTAINER. RAYMOND SAMUEL WILE and SIDNEY HERBERT GOBAY, New York, N. Y. Filed Dec. 12, 1919. Serial No. 344,275. 4 Claims. (Cl. 215—12.)

1. In a vacuum walled vessel, spaced inner and outer walls of occluding material enclosing a vacuum cham-

ber and having their confronting surfaces coated with non-occluding material to prevent occlusion of gases and polished to reflect heat rays and prevent absorption thereof by said walls.

1,463,028. HAIR CURLER. LOUIS GAETAN AGOSTINI, Paris, France. Filed Feb. 17, 1922. Serial No. 537,296. 7 Claims. (Cl. 132—34.)

1. A hair curler, comprising a tube, a central rod inserted through the bore of the tube and projecting therebeyond at opposite ends; an end piece on one end of the rod; a knob on the other end of said rod; and a spring acting to normally grip the knob to the adjacent tube end and thereby prevent relative rotation between the rod and tube.

1,463,029. COMBINED TROLLEY FROG AND ELECTRIC CUT-OUT. CHARLIE M. ANDREWS, Caryville, Tenn., assignor of one-half to G. Edward Moore, Caryville, Tenn. Filed June 2, 1922. Serial No. 565,479. 7 Claims. (Cl. 191—38.)

1. A combined trolley frog and electrical cut-out comprising a divided frog plate carrying a trolley track and formed with upper and lower recesses adjacent its point of division, said recesses defining intermediate metallic webs electrically separated, said lower recess interrupting the continuity of said trolley track, an insulator seated in the upper recess, functioning as a tension member for holding the divided parts of said frog plate together, a second insulator seated in said lower recess, means for securing said first insulator and a part of said frog plate together, said means engaging said second insulator.

1,463,030. COLLAPSIBLE HOOD OR ROOF OF VEHICLES. GUSTAVE BAEHR, Paris, France. Filed Mar. 31, 1921. Serial No. 457,467. 1 Claim. (Cl. 296—45.)

In a vehicle of the character described, a body having a recess in the outer face of its side, a hinged door for closing the recess, the door when closed being substantially flush with the outer face of the body, and three glazed frames hinged together to fold one upon the other, the middle frame being hinged at one end to the upper side edges of the said recess to swing upwardly and downwardly and the other frames hinged to the side edges of the middle frame to extend laterally therefrom and in alinement therewith or to fold on the same, whereby the frames when not in use and folded can be swung down into the recess and the recess closed.

- 1,463,031. TOOL FOR REMOVING FROM OR APPLYING DIFFERENTIAL GEARS TO THEIR AXLES. WILLIAM C. BAKELS, Midland Park, N. J. Filed Mar. 24, 1922. Serial No. 546,398. 8 Claims. (Cl. 29—85.)

1. A tool for effecting the connection and disconnection of a differential gear and axle section having a frame including means for supporting the axle section for axial movement, means at one end of the frame engageable with the gear for limiting the axial movement thereto in opposite directions, means movable through the opposite end of the frame and engageable with one extremity of the axle section for effecting relative axial movement of the same with respect to the gear in one direction whereby to permit of the disengagement and removal of the gear retaining means, and means movable through the first mentioned end of the frame and engageable with the opposite extremity of the axle section for effecting relative axial shifting movement of said axle section through the gear and the removal of the same therefrom.

- 1,463,032. TOY. RALPHAEL BANTLE, St. Louis, Mo. Filed Oct. 12, 1920. Serial No. 416,444. 6 Claims. (Cl. 46—40.)

2. In a toy, a hollow base having its bottom side provided with a finger inserting opening, a dancing figure positioned above the base, means for supporting and moving the figure, and a concealed manually operated slidable operating member entirely disposed in the base and having one of its ends extending above said finger inserting opening and serving to impart motion to said supporting means, when moved by a finger extending through the opening.

- 1,463,033. TRUING DEVICE FOR GRINDING DISKS. JOHN R. BECKETT, Somerville, Mass. Filed July 17 1919. Serial No. 311,531. 4 Claims. (Cl. 125—11.)

1. The combination with a grinding disk, of a truing device therefor comprising a carriage support mounted for angular adjustment to extend diagonally at either

side of said disk at will, a carriage bearing a truing tool mounted for movement on said support and equipped

with an actuating device coaxial with the axis of adjustment of said support, and means for adjusting the tool transversely on said carriage.

- 1,463,034. CARBURETOR. ASHLEY C. BENNETT, Minneapolis, Minn., assignor to Irene E. Bennett, Minneapolis, Minn. Filed Feb. 10, 1914. Serial No. 817,804. 5 Claims. (Cl. 261—14.)

2. A carburetor comprising a casing forming a vertical passageway, a contracted neck at the bottom of the passageway, means for delivering fuel oil to said passageway at the throat of the neck, said neck being formed with peripheral holes for delivering heated air, and an expanded annular chamber open to the atmosphere at the bottom, a valve comprising a head operating in said annular chamber and adapted to close said bottom opening, and a tubular portion slidable in said passageway and adapted to cover or uncover said ports, said valve being adapted to be raised by the suction of the engine to admit normal air and to cut off heated air when the engine reaches a predetermined speed.

- 1,463,035. INTAKE MANIFOLD. ASHLEY C. BENNETT, Minneapolis, Minn., assignor to Irene E. Bennett, Minneapolis, Minn. Filed Mar. 1, 1917. Serial No. 151,697. 1 Claim. (Cl. 123—122.)

An intake device for gas engines comprising an exhaust pipe formed in two interconnected sections, one of said sections being connected with the cylinders of the engine, an intake manifold secured upon the other

section and having a connection with the carbureter extending through and surrounded by said other section,

and controllable means for causing varying quantities of the exhaust gases to pass through said last mentioned pipe section.

1,463,036. ROLLING-MILL RAGGING MECHANISM. GEORGE J. BRYEN, Duquesne, Pa. Filed Dec. 23, 1920. Serial No. 432,674. 8 Claims. (Cl. 80—5.1.)

1. A rolling mill ragging mechanism comprising a frame, upper and lower ragging disks journaled on pins mounted in said frame, said disks having serrated peripheral faces, an arm having one end secured to said frame for moving said mechanism into place between a pair of rolls, and a counterweight adjacent the free end of said arm.

1,463,037. PROCESS FOR THE MANUFACTURE OF ALKALI-METAL SILICATES. CAMILLE DEGUIDE, Enghien, France. Filed Dec. 24, 1921. Serial No. 524,695. 3 Claims. (Cl. 23—13.)

1. The process of producing alkali-metal silicates, which consists in decomposing barium silicate by water and an alkali-metal salt the acid radical of which forms a barium salt less soluble than barium silicate.

1,463,038. KNIFE-BLADE FUSE. EDWARD H. ELLISON, Jamestown, N. Y., assignor to Monarch Refillable Fuse Co., Jamestown, N. Y., a Corporation of New York. Filed Apr. 27, 1920. Serial No. 376,931. 20 Claims. (Cl. 200—132.)

1. A fuse comprising an insulating casing having substantially smooth unbroken ends, a fusible link therein, a projecting knife blade at each end thereof extending into and forming connections with the fusible link, means for closing the ends of said casing, bridge pieces for aligning said knife blades said bridge pieces engaging said smooth unbroken ends to secure an effective gas-tight joint, held in predetermined position relatively to said casing by means independent of said closing means.

1,463,039. TRIPLE-VALVE DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 27, 1921. Serial No. 480,705. 19 Claims. (Cl. 303—35.)

1. In a fluid pressure brake, the combination with a brake pipe, of a valve mechanism for retarding an emergency application of the brakes and means operated upon an increase in brake pipe pressure for controlling said valve mechanism.

9. In a fluid pressure brake, the combination with a triple valve device for controlling the application and release of the brakes and having a service lap position and a position in which the release of the brakes is retarded, of means for retarding an emergency application of the brakes and a valve device operative upon movement of the triple valve device to the retarded release position for cutting said means into operation and upon movement to service lap position for cutting said means out of operation.

15. In a fluid pressure brake, the combination with a brake cylinder and a triple valve device for effecting a service application of the brakes and an emergency application of the brakes and having a position in which the release of the brakes is retarded, of a valve mechanism for retarding the flow of fluid from the triple valve device to the brake cylinder in an emergency application of the brakes and a valve device positioned upon movement of the triple valve device in effecting a service application of the brakes for establishing a direct communication from the triple valve device to the brake cylinder in an emergency application of the brakes and positioned upon movement of the triple valve device to the retarded release position for cutting off said direct communication.

1,463,040. DOOR AND BRAKE CONTROL DEVICE. ELLERY R. FITCH, St. Louis, Mo., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed June 29, 1921. Serial No. 481,251. 8 Claims. (Cl. 303—6.)

1. The combination with a mortorman's brake valve device for effecting an application of the brakes, of a fluid pressure operated door engine, a manually operated valve device for supplying fluid to said door engine, a main reservoir charged with fluid under pressure, and a valve device operated by fluid supplied to the door engine for supplying fluid directly from said main reservoir to effect an application of the brakes.

3. The combination with a brake cylinder and a mortorman's brake valve device for supplying fluid under pressure to the brake cylinder, of a fluid pressure operated door engine, a valve device manually operable by the conductor for supplying fluid to said door engine, a source

of fluid under pressure, a valve device operated by fluid, supplied to the door engine for supplying fluid from said source to the brake cylinder, and a double check valve for

controlling communication from said last mentioned valve device and from the motorman's brake valve to the brake cylinder.

- 1,463,041. ELEMENT FOR WAINSCOTING. JOSE KÄLIN, Oberwinterthur, Switzerland. Filed Mar. 25, 1921. Serial No. 455,564. 1 Claim. (Cl. 20—15.)

In a wainscoting element, a molding arranged adjacent to one of the longitudinal edges of the element and joining on to a flat portion of the element, the molding being integral with the flat portion and all the parts of the molding projecting above the face of the flat portion so that the molding can be planed off at places to the face of the flat portion.

- 1,463,042. MOTOR SLEIGH. JOHN KRYSIAK, Four Corners, Wyo. Filed June 8, 1922. Serial No. 566,771. 5 Claims. (Cl. 305—6.)

1. In a device of the class described, a driving wheel including a hub, relatively long radial spokes carried thereby, relatively short intermediate spokes carried by said hub, a tread block pivotally secured intermediate its ends to the outer end of each longer spoke, intermediately

positioned tread blocks pivotally secured at their opposite ends to the adjacent ends of the aforesaid tread blocks, and link connection between the pivoted ends of said blocks and the shorter spokes whereby two adjacent tread plates will be intermittently moved into engagement with the ground at one time.

- 1,463,043. LINK. JOSEPH N. LAGASSE, Hyner, Pa. Filed July 7, 1922. Serial No. 573,503. 1 Claim. (Cl. 24—237.)

A link of the class described formed from a single piece of material and providing a main loop and two minor loops, the minor loops being parallel to each other and arranged at right angles to the major loop, the ends of the minor loops extending into the major loop and crossing each other to provide a space between their extremities and converging portions connecting the major loop with the minor loops.

- 1,463,044. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed July 6, 1920. Serial No. 394,112. 5 Claims. (Cl. 110—86.)

1. A wall structure made up of a main masonry outer wall and a replaceable inner facing wall, one of said walls including blocks having lock head seats with entrance throats leading thereto, and the other wall including blocks having necks formed with lock heads, said heads being insertable into and removable from interlocking engagement with said seats by movement in the wall in the space between immediately adjacent lower and upper layers of blocks or bricks.

- 1,463,045. FURNACE-WALL STRUCTURE. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Sept. 7, 1920. Serial No. 408,698. 7 Claims. (Cl. 72—101.)

4. A wall structure comprising a permanent outer wall and a replaceable inner wall, said outer wall including horizontally spaced anchoring boxes and horizontally in-

terposed blocks, and said inner wall having built therein anchoring tiles with projecting ends that are detachably

anchored within the anchor boxes of said outer wall and afford supporting shelves for elements of the inner wall.

1,463,046. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Sept. 7, 1920. Serial No. 408,699. 7 Claims. (Cl. 72—101.)

1. A wall structure comprising a permanent outer wall and a replaceable inner wall, said outer wall having metallic anchor boxes built therein, and said inner wall having built therein anchoring tiles with ends that project into and are interlocked to said anchor boxes.

1,463,047. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Dec. 10, 1921. Serial No. 521,376. 10 Claims. (Cl. 72—102.)

1. A wall structure comprising a permanent masonry wall and a replaceable wall, said permanent wall having

non-metallic elements constructed and arranged to form horizontal rows of vertically spaced pockets, and said replaceable wall including shelf-forming tiles that are detachably anchored in the pockets of said permanent wall and project into the replaceable wall and form horizontal shelves that support independently replaceable overlying belts of the latter.

1,463,048. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Dec. 10, 1921. Serial No. 521,377. 2 Claims. (Cl. 72—102.)

1. A wall structure comprising a permanent masonry outer wall, and a replaceable masonry inner wall, said inner wall having shelf-forming tiles extended from said inner wall into said outer wall and detachably anchored therein, buckstays at the exterior of said wall structure, and metallic anchors interlocked to said shelf-forming tiles and extended therefrom through said outer wall and anchored to said buckstays.

1,463,049. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Dec. 10, 1921. Serial No. 521,378. 5 Claims. (Cl. 72—102.)

1. A wall structure comprising a permanent masonry outer wall and a replaceable masonry inner wall, said outer wall having vertically spaced horizontal tile layers

made up of alternately reversed L-shaped tiles, and said inner wall including shelf-forming tiles partly imbedded in seats formed in said outer wall by said L-shaped tiles.

1,463,050. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Apr. 8, 1922. Serial No. 550,841. 15 Claims. (Cl. 72—102.)

1. A composite furnace wall comprising a permanent masonry outer wall having therein horizontal rows of sill-forming blocks, overlying horizontal rows of lintels and intervening pilasters, forming vertically spaced rows of horizontally spaced pockets, in combination with a high refractory replaceable masonry inner wall including shelf-forming blocks projected into and anchored within the pockets of said permanent wall.

1,463,051. PARTITION WALL FOR FURNACES. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Apr. 8, 1922. Serial No. 550,842. 7 Claims. (Cl. 72—102.)

1. A composite partition wall for furnaces comprising a permanent center wall and shelf-forming elements anchored to and projecting from opposite sides of said wall, and replaceable facing walls anchored to said center wall by said shelf-forming elements.

1,463,052. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Apr. 24, 1922. Serial No. 556,195. 12 Claims. (Cl. 72—102.)

1. A composite furnace wall comprising a permanent masonry outer wall having therein horizontal rows of sill-forming blocks, overlying horizontal rows of lintels and intervening pilasters, forming vertically spaced rows of horizontally spaced pockets, in combination with a high refractory replaceable masonry inner wall including shelf-forming blocks projected into and anchored within the pockets of said permanent wall, said shelf-forming blocks each being substantially the width of a co-operating pocket.

1,463,053. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Apr. 24, 1922. Serial No. 556,196. 6 Claims. (Cl. 72—102.)

1. A composite furnace wall comprising a permanent masonry outer wall having horizontally spaced pilasters and intervening pockets, in combination with a high refractory inner wall including shelf-forming blocks that project into the pockets of said permanent outer wall, said shelf-forming blocks comprising outside and intermediate sections, the former having interlocking engagement with said pilasters and being held interlocked therewith by the intermediate lock sections.

1,463,054. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed May 1, 1922. Serial No. 557,701. 15 Claims. (Cl. 72-102.)

1. A composite furnace wall comprising a permanent masonry outer wall with pockets extending through the same, in combination with a highly refractory replaceable inner wall including shelf-forming blocks seated in said pockets and extending from said replaceable inner wall through said permanent outer wall.

1,463,055. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed May 19, 1922. Serial No. 562,126. 10 Claims. (Cl. 72-102.)

1. A composite furnace wall comprising a permanent masonry outer wall having therein a long continuous channel, in combination with a highly refractory replaceable inner wall including shelf-forming blocks placed adjacent each other in a continuous row and extended into and anchored within the channel of said permanent outer wall, said replaceable inner wall further including belts of highly refractory material supported by said shelf-forming blocks.

1,463,056. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed July 17, 1922. Serial No. 575,737. 23 Claims. (Cl. 73-102.)

19. As a new article of manufacture, a tile anchor box of rectangular formation provided with rectangular pocket-forming cavities that extend less than from end to end thereof.

1,463,057. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn., assignor to A. P. Green Fire Brick Company, Mexico, Mo., a Corporation of Missouri. Filed Sept. 18, 1922. Serial No. 588,746. 15 Claims. (Cl. 72-102.)

1. A wall structure made up of a masonry outer wall and a replaceable inner wall, said outer wall including channel shaped tile anchoring boxes affording sill blocks and lintels, and pilasters interposed between the sill and lintel-forming portions of said anchor boxes, and said inner wall including shelf-forming blocks extended into and anchored within said anchor boxes.

1,463,058. FURNACE WALL. MICHAEL LIPTAK, St. Paul, Minn. Filed Oct. 6, 1922. Serial No. 592,750. 12 Claims. (Cl. 72-102.)

1. A wall structure made up of a masonry outer wall and a replaceable inner wall, said outer wall including tile anchor boxes and said inner wall including shelf-

forming blocks extended into and anchored within said anchor boxes, said anchor boxes being rectangular, the bottom portions thereof affording sills and the top portions thereof affording lintels and the end portions

thereof affording pilasters in the outer wall, said anchor boxes being horizontally divided and set with their pocket-forming portions aligned but with their pilaster-forming end portions offset so as to form staggered joints between the upper and lower box-forming sections.

1,463,059. BOX. JAMES F. MATTHEWS, North Augusta, S. C., assignor of fifty-one one-hundredths to Wade H. White, Augusta, Ga. Filed May 6, 1922. Serial No. 559,014. 5 Claims. (Cl. 217-65.)

1. A receptacle, a member arranged therein to vary the interior size thereof, and a cam associated with the receptacle and adapted to move the member inwardly thereof.

1,463,060. ANTISKIDDING DEVICE. CONSTANTINE L. OCZKOWSKI, Bunell, Colo. Filed Feb. 21, 1922. Serial No. 538,156. 2 Claims. (Cl. 152-14.)

1. In an anti-skidding cross chain for motor vehicles, a link including a body portion of H-shape in plan with the legs thereof at one end connected at their bottom edges by a web, said web being extended beyond the end edges of said legs into hook shape, and a pivot pin between and connecting the legs at the opposite end of the body portion for pivotal and detachable reception of the hook-shaped member of another similar link.

1,463,061. PORTABLE OVEN. IGNATZ H. PAWLICK, Chicago, Ill., assignor to Enterprise Portable Oven Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 17, 1922. Serial No. 553,359. 5 Claims. (Cl. 126-275.)

1. The combination with an oven comprising a plurality of side walls removably secured to each other, of a frame removably disposed in said oven, said frame being composed of a plurality of members bolted together, shelves carried by said frame, baffle plates carried by said frame and being disposed between said frame and the oven walls, an oven door communicating with each shelf, and a plate carried by each shelf and extending to the oven door.

1,463,062. FISHING TACKLE. EFFIE M. ROBERTS, St. Louis, Mo. Filed May 17, 1921. Serial No. 470,403. 4 Claims. (Cl. 43-105.)

1. In a fishing tackle, the combination of a collapsible frame, a net secured thereon and adapted to be expanded by said collapsible frame, a staff, said frame comprising a collar slidable on the staff, rods pivotally connected to and radiating from said collar, a plurality of links having pivotal connections with the radius rods and the staff, and a plurality of hooks suspended from the staff and in spaced relation with the net the expanded net when being raised from the water adapted to prevent loss of fish engaged by the hooks and to catch fish in the vicinity of the hooks.

1,463,063. PAN. CHARLES RYSDON, Sioux Falls, S. Dak. Filed Feb. 19, 1923. Serial No. 619,973. 2 Claims. (Cl. 119-61.)

2. A pan for feeding pigs comprising an imperforate upwardly extending continuous seamless slightly flared rigid metallic body portion having formed integral therewith an imperforate seamless bottom formed with an upwardly extending continuous circular rib semi-cylindrical in cross section, said body portion provided

throughout with alternately disposed inwardly and outwardly extending corrugations and further having its top marginal part reinforced by a narrow snugly fitting overlap of the material from which the body portion is constructed thereby providing the body portion with a top edge of double thickness, said overlap arranged

against and conforming in contour to the outer face of said body portion, the corrugations of said body portion being substantially V-shaped in contour and gradually increasing in depth from the lower to the upper end thereof and further starting at a point in close proximity to the lower terminus of the body portion.

1,463,064. RESILIENT WHEEL. ABEL SEQUEIRA, New Bedford, Mass. Filed July 22, 1922. Serial No. 576,696. 2 Claims. (Cl. 152—29.)

1. In a wheel of the character described, an exteriorly threaded spoke tube, a felly element, means to engage laterally outwardly of the edges of tire shoes of the general character indicated, an interiorly threaded sleeve adapted to screw upon the spoke tube and enlarged at its outer part, and a shoe retaining member apertured and receiving the sleeve therein for confinement by the enlargement, and resilient shoe load sustaining means operative on the spokes.

1,463,065. SNOW GUARD AND FENDER. HENRY N. SIEGER, Slatington, Pa. Filed Jan. 30, 1923. Serial No. 615,918. 5 Claims. (Cl. 108—27.)

1. As a new article of manufacture, a snow guard embodying a bar or strap adapted to be secured at one end to a roof, an upstanding plate secured to the opposite end having a depending rib in longitudinal align-

ment with the bar or strap and with the under face of the rib in the same plane as the under face of the

bar, and lateral bearing flanges provided on said plate disposed in a plane above the under face of the plate and strap.

1,463,066. METHOD OF MAKING SEAMLESS UPPERS.

DANIEL G. CARTER, Mosheim, Tenn. Filed Feb. 25, 1922. Serial No. 539,305. 2 Claims. (Cl. 69—21.)

2. The method of making seamless uppers which consists in conforming a pattern of green hide to a last, subjecting it while so conformed to a tanning process a sufficient length of time to permit the tanning process to give it a set shape, removing it from the last, nesting it with other similarly shaped patterns and subjecting the nested group of patterns for a further length of time to the tanning process until tanned.

1,463,067. STRAINER. JAMES H. CRARY, Brooklyn, N. Y. Filed May 28, 1921. Serial No. 473,526. 4 Claims. (Cl. 210—165.)

1. A fluid strainer comprising a cylindrical body, a head at the lower end provided with an inlet and a drain, a head at the upper end provided with an outlet, and a strainer element mounted in said body and having exteriorly disposed means for effecting reciprocations of the strainer between the opposite ends of the body for the purpose of cleansing the same by its movement through the liquid trapped in the body.

1,463,068. IRONING BOARD. JOHN P. DORAU, North Fond du Lac, Wis. Filed May 31, 1921. Serial No. 473,606. 4 Claims. (Cl. 68—10.)

1. An ironing board, side strips pivotally connected with said board beneath one end thereof, a support pivotally connected with the board in spaced relation to the mounting of said side strips and comprising side bars and a cross rod engaging the under faces of the side strips, the side strips being provided with recesses receiving said cross rod, and resilient strips secured to the side strips and engaging the cross rod to hold the same in sliding engagement with the side strips, said side strips and support folding up against the underface of the board with the support positioned between the side strips, a support pivotally connected with the free ends of the side strips for engaging the second end portion of the board when in an operative position and for engaging and securing the first support when in a folded position, and means for locking the second support in a folded position.

1,463,069. FOLDABLE IRONING BOARD. JOHN P. DORAU, North Fond du Lac, Wis. Filed Feb. 20, 1922. Serial No. 537,877. 1 Claim. (Cl. 68—10.)

An ironing board having a pivoted inwardly foldable leg structure at one end, a pair of inclined braces pivoted near their upper ends to said leg structure and connected at said upper ends by a transverse horizontal rod under the board, a pair of horizontally elongated guides secured to the lower side of the board and slidably receiving said rod, and a second leg structure pivoted to and rising from the lower ends of said braces, the upper end of said second leg structure having detachable engagement with the board.

1,463,070. FOLDABLE IRONING BOARD. JOHN P. DORAU, North Fond du Lac, Wis. Filed Feb. 20, 1922. Serial No. 537,878. 3 Claims. (Cl. 68—10.)

1. An ironing board supporting frame formed of pivotally connected framing members and including a pair of pivoted members, an operating lever hinged to the

ironing board on a transverse axis and extending downwardly between the upper ends of said members, and a pivot parallel with the hinge axis connecting said ends of said members with said operating lever, the lower end of said lever being shaped to form a hand-hold for forcing the lever and members beyond dead center to effective position, means being provided for then limiting the movement of the lever.

1,463,071. ANTISKID-CHAIN HOOK. GEORGE B. N. DOW and FRANK P. HAM, Manchester, N. H., assignors to George J. Clarke, West Hanover, Mass. Filed Nov. 21, 1922. Serial No. 602,370. 2 Claims. (Cl. 24—233.)

1. A device of the class described comprising a body member having a longitudinally extending pocket in one edge thereof and an outwardly yielding spring in the other edge, said body having an L-shaped recess at one end thereof with the short arm opening through said pocket and adapted to receive a chain link, a blade pivotally mounted at one end in said pocket and adapted to close said L-shaped recess and normally held closed by said spring, and cooperating means carried by said blade and body for the reception of a chain link whereby the blade is held in closed position by the link when the device is in use.

1,463,072. STATIONARY CHEMICAL-MIXING FIRE-EXTINGUISHER SYSTEM. JOHN W. ENRIGHT, New Orleans, La. Filed Nov. 23, 1920. Serial No. 426,021. 11 Claims. (Cl. 169—8.)

1. In a stationary chemical mixing fire extinguisher system a tank for an alkaline solution, a reservoir for a liquid medium having a discharge outlet, a mercury seal normally interposed in said outlet, an acid receptacle having a discharge siphon pipe, one leg of which extends into the said reservoir, and means operative under fire emergency conditions for charging said reservoir with liquid, the liquid entering said siphon leg, the weight of

the liquid ultimately overcoming the mercury of said seal and discharging therefrom, the discharge of the liquid from the reservoir and siphon leg initiating the siphoning of acid from the acid receptacle.

- 1,463,073. MACHINE FOR SHAPING CYLINDERS. ABRAM VAN AKEN FELTEN, Danbury, Conn., assignor to The New England Metal Barrel Corporation, Danbury, Conn., a Corporation of Connecticut. Filed Mar. 11, 1922. Serial No. 543,047. 13 Claims. (Cl. 153—28.)

1. A cylinder shaping machine including a shaft, a second shaft, co-operating forming rollers carried by said shafts, means for movably supporting said second shaft, collars carried by said second shaft, crank arms secured one to each of said collars, a spring interposed between the upper ends of said arms for pressing the same in opposite directions, and cylinder contacting rollers carried by said arms.

- 1,463,074. BOX. CHARLES AUGUSTUS FOX, New York, N. Y. Filed May 28, 1921. Serial No. 473,547. 5 Claims. (Cl. 229—43.)

2. A box comprising tray-like sections, a lining fitted within the rim of one section over which the rim of the other section is adapted to fit, and securing elements engaging through the first named rim and lining, one rim having extension flaps to overlap the other.

- 1,463,075. FUR SOFTENING AND CLEANING MACHINE. SAMUEL FRIEDMAN, Brooklyn, N. Y. Filed Sept. 9, 1921. Serial No. 499,483. 15 Claims. (Cl. 15—90.)

1. In a fur softening and cleaning machine, a rotatable tumbling drum, a cushioned member, and suspension means suspending the said cushioned member within the drum in close proximity with the inner surface of the drum.

- 1,463,076. FLESHING MACHINE. SAMUEL FRIEDMAN, Brooklyn, N. Y. Filed Oct. 27, 1921. Serial No. 510,723. 11 Claims. (Cl. 149—15.)

6. A fleshing knife of the class described including a sectored body adapted to be contracted, and a separate annular cutter element at the periphery, said body having an annular depression in which said cutter element is detachably seated, the material of the body extending radially at the back of said groove beyond the material at the front of the groove.

- 1,463,077. SPANNER. WILLIAM RALEIGH KERR GANDELL, London, England. Filed July 3, 1922. Serial No. 572,588. 3 Claims. (Cl. 81—90.)

1. A tool for applying additional leverage to a shaft of a spanner, comprising a metal bar having an abutment device adjacent one of its ends for engaging one side edge of the shaft of a spanner when a face of the latter is in juxtaposition to a face of the bar, said abutment device being located at one side of the bar and comprising a body part upstanding from the plane of its said face and lip parts projecting from the body part, one lip part extending in a direction transverse of said face and another lip part extending in a direction parallel with the longitudinal axis of that face, a second abutment device carried by the opposite side of said bar for engaging the opposite side edge of the shaft of the spanner, said second abutment device comprising a

stem upstanding from the plane of said face of the bar and having a part integral therewith and projecting therefrom in a direction parallel with the longitudinal

axis of the said face and also having a second part projecting therefrom in a direction transverse of said face, substantially as described.

1,463,078. BEET HARVESTER. RONALD F. GILMORE and WILLIAM G. JOHANSEN, Algona, Iowa. Filed July 17, 1919. Serial No. 311,421. 5 Claims. (Cl. 55—107.)

1. In a harvester of the character set forth, a standard having an enlargement at its lower end, a cutter, a tubular stem projecting from the cutter and slidably mounted on the standard and having its upper portion drawn inward to engage the enlargement of the standard to limit the movement of the cutter in one direction and an expansible helical spring mounted within the tubular stem of the cutter and normally pressing the latter downwardly.

2. In a harvester of the character specified, a topping mechanism, a supporting beam therefor, and means adjustable vertically against one end of the beam for adjusting the topping mechanism vertically.

3. In a harvester of the character specified, the combination with a topping mechanism, of a supporting beam laterally adjustable at one end, and means movable vertically against the adjustable end of the beam for adjusting the topping mechanism vertically.

4. In a harvester of the character specified, a beam, a topping mechanism carried thereby, a guide on opposite sides of the beam, and means under the control of the operator for adjusting the beam vertically and laterally between the guides.

5. In a harvester of the character specified, a topping mechanism, a digger mechanism, a means joining the two mechanisms, and means for moving the beam to simultaneously adjust the mechanism vertically and laterally.

1,463,079. MEANS FOR AUTOMATICALLY OPENING DOORS OR GATES. GEORGE NEWTON GIVENS, Colfax, La., assignor of two-fifths to Charles E. Duffey, Colfax, La. Filed May 27, 1921. Serial No. 472,988. 1 Claim. (Cl. 268—9.)

In a device for automatically opening doors by vehicle wheels, vehicle wheels, the combination with swinging doors, rods mounted for rotation adjacent the doors, a lever rigidly connected at one end to a rod, a link pivotally connected at one end to the free end of the lever, with the other end of the link pivotally connected to a door, means operatively connecting the rods together for simultaneous rotation but in opposite directions, a crank pivotally mounted remote from said rods, a shaft operated by said crank, an arm operated by said shaft, a drum loosely mounted on the shaft between the arm and the crank and provided with spaced projections on the side of the drum adjacent the arm, said arm adapted to alternately engage said projections to rotate the drum in either direction, means operatively connecting the drum with one of the rotatively mounted rods for transmitting rotary motion from the drum to one of the rods, a hollow post located in protective relation to the shaft, drum, and operating arm, a weight adapted to be operated within the post, and a flexible means connecting the operating arm with the weight and supported upon the post.

1,463,080. TYPEWRITER ATTACHMENT. FRANCES GRAY, Wilkinsburg, Pa. Filed Feb. 14, 1921. Serial No. 444,747. 1 Claim. (Cl. 197—189.)

The combination with a typewriter platen, of an adjustable automatic stop including a gear revoluble with and having its axis fixed relative to the platen, another gear meshing with the platen gear, a combined stop and index extending from the axis of the driven gear and adjustable angularly to different positions on said gear, said stop and index being shiftable laterally into engagement with any of the teeth on its gear, said stop and index being movable by the rotation of the platen, into the pass between the gears to stop the rotation of the platen.

1,463,081. HEADREST. ABRAM O. HANCOCK, Richmond, Va. Filed Feb. 16, 1922. Serial No. 537,055. 4 Claims. (Cl. 155—175.)

4. A device of the character described, comprising in combination, a head rest consisting in a plate member with padding upon one side thereof, a projection ad-

adjacent each end of the plate and extending from the inner edge thereof, an arm pivotally connected at its one end to each extension and each arm comprising a plurality of telescopic tubular sections, the innermost section in

each instance being adapted to receive the other sections and then folded inwardly and upon the associated edge of the head rest, and a pad slidable longitudinally of the innermost tubular section of each arm for the purpose described.

1,463,082. AXLE STRAIGHTENER. JARNETT E. HANES, Alma, Ill. Filed Oct. 20, 1921. Serial No. 509,103. 1 Claim. (Cl. 153—38.)

A device of the class described comprising a beam member having a transverse aperture at one end and a vertical aperture in the other end, a block slidably bearing on said beam adapted to engage an axle, a U-shaped strap engaging around said beam and connected to said block and slidably coupling the block to the beam, another U-shaped strap having a plurality of transverse apertures through its side portions and adapted to engage around the axle, a transverse pin engaging through one pair of the apertures of the last mentioned strap and likewise through the transverse aperture of the beam member, a threaded rod extending through the vertical aperture of the beam and having means for detachably engaging the rod at one end with the axle, and a nut device engaging the threads of the rod and bearing against the beam.

1,463,083. SEAL FOR FOLDERS. MILTON HARTMAN, Detroit, Mich., assignor to Localized Advertising Corporation, Detroit, Mich. Filed June 5, 1922. Serial No. 565,856. 2 Claims. (Cl. 229—92.5.)

1. In combination, a folder embodying a plurality of pages, a return card or the like positioned between them,

and a seal folded into halves and having a tab, the tab being secured to said card and the halves being secured

respectively to the outer pages to hold them together and to maintain the card in place between them.

1,463,084. REPAIR DEVICE FOR FISHING RODS. DONALD MCCORMACK HUDSON, Bend, Oreg. Filed Sept. 8, 1921. Serial No. 499,237. 1 Claim. (Cl. 287—126.)

A repair device for fishing rods comprising a socket member and a ferrule member, said ferrule member being adapted for reception within said socket member, and means for attaching each of said members to its respective broken part of a fishing rod, said means consisting of a plurality of kerfs formed in the socket member and the ferrule member whereby the same are expandable to receive rods of various diameters and a collar adapted to be received by each of said members and to contact its split portion about its respective section of the fishing rod to which it is attached and cause the split portion to grip the rod to secure the respective members in position thereon.

1,463,085. HAIR-WAVING DEVICE. OSCAR J. HUNGER-BÜHLER and CHARLES SCHOPPER, Far Rockaway and New York, N. Y. Filed June 22, 1922. Serial No. 570,238. 3 Claims. (Cl. 132—39.)

2. A hair curler and waver comprising an expandable tubular member upon which the hair is adapted to be wound, means extending into said tubular member for expanding the same whereby the coils of hair are drawn taut thereupon, and interengageable means at the inner end of said member, operable upon expansion of the same for locking the hair thereto.

1,463,086. WATERPROOF CARRYING CASE. JACK D. KELLY, Elmhurst, N. Y. Filed Apr. 29, 1922. Serial No. 557,347. 2 Claims. (Cl. 206—41.)

2. In a waterproof carrying case of the character described, a tubular body and cover each having a closed end and an open end and adapted for telescopic associ-

ation, an externally disposed flange provided on the body adjacent the open end thereof, a resilient gasket seated on said flange with which the open end of the cover is adapted to engage when in closed position on the body, a ball pivoted to the body for longitudinal swinging movement, a pair of centrally disposed upstanding parallel beads on the cover defining therebetween a receiving depression or groove for the reception of the bight of said bail, whereby upon engagement with the cover said bail will function to impinge the open end of the cover against the gasket and said gasket will in turn function to tensionally maintain the bight of the bail within the receiving depression against casual displacement.

1,463,087. ROLLER-BLIND ADVERTISING DEVICE. WILHELMUS H. LEYDEKERS and WILLIAM OLIVER RUDDLE, London, England. Filed Dec. 14, 1922. Serial No. 606,941. 3 Claims. (Cl. 40—84.)

1. An advertising device comprising in combination with a supporting frame, a shaft mounted therein a circular toothed rack fixed to the frame, said rack having a circumferentially disposed toothless notch, a pair of flat circular discs spaced apart and fixed to the shaft, a number of spindles arranged in a circular row between the discs, the opposite ends of each spindle pivoted, respectively, on the two discs, a roller on each spindle, a flexible advertisement-carrying blind attached at one end to each roller, a toothed pinion fixedly mounted at one end of each spindle, the teeth of the pinions arranged to mesh with the teeth on the rack in order to cause the rollers to travel around the rack and simultaneously rotate upon their axes in a direction to roll the blinds thereon, ratchet gear mechanism for imparting a step-by-step rotary motion to the shaft and the roller-carrying discs, each pinion in turn being adapted to pass in front of the notch on the rack thereby passing out of mesh with the rack and permitting the corresponding roller to turn in the reverse direction to allow the blind rolled thereon to unroll under the action of gravity, means comprising a shaft and worm-gear for actuating said mechanism, and means for causing the said roller to re-start turning in the rolling-up direction and the teeth on its pinion to re-engage with the teeth of the rack.

1,463,088. RECEPTACLE. FRANCIS JAY LYNCH, Bloomfield, N. J. Original application filed May 6, 1921, Serial No. 467,415. Divided and this application filed Dec. 3, 1921. Serial No. 519,623. 2 Claims. (Cl. 206—46.)

1. A receptacle including side walls, and end portions, said receptacle being adapted to house a cartridge having

end flanges normally lying adjacent the end portions of said receptacle, and ridges forming a part of the side

wall of said receptacle, said ridges being adapted to overlap and engage said elements, to prevent a movement of said cartridge with respect to said receptacle.

1,463,089. REBORING MACHINE. DAVID L. MARTYN, Vancouver, Wash. Filed Sept. 28, 1921. Serial No. 503,866. 9 Claims. (Cl. 77—2.)

1. A re-boring machine comprising a frame including a vertical housing, a vertically disposed bearing mounted within the latter, a bearing engaging member engaging the upper end of the bearing, a compressible element mounted in said member, a boring bar extending through said bearing and housing, a grooved, bar-feeding device mounted on said element and provided with means for connection with the bar for feeding the latter, and adjustable means connected with the frame and housing and extending into the groove of the feeding device for coupling rotatably the latter with the frame and further adapted for compressing at will said element to cause a non-rotative engagement of the feeding device with the frame and a corresponding feed of the bar.

1,463,090. CLAMSHELL-BUCKET-OPERATING MECHANISM. SAMUEL OSCAR NAFZIGER, Goshen, Ind. Filed Oct. 7, 1920. Serial No. 415,248. 8 Claims. (Cl. 212-127.)

1. A device of the type described comprising a supporting rail, a frame movable along and supported by said rail, an operator's platform carried by said frame, a clam shell bucket, actuating means for said bucket carried by said platform, means connecting said bucket with said actuating means, and means carried by said frame for positively holding said bucket in a fixed position, said means comprising two lazy tongs each secured to one side of said bucket at one of their ends, and fastened to said frame at their other ends, and means for positively holding said lazy tongs in a fixed position.

1,463,091. ANIMAL TRAP. KENT PEARSON, Marion, Iowa. Filed Mar. 3, 1922. Serial No. 540,712. 2 Claims (Cl. 43-98.)

1. A trap having a base electrode, an insulating disc thereon, a bait holder insulated from said electrode and extending through said disc, an electrode on said disc, and a conductor from said bait holder to the second electrode resting on said disc.

1,463,092. LUBRICANT AND PROCESS OF PREPARING SAME. RUSSELL GEORGE PELL, London, England, assignor to Technical Research Works, Limited, London, England. Filed Sept. 29, 1922. Serial No. 591,420. 3 Claims. (Cl. 87-9.)

2. A composition of matter consisting of lubricating oil and aliphatic polyhydric alcohols of which the hydroxyl groups are partially replaced by acid radicals, substantially as described.

1,463,093. VALVE. JOHN W. PEARSON and JOSEPH S. POWER, Dayton, Ohio, assignors to The Davis Sewing Machine Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 28, 1921. Serial No. 456,163. 5 Claims. (Cl. 137-139.)

1. In a valve, a casing, an exit opening, a resilient seat therein, a valve member adapted to engage with said seat, means for actuating said valve member into and out of engagement with said seat, and a drain lip on said resilient seat on the exterior of said casing.

1,463,094. MANUFACTURE OF BRIQUETTES. THOMAS RIGBY, Westminster, London, England. Filed Nov. 23, 1921. Serial No. 517,300. 3 Claims. (Cl. 44-11.)

1. In a briquetting apparatus, in combination, a working chamber, a ram working therein, a hopper for material to be briquetted, means for feeding material in an uncompressed state from said hopper to the working chamber, alternative means for forcing material from said hopper into said working chamber, and means for rendering operative at will either the feeding means or the forcing means.

1,463,095. MICROMETER ATTACHMENT. ANDREW RUDNAX, Buffalo, N. Y. Filed Feb. 20, 1920. Serial No. 360,252. 5 Claims. (Cl. 33-169.)

1. The combination with a depth micrometer having a straight edge member to rest on a surface from which a measurement is to be taken and having a measuring post adjustable to project transversely of and beyond the straight edge member, of an arm member parallel with the

post to cooperate therewith when projected beyond the straight edge member, and means adjustably mounting the

arm member for movement on the other member independently of and in a plane transversely of and relatively to the post.

1,463,096. AUTOMATIC TRAIN STOP. EMILIO R. SALAZAR, Habana, Cuba. Filed Mar. 28, 1919. Serial No. 285,831. 3 Claims. (Cl. 246—187.)

1. The combination of a locomotive steam pipe, a cut-off valve complementary thereto, an explosion chamber, a conduit intermediate said chamber and the casing of said cut-off valve, means in the explosion chamber for holding an explosive charge, and means for igniting such charge to bring about movement of the cut-off valve to close the pipe.

1,463,097. POWER DRIVE UNIT FOR AGRICULTURAL IMPLEMENTS. HERMAN L. SCHNEIDER, Glen Ullin, N. Dak., assignor of one-half to Lena Miller, Chicago, Ill. Filed Feb. 11, 1922. Serial No. 535,762. 25 Claims. (Cl. 180—13.)

1. The combination with a push operated implement having a rearwardly extending tongue, of a pusher frame, pivotally connected to said tongue, a single wheel between the sides of said frame to support the same for swivel movement, means on said frame to drive said wheel, and means between said frame and said implement for steadying the frame.

1,463,098. DETACHABLE FOOT FOR WIRE TRAYS. FRANK M. SNYDER, Lafayette, Ind., assignor to The Peerless Wire Goods Company, Lafayette, Ind., a Corporation of Indiana. Filed Apr. 25, 1921, Serial No. 464,475. Renewed June 9, 1923. 5 Claims. (Cl. 220—69.)

5. A detachable foot for wire stays, comprising a wire having an intermediate portion, end portions connected to the ends of the intermediate portion and provided with

hooks arranged to hook upon two parallel wires of a tray bottom, and a transverse portion extending from the end of an end portion transversely thereto and provided at its

end with an upwardly open hook adapted to hook beneath a tray-bottom wire transverse to the first-named tray-bottom wires.

1,463,099. STOCK TANK HEATER. ALBERT L. STEINKE, Pipestone, Minn. Filed Mar. 15, 1923. Serial No. 625,319. 2 Claims. (Cl. 126—360.)

1. A tank heater having an upstanding air inlet pipe, a circular open-ended sleeve surrounding and spaced from the upper end of said pipe, said sleeve extending above said pipe and terminating in a horizontal plane, means rigidly mounting said sleeve on said pipe, an oil tank resting on said sleeve and having a valved drip outlet discharging into said pipe, and an annular flange on the lower end of said tank frictionally engaging said sleeve to hold the tank in place.

1,463,100. DOOR HANGING AND SECURING MEANS. JOHN H. STEWART, Rutherford, N. J. Filed Mar. 25, 1921. Serial No. 455,391. 21 Claims. (Cl. 20—23.)

6. In combination with a structure, and a sliding door thereon, movable transversely into or away from the doorway in addition to the sliding movements, and sus-

pension means pivotally secured to said door and to said structure to swing in a plane approximately parallel with the plane of the door and to swing transversely to the plane of the door to be thus constrained to conform to the sliding and transverse movements of the door.

1,463,101. VAPOR BURNER. OSCAR I. STRAUB, Buffalo, N. Y., and FREDERICK G. WAHL, Detroit, Mich; said Wahl assignor to said Straub. Filed May 1, 1922. Serial No. 557,522. 3 Claims. (Cl. 158—68.)

2. A vapor burner comprising a burner structure, a retort, heating means at the burner extending to the retort, means to place the lower part of the retort in communication with a source of liquid fuel supply under pressure, a liner having a closed top and an open bottom mounted in said retort, means to hold the liner in place, a cap in the top of the liner having an orifice, and a plunger mounted to reciprocate in the liner and having a pin fitting slidably in the orifice, substantially as described.

1,463,102. ASEPTIC TANK. GEORGE B. STRYKER, Jr., Memphis, Tenn. Filed Sept. 25, 1919. Serial No. 326,233. 1 Claim. (Cl. 72—13.)

An aseptic tank comprising a plurality of rectangular sections or units constructed of plastic material, metal re-enforcing bars embedded within said sections, said bars being of right-angle construction and located with their respective angular portions at the corresponding angular portions of said sections, said re-enforcing bars being of relatively different lengths and arranged in superposed horizontal rows in each of said sections, the longer length bars overlapping the shorter length bars, and said sections having interengaging tongue and grooved portions and assembled in superposed relation, substantially as set forth.

1,463,103. CLAPPER VALVE. ALFRED F. THORSTEN, Brooklyn, N. Y. Filed Apr. 18, 1922. Serial No. 555,522. 4 Claims. (Cl. 251—126.)

1. A clapper valve for the outboard discharge of soil, waste, or the like, from ships, comprising a valve casing having an inner restricted bore and an outer relatively

enlarged bore forming at their juncture an internal shoulder constituting a seat, a clapper swingingly mounted within the enlarged bore adjacent said seat for inward swinging movement thereagainst to a closed position, a shaft connected to said clapper and extending through one of the side walls of the casing for swingingly mounting said clapper therein, a weighted element

mounted for swinging movement exteriorly of the casing and adjacent the protruding extremity of the shaft, interengageable means on the protruding extremity of said shaft and said weighted element for gravitationally rotating the shaft to normally effect the closing of the clapper against its seat, and a housing provided on the side of said casing for housing the exteriorly disposed elements.

1,463,104. GAS FIRED FURNACE. WALTER RATLEDGE TWIGG, Luton, England. Filed Mar. 29, 1918. Serial No. 225,501. 11 Claims. (Cl. 158—7.5.)

1. A reversible regenerative furnace comprising a furnace structure having a hearth, pressure air regenerator chambers provided underneath the said hearth and within the furnace structure, means to deliver pressure air to the regenerator chambers, means to deliver coal gas to the furnace combustion chamber, openings in the furnace hearth adjacent the outlet end of the gas delivering means to permit admixture of air and gas for combustion, and means to effect reversal of the direction of the flow of the gas and air.

1,463,105. PLUNGER SHOE. JEAN FRANCIS WEBB, Jr., New York, N. Y., assignor to The International Signal Co., a Corporation of Arizona. Filed Dec. 30, 1922. Serial No. 609,866. 4 Claims. (Cl. 191—49.)

4. A contact shoe comprising a shank having an upper base and a lower base, means connecting the upper base

to a plunger, said lower base being cylindrical and having screw holes, a sole plate recessed to receive said lower base, said sole plate being circular in outline, said lower base and said sole plate having screw receiving holes, those of the plate being multiples of those of the base whereby the plate may be adjusted around the ends of the shank for purpose of wear, said plate having a circuitous groove in its bottom to provide an outer contact surface and an inner contact surface the width of the inner contact surface approximating that of the track ramp with which the shoe is adapted to engage.

- 1,463,106. SOD-CUTTING PLOW. JOSEPH F. WEBER, Lansing, Mich. Filed Sept. 25, 1922. Serial No. 590,464. 4 Claims. (Cl. 97—22.)

1. A device of the class described comprising a wheel mounted frame; guides; means for mounting the guides on the frame for vertical adjustment; rotary cutters journaled on the frame and located to the rear of the guides; and angular undercutters carried by the frame and disposed to the rear of the rotary cutters.

- 1,463,107. TONE ARM STOP. ROBERT H. WEITERS-HAUSEN, Pittsburgh, Pa. Filed Aug. 4, 1922. Serial No. 579,692. 10 Claims. (Cl. 274—9.)

1. A device for the purpose set forth comprising a supporting means provided with openings, a stop element selectively engaging in certain of said openings, and an adjustable combined needle positioning and tone arm arresting element slidably mounted in said means and co operating with said stop element.

- 1,463,108. CHANGE-SIGN DEVICE. RALPH A. WILLISON and CLIFFORD N. ESEBERG, Portland, Oreg. Filed July 6, 1922. Serial No. 573,096. 10 Claims. (Cl. 40—76.)

1. A sign including a movable sign element, means for causing intermittent movement of said sign element, cam elements spaced from each other a distance corresponding

to the intermittent movement of said sign element and each having oppositely acting portions, and spring actuated means for engaging said cam elements and retarding movement of said sign element when movement thereof is about to cease and assisting movement of the sign element when movement thereof is again started.

- 1,463,109. AIR PUMP. EPHRAIM WITMAN, Sinking Spring, Pa. Filed Sept. 16, 1921. Serial No. 501,013. 1 Claim. (Cl. 230—27.)

In an air pump of the class described, a cylinder, a base and a cap for said cylinder, a piston in said cylinder, an air intake opening in the cap and in the base, a hinged check valve for each of said openings disposed interiorly of said cylinder, said base having a passage-way communicating the inner chamber of the cylinder with the outside, said cylinder being formed with an opening adjacent its top end, a tube extending to said passageway, a second tube extending to said opening, a fitting having a nipple adapted to receive a rubber hose connecting said two tubes together adjacent the transverse and medial plane of the cylinder, and a hinged valve in said fitting adapted to alternately move in the front of said tube in response to the movement of the piston.

- 1,463,110. ROTARY FLUID-PRESSURE PRODUCING APPARATUS. ALBERT J. WORTHEN, San Francisco, Calif. Filed Nov. 4, 1921. Serial No. 512,742. 4 Claims. (Cl. 230—11.)

1. In a rotary fluid pressure producing apparatus, a plurality of velocity producing wheels mounted to rotate in unison and spaced apart, successive wheels having vanes set at gradually increasing angles relative to the movement of the wheels, and stationary velocity-producing diaphragms between the said wheels, successive diaphragms having passages gradually decreasing in size, one of the wheels having passages established by vanes having substantially plane surfaces at substantially right angles to the direction of movement of the wheel.

1,463,111. MACHINE FOR TREATING FISH. MAURICE J. ABBOTT, New York, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 10, 1917, Serial No. 206,517. Renewed Jan. 8, 1923. 34 Claims. (Cl. 17—10.)

1. In a fish positioning machine, a rotatable carrier having downwardly and outwardly extending fish-guiding devices whereby centrifugal tendency is imported to the fish to promote their sliding away from the axis of rotation, and means for automatically positioning the fish head first and delivering them in that direction at the inner ends of said guiding devices.

1,463,112. VEHICLE BRAKE. MARIUS ADENOT, Caluire, France, assignor to Société Lyonnaise d'Industrie Mécanique, Caluire, Rhone, France, a Corporation of France. Filed Feb. 9, 1921. Serial No. 443,679. 1 Claim. (Cl. 188—151.)

In a vehicle brake the combination of a rotatable drum, a non-rotatable support within said drum, a pneumatic cylinder carried by said support open at one end, a plunger in said cylinder having a socket, two approximately semi-circular brake shoes fulcrumed upon said support close to said cylinder and adapted to coact with said drum, a cam lever engaging between the free ends of said brake shoes, adapted to rock same apart for engaging the drum, a rod having one end connected to said cam lever and having at the other end a ball engaging the socket in said plunger, and springs for retracting the brake shoes from the drum, the open end of the cylinder leaving a clearance around said rod, whereby said rod is enabled to rock.

1,463,113. BAG CLOSURE. OTIS BIBB, Louisville, Ky. Filed Apr. 14, 1921. Serial No. 461,257. 11 Claims. (Cl. 150—3.)

2. A bag closure comprising four flat members arranged within a bag and substantially in the plane of the opening thereof, pivotal connections between the adjacent

ends of said members whereby two oppositely disposed toggles are formed, means for attaching the members to the bag and means for urging the toggles to closed position.

1,463,114. CORING MACHINE. EARNST A. BOSTROM, Griffin, Ga., assignor to Pomona Products Company, Griffin, Ga., a Corporation of Georgia. Filed June 18, 1921. Serial No. 478,609. 12 Claims. (Cl. 146—52.)

1. In combination, a vacuum chamber and means for maintaining a vacuum therein, a suction tube operatively connected at one end with said vacuum chamber and having its other end open and exposed without enclosure, a tubular cutter head on said outer end adapted to cut into the end of pimento peppers, said cutter head being so proportioned that air under atmospheric pressure will pass into the fruit and carry back the seed into the suction tube through the inside of the cutter head, substantially as set forth.

1,463,115. ACCELERATOR FOOT THROTTLE. HARRY LENDELL CARNAHAN, Centralia, Mo. Filed Feb. 28, 1921. Serial No. 448,597. 4 Claims. (Cl. 74—39.)

1. In a foot accelerator for controlling throttle movement of an engine, a control rod, a throttle operating rod, links connected to said control rod, one of said links limited to a pivotal movement, the other of said links being fixed to said throttle operating rod for operating same upon movement of the control rod, a return spring connected to said links for returning the throttle operating rod, links and control rod to normal position, said spring arranged to provide steady resistance to the operation of said control and throttle rods.

1,463,116. SEWING-MACHINE ATTACHMENT FOR SPIRAL STITCHING. ANALDO M. ENGLISH, Brookline, Mass., assignor to Cummings Machine Works, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 26, 1921. Serial No. 447,912. 19 Claims. (Cl. 112—2.)

1. A sewing machine attachment for spiral stitching comprising a cloth-guide and means adapted to be actu-

ated through the reciprocating movement of a sewing machine needle-bar to give a progressive lateral move-

ment to the said cloth-guide to cause the stitches made by the machine to form a spiral course.

1,463,117. TRAP. ALFRED R. GILMORE and GATES R. CARSON, Red Rock, Pa. Filed Mar. 24, 1922. Serial No. 546,376. 1 Claim. (Cl. 43-88.)

A trap of the character described comprising two identically constructed sections defining a trip body of elongated contour, and having a longitudinal bore open at one end and closed at the other end of the trap, yieldable means connecting the sections together at one end for pivotal movement toward and away from each other, pointed prongs projecting from each section within said bore, a rod projecting from the inner edge of one section, the corresponding edge of the other section having an opening receiving said rod, and a combined bait holder and trip element fulcrumed on said rod and disposed to be positioned between said edges of said sections to hold the latter spaced apart when the trap is set.

1,463,118. RAIL CHAIR. WILLIAM R. GORRELL and HENRY BARKSCHAT, Los Angeles, Calif. Filed Oct. 26, 1922. Serial No. 597,198. 2 Claims. (Cl. 238-274.)

1. In a rail chair, the combination of a rail-supporting member having an opening extending vertically there-through, an expansible, invertible, rail spike-receiving clamp disposed in said opening, and inter-engaging elements carried by said member and said clamp for locking the latter in said opening when in expanded position, said elements being positioned upon said member and said clamp so that the latter may be inverted in said opening.

1,463,119. SCREEN-DOOR CLIP. JOHN HEARD, Strathroy, Ontario, Canada. Filed Sept. 25, 1922. Serial No. 590,282. 9 Claims. (Cl. 292-74.)

1. A screen door clip comprising a receiving member adapted to be secured upon a door frame, said receiving member including a casing, a spring pressed plate cooperating with said casing and an engaging member adapted to be fixed to the door, said engaging member including a projecting staple portion for engagement between the spring pressed plate and the opposite portion of the casing.

1,463,120. ROAD PLANE. WILLIAM H. JENNINGS, St. Paul, Minn., assignor of one-half to Leo Levy, St. Paul, Minn. Filed Dec. 12, 1921. Serial No. 521,914. 1 Claim. (Cl. 37-153.)

A road planer comprising an elongated skeleton frame adapted to be drawn endwise, a series of transverse scraper blades fixed to the under side of the frame and a diagonally arranged, vertically disposed scraper blade hingedly attached to one of the rear corners of the frame, and means carried by the other rear corner of the frame and operatively attached to the adjacent end of the diagonal board for raising and holding it raised to various positions, said frame having transverse angle bars and bolts passed through said angle bars and the scraper blades to make the blades detachable for grinding or repairing.

1,463,121. WINDOW SCREEN. GEORGE W. JOHNSTON, Washington, D. C. Filed Apr. 18, 1922. Serial No. 554,711. 6 Claims. (Cl. 156-14.)

4. In a building structure including a wall and opening therethrough, the combination with a closure for said opening, of a recess formed in said wall in a plane par-

allel to said closure, a screen adapted to slide entirely within said recess, and be extended therefrom to cover any portion of said opening, and a stop-member controlled by the movements of the screen for simultaneously sealing the outer end of said recess and the upper edge of the closure when said screen is wholly extended from said recess.

1,463,122. PROCESS FOR MAKING TURPENTINE SUBSTITUTE AND PRODUCT THEREFROM. WILLIAM BURNS LOGAN, De Quincy, La., assignor to Acme Products Company, Inc., New Orleans, La., a Corporation of Louisiana. Filed Nov. 23, 1922. Serial No. 602,887. 10 Claims. (Cl. 134—56.)

1. A process of making a turpentine substitute which comprises subjecting vapors of pine oil to the action of a catalyst comprising a copper chlorid, at a temperature between about 225° and 350° C., condensing the vapors, separating water therefrom, fractionally distilling the condensate, and collecting the fraction distilling up to about 200° C.

8. A turpentine substitute, which comprises a liquid material of turpentine-like appearance, having a specific gravity between .85 and .86, containing about 90% of dipitenes, having an index of refraction of about 1.475 to 1.477 at 20° C., such material boiling at about 175° C., about 75% of the whole boiling below 180° C., and 95% boiling at not above 190° C.

1,463,123. BUILDING-MATERIAL COMPOSITION. FREDRICK J. MCALLISTER, Elyria, Ohio, assignor of one-eighth to A. E. Simmons and one-eighth to Frank Henke, both of Elyria, Ohio. Filed Aug. 9, 1922. Serial No. 580,760. 4 Claims. (Cl. 106—24.)

1. A composition of matter comprising a fibrous material, 30 to 50 per cent; hydraulic settable cement, 25 to 35 per cent; lime, 5 to 10 per cent; alum, 1 to 5 per cent, and silicious material, 4 to 35 per cent.

1,463,124. BAKING FRAME. JOHN J. MCCONNELL, Rockford, Ill. Filed Apr. 18, 1922. Serial No. 554,593. 2 Claims. (Cl. 53—6.)

1. A cooking utensil of the character described comprising a wire basket including opposed sides and end walls, a cover hinged upon one end wall, means carried by the cover for engaging the opposite end wall for holding the cover in its closed position, and the wire forming the outline of said end walls being extended above and below the basket and transversely thereof to provide supports, whereby the basket can be supported with either its bottom or top uppermost for the purpose specified.

1,463,125. BABY GUARD. ERNEST HUBERT MADERE, Hahnville, La., assignor to Bienville Manufacturing Company Inc., New Orleans, La. Filed Sept. 27, 1922. Serial No. 590,827. 2 Claims. (Cl. 155—189.)

1. A protecting guard for young children, comprising a broad flexible adjustment band adapted to go around the

body of the child beneath the shoulders, and extending downwards from the shoulders and supporting the back

and sides of the child, with a plurality of divergent resilient legs secured to and projecting downwards from said band at the sides and rear thereof.

1,463,126. SASH WEIGHT. JOHN F. MAKEPEACE, Sanford, N. C. Filed Dec. 16, 1922. Serial No. 607,360. 1 Claim. (Cl. 16—216.)

A sash weight comprising a hollow member of rectangular formation in cross section, the corners of said member at the upper end thereof being slotted, the upper end of each wall of said member being bent inwardly for the purpose specified, two of said inwardly bent portions having openings, and a cord attached to the yoke and having its free end received by said opening.

1,463,127. CROSSING SIGNAL. JOSEPH A. MANTA, Provincetown, Mass. Filed Apr. 18, 1922. Serial No. 554,627. 5 Claims. (Cl. 246—128.)

1. A signalling device of the character described comprising a stationary member, guide means carried thereby, a movable frame slidably associated with said guide

means, a pivoted semaphore blade normally arranged in inclined position, a flexible connection between the shorter end of the semaphore blade and the top of said frame, an electric motor and means driven thereby connected with the bottom of the movable frame, a pair of rail sections insulated from the other rail sections of a trackway, and normally engaged contact members moved out of contacting relation by movement of the movable frame interposed in circuit with said insulated rail sections and said motor and a source of current.

1,463,128. PICKER-STICK CHECK. AMEDEE MASSEY and AARON BENSON, Norwich, Conn. Filed Nov. 28, 1921. Serial No. 518,393. 2 Claims. (Cl. 139—165.)

1. In check mechanism, the combination of a loom, a body portion having a head secured to the loom, parallel spaced arms secured to the body, a bolt for securing the arms to each other, washers arranged on the bolt between the arms, a head secured on the arms and means for securing the head to said arms.

1,463,129. AUTOMATIC FLUID CONTROL. WILLIAM H. MILTON and FRED SCHERMER, Muscatine, Iowa. Filed June 3, 1921. Serial No. 474,797. 5 Claims. (Cl. 226—127.)

1. An automatic fluid control comprising a casing having an inlet, an outlet and a discharge, a valve within the casing and adapted to cut off communication between the inlet and the outlet or between the inlet and the said discharge, a holder for maintaining the valve in position to cut off communication between the inlet and

outlet, and a float for actuating said holder to effect release of the valve which automatically operates to cut off communication between the inlet and discharge and establish communication between the inlet and the outlet.

1,463,130. TOOL FOR REMOVING VALVES. JAMES B. MORRIS, Nashville, Tenn. Filed July 3, 1922. Serial No. 572,646. 11 Claims. (Cl. 29—86.3.)

1. In a valve-releasing tool, a bar, a spring-engaging member mounted thereon, mechanism cooperating with said bar to move said spring engaging member longitudinally of the stem of said valve, said mechanism having handle-parts for its manual operation adjustable to varying angles with respect to said bar and adapted for complete operation of said mechanism in any of said positions of angular adjustment.

1,463,131. FEELER MECHANISM FOR LOOMS. ISAAC SNOW, Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 29, 1922. Serial No. 547,689. 8 Claims. (Cl. 139—281.)

1. In a feeler mechanism for looms, the combination of a feeler mounted for movement in a direction longitudinally of the shuttle to effect by such longitudinal movement replenishment of filling, a transmitter, an enlarged portion carried by the feeler and normally engaged with the transmitter when the feeler is in rearward feeling position and moved out of engagement with the transmitter by a working supply of filling in the

properly boxed shuttle on a detecting beat, and a stop which limits the lateral movement of the feeler to an extent insufficient to actuate the transmitter when the enlarged portion of the feeler is moved out of engagement with the transmitter.

1,463,132. PHOTOGRAPHIC OBJECTIVE. CHRISTOPHER GRAF, South Bend, Ind., assignor to Richard Graf, South Bend, Ind. Filed Jan. 5, 1922. Serial No. 527,241. 7 Claims. (Cl. 88—57.)

7. A photographic lens of the anastigmat type comprising a fixed back combination, and an adjustable front combination, said front combination comprising two lenses separated by an air space and movable relatively to each other, the arrangement being such that when the lenses of the front combination are in their relative position closest to each other, an image of a desired maximum degree of diffusion is produced, and that when they are moved away from each other, an increasingly sharper image is produced.

1,463,133. FUEL-MIXTURE HEATING AND VAPORIZING DEVICE. WILLIAM WALLACE GRANT, Brooklyn, N. Y.; Helen M. W. Grant administratrix of said William Wallace Grant, deceased. Filed Nov. 27, 1920. Serial No. 426,708. 17 Claims. (Cl. 219—38.)

1. A fuel mixture heating and vaporizing device comprising an individual heating unit adapted to be interposed in an engine fuel mixture supply line to form a continuation thereof and including a casing, means interiorly of the casing for heating said casing, means exteriorly of the casing whereby the casing may be heated, and a shell surrounding the casing for conducting a fuel mixture over and around the casing in contact therewith.

1,463,134. SHANK AND BIT PUNCH. HARRY VERCOE HAIGHT, Sherbrooke, Quebec, Canada, assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 19, 1922. Serial No. 569,474. 6 Claims. (Cl. 76—5.)

1. In a fluid actuated machine for punching hollow articles, the combination of a cylinder and double-ended reciprocating hammer piston, anvil blocks separate from the piston at each end of the cylinder, one anvil block being adapted to carry a pin, and means for causing the piston to impart blows of impact to one or the other of the said anvil blocks according to the direction in which the pin is to be driven.

1,463,135. SPRING WHEEL. BRADFORD B. HOLMES, U. S. Army. Filed Aug. 21, 1919. Serial No. 318,956. 4 Claims. (Cl. 152—45.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

3. In a spring wheel, a spoke holding portion comprising a side plate having an extension forming a conical surface, a plate having a conical surface and adjustably connected to said side plate, a hub portion having a fixed and an adjustable member, supporting plates co-acting with the conical surfaces of said plates and said fixed and adjustable members, and spring means for holding said plates yieldingly in position.

1,463,136. METHOD OF AND APPARATUS FOR OPERATING PRINTING TELEGRAPHS. EDWARD E. KLEINSCHMIDT, Brooklyn, N. Y., assignor to The Kleinschmidt Electric Company, a Corporation of New York. Filed May 1, 1919. Serial No. 293,949. 8 Claims. (Cl. 178—33.)

1. A printing telegraph system comprising a rotary distributor divided into signal receiving and transmitting sections, a stop position for said distributor immediately preceding said signal receiving section, means for transmitting a start impulse immediately preceding said signal transmitting section, a start-stop magnet for said distributor, a receiving relay adapted to complete local energizing circuits through said start magnet and said receiving distributor section, and a shunt circuit around said receiving relay arranged to permit the completion of a local energizing circuit through said start relay.

1,463,137. ROLLER COASTER. STANLEY MAKEPEACE, Milwaukee, Wis., assignor to Castalia Gardens, Inc., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 8, 1922. Serial No. 580,427. 6 Claims. (Cl. 105—169.)

1. In a roller coaster car and track structure, a car having bracket mountings at opposite sides thereof, stub axle steering knuckles journaled in the bracket mountings, supporting wheels upon the stub axles, guard rollers associated with the supporting wheels, track rails supporting the wheels, and resiliently mounted means connecting the steering knuckles at opposite sides of the car to cause the supporting wheels to follow the track rail and permit movement of the car relative to the supporting wheels.

1,463,138. CULTIVATOR. ARTHUR W. REYNOLDS, Newtown, Conn. Filed July 12, 1921. Serial No. 484,042. 5 Claims. (Cl. 97—154.)

1. In a sulky cultivator of the character described, a center bar, a side bar pivotally secured thereto and carrying cultivator teeth and means for swinging said side

bar on its pivot toward or from said center bar, said means comprising links and levers pivotally connecting

said side and center bar, a push rod for manipulating said parts, and a stirrup device movable in a direction in line with said center bar for operating said push rod.

1,463,139. BOTTLE CAP REMOVER. TURNER C. RUSH, Lexington, Ky., assignor to Fredric Grant Erd, Lexington, Ky. Filed Oct. 11, 1922. Serial No. 593,877. 6 Claims. (Cl. 65—46.)

1. In a bottle cap removing device, an element having means to secure it to a wall or other support, and a cap removing element slidably and pivotally engaged with the first named element and movable to a closed inoperative position approximately parallel with the plane of the first named element and to a cap removing position projecting at an angle to said plane.

1,463,140. SWITCH STAND. FRANK C. ANDERSON, Cincinnati, Ohio, assignor to The American Valve and Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 12, 1923. Serial No. 624,496. 21 Claims. (Cl. 246—411.)

1. In a switch-stand, mechanism comprising a lever and rack-actuating means coaxially connected, a rack engaged by said rack-actuating means, a switch-throwing crank, and an intermediate crank arm pivoted to said rack and radially slidably connected to said switch-throwing crank for rotation thereof incident to sliding of said rack.

1,463,141. METHOD OF CONTROLLING COMBUSTION. FRANCIS H. BROWN, Philadelphia, Pa., assignor, by mesne assignments, to The Hagan Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 28, 1917, Serial No. 157,921. Renewed Apr. 16, 1923. 7 Claims. (Cl. 236—14.)

1. The method of controlling the feed of fuel to a furnace which consists in automatically regulating the fuel feed by and in accordance with variations in furnace pressure.

1,463,142. APPARATUS FOR CONTROLLING COMBUSTION. FRANCIS H. BROWN, Glenolden, Pa., assignor, by mesne assignments, to The Hagan Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Mar. 28, 1917, Serial No. 157,921. Divided and this application filed Oct. 30, 1920. Serial No. 420,619. 17 Claims. (Cl. 236—14.)

1. In an apparatus for controlling combustion, the combination of a furnace, means for feeding fuel into the furnace and means for regulating the feed of fuel by and in accordance with variations in furnace pressure.

1,463,143. CONTROLLING COMBUSTION. FRANCIS H. BROWN, Ridley Park, Pa., assignor, by mesne assignments, to The Hagan Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed Mar. 28, 1917, Serial No. 157,921. Divided and this application filed June 21, 1922. Serial No. 569,999. 16 Claims. (Cl. 236—14.)

11. The method of operating boiler furnaces which consists in maintaining a substantially uniform furnace gas pressure for varying rates of combustion and regulating the rate of fuel feed in accordance with the rate of outflow of the furnace gases.

16. A furnace having in combination therewith a stoker for feeding fuel thereto, air impelling means for furnishing draft, means for controlling the air impelling means by the steam pressure of the boiler, means for controlling the stoker in accordance with the variations

of the air impelling means, and means for maintaining substantially uniform pressure in the furnace for vary-

ing rates of combustion which last named means also varies the relative speed of the stoker to that of the air impelling means.

1,463,144. MANUFACTURE OF SHAFTS. JOHN J. CARTER, Anderson, Ind., assignor to The Remy Electric Company, a Corporation of Indiana. Filed Jan. 26, 1920. Serial No. 353,928. 2 Claims. (Cl. 29—148.)

1. The process of manufacture of a shaft having a shoulder which consists in providing the shaft with a groove; in making a washer having a thickness less than the width of the groove, and an internal diameter slightly greater than a portion of the shaft whereby the washer may be readily placed in alignment with the groove; in initially deforming the washer so that the washer enters the groove at portions thereof in order to support the shaft; in supporting the washer axially while squeezing the washer so as to reduce its internal diameter and to increase its thickness whereby the groove will be substantially occupied by a portion of the washer.

1,463,145. CAP FOR RECEPTACLES. WILLIAM E. KOSS, Evanston, Ill., assignor to Frank A. Brown, Wilmette, Ill. Filed Aug. 21, 1922. Serial No. 583,080. 6 Claims. (Cl. 215—46.)

1. A sheet metal screw cap for receptacles comprising a top and a depending screw threaded flange, there being an outwardly directed hollow bead extending peripherally in the flange between the topmost thread thereof and the top of the cap, whereby deformation of the bead by a blow thereon will displace an adjacent portion of the top of the cap, substantially as and for the purposes set forth.

1,463,146. RIVETER. JAMES L. BERNARD, Beaver, Pa.
Filed Dec. 4, 1920. Serial No. 428,372. 5 Claims.
(Cl. 78—19.)

1. A power riveter comprising a fixed frame having opposite spaced jaws closed at their bottom and top, forming a closed throat therebetween, a vertically adjustable hydraulic cylinder mounted in one of said jaws, an upsetting tool carried by said cylinder, a vertically ad-

justable bucking-up stake mounted in the other of said jaws, means for adjusting said cylinder and said bucking-up stake vertically, and fluid pressure means for counterbalancing the weight of said cylinder and bucking-up stake.

1,463,147. COVER AND COVER-SECURING MEANS. MAX L. HILLMER, Detroit, Mich., assignor to The Remy Electric Company, a Corporation of Indiana. Filed Oct. 30, 1918. Serial No. 260,243. 7 Claims. (Cl. 220—55.)

1. In a device of the kind described, the combination with a support and a flexible cover therefor; of a fixed member secured to the support; and movable means cooperating with the fixed member to secure the cover in position upon the support, said cover and movable means having cooperating portions, the cover portions adapted by the flexing of the cover to spring into interlocking relation with said portions of said movable means in order to prevent the moving of said movable means due to the jarring or vibration of the support and cover.

THE OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 312—No. 5.

TUESDAY, JULY 31, 1923.

Price—\$5 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, \$5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(C. C. A. N. Y.) Palmer patent, 878,995, claim 1, for apparatus for inverting tubular fabrics, *Held* valid and infringed. *Palmer v. E. Z. Waist Co.*, 288 Fed. Rep., 848.

(C. C. A. N. Y.) Schey patent, 902,724, for an apparatus for broiling meats, *Held* infringed. *Schey v. Giovanna*, 288 Fed. Rep., 849.

(C. C. A. N. Y.) Fuller patent, 1,101,268, for stencil paper, *Held* valid and infringed. *A. B. Dick Co. v. Burnett*, 288 Fed. Rep., 799.

(C. C. A. N. Y.) Clorious patent, 1,203,852, for game of skill, *Held* valid, but not infringed. *Chester-Pollard Amusement Co. v. Kentucky Derby Co.*, 288 Fed. Rep., 802.

(D. C. R. I.) Gerosa patent, 1,263,879, for lug for power-plant support for motor vehicles, void for lack of invention. *Hudson Motor Specialties Co. v. Apco Mfg. Co.*, 288 Fed. Rep., 871.

(C. C. A. N. Y.) Garson patent, 1,337,400, for a crane, *Held* invalid for want of novelty. *Garson v. Elwell-Parker Electric Co.*, 288 Fed. Rep., 824.

(C. C. A. N. Y.) Chester patent, 1,368,111, for an amusement apparatus, *Held* valid, but not infringed. *Chester-Pollard Amusement Co. v. Kentucky Derby Co.*, 288 Fed. Rep., 802.

(C. C. A. Ill.) Tufford reissue patent, 14,049, for rubber heel lift, *Held* not infringed. *U. S. Rubber Co. v. I. T. S. Rubber Co.*, 288 Fed. Rep., 786.

(C. C. A. Ohio.) Tufford reissue patent, 14,049, for rubber heel lift, *Held* not infringed. *I. T. S. Rubber Co. v. Tee Pee Rubber Co.*, 288 Fed. Rep., 794.

(C. C. A. Va.) Patterson reissue patent, 12,159, disclaimer eliminating matter added by reissue and narrowing the original patent, *Held* ineffective. *Rosemary Mfg. Co. v. Halifax Cotton Mills, Inc.*, 288 Fed. Rep., 683.

Interference Notices.

U. S. PATENT OFFICE, Washington, July 12, 1923.

Jesse Minor, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the New England Confectionery Company, 253 Summer Street, Boston, Mass., for registration of a trade-mark and trade-mark registered June 2, 1903, No. 40,490, to Jesse Minor, 3822 Pier Street, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Jesse Minor at the said address having been returned by the post office undelivered, notice is hereby given that unless said Jesse Minor, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner of Patents.

U. S. PATENT OFFICE, Washington, July 12, 1923.

Bucknam & Vanderpoel, their assigns or legal representatives, take notice:

An interference having been declared by this Office between D. B. Scully Syrup Company, 321 East Illinois Street, Chicago, Ill., for registration of a trade-mark and trade-mark registered May 29, 1906, No. 53,164, to Bucknam & Vanderpoel, 198 West Broadway, New York, N. Y., and a notice of such declaration sent by registered mail to said Bucknam & Vanderpoel at the said address having been returned by the post office undelivered, notice is hereby given that unless said Bucknam & Vanderpoel, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner of Patents.

Condition of Applications Under Examination at Close of Business July 20, 1923.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 75,422; Trade-Mark Division, 3,475. Oldest new case, Sept. 9, 1922; oldest amended, Sept. 21, 1922. The dates given are 1922 except where * indicates 1923.)	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.
			New.	Amended.	
314	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plows; Planting; Scattering Unloaders; Trees, Plants, and Flowers.	Oct. 16	Oct. 2	1,277

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE AMERICAN DAIRY SUPPLY COMPANY.

Decided February 21, 1923.

TRADE-MARK—DESCRIPTIVE—NOT REGISTRABLE.

Since the words "The Certified Cap," for paper disks for closures for receptacles, usually known as milk-bottle caps, are, if applied directly to the caps, either deceptive or descriptive of the contents of the bottles closed by the caps, *Held* that registration of this mark used on labels showing the words directly applied to the disks should be refused, because distributors of milk and supervising health authorities seeing such labels bearing notice of registration would be led to believe the mark as applied directly to the caps had been registered.

ON APPEAL.

TRADE-MARK FOR PAPER-MATERIAL DISKS FOR CLOSING RECEPTACLES, USUALLY KNOWN AS MILK-BOTTLE CAPS.

Mr. Hubert E. Peck for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiner of Trade-Marks denying registration to "The Certified Cap," applied to paper material disks for closing receptacles, usually known as milk-bottle caps, and closure disks, Class 50, Merchandise not otherwise classified.

It appears the registration was approved and the mark was published, but thereafter registration was refused for reasons, some of which are set out in the decision sustaining the opposition of the Sheffield Farms-Slawson-Decker Company in proceeding No. 1,125.

There were other protests filed by medical or health officers from various places, which protests have now been misplaced or lost, against the registration of a mark of this character to be used upon milk bottles or containers, and these protests were considered by the Examiner of Trade-Marks as having a bearing upon the matter of refusal of registration.

Without reviewing at length these specific objections it will be sufficient to state here that it is a matter of common knowledge that in many communities, counties, or other sections of the country careful medical supervision by the health authorities of the production and handling of milk is in force. In many of these places milk which is handled and sold under this supervision is referred to as "certified milk," and such words appearing on the container, the closure, or any part of a receptacle used in distribution would create in the mind of the consumer the belief that the milk was being handled under such desirable supervision. In view of the foregoing I am satisfied the applicant is not entitled to use the word "Certified" or "The Certified Cap" on any device which is ultimately to become a part of a milk

container. Such a use would be deceptive if the milk in the container were not certified and would be descriptive if the milk were certified. In either event the mark could not be registered under the 1905 act as amended.

It is applicant's contention that the use of the mark upon the cap itself is not contemplated. Appellant company states in the brief filed at the hearing:

Applicant's "The Certified Cap" products are sold to the bottle closure trade and are ultimately used to close various kinds of containers for various kinds of products, in addition to its use as a closure for bottled milk,—see Mr. J. A. Burkart affidavits of record. Applicant's trade-mark, however, is not displayed on or in connection with such containers and bottles and is not known to the consumers of the bottled milk and the products in such containers.

To emphasize this matter, applicant in the brief above referred to states that its "trade-mark is not displayed on applicant's closure disks." In the affidavit filed June 30, 1922, the president of the applicant company avers that—

the milk caps manufactured by said corporation applicant for the milk cap trade do not and never did bear the trade mark of said applicant so far as the consumers of the bottled capped milk are concerned, and said corporation applicant does not print, impress or otherwise apply its said trade mark directly on or to its caps, but its said trade mark is displayed for inspection by the milk cap trade by labels on the packages or caps and by labels inserted in said packages, but not in such manner as to be seen by the consumers of bottled milk capped by "The Certified Cap."

The application, however, is not restricted in accordance with these averments and statements. The specimens show a label having the picture of a cap thereon with the mark applied directly to the cap. This would indicate to a purchaser that the applicant company was applying its mark, as shown in the picture, directly to the cap. A user of caps for milk bottles whose milk had been handled under the local health authorities and who wished and was entitled to label his caps "certified" would on seeing applicant company's label be warranted in believing such use would infringe the appellant's rights. Further, health authorities seeing appellant's label might well be led to believe their local statutes were being violated, or that the Patent Office had registered a mark to be used on caps by dairymen in violation of local statutes. No doubt it is true the applicant company usually prints the particular information on the cap requested by the milk distributor or user of the cap, but the label is contrary to this, and also there is no formal disclaimer of the use of the mark applied directly to the cap and nothing to prevent appellant from applying the mark, as the law contemplates a mark being applied, directly on the goods. It is believed the Examiner is right in denying registration of the mark.

The decision of the Examiner of Trade-Marks is affirmed.

Supreme Court of the United States.

JOHN SIMMONS COMPANY v. THE GRIER BROTHERS COMPANY.

Decided February 27, 1922.

1. PATENTS—JUDGMENTS—BILL OF REVIEW.

A bill of review is called for only after a final decree—one that finally adjudicates upon the entire merits, leaving nothing further to be done except the execution of it.

2. SAME—SAME—INTERLOCUTORY DECREE.

An interlocutory decree may be modified or rescinded by the court at any time before final decree.

3. SAME—SAME—SAME.

Whether a decree is final or interlocutory depends upon its essential purport and effect and not upon its characterization in pleadings.

4. SAME—SAME—FINAL DECREE.

The decree of July 24, 1914, was not a final decree, since an accounting was necessary. Nor was the decree of Jan. 5, 1916, final. As to unfair competition, an inquiry before a master was necessary, while the decision as to patent infringement remained in abeyance until final decree could pass, since there was nothing to take the case out of the ordinary rule that there can be but one final decree in a suit in equity (distinguishing *Smith v. Vulcan Iron Works*, 165 U. S., 518, 525; *Hill v. Chicago & Evanston Railroad Co.*, 140 U. S., 52; and following *Keystone Iron Co. v. Martin*, 132 U. S., 91).

5. SAME—SAME—PETITION FOR REHEARING.

Held that the bill of review filed in the foregoing circumstances is to be treated as a petition for rehearing.

6. SAME—SAME—PROCEDURE TO OBTAIN REHEARING OR REVIEW.

Proceedings to reopen a decree of a district court, entered pursuant to the mandate of an appellate court, whether by rehearing or review, should first be referred to the latter tribunal (citing *Southard v. Russell*, 16 How., 547, 570, 571; *in re Potts*, 116 U. S., 263, 267; 1897, C. D., 342; 78 O. G., 2049; *National Brake Co. v. Christensen*, 254 U. S., 425, 430-431).

7. SAME—SAME—FAILURE TO APPLY FOR A WRIT OF CERTIORARI.

The plaintiffs cannot be regarded as consenting to the decree of Jan. 5, 1916. They simply accepted an adverse decision as to a part of their suit, not open to further appeal at their instance, and proceeded in the orderly mode to preserve their suit as to the rest. Nor were they guilty of laches for omitting at that stage to make application to the Supreme Court for a writ of certiorari, because that mode of review is not a right of the party.

8. SAME—JUDGMENTS—REHEARING AFTER DECISION OF APPELLATE COURT.

In a suit charging unfair competition in trade and infringement of a patent the district court held, July 24, 1914, the patent valid and infringed and awarded a permanent injunction on both grounds, with an interlocutory decree for an accounting. This decision was sustained by the circuit court only as to unfair competition, and the case was remanded to the district court and a decree entered thereon January 5, 1916, and a master appointed to ascertain damages. Subsequently the Supreme Court found the patent to be valid and infringed by another defendant. Afterwards the circuit court granted a petition to file a bill of review in the district court based on the decision of the Supreme Court, and the district court sustained the plaintiffs' right to maintain a bill of review and held its former decree, in so far as it held the patent invalid, set aside. The circuit court reversed this decision and directed the former decree of the district court to be reinstated. *Held* the decision of the Supreme Court was sufficient to demonstrate that the circuit court

erred in its decision on the first appeal, and the error afforded ample ground for setting matters right before final decree.

9. SAME—CLAIM 4 OF BALDWIN LAMP PATENT UPHELD. *Abercrombie & Fitch Co. v. Baldwin* (245 U. S., 198), upholding claim 4 of Baldwin lamp patent, followed.

Mr. James Q. Rice for the petitioner.

Mr. C. P. Byrnes, Mr. David A. Reed, Mr. Geo. H. Parmelee, and Mr. Geo. E. Stebbins for the respondent.

ON writ of certiorari to the United States Circuit Court of Appeals for the Third Circuit.

Mr. Justice PITNEY delivered the opinion of the Court.

In October, 1913, Frederic E. Baldwin, a citizen of New York, together with the present petitioner John Simmons Company, a corporation and citizen of that State, brought suit in the United States District Court for the Western District of Pennsylvania against The Grier Brothers Company, a corporation and citizen of the latter State, charging infringement of reissued Letters Patent No. 13,542, issued to and owned by Baldwin and under which the Simmons Company was sole licensee, for certain improvements in acetylene-gas lamps intended for various uses, especially that of miners' lanterns. The bill charged also unfair competition with plaintiffs by the sale of lamps made to resemble the Baldwin lamp manufactured under the patent. The district court granted a preliminary injunction as to unfair competition but reserved the question of patent infringement for final hearing (210 Fed. Rep., 560). Upon that hearing the court held claim 4 of the Baldwin reissue patent valid and infringed and awarded a permanent injunction upon both grounds, July 24, 1914, with an interlocutory decree for an accounting (215 Fed. Rep., 735). Upon appeal by defendant (the present respondent), the Circuit Court of Appeals for the Third Circuit affirmed the decree as to unfair competition but reversed it as to patent infringement, holding the reissue to be void as to claim 4 upon the ground that this broadened the original patent (219 Fed. Rep., 735, 739). This decision was rendered January 22, 1915, and the mandate went down about a month later setting forth the decree of the appellate court that the decree of the district court be—affirmed as to so much thereof as refers to the subject of unfair competition, but the rest of the decree must be modified in accordance with the opinion of this court, and that the appellant recover costs and have execution therefor; and thereupon commanding that execution and further proceedings be had according to right and justice. No decree was entered upon this in the district court until January 5, 1916, when on motion of plaintiffs an order was entered that the decree of the circuit court of appeals be made the decree of the district court, that plaintiffs recover from defendant their damages sustained by reason of unfair trade to be ascertained and reported by a master to whom reference was made for the purpose, that a perpetual injunction be issued restraining defendant from further unfair competition in trade; and that the

bill of complaint as to infringement of the reissue patent be dismissed. The accounting before the master is still pending.

In May, 1913, Baldwin had brought suit (John Simmons Company intervening) upon the same reissue patent in the United States District Court for the Southern District of New York against Abercrombie & Fitch Company (Justrite Company, intervening), and that court adjudged the patent valid and infringed (227 Fed. Rep., 455). On appeal this decree was affirmed by the Circuit Court of Appeals for the Second Circuit, November 9, 1915 (228 Fed. Rep., 895). On December 20, 1915, defendants in that suit presented to this Court a petition for a writ of certiorari; January 10, 1916, this writ was granted (239 U. S., 649); and under it, on December 10, 1917, the decision of the Circuit Court of Appeals for the Second Circuit was affirmed, this Court holding, in direct opposition to the decision of the Circuit Court of Appeals for the Third Circuit, that claim 4 of the reissue was valid (245 U. S., 198; 246 O. G., 567). A mandate was sent down January 15, 1918, to the District Court for the Southern District of New York, and the proper decree was promptly entered thereon.

Soon after this, plaintiffs herein petitioned the District Court for the Western District of Pennsylvania for leave to file what was called a "bill of review" against its decree of January 5, 1916. The Court in the first instance refused, but without prejudice to an application to the Circuit Court of Appeals for the Third Circuit for leave to file such bill. Upon application that court granted plaintiffs leave to make the application to the district court, and authorized the latter court to take action thereon. Under this leave, application was renewed to the district court, the proposed "bill of review" being at the same time presented, and with leave of the court filed. This bill sets out the original bill and the proceedings had thereunder, as above recited; also the proceedings in the suit in the second circuit and the final decision of this court therein; alleging these as "new facts" that had arisen since the decree entered in the District Court for the Western District of Pennsylvania on the 5th of January, 1916, and as showing that that decree was erroneous and contrary to law, in so far as (pursuant to the opinion of the Circuit Court of Appeals for the Third Circuit) it dismissed the bill as to infringement of the reissue patent and failed to decree a perpetual injunction and ascertainment of damages as to infringement; prayed that the cause might be reopened and the decree rescinded and set aside, in so far as it dismissed the patent cause of action, and a new decree entered granting the relief prayed for in the original bill. Defendant answered admitting in the main, or at least not denying, the allegations of the so-called bill of review as to the former proceedings and decrees in the courts of the two circuits, but denying that the lamp involved in the Abercrombie & Fitch Company suit (the "Justrite lamp") corresponded

in essential features of construction with the "Grier lamp" involved in the present suit; averring that the decisions of the circuit courts of appeals of the two circuits were not rendered on the same state of facts; that the bill was—

in fact only a petition for rehearing because of the decision of the Supreme Court referred to therein;

and that the decision of this Court in the Abercrombie & Fitch Company suit formed no basis for a bill of review.

Afterwards, John Simmons Company by leave filed a supplemental bill setting up that it had acquired from Baldwin all his rights in the reissue patent including all claims for damages and profits on account of the infringement. Defendant having answered this, testimony was taken to show the structural identity of the "Justrite" and the "Grier" lamps, and the cause came to hearing, with the result that the district court found substantial identity between the two lamps in all essential features of construction, sustained the right of plaintiffs to maintain the bill of review, and held that its former decree, entered pursuant to the mandate of the circuit court of appeals, so far as it held the reissue patent invalid, should be vacated and set aside and a decree entered sustaining the validity of claim 4 of the reissue, finding defendant guilty of infringement thereof, and plaintiffs entitled to an accounting of profits and a perpetual injunction. From the decree thus entered an appeal was taken to the circuit court of appeals, which reversed it and remanded the cause with directions to reinstate the decree of January 5, 1916 (265 Fed. Rep., 481). To review this decision, the present writ of certiorari was allowed (253 U. S., 482).

The district court, as will appear from an excerpt from its opinion reported in a note to the opinion of the circuit court of appeals (265 Fed. Rep., 483), treated the case as one based upon a true bill of review, and this as resting not upon new matter that had arisen since the decree but upon error of law apparent on the face of the record without further examination of matters of fact.

The circuit court of appeals, upon a recital of the different steps in the litigation, regarded the situation as one of plaintiffs' own creation, for the reason that after that court's decision on the original bill but before the mandate went down, although apprised of the contrary decision of the District Court for the Southern District of New York in a cause to which they were parties, plaintiffs made no request to the Circuit Court of Appeals for the Third Circuit to withhold its mandate; that, after the mandate went down and before a decree pursuant to it was entered in the court below, they knew of the affirmance of the decision of the district court of New York by the Circuit Court of Appeals for the Second Circuit, yet made no request to either court in the third circuit to have the entry of a decree withheld; that on the contrary, with knowledge that this court had under consideration a petition for certiorari in the second circuit case, they prepared and of their own motion caused to be entered on January 5,

1916, the decree dismissing their suit as to the patent infringement; and after this court on January 10, 1916, granted the certiorari, they allowed the term to end without moving to suspend, open, or vacate the decree of January 5. The court held that in effect, so far as plaintiffs were concerned, that decree was a consent decree, and while not going to the extent of holding that this was sufficient to bar them from maintaining the bill of review, did declare that the anomalous situation and consequent hardship, arising from the fact that a patent adjudged valid in one circuit by this court at the same time had been adjudged invalid by the circuit court of appeals in another circuit, was due not to any fault of the law or of the patent system but to the failure of plaintiffs to take steps that might have avoided it. Proceeding to consider the legal question whether the decision of this court in 245 U. S., 198, either showed an error of law apparent on the face of the record without further examination of matters of fact, or constituted a new fact discovered since the decree and materially affecting it, the court held on the authority of *Scotten v. Littlefield* (235 U. S., 407, 411), *Tilghman v. Werk* (39 Fed. Rep., 680), and *Hoffman v. Knox* (50 Fed. Rep., 484) that the bill of review could not be maintained.

The cases cited are to the effect that, in the application of the ancient rule of practice in equity, based upon Lord Bacon's first ordinance (Story Eq. Pl., 6th ed., sec. 404), a change in the authoritative rule of law, resulting from a decision by this Court announced subsequent to the former decree, neither demonstrates an "error of law apparent" upon the face of that decree nor constitutes new matter *in pais* justifying a review.

[1, 2, 3] But a bill of review is called for only after a final decree—one that finally adjudicates upon the entire merits, leaving nothing further to be done except the execution of it. If it be only interlocutory, the court at any time before final decree may modify or rescind it. (Story Eq. Pl., secs. 408, a, 421, 425.) In the so-called bill of review herein, it is in terms alleged that the decree of the District Court for the Western District of Pennsylvania, entered July 24, 1914, was an interlocutory decree. The same is alleged as to the decree of January 5, 1916. Both allegations are admitted by the answer, which at the same time asserts that the "bill of review" is in fact only a petition for rehearing. Obviously, the nature of the decree is to be determined by its own essential purport and effect, not by the statements of the pleaders about it. But an examination of the record demonstrates that they correctly described the decree as interlocutory.

[4] The decree of July 24, 1914, although following a "final hearing", was not a final decree. It granted to plaintiffs a permanent injunction upon both grounds, but an accounting was necessary to bring the suit to a conclusion upon the merits. An appeal taken to the circuit court of

appeals, whose jurisdiction, under section 129 Judicial Code, extended to the revision of interlocutory decrees granting injunctions, followed by the decision of that court reversing in part and affirming in part, did not result in a decree more final than the one reviewed. The prayer for relief based upon infringement of patent and that based upon unfair competition in trade were but parts of a single suit in equity. The decree entered pursuant to the decision of the appellate court, did not bring the suit to a conclusion for either purpose. As to unfair competition, it evidenced a quasi-definitive decision in plaintiffs' favor, but an inquiry before a master still was necessary before final decree could pass; an inquiry not formal or ministerial but judicial, in order to ascertain the amount of the damages to be awarded. As to the claim of patent infringement, the decree evidenced a quasi-definitive decision adverse to plaintiffs, which, if nothing occurred to prevent, would in due course be carried into the final decree. But it did not constitute a separation of the cause, nor dismiss defendant from the jurisdiction for any purpose; necessarily this decision remained in abeyance until the cause should be ripe for final decree; there was nothing to take the case out of the ordinary rule that there can be but one final decree in a suit in equity.

Smith v. Vulcan Iron Works (165 U. S., 518, 525), where it was held by this Court, after some diversity of opinion among the circuit courts of appeals of the different circuits, that an appeal to one of those courts under section 7 of the act of 1891, from which section 129 Judicial Code was derived, taken from an interlocutory decree granting an injunction and awarding an accounting in a patent case, conferred jurisdiction upon the appellate court to consider and decide the case upon its merits, and thereupon direct a final decree dismissing the bill, if in its judgment it had no equity to support it, differed vitally from the case before us, since there an adverse decision upon the patent disposed of the entire merits, the suit having no other object. Nor was the situation presented in the present case analogous to that passed upon by this Court in *Hill v. Chicago & Evanston Railroad Co.* (140 U. S., 52), which arose out of its decision in 129 U. S., 170. There a decree was held final for the purposes of an appeal, which dismissed the bill as to certain parties and denied relief "upon all matters and things in controversy," although it left undetermined a severable matter in which those parties had no interest. The test of finality here to be applied is rather that exemplified by *Kcystone Iron Co. v. Martin* (132 U. S., 91) and cases cited. In *ex parte National Enameling Co.* (201 U. S., 156, 165; 121 O. G., 1679) it was pointed out that the rule of the *Hill* case can not apply to a case in which there is but a single defendant.

[5] Regarding, therefore, the decree of January 5, 1916, as an interlocutory not a final one, there is

neither technical nor substantial ground for applying to it the rules pertaining to a bill of review, and the bill herein called such is to be treated as essentially a petition for rehearing. By the 69th Equity Rule (226 U. S., 669) such a petition is in order at the term of the entry of the final decree; and, of course, if an interlocutory decree be involved, a rehearing may be sought at any time before final decree, provided due diligence be employed and a revision be otherwise consonant with equity.

[6] As the decree in question was entered pursuant to the mandate of an appellate court, proper deference to its authority required that a proceeding to reopen it, whether by rehearing or review, should be first referred to that tribunal. (*Southard v. Russell*, 16 How., 547, 570-571; *in re Potts*, 166 U. S., 263, 267; *National Brake Co. v. Christensen*, 254 U. S., 425, 430-431.)

[7] That having been done in this case, and leave for the purpose obtained (leave to grant a "review" fairly included any step short of that), what obstacle stood in the way of correcting the decree? The suit was still pending; plaintiffs applied promptly after the decision of this Court in the *Abercrombie & Fitch Co.* suit (245 U. S., 198). It was eminently proper that the decree in the present suit should be made to conform to that decision, in the absence of some special obstacle. We cannot assent to the view of the court below that plaintiffs may be regarded as consenting to the decree of January 5, 1916; they simply accepted an adverse decision as to a part of their suit, not open to further appeal at their instance, and proceeded in the orderly mode to pursue their suit as to the rest. They were not guilty of laches for omitting at that stage to make application to this Court for allowance of a writ of certiorari. That mode of review is not a right of the party, but lies in this court's discretion; peradventure the very fact that a final decree had not yet been entered might have been deemed a sufficient ground for refusing the writ. (*Hamilton Shoe Co. v. Wolf Brothers*, 240 U. S., 251, 254, 257-258.)

[8, 9] Our decision in *Abercrombie & Fitch Co. v. Baldwin* (245 U. S., 198) must be taken as not only demonstrating that the circuit court of appeals erred in its disposition of this case upon the first appeal (219 Fed. Rep., 735), but that the error, even though not amounting to "error apparent", within the meaning of Lord Bacon's first ordinance, afforded ample ground for setting matters right upon a rehearing before final decree, as was in effect done by the district court. No sufficient ground is shown for the reversal of its latest decree.

Decree of the circuit court of appeals reversed, and that of the district court affirmed; and the cause remanded to that court for further proceedings in conformity to this opinion.

Court of Appeals of the District of Columbia.

IN RE HAMMER.

No. 1,524. Decided January 2, 1923.

PATENTABILITY—ANTICIPATION.

Where the essential features of an application corresponds with features found in the references and operate in substantially the same manner without producing different results, *Held* that there is no invention in the combination.

Mr. Theo. K. Bryant for Hammer.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDIEL, Associate Justices.

SMYTH, C. J.:

Hammer's application for a patent on an improvement in wire mattresses was denied by the Patent Office. We set out claims 1, 3, and 5.

1. A mattress fabric comprising a continuous wire provided with a plurality of loops, one being opposite the other for helical connection, formed by twisting portions of the wire.

3. A mattress fabric comprising a continuous wire provided with a plurality of loops, one being opposite the other for helical connection, formed by double twisting one end and single twisting the other end of the return portions of the wire.

5. A mattress comprising a pair of frame members, a continuous wire having a plurality of loops formed by twisting the wire for helical connection with the frames, said wire having crimps to point in reverse directions, and transverse links connecting a crimp in the return bend of one wire with a crimp in the return bend of the other.

The application was rejected on a patent to Way July 28, 1914, on one to Langlykke September 24, 1918, and on one to Slater (British) March 13, 1907. We have considered it in the light of the references and are satisfied that its essential features correspond with features found in the references and operate in substantially the same manner without producing different results; consequently, that there is no invention in the combination. Under these circumstances the action of the Commissioner of Patents must be, and it is, affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

STILLWELL v. THOMPSON, JR.

Nos. 1,575 and 1,576. Decided May 7, 1923.

1. INTERFERENCE—PRELIMINARY STATEMENT—AMENDMENT.

Where a party, acting timely and in good faith, shows that an amendment is essential to the preservation of his rights, the privilege should be accorded, and this may be done at any step in the proceedings prior to the final determination of the case in the Patent Office.

2. SAME—SAME—SAME.

Where S., in company with one Woodbury, developed the invention in issue at the laboratory of the Du Pont Powder Company and three years later, at the time the original preliminary statement was prepared, S. and W. had before them a letter of Sept. 11, 1915, written by W. to the Du Pont Company, which indicated that conception had then taken place, and it appears from the affidavits in support of the motion to amend that when S. and W., after a search of the files of the Du Pont Powder Works had been made by S.'s attorney, were confronted with a letter dated Aug. 16, 1915, they clearly recalled a conference which S. had with W.

when he disclosed sketches of the invention and explained its operation, *Held* that the Examiners in Chief properly allowed S.'s motion to amend.

Mr. Edwin J. Prindle for Stillwell.

Mr. Thomas Howe for Thompson, jr.

Before SMYTH, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, J.:

The two interferences can be treated as a single case. The single claim in issue in No. 1576 reads as follows:

The method of forming a cavity in explosive contained in a shell which consists in supporting the shell with its axis having a vertical component, whereby explosive released tends to drop away from the shell, and having its lower end open, and removing explosive material to form the desired cavity by relatively moving the shell and drills, or cutters of different diameters and in longitudinally fixed relationship, whereby the said drills or cutters enter into the explosive from the lower, open end of the shell along a path having a vertical component and the boring of large diameter is carried out simultaneously with a portion of the boring of smaller diameter.

Five more specific claims to the same method are involved in No. 1575. Claims 1 and 5 illustrate the invention in issue as follows:

1. The method of forming a cavity in explosive material contained in a shell having directly communicating bores of different diameters, which consists in boring out the explosives contained in the bore of larger diameter, on a diameter not greater than the diameter of the lesser bore.

5. The method of forming a cavity in explosive cast in a shell having bores of different diameters, which consists in advancing boring cutters or drills in fixed longitudinal relationship into the said explosive, the said cutters or drills being of different diameters to form holes of different diameters in the different bores respectively, the hole of larger diameter in the larger shell bore being not greater than the lesser bore.

From the claims it will be observed that the invention involves a method of boring out a portion of the explosive material cast in a shell to form a cavity to receive the detonator, which upon impact explodes the shell.

A patent was issued to the senior party Thompson February 5, 1918, upon a division of an application filed November 20, 1916. Stillwell filed his application July 24, 1916.

Stillwell in his preliminary statement alleged conception and disclosure on or before September 11, 1915, and reduction to practice October 30, 1915. Thompson in his preliminary statement fixed a date of conception on September 7, 1915, disclosure September 15, 1915, and reduction to practice November 1, 1915.

Since Thompson on the face of his preliminary statement could claim no earlier date than his alleged date of disclosure, it will be observed that Stillwell is prior both as to date of conception and reduction to practice. Thompson on motion was allowed by the Examiner to amend his preliminary statement, fixing the date of conception and disclosure at August 27, 1915. During the taking of the testimony Stillwell moved to be allowed to amend his preliminary statement. The motion was denied by the Examiner who awarded priority to Thompson. On appeal the Board of Examiners in Chief allowed Stillwell's motion to amend and awarded him priority, fixing his date of conception and disclosure as early as August 25, 1915, and reduction to practice on October 30, 1915.

The Commissioner denied the right of Stillwell to amend and reversed the Examiners in Chief. From the decisions these appeals were taken.

[1] The right of a party to amend in a patent case is not different from the similar right accorded by courts in proceedings at law and in equity. Where a party, acting timely and in good faith, shows that amendment is essential to the preservation of his rights, the privilege should be accorded, and this may be done at any step in the proceedings prior to the final determination of the case in the Patent Office. If both parties were restricted to the dates given in their preliminary statements, Stillwell would prevail. The tribunals below all agree that there is no evidence of intentional misstatement on the part of either of the parties or their witnesses. The whole case, therefore, turns upon the right of Stillwell to amend after a similar privilege had been accorded Thompson.

Thompson's right to amend, and indeed his case turns on a late-discovered sketch in the possession of his principal witness Smith. It appears that on September 7, 1915, Thompson went to Parlin, N. J., in the employ of the International Steel & Ordnance Company. He was there, as he states, for the first time confronted by the problem of boring shells. Conferences were held between Thompson and the officers of the company. As a result Thompson devised the invention in issue. Smith had been associated with Thompson before going to Parlin and was his chief assistant there in the course of developing the invention. When Thompson prepared his original preliminary statement, Smith was with the American Army in France.

After Thompson discovered, from the preliminary statements, that Stillwell was prior in point of time, he wrote Smith in part as follows:

September 4th, 1915.

Captain ST. CLAIR SMITH, 58th Artillery, C. A. C., A. E. F.

My dear SAINTY :-

It is highly important that a date of conception of the boring machine be substantiated. I went to Parlin, September 7th, 1915, and after reading the Russian specifications, immediately began to mentally design machinery for the new work. I remember that at that time I concentrated on machinery to form the cavities and have sketches of several types of casting plugs. I also remember planning to use an inverted drill press of some sort, adopted with a shell holder, and wonder if I did not roughly outline my purposes to you in our many conversations.

Can you recall of my telling you my plans, and would you be willing to say that I had divulged the general scheme within three days after taking up my duties at Parlin? If you can and will write me to this effect, it will be a great help. Please do not delay a reply.

* * *

Sincerely,

(Sgd.) ULDRIC THOMPSON, Jr.

Smith returned Thompson's letter answering in long hand on the back thereof in part as follows:

Dear TOMMY:

Please don't think me discourteous in replying on the back of your letter, but paper up front is a very scarce article.

Yes I remember very clearly your efforts to dope out a drill almost the very day you arrived on the scene and further you made some sketches. The drill question was taken up by you the very moment you arrived and if you will remember that while we were designing the crimping machine you and I discussed the kind of machinery necessary to drill the fuse seat in the charge. * * *

As always,

ST. CLAIR SMITH.

Smith testified that after he returned to this country he discovered among his papers a pencil

sketch, dated August 27, 1915, outlining the Thompson device. On the strength of this sketch Thompson amended. The testimony discloses that at the conferences at Parlin, Thompson disclosed his sketches made from time to time as the work developed. All these sketches were signed. The pencil sketch discovered by Smith, however, discloses no signature. The tribunals below all accorded Thompson the date of this drawing, August 27, 1915, as a date of conception and disclosure. Without further review of Thompson's case, we may say that on our view of the case the finding of the tribunals below may stand unimpeached, without affecting the result.

Coming to Stillwell's right to amend, it appears that he returned to New York from his annual vacation August 15, 1915, and on the following day he was informed that he was wanted at the engineering department of the Du Pont Powder Company at Wilmington, Del. He went there and in company with one Woodbury, developed the invention in issue. The original preliminary statements were filed three years later and it would not be surprising if both parties may have been uncertain as to exact dates. It was not until Stillwell's attorney made an investigation and search of the files of the Du Pont Powder Works that evidence of earlier dates than those appearing in the preliminary statement was discovered. From a letter it was ascertained that Stillwell also proceeded to Wilmington immediately. The letter dated August 16, 1915, from the chief engineer is as follows:

We are returning herewith original blue print of shell which we obtained from you through the chemical department. We also attach two photostatic prints of the shell, and one photostatic print to the chemical department's copy of this letter.

Mr. Stillwell will confer with Mr. Woodbury within the next few days in regard to the details of this installation, and he will please turn over to him the two photostatic prints attached hereto.

Mr. Stillwell was in this office today and it was agreed that he would take this matter up Wednesday the 18th inst., go over the proposition in detail with Mr. Woodbury, and make some preliminary sketches and designs of the apparatus and layout desired, submitting same to us as soon as possible. There will be some experimental work required, and we suppose Mr. Woodbury will give Mr. Stillwell the benefit of the experiments which he has so far carried on and assist him in any further work necessary.

At the time the original preliminary statement was prepared, Stillwell and Woodbury had before them a letter of September 11, 1915, written by Woodbury to the chemical department of the Du Pont Company, which among other things, contained the following statement:

We have already talked with Mr. Stillwell regarding the drilling operation and he is preparing to set up a drill press here at the laboratory in order to try out both the drilling and boring.

This, it appears, accounted for the date of conception and disclosure fixed in the original preliminary statement as "on or before September 11, 1915."

It appears from the affidavits in support of the motion to amend, that when Stillwell and Woodbury, after a search had been made by Stillwell's attorney, were confronted with the letter of August 16th they clearly recalled from the data before

them the conferences appointed for August 18th and that within two days or not more than a week, August 25th thereafter, Stillwell had a second conference with Woodbury when he disclosed sketches of the invention and explained its operation.

[2] We deem it unnecessary to further review the evidence in this case since it has been analyzed in great detail both by the Examiner and the Board of Examiners in Chief. As suggested, if both parties were restricted to the dates given in their original preliminary statements, Stillwell would prevail. Our examination of the record convinces us that if either party is to be permitted to amend his preliminary statement, the right should be accorded both. Indeed, Stillwell's position in this regard is stronger and more consistent than Thompson's. We are in full accord with the reasoning and able analysis of the case, as given in the opinion of the Board of Examiners in Chief.

The decisions of the Commissioner are, therefore, reversed.

Dissenting—Mr. Chief Justice SMYTH.

PATENT SUITS.

[Notices under section 4921, Revised Statutes, as amended February 18, 1922.]

821,393, Wright & Wright, Flying machine, suit filed Dec. 1, 1921, D. C., S. D. N. Y., Doc. E 22/294, *Wright Aeronautical Corp. v. Ludlow Syndicate, Inc., et al.* Bill dismissed without prejudice June 5, 1923. Same, suit filed Dec. 6, 1921, D. C., S. D. N. Y., Doc. E 22/311, *Wright Aeronautical Corp. v. Aeronautical Equipment Co.* Bill dismissed without prejudice June 5, 1923.

871,735, J. Rashkin, Doors for elevator shafts, suit filed Feb. 20, 1922, D. C., D. Mass., Doc. E 1694, *The Peelle Co. v. Morrison & Skinner Co.* Final decree dismissing bill with costs entered Mar. 17, 1923. Case being appealed.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,270,559, S. Simpson, Clutch facing, decided May 14, 1923, claim 2.

Pat. 1,332,923, W. Shurtleff, Heating and ventilating unit, decided July 10, 1923, claim 8.

Pat. 1,397,275, J. J. Fitzgerald, Gage device, decided June 11, 1923, claims 1, 5, and 7.

Pat. 1,432,925, G. Thompson, Impulse sender, decided June 19, 1923, claims 3 and 5.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 31, 1923.

[Vol. 312. No. 5.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 143,823. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANSEL S. LEO, New York, N. Y. Filed Feb. 19, 1921.

LUCKY STRIKE

Particular description of goods.—Wheat Flour.
Claims use since 1916.

Ser. No. 150,895. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) GABEL BROS., Garberville, N. Y. Filed July 25, 1921.

Black Wonder

Particular description of goods.—Stove Polish.
Claims use since June 29, 1921.

Ser. No. 154,895. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) UNITED ALLOY STEEL CORPORATION, New York, N. Y., and Canton, Ohio. Filed Nov. 1, 1921. Under section 9 of the act of Mar. 19, 1920.

BERGER

Particular description of goods.—Black Steel, Galvanized Steel, Rust-Resisting Anticorrosive Iron, and Iron, Steel, and Alloy-Steel Metal Sheets.

Claims use since 1896.

Ser. No. 155,589. (CLASS 39. CLOTHING.) THE AMERICAN LADY WAIST CO., New York, N. Y. Filed Nov. 19, 1921.

ATHENA

Particular description of goods.—Ladies' Waists.
Claims use since about Nov. 1, 1921.

Ser. No. 156,133. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE ATTICA MILLS, Attica, Kans. Filed Dec. 1, 1921.

The words "Kansas Sunshine" and "Flour" being disclaimed apart from the mark as shown in the drawing.
Particular description of goods.—Wheat Flour.
Claims use since about Feb. 10, 1921.

Ser. No. 158,487. (CLASS 38. PRINTS AND PUBLICATIONS.) NATIONAL PROCESS COMPANY, INC., New York, N. Y. Filed Jan. 26, 1922.

Repro- Prints

Particular description of goods.—Photo Prints.
Claims use since Oct. 12, 1921.

Ser. No. 158,929. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) JOHN F. JONES, Pomona, Calif. Filed Feb. 6, 1922.

No claim is asked broadly for the word "Expansion" and no separate claim therefor is made for it.

Particular description of goods.—Piston Packing Rings.
Claims use since Jan. 14, 1922.

Ser. No. 159,269. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LOS ANGELES FERTILIZER COMPANY, Oakland, Calif. Filed Feb. 13, 1922.

Applicant disclaims the use of the word "Brand" apart from the mark shown.

Particular description of goods.—Meat Scraps for Poultry Food.

Claims use since 1917.

Ser. No. 159,711. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LIBBY, McNEILL & LIBBY, Chicago, Ill. Filed Feb. 23, 1922.

Particular description of goods.—Pork and Beans, Meat Extracts, Bouillon Cubes, Canned Soups, Canned Fish; Canned, Dried, and Preserved Fruits, Berries, and Vegetables; Plum Puddings and Mincemeats, Olives, Pickles; Catchups and Relishes, Sauces, and Condiments for Seasoning Food; Olive Oil, Salad Oils and Salad Dressings, Marmalades, Fruit Butters, Jams, Fruit Preserves and Jellies; Fresh, Condensed, Powdered, and Evaporated Milk.

Claims use since Jan. 2, 1905.

Ser. No. 160,428. (CLASS 39. CLOTHING.) HENRI PICARD, New York, N. Y. Filed Mar. 9, 1922.

No claim is made to the exclusive use of the word "Brussels" apart from the mark as shown.

Particular description of goods.—Hats and Caps for Men, Women, and Children.

Claims use since about Jan. 31, 1922.

Ser. No. 160,429. (CLASS 39. CLOTHING.) HENRI PICARD, New York, N. Y. Filed Mar. 9, 1922.

HORS CONCOURS

Laville, Petit & Crespin
PARIS

No claim is made to the exclusive use of the words "Chapeau," "Importe," "Hors Concours," and "Paris" apart from the mark as shown.

Particular description of goods.—Hats and Caps.
Claims use since about Jan. 31, 1922.

Ser. No. 160,643. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OCTINA A. TILLMAN, Cape May, N. J. Filed Mar. 13, 1922.

ALLISA

Particular description of goods.—Shampoo Preparation, Massage Cream, and a Preparation for the Treatment of the Hair.

Claims use since August, 1915.

Ser. No. 160,731. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) VOORHEES RUBBER MFG. Co., Jersey City, N. J. Filed Mar. 15, 1922.

INTERLOCK

The trade-mark consists of the word "Interlock" arranged as shown in accompanying drawing.

Particular description of goods.—Hose Made Wholly or Partly of Rubber or a Rubber Composition.

Claims use since Feb. 23, 1922.

Ser. No. 161,200. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALBERT T. PETERS, doing business as Vitaminal Products Co., Peoria, Ill. Filed Mar. 24, 1922.

VITAMINERAL

Particular description of goods.—Cattle, Swine, Dairy, and Poultry Feed.

Claims use since Apr. 1, 1921.

Ser. No. 161,747. (CLASS 38. PRINTS AND PUBLICATIONS.) PACIFIC RADIO PUBLISHING Co., INC., San Francisco, Calif. Filed Apr. 4, 1922.

RADIO

Particular description of goods.—Monthly Publication.
Claims use since Oct. 20, 1921.

Ser. No. 162,148. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) TRENTON MILLING Co., Trenton, Ill. Filed Apr. 11, 1922.

These stripes are in alternate red and blue and entirely surround the container, as shown in the drawing. These horizontal stripes are in two pairs, one pair above and one pair beneath the circular design.

Particular description of goods.—Wheat Flour.

Claims use since Aug. 6, 1915.

Ser. No. 162,938. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) GUSTAV MEZ, doing business as Mercedes Buro-Maschinen- und Waffen-Werke, Benshausen, Post Mehlis, in Thuringia, Germany. Filed Apr. 26, 1922.

„Elektra“

Particular description of goods.—Adding Machines and Parts Thereof; Calculating Machines, Including Those with Electric Drive, and Parts Thereof; Slide Rules, and Hand-Operated Counting Registers.

Claims use since 1920.

Ser. No. 162,939. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) GUSTAV MEZ, doing business as Mercedes Buro-Maschinen- und Waffen-Werke, Benshausen, Post Mehlis, in Thuringia, Germany. Filed Apr. 26, 1922.

Euklid

Particular description of goods.—Adding Machines and Parts Thereof; Calculating Machines, Including Those with Electric Drive, and Parts Thereof; Slide Rules, and Hand-Operated Counting Registers.

Claims use since 1909.

Ser. No. 164,204. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) UNITED STATES FOIL COMPANY, Louisville, Ky. Filed May 20, 1922.

KLONDIKE SLICE

No claim made to the word "Slice" apart from the mark as shown.

Particular description of goods.—Ice Cream.

Claims use since Apr. 28, 1922.

Ser. No. 165,501. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) MILLER & VAN WINKLE, INC., Brooklyn, N. Y. Filed June 14, 1922. Under ten-year proviso.

Particular description of goods.—Springs for General Use, Such as Compression, Extension, and Torsion Springs.

Claims use since 1884.

Ser. No. 166,082. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WALTER MELLOR, Philadelphia, Pa., and Cummington, Mass. Filed June 26, 1922.

TODMORDEN FARM

Particular description of goods.—Raw Milk and Cream, Butter, Cheese, Cattle, Fresh Apples, Eggs; Poultry, Alive and Dressed for Food Purposes; Fresh Vegetables, and Fresh Corn.

Claims use since Jan. 9, 1922.

Ser. No. 166,371. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARRISON & Co., also doing business as Harrison Flour Mills Co., New York, N. Y. Filed July 1, 1922.

HARISCO

Particular description of goods.—Wheat Flour.

Claims use since May 25, 1922.

Ser. No. 166,413. (CLASS 38. PRINTS AND PUBLICATIONS.) THE TRIBUNE COMPANY, Chicago, Ill. Filed July 1, 1922.

INVESTORS' GUIDE

Trade-mark "Investors' Guide."

Particular description of goods.—Heading for a Newspaper Column.

Claims use since Dec. 15, 1915.

Ser. No. 166,573. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) EUGENE R. SCHOOLEY, doing business as Henry N. Schooley and Son, Luzerne, Pa. Filed July 7, 1922.

CHANTICLEER

Particular description of goods.—Food for Chickens.

Claims use since 1902.

Ser. No. 166,672. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARRISON & Co., also doing business as Harrison Flour Mills Co., New York, N. Y. Filed July 10, 1922.

ROSALIND

Particular description of goods.—Wheat Flour.

Claims use since June 22, 1922.

Ser. No. 166,673. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARRISON & Co., also doing business as Harrison Flour Mills Co., New York, N. Y. Filed July 10, 1922.

MONOPLANE

Particular description of goods.—Wheat Flour.

Claims use since June 22, 1922.

Ser. No. 167,084. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE HOME FOOD SERVICE COMPANY, INCORPORATED, Denver, Colo. Filed July 19, 1922.

No claim made to the word "Brand" apart from the mark shown in the drawing.

Particular description of goods.—Breakfast Cereal Foods.

Claims use since June 15, 1922.

Ser. No. 167,111. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE WHEACO CEREAL CORPORATION, Denver, Colo. Filed July 19, 1922.

Color is not a particular feature of the mark, the lining being for purposes of shading only, and no claim made to the words "A Pure Whole Wheat Food, Made in Denver, Colorado, U. S. A." apart from the mark shown in the drawing.

Particular description of goods.—Cereal Breakfast Foods, Wheat Flour, Pancake Flour, and Buckwheat Flour.

Claims use since Jan. 1, 1919.

Ser. No. 167,422. (CLASS 39. CLOTHING.) THOMAS G. PLANT COMPANY, Boston, Mass. Filed July 26, 1922.

FIVE TOE FITTER

No claim is made to the individual words except as combined in the mark.

Particular description of goods.—Boots, Shoes, and Slippers of Leather, Rubber, Felt, Silk, Cloth, and Other Fabric Construction.

Claims use since Dec. 22, 1921.

Ser. No. 167,580. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE W. R. MONTAGUE COMPANY, La Crosse, Wis. Filed July 29, 1922.

**"ASK THOSE
Try Me WHO EAT
THEM"**

Particular description of goods.—Candy.
Claims use since Mar. 1, 1914.

Ser. No. 167,714. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHAS. J. DAVOL, North Kingstown, R. I. Filed Aug. 2, 1922.

Particular description of goods.—Milk, Butter.
Claims use since Jan. 2, 1909.

Ser. No. 168,238. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) LENA B. ARCHER, Navarre, Ohio. Filed Aug. 16, 1922.

Particular description of goods.—Alloy Made from Nickel Ore for Forging Steel.

Claims use since about Nov. 1, 1920.

Ser. No. 168,494. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SPANGENBERG & Co., Chicago, Ill. Filed Aug. 19, 1922.

"SOMETHING TO CROW ABOUT"

Particular description of goods.—Eggs.
Claims use since May 18, 1915.

Ser. No. 169,129. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HARRINGTON & HORD, Fort Worth, Tex. Filed Sept. 6, 1922.

THE DOG ADORED

Particular description of goods.—Article of Food Composed of Ground Meats, Catchup, and Crackers.
Claims use since Aug. 1, 1922.

Ser. No. 169,722. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE LONGMONT FARMERS MILLING & ELEVATOR Co., Longmont, Colo. Filed Sept. 20, 1922.

Color forms no particular part of the mark, the lining being for purposes of shading only.

Particular description of goods.—Wheat Flour.
Claims use since Apr. 10, 1922.

Ser. No. 169,908. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KEHLOR FLOUR MILLS COMPANY, St. Louis, Mo. Filed Sept. 25, 1922.

RADIO

Particular description of goods.—Wheat Flour.
Claims use since Sept. 1, 1922.

Ser. No. 170,359. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) BAKER, HAMILTON AND PACIFIC COMPANY, San Francisco, Calif. Filed Oct. 6, 1922.

Particular description of goods.—Garden Hose.
Claims use since July, 1920.

Ser. No. 170,916. (CLASS 39. CLOTHING. WEDGE HEEL & RUBBER Co. INC., Fort Wayne, Ind. Filed Oct. 18, 1922.

Particular description of goods.—Rubber Heels.
Claims use since August, 1922.

Ser. No. 171,135. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) MOGUL ELECTRIC COMPANY, Seattle, Wash. Filed Oct. 24, 1922.

No claim is made to "Dry Storage Batteries" or to the representation of a battery apart from the mark shown.

Particular description of goods.—Batteries.
Claims use since July 1, 1922.

Ser. No. 171,139. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) GEORG SCHICHT A. G., Aussig, Czechoslovakia. Filed Oct. 24, 1922.

All wording appearing on the drawing, with the exception of the words "de Hudetz," are disclaimed apart from the mark shown.

Particular description of goods.—Toilet and Medicinal Soap.
Claims use since May, 1922.

Ser. No. 171,147. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) GEORG SCHICHT A. G., Aussig, Czechoslovakia. Filed Oct. 24, 1922.

All the wording appearing on the drawing, with the exception of the words "de Hudetz," are disclaimed apart from the mark shown.

Particular description of goods.—Toilet and Medicinal Soap.

Claims use since May, 1922.

Ser. No. 171,442. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BRUNO RADIO CORPORATION, New York, N. Y. Filed Nov. 1, 1922.

Particular description of goods.—Radio Sending Sets, Radio Receiving Sets, Assembled and Not Assembled.

Claims use since July 1, 1922.

REISSUES.

JULY 31, 1923.

15,663. MANICURE IMPLEMENT. JOHN OLIN LANDIS, Waynesboro, Pa. Filed Mar. 15, 1923. Serial No. 625,269. Original No. 1,324,677, dated Dec. 9, 1919, Serial No. 291,314, filed Apr. 19, 1919. 2 Claims. (Cl. 30—23.)

1. A device of the character described comprising a metal disk provided on its edge with a continuous annular flange of substantially circular form in cross section, said flange having flat ground surfaces about its periphery, said ground surfaces extending entirely through the flange to provide a plurality of cutting members.

15,664. AUTOMATIC TRAIN-CONTROLLING APPARATUS. EDWARD H. OLSON, JAMES C. H. CLARK, MERL B. MEALEY, Walla Walla, Wash., and CHARLES PELTER Oregon City, Oreg. Filed Feb. 8, 1923. Serial No. 617,877. Original No. 1,366,588, dated Jan. 25, 1921, Serial No. 215,513, filed Feb. 5, 1918. 3 Claims. (Cl. 246—68.)

1. In a train controlling apparatus, a compressed air brake pipe, a valve for controlling the release of the air within the air brake pipe, an electric circuit, a motor in said electric circuit, an eccentric operated by the motor, said eccentric having connection with the valve for intermittently operating the valve to gradually release the air in the air brake pipe, and means for adjusting the connection between the eccentric and valve to regulate the movement of the valve.

15,665. TEMPERATURE CONTROL OF KETTLES BY ZONES. JOHN GEORGE LEHMAN, Bethlehem, Pa., assignor to Bethlehem Foundry & Machine Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Oct. 12, 1922. Serial No. 594,170. Original No. 1,407,666, dated Feb. 21, 1922, Serial No. 327,007, filed Sept. 27, 1919. 6 Claims. (Cl. 257—211.)

1. In a device for treating liquids, a kettle having integral side and bottom walls, fluid passages in the walls, and

a plurality of points of inlet to and outlet from the said passages, in combination with controlled fluid supply for

the inlets whereby fluid can be passed through the passages to surround one or more belts or zones of said kettle without passing through the other belt or belts thereof.

15,666. ADJUSTABLE GUIDE FOR HAMMERS. STEPHEN PAUL, Lansing, Mich., assignor, by mesne assignments, to The Massillon Foundry & Machine Company, Massillon, Ohio. Filed July 5, 1922. Serial No. 573,059. Original application filed May 3, 1917, Serial No. 166,132. Renewed May 28, 1920, Serial No. 385,067. Original No. 1,352,621, dated Sept. 14, 1920. 9 Claims. (Cl. 78—37.)

2. In a guide for drop hammers, a drop hammer side frame having a pocket with a bearing face at the bottom of the pocket, a guide adapted to fit in the pocket and to rest upon the bearing face, a retaining device for the guide and independent adjustments for the upper and lower parts of the guide to adjust the guide out of parallelism with its initial position in the adjusted positions.

15,667. SHIELD. HARRY SIMMONS, Spokane, Wash. Filed Jan. 17, 1923. Serial No. 613,300. Original No. 1,399,446, dated Dec. 6, 1921, Serial No. 443,684, filed Feb. 9, 1921. 8 Claims. (Cl. 296—95.)

5. The combination with a shield of a support therefor, a controlling handpiece by means of which said shield is moved to adjust it to various positions, said shield and controlling hand piece having a common pivot connecting both said shield and hand piece with said support and locking means controlled by said handpiece for locking the shield in its adjusted position.

DESIGNS.

JULY 31, 1923.

62,767. WALL PLATE FOR LIGHTING FIXTURES. GEORGE AINSWORTH, Great Neck, N. Y., assignor to Beverly Lights Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 22, 1922. Serial No. 3,795. Term of patent 14 years.

The ornamental design for a wall plate for lighting fixtures as shown.

The ornamental design for a body shell for lighting fixtures as shown.

62,769. CHILD'S VEHICLE. CHARLES E. BAKER, Hartford, Conn., assignor to The Universal Pattern & Model Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 26, 1921. Serial No. 448,252. Term of patent 7 years.

The ornamental design for child's vehicle, as shown.

62,770. FLOWERPOT. WILLIAM H. COCHRAN, Spartanburg, S. C. Filed July 3, 1922. Serial No. 2,932. Term of patent 3½ years.

The ornamental design for a flowerpot, as shown.

- 62,771. IDENTIFICATION SIGN FOR OPTOMETRISTS. EARL F. COLLINS, Charleston, W. Va. Filed July 30, 1920. Serial No. 400,250. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an identification sign for optometrists as shown.

- 62,772. MASS-CARD HOLDER. VERNON E. COOK, Utica, and LEO R. H. BURTON, Rome, N. Y. Filed Oct. 14, 1922. Serial No. 3,965. Term of patent 14 years.

The ornamental design for a mass card holder as shown.

- 62,773. ARM FOR LIGHTING FIXTURES. WILLIAM J. GRADY, Decatur, Ill., assignor to Faries Manufacturing Company, Decatur, Ill., a Corporation of Illinois. Filed Jan. 23, 1922. Serial No. 315. Term of patent 7 years.

The ornamental design for an arm for lighting fixtures, as shown.

- 62,774. PLATE OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y., a Firm. Filed Oct. 28, 1922. Serial No. 4,146. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown.

- 62,775. PLATE OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y., a Firm. Filed Oct. 28, 1922. Serial No. 4,147. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown.

62,776. DISH, BOWL, OR SIMILAR ARTICLE. WILLIAM D. HAVILAND, Limoges, France, assignor to Theodore Haviland & Co., New York, N. Y., a Firm. Filed Oct. 28, 1922. Serial No. 4,148. Term of patent 14 years.

The ornamental design for a dish, bowl, or similar article, as shown

62,777. SLIPPER. MORRIS HIRSHFIELD, Brooklyn, N. Y. Filed Nov. 18, 1922. Serial No. 4,327. Term of patent 3½ years.

The ornamental design for a slipper, substantially as shown.

62,778. SLIPPER. MORRIS HIRSHFIELD, Brooklyn, N. Y. Filed Nov. 18, 1922. Serial No. 4,328. Term of patent 3½ years.

The ornamental design for a slipper, substantially as shown.

62,779. SLIPPER. MORRIS HIRSHFIELD, Brooklyn, N. Y. Filed Jan. 29, 1923. Serial No. 5,022. Term of patent 3½ years.

The ornamental design for a slipper, substantially as shown and described.

62,780. SLIPPER. MORRIS HIRSHFIELD, Brooklyn, N. Y. Filed Jan. 29, 1923. Serial No. 5,023. Term of patent 3½ years.

The ornamental design for a slipper, substantially as shown and described.

62,781. ARM FOR LIGHTING FIXTURES. HENRY M. KOFSKY, Philadelphia, Pa. Filed Oct. 27, 1922. Serial No. 4,114. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures substantially as shown.

- 62,782. PAPER CARTON. LOUIS KUHN, Milwaukee, Wis., assignor to American Candy Co., Milwaukee, Wis., a Corporation of Illinois. Filed Feb. 20, 1922. Serial No. 794. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a paper carton, as shown.

- 62,783. AUTO REAR SIGNAL LAMP. LEON LAPIDUS, Brooklyn, N. Y. Filed Aug. 31, 1922. Serial No. 3,608. Term of patent 7 years.

The ornamental design for an auto rear signal lamp, as shown.

- 62,784. BOTTLE. WILLIAM BAIRD MARBLE, Los Angeles, Calif., assignor to Southern Glass Company, a Corporation of California. Filed May 22, 1922. Serial No. 2,368. Term of patent 14 years.

The ornamental design for a bottle, as shown.

- 62,785. BOTTLE. WILLIAM BAIRD MARBLE, Los Angeles, Calif., assignor to Southern Glass Company, a Corporation of California. Filed May 22, 1922. Serial No. 2,369. Term of patent 14 years.

The ornamental design for a bottle, as shown.

- 62,786. RING-DISPLAY HOLDER. ARTHUR MENG, Cleveland, Ohio. Filed Aug. 3, 1922. Serial No. 3,274. Term of patent 7 years.

The ornamental design for a ring display holder, as shown.

- 62,787. LIGHTING-FIXTURE SUSPENSION STRAP. ABRAHAM MILLER, New York, N. Y. Filed Oct. 7, 1922. Serial No. 3,905. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a lighting fixture suspension strap, as shown.

62,788. LIGHTING-FIXTURE ARM. ABRAHAM MILLER, New York, N. Y. Filed Oct. 7, 1922. Serial No. 3,906. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a lighting fixture arm, as shown.

62,789. LIGHTING FIXTURE. PAUL MOHRMANN, Chicago, Ill., assignor to Friedley Voshardt Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 29, 1922. Serial No. 3,840. Term of patent 7 years.

The ornamental design for a lighting fixture, as shown.

62,790. LACE. THOMAS MONK, Bridgeport, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,271. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,791. ELASTIC WOVEN FABRIC. GEORGE C. MOORE and THOMAS F. MOORE, Westerly, R. I. Filed Aug. 18, 1922. Serial No. 3,453. Term of patent 14 years.

The ornamental design for elastic woven fabric, as shown.

62,792. INVERTIBLE DESK CABINET. WILLIAM G. MOORE, Omaha, Nebr. Filed July 25, 1921. Serial No. 487,213. Term of patent $3\frac{1}{2}$ years.

The ornamental design for an invertible desk cabinet, as shown.

62,793. WATCH-MOVEMENT CASE. SISSAG K. OUZOUN-BOGHOSIAN, Heliopolis, Egypt. Filed Jan. 13, 1923. Serial No. 4,895. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a watch-movement-case, as shown.

62,794. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,278. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,795. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,279. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,796. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,280. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,797. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,281. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,798. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,282. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,799. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,283. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,800. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,284. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,801. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,285. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,802. LACE. SAMUEL H. PAGE, Stratford, Conn., assignor to The American Fabrics Company, a Corporation of Connecticut. Filed Feb. 26, 1923. Serial No. 5,286. Term of patent 14 years.

The ornamental design for lace substantially as shown.

62,803. LENS. FERDINAND PIASZEK, Saginaw, Mich. Filed Feb. 28, 1922. Serial No. 934. Term of patent 14 years.

The ornamental design for a lens as shown.

62,804. BOTTLE. HARRY K. QUAN, New York, N. Y. Filed Feb. 9, 1922. Serial No. 612. Term of patent 3½ years.

The ornamental design for a bottle substantially as shown.

62,805. VANITY CASE. ABRAHAM SCHOCKET, New York, N. Y. Filed Feb. 20, 1922. Serial No. 785. Term of patent 3½ years.

The ornamental design for a vanity case.

62,806. BEDSTEAD FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Aug. 24, 1922. Serial No. 3,551. Term of patent 3½ years.

The ornamental design for a bedstead frame as shown.

62,807. BEDSTEAD FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Aug. 24, 1922. Serial No. 3,550. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a bedstead frame as shown.

62,808. FLOWER DOLL. CALLIE WOOD, Reno, Nev. Filed Mar. 25, 1922. Serial No. 1,390. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a flower doll as shown.

62,809. DOLL. DOMENIC ZAPPIA, Cleveland, Ohio, assignor to Paramount Rubber Consolidated, Inc., Little Falls, N. J., a Corporation of Delaware. Filed Mar. 12, 1923. Serial No. 5,441. Term of patent 14 years.

The ornamental design for a doll, substantially as shown in the drawing hereof.

62,810. PEDESTAL. LORENZO ZUNINO, Berkeley, Calif. Filed June 5, 1922. Serial No. 2,526. Term of patent $3\frac{1}{2}$ years.

The ornamental design for a pedestal, substantially as shown.

PATENTS

GRANTED JULY 31, 1923.

1,463,148. SERVICE CONNECTION FOR CONCRETE MAINS. CHARLES F. BUENTE, Avalon, Pa. Filed July 21, 1919. Serial No. 312,181. 13 Claims. (Cl. 137—75.)

1. A service connection comprising a body member having a plurality of openings formed in the outer face thereof, and a single opening formed in the inner face thereof and aligning with one of said openings in the outer face, said openings intersecting within the body member, and a single means for closing one or all of said openings, one of said openings being threaded throughout a sufficient portion of its length to permit said means to be moved to a position entirely within said body member, substantially as described.

1,463,149. FIRE ESCAPE. ANTOINE JOSEPH MARIUS BARTHELEMY DIT PAUL CANS, Paris, France. Filed Jan. 19, 1922. Serial No. 530,271. 4 Claims. (Cl. 227—28.)

1. The combination with a flexible element, of a main body, a pair of rollers rotatably mounted in said body upon spaced parallel axes, fixed in a substantially vertical common plane, a mobile roller rotatably mounted upon an axle movable transversely of said vertical plane and means to pivotally mount said axle to permit it to be swung out of parallelism with the axes of said pair of rollers into a position substantially at right angles to said axes.

1,463,150. FRAME FOR FRAMING PRINTS AND THE LIKE. JOHN H. CARLSEN, Chicago, Ill. Filed July 29, 1922. Serial No. 578,343. 3 Claims. (Cl. 40—152.)

1. A frame for framing prints and the like, comprising a rabbeted picture frame having an exposure opening therein for the picture, a back piece having a raised print engaging portion entering said rabbet and a depressed marginal portion around said raised portion into which the picture frame fits, and means for removably securing said picture frame and back piece together.

1,463,151. INCLOSED SWITCH. JOHN E. CARR, Aurora, Ill., assignor to All-Steel-Equip Company, Aurora, Ill., a Corporation of Illinois. Filed July 1, 1920. Serial No. 393,303. 10 Claims. (Cl. 200—50.)

1. An externally operated inclosed switch having a box, a cover hinged to it, a switch within the box, an operating rod connected to the switch and passing out through a hole in one of the walls of the box, said rod being movable approximately longitudinally for operating the switch and being arranged approximately parallel to the hinged axis of the box cover, the switch being fastened to the cover and adapted to engage and lock the rod when the latter has been pulled outward and the door has been swung open.

1,463,152. ELECTROLYTIC CONDENSER. LEWIS W. CHUBB, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 30, 1919. Serial No. 348,444. 8 Claims. (Cl. 175—315.)

1. The combination with an electrolytic condenser comprising a plurality of electrodes immersed in an electrolyte, of means for maintaining the capacitances of the condenser electrodes substantially equal, said means including a switch which is actuated when the voltage is unequally divided between the electrodes.

1,463,153. FAN STRUCTURE. NOBLE S. CLAY, Wilkesburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 9, 1920. Serial No. 415,767. 3 Claims. (Cl. 170—159.)

1. A fan blade comprising a body of flexible non-metallic material, a metallic bar secured to the inner end thereof, and a ring member on said bar.

1,463,154. EXTRACTION APPARATUS. EARL H. CUMMINS, Chicago, Ill., assignor to Dadant & Sons, Hamilton, Ill., a Partnership. Filed Nov. 15, 1920. Serial No. 424,194. 3 Claims. (Cl. 87—6.)

1. An extraction apparatus including a solvent receiving chamber adapted to be alternately heated and cooled, a condenser, means connecting the condenser with the solvent receiving chamber, a material receiving chamber connected to the condenser containing a

perforated crate and provided with heating coils and air-tight doors, a drum for receiving the solvent and

its dissolved material, and automatic siphon means and excess vapor escape means connecting the receiving drum with the material receiving chamber.

1,463,155. COMBINED TYPEWRITING AND COMPUTING MACHINE. FRANK K. DAVIS and CHARLES C. TAYLOR, Washington, D. C., assignors to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Nov. 21, 1921. Serial No. 516,625. 22 Claims. (Cl. 235—60.)

1. In a combined typewriting and computing machine, in combination, typewriting mechanism including numeral-keys and a traveling carriage, computing mechanism, normally set for addition, including a register, numeral-key-actuated means for indexing digits as typed, a general operator for actuating the register in accordance with the digits indexed, and subtraction-setting means, motor means for actuating said general operator, addition and subtraction stops mounted on said carriage a motor-trip-device engaged and actuated by said stops, during movement of the carriage in a letter-feeding direction, but past which the stops normally pass idly in the opposite direction, a subtraction-trip operable by said carriage only in letter-feeding direction, and means controlled by the subtraction-trip to render the motor-trip-device actuable by said stops when the carriage is backed across the machine.

12. In a power-operated computing machine, in combination, a carriage, an operating member mounted thereon, motor-trip mechanism including a lever having an abutment thereon and a tappet pivoted thereon and yieldingly pressed against said abutment, whereby said tappet, when engaged by said member in a letter-

feeding direction, will serve to actuate the lever, but, when engaged by the member in a reverse movement, will be swung about its pivot idly, and means to lock said tappet against the abutment to enable the lever to be actuated by said member when the latter is moving in the reverse direction.

20. In a combined typewriting and computing machine, in combination, a carriage, a subtraction-trip device actuatable thereby, and a latching device normally held out of action by said subtraction-trip device, but effective thereon, upon operation of the latter, to co-operate therewith and hold it in actuated condition.

1,463,156. ARCH BRICK. GUY CARLETON DENNEY, Hinsdale, Ill., assignor to American Arch Company, a Corporation of Delaware. Filed July 20, 1920. Serial No. 397,619. 4 Claims. (Cl. 110—87.)

1. An arch brick member having along one edge an arch brick support engaging surface and having on its opposite edge a cut back portion having an inclined end surface and a projecting portion having an oppositely inclined end surface, the planes of said surfaces not intersecting within the body of the member and said portions being complementary whereby when a pair of such members are assembled in reversed relation they cooperate to form a brick, said inclined end surfaces being serrated or roughened.

1,463,157. STOKER GRATE. GEORGE W. EDWARDS, Berlin, N. H. Filed May 5, 1921. Serial No. 466,883. 5 Claims. (Cl. 110—40.)

1. A key for a carrier bar of a stoker grate, comprising the body part whose upper portion constitutes the grate surface, said body part provided at its lower portion with a supporting surface terminating at one end in a lug adapted to engage a dove-tail support and also having an oblique hole extending downward from the upper surface of the body of the key said hole having its obliquity oppositely directed to the obliquity of the lug, combined with an oblique locking pin fitting the oblique hole and said pin arranged at an angle to the engaging surface of the lug and forming therewith a dove-tail recess for engaging a dove-tail portion of the carrier bar.

1,463,158. SYSTEM FOR REMOVING AIR AND GASES FROM WATER. RAYMOND N. EHRHART, Pittsburgh, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 5, 1920. Serial No. 386,834. 18 Claims. (Cl. 183—2.5.)

1. In the treatment of liquid for the removal of air and gases therefrom, the method which consists in evaporating a portion of the liquid to be treated, exhausting the vapors and gases from the evaporator through a con-

denser, and definitely varying the action of the exhausting means to thereby maintain the rate of evaporation substantially constant, substantially as described.

denser, and definitely varying the action of the exhausting means to thereby maintain the rate of evaporation substantially constant, substantially as described.

1,463,159. BRAKE. EDWIN R. EVANS, Detroit, Mich. Filed Dec. 16, 1922. Serial No. 607,341. 15 Claims. (Cl. 188—194.)

2. In a brake mechanism, the combination with a vehicle wheel, and a brake drum carried by said wheel, of a journal member for said wheel, a mounting for said journal member adapting the same for a steering movement about a swivel axis substantially transverse to that of the journal member, a pair of complementary brake shoes interiorly coacting with said drum, a pivotal mounting for corresponding extremities of said brake shoes, the other extremities of said shoes being formed with complementary substantially semi-cylindrical radial channels, a rock shaft substantially transverse to said swivel axis, a cam upon said shaft engaging in said channels of the brake shoes, said cam being centered in substantial alignment with said swivel axis and being elongated transversely of said shaft the ends of said cam established by said axis being spherically rounded, and means for rocking said cam upon an axis transverse to its major axis.

1,463,160. FIREARM. EUGENE A. FAIRBANKS, Holland, Mich. Filed June 19, 1922. Serial No. 569,438. 4 Claims. (Cl. 42—41.)

1. In combination with the barrel, the breech and the hammers and the hammer actuating mechanism of a breech loading fire arm, a trigger pivotally mounted in position to hold the hammer in "cocked" position, a locking bolt having an upper short arm and a longer lower arm forming a slot between them, said bolt mounted upon the trigger plate in position to be made to slide longitudinally so the catch on the hammer will be made to enter the slot in the locking bolt and the end of the

trigger body will be secured under the longer arm of the locking bolt head, a spring for forcing the locking bolt into contact with the catch on the head and over the end of the trigger body, a thumb slide mounted upon the breech of the gun and having a downwardly extending body thereon, an incline and a ledge formed upon the lower end of said body, a bell crank lever pivotally mounted so one arm of said lever will contact with the

incline and ledge, and the other end will engage the end of the locking bolt in such a manner that when the thumb slide is slid forwardly the lever will draw the bolt out of contact with the hammer and the trigger, and when the thumb slide is slid backwardly the end of the lever will slide downwardly upon the incline and allow the locking bar to be forced into contact with the catch on the hammer and the end of the trigger body to lock the hammer in "cocked" position.

1,463,161. MATTRESS FRAME. FRANCIS G. GALE, Waterville, Quebec, Canada. Filed Nov. 12, 1921. Serial No. 514,575. 2 Claims. (Cl. 5—206.)

1. In a mattress frame, the combination with a side rail and an end rail, of a corner fastening connecting said rails and comprising one member rigidly secured to the side rail and having a portion to close the end of the end rail and another section rigidly secured to the end rail and having a portion to close the end of the side rail, said sections being secured together.

1,463,162. SIDELAMP. CHARLES E. GODLEY, Detroit, Mich., assignor to Edmunds & Jones Corporation, Detroit, Mich., a Corporation of New York. Filed Sept. 18, 1922. Serial No. 588,794. 2 Claims. (Cl. 240—7.)

1. In a lamp, the combination of a cylindrical glass body having a closed forward end, a light bulb within the cylindrical body, a substantially cylindrical case enclos-

ing the cylindrical body and having an end to close the open end of the body, said case having openings in its cylindrical portion to permit the passage of light rays, a detachable ring at the open end of the case to hold the glass body therein, and means mounted within the case at its closed end to support the light bulb, comprising a flanged disk fitting the open end of the glass body, a connector sleeve mounted in the disk to support the bulb, and a spring between the disk and the end of the case to press the disk against the end of the body.

1,463,163. ANIMAL TRAP. MILFRED L. GREENSTREET and WALLACE DAY, Maplewood, Mo., assignors of one-third to May B. Cornwall, St. Louis, Mo. Filed Sept. 9, 1922. Serial No. 587,133. 5 Claims. (Cl. 43—86.)

1. In an animal trap, a pair of rings adapted to be superimposed, means for thrusting said rings apart transversely of their axes, a radial shoulder formed on one of said rings facing in the direction of movement of said ring, a trigger pivoted to the corresponding portion of the other ring having an edge facing in the direction of movement of the ring and adapted to engage said shoulder when said rings are superimposed, and an element on said trigger, extending over the center of the ring, to be engaged by an animal passing through the ring in one direction only to disengage said trigger from said shoulder.

3. In combination, a trap including a spring coil and an attaching member insertable within said coil and having a recess adapted to receive a portion of said coil to retain the trap in a desired position relative to a mounting surface.

1,463,164. TELEPHONE SYSTEM. HARRY H. IDE, La Grange, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1919. Serial No. 313,799. 35 Claims. (Cl. 179—18.)

1. An automatic numerical selector switch of the character described controlled over the two sides of the line in series, provided with only four operating relays, a pair of motor magnets, one of said relays and one of said magnets being adapted to be included in a vibratory circuit arrangement, test means including said relay included in said vibratory circuit for controlling the oper-

ating circuit of the other of said magnets, and restoring means including said last magnet whereby said last magnet operates to release said numerical switch to normal.

1,463,165. FLEXIBLE SUPPORTING MEANS SUITABLE FOR USE IN SUSPENSION TRANSPORTER ARRANGEMENTS AND FOR OTHER PURPOSES. ALEXANDER GEORGE MACKENZIE JACK, Sheffield, England. Original application filed Dec. 8, 1919, Serial No. 343,439. Patent No. 1,417,070, dated May 23, 1922. Divided and this application filed May 1, 1922. Serial No. 557,790. 14 Claims. (Cl. 104—112.)

1. A flexible trackway comprising a plurality of short metal sections flexibly connected endways and provided with teeth to form a rack, the sections being interlocked in a longitudinal direction so that they cannot move apart endways.

1,463,166. PEDAL DEVICE FOR PIANOS AND FOR OTHER PURPOSES. BENJAMIN H. JEFFERSON and WALTER I. KIRK, Chicago, Ill., assignors, by mesne assignments, to Lyon & Healy, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 15, 1919. Serial No. 297,378. 1 Claim. (Cl. 74—81.)

A pedal provided with a pressing surface for the foot and having an aperture in said surface and a pin having its lower end fitted detachably into said aperture and its upper end constructed to provide another pressing surface for the foot.

1,463,167. HAMMER. HENRY E. KEYES, Philadelphia, Pa. Filed Oct. 7, 1922. Serial No. 592,981. 5 Claims. (Cl. 145—29.)

1. A hammer head provided with a shoulder and a projection undercut at the shoulder, and a detachable strik-

ing face provided with a socket which fits over the projection and which has a series of longitudinally projecting

lugs of relatively soft and ductile material which are locked upon the said projection by impact against the said shoulder.

1,463,168. SYSTEM OF CONTROL. REESE T. KINTZING, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 27, 1920. Serial No. 419,874. 12 Claims. (Cl. 172—179.)

2. In a motor-control system, the combination with a plurality of motors mounted in tandem having control circuits common to all the motors, of a plurality of voltage relays connected in parallel relation in said control circuits, and a plurality of overload relays connected in series relation in said control circuits.

1,463,169. VALVE. KARL LÖWINGER, Moravska Ostrava, Czechoslovakia. Filed Feb. 23, 1921. Serial No. 447,104. 1 Claim. (Cl. 251—155.)

A valve comprising a casing and a cover therefor, said casing having in its upper face a beveled surface extending

inwardly and forming with said cover an annular space, and a packing ring in said space adapted to be pressed

against said beveled surface by the pressure exerted by said cover, so as to form a tight-joint between said cover and said casing.

1,463,170. AUTOMATIC ELECTRIC METER. MATHIAS ODIN SEVERIN MADSEN, Aarhus, Denmark, assignor to Otto Kristian Heesch, Aarhus, Denmark. Filed Nov. 4, 1922. Serial No. 599,133. 3 Claims. (Cl. 194—11.)

1. Stop mechanism for an electric meter having coin controlled mechanism of the type described, comprising a rotary cylinder, a spring for rotating the cylinder in one direction, a contact piece on the cylinder, a contact member capable of engaging said contact piece when the cylinder is in one position and the circuit is closed, and coin controlled means for moving the cylinder to bring the contact members into engagement with each other comprising a shaft, an arm secured to the shaft and capable of extending into the path of the coin in the coin controlled mechanism, a second arm fixed on the same shaft, and a projection on the end of the cylinder and extending into the path of the said second arm, so that the said spring acting upon the cylinder holds the first mentioned arm in the path of the coin when the contacts are out of engagement, and the movement of the coin operates the said arms and projection to bring the contacts into engagement with each other.

1,463,171. VALVE-OPERATING MECHANISM. GEORGE J. MEAD, Glen Rock, N. J. Filed May 9, 1921. Serial No. 468,057. 7 Claims. (Cl. 64—90.)

1. A releasable driving connection, comprising drive and driven shafts, one of said shafts having an extension,

cooperating radially toothed clutch members on said extension and the other shaft respectively, means for sliding

said extension so as to bring said clutch members into and out of engagement, and releasable means for retaining said clutch members in engaging position.

1,463,172. BELT ATTACHMENT. SAMUEL NEWMAN, Cincinnati, Ohio. Filed July 24, 1922. Serial No. 577,067. 2 Claims. (Cl. 24—74.)

1. A belt attachment comprising a tubular casing to be fastened to one belt end part, a slide to be fastened to another belt end part, guided by the top and bottom of said casing and having rear lengthwise flanges and a rear projection near its end remote from its fastening to the belt end part, said casing having, near its end adjacent to the slide fastening, a tongue projecting forwardly from its back and projecting toward said slide projection, and having an opening in said back adjacent to said tongue, and a sinuated spring with its loops loosely confined to said slide by said flanges and having one end engaging with the slide projection and its opposite end engaging behind and against said tongue whereby said slide is held back against the back of said casing, and adapted to be disengaged from said tongue by an instrument inserted through said opening in said back, to permit disassembly of the attachment.

1,463,173. BOX CAR. OSTRANDER J. PARKS, River Forest, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed Apr. 4, 1921. Serial No. 458,181. 1 Claim. (Cl. 108—54.)

A roof structure comprising, in combination, a relatively rigid metal plate having a corrugation of substantially cylindrical outline adjacent one edge thereof, and a horizontal

ed to be interchangeably secured to said support or said lever and flexible means connecting said lever and saddle and passing over said sheaves, whereby when the muscular strength of said patient is exerted upon said lever said saddle will be raised.

1,463,178. ELECTRIC INCANDESCENT LAMP. BENJAMIN E. SHACKELFORD, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Mar. 9, 1918. Serial No. 221,360. 8 Claims. (Cl. 176—16.)

1. An electric signal lamp comprising a substantially spherical envelope filled with hydrogen, at a substantial pressure, a concentrated tungsten filament therein mounted near the center of the envelope, capable of rapid incandescence and extinction when responding to a series of current impulses and thus adapted for producing in rapid succession, light flashes substantially synchronized with current impulses.

1,463,179. DISPLAY-CASE WARMER. ALBERT G. STEPHENS, Indianapolis, Ind. Filed July 5, 1921. Serial No. 482,312. 3 Claims. (Cl. 34—21.)

1. In a display vending and warming-case, a glass receptacle, a hopper having a discharge opening through which the receptacle discharges through said hopper, a plate extending inwardly of the hopper from the inner rear edge of the hopper, a curved side and bottom against which the hopper discharges and which in part define a trough, said trough having a discharge at one side of the hopper discharge, a hinged closure for the trough discharge, and a heating element under said trough discharge adjacent said closure to warm the vended product.

1,463,180. HAMMERING APPARATUS. WILLIAM Y. STROH and GEORGE W. KLAGES, Pittsburgh, Pa. Filed Jan. 24, 1920. Serial No. 353,665. 13 Claims. (Cl. 78—27.)

1. Hammering apparatus comprising a plurality of reciprocating plungers, a hammer element carried by each of said plungers, a spring for each plunger arranged to

impart a striking blow thereto, and an eccentric shaft having a plurality of eccentrics at different angles, to-

gether with eccentric straps provided each with a toe adapted to engage and retract one of the plungers, substantially as described.

1,463,181. WINDING AND REELING DEVICE. WILLIAM VORDERWINKLER, Roselle, N. J. Filed May 11, 1922. Serial No. 560,025. 7 Claims. (Cl. 242—37.)

1. A device of the character described comprising a stationary frame, a bobbin mounted on said frame, a movable frame, driving means carried by said movable frame, a pivoted lever adapted to engage said movable frame and hold said driving means in engagement with said bobbin, means to guide a thread under tension to said bobbin, and counterbalancing means adapted to drop upon said lever when the tension of said thread is released whereby said lever will be disengaged from said movable frame.

1,463,182. SAFETY DEPOSIT BOX. JOSEPH VOSS, Manitowoc, Wis. Filed June 22, 1922. Serial No. 570,063. 3 Claims. (Cl. 109—12.)

1. In combination with a safety deposit box having a door and a lock secured to the inner side of the door, a sliding plate mounted on the inner face of the lock, a connection between the plate and a movable portion of the lock mechanism whereby the locking plate may be moved into projected and retracted positions upon the opening and closing of the lock, said plate having recesses in the lateral portions thereof, and stops secured to the inner faces of the box in position to align with

the recesses of the plate when the latter is retracted and adapted to be out of line with the recesses when the

plate is projected, whereby said stops are adapted to engage the intermediate portions of the plate to prevent opening of the door.

1,463,183. LAMP. SELDEN G. WARNER, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Feb. 24, 1920. Serial No. 360,697. 8 Claims. (Cl. 240—37.)

1. In combination, a semaphore lens, a lamp fixture comprising a tripod the legs of which are rigidly positioned at one end in one of the annular grooves of the lens, said fixture being thus supported directly and solely from said lens, and a lamp mounted on said fixture, substantially as described.

1,463,184. FIRE-BRICK ARCH. ALFRED H. WILLETT, West New York, N. J., assignor to American Arch Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 4, 1918. Serial No. 265,191. 9 Claims. (Cl. 110—87.)

1. A tube supported fire brick arch construction comprising a series of pairs of invertible bricks supported between two tubes, said bricks in each pair being inclined toward and resting against each other and each brick having at the meeting end two oppositely inclined supporting surfaces constructed to permit the bricks to be rested against each other either face upward.

1,463,185. DUMP BODY. JAMES G. WINSOR, Detroit, Mich. Filed May 21, 1919. Serial No. 298,705. 11 Claims. (Cl. 298—10.)

1. The combination of a vehicle frame having a portion below the tops of the wheels, a hopper having a main portion which can dump clear of the wheels between the wheels, and one or more end extensions whose bottoms are considerably raised above the bottom of the main portion for the purpose of clearing the top of the wheel or wheels and underneath rockers supporting the hopper upon the frame and shaped to carry the hopper out to the side of the frame in dumping.

1,463,186. TRAMPER FOR COTTON PRESSES. BRONSON C. WOODFORD, Dallas, Tex., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Apr. 7, 1921. Serial No. 459,358. 4 Claims. (Cl. 100—25.)

1. In a cotton press, a frame made up of opposite sides; sprocket wheels separately mounted at each end of each side opposite and in axial alignment with the other separately mounted sprocket wheel; endless sprocket chains connecting the sprockets on each side; a plunger head having a stem between the two sides; a pair of actuation bars secured cross-wise of the stem and extending between the chains; an actuating member connecting the chains and extending between the cross bars; means to rotate the sprockets; all combined to cause the plunger head to be reciprocated by the continuous revolution of the sprocket chains.

1,463,187. [WITHDRAWN.]

1,463,188. ENGINEER'S VALVE FOR PNEUMATIC SANDERS. JOHN R. ALLAN, Boston, Mass., assignor to Hanlon Locomotive Sander Company, Winchester, Mass., a Corporation of Massachusetts. Filed Feb. 6, 1922. Serial No. 534,284. 8 Claims. (Cl. 291—16.)

2. In a valve of the character described, a valve body having a valve seat in a plane at substantially right angles to the axis of the valve body, a gasket secured

thereto, a rotary stem which extends through the gasket and valve seat, an air discharge passage which extends upwardly through the gasket and valve seat into the said body, and thence extends outward through the side wall of the valve body to form a discharge outlet, said valve

stem having a shoulder portion which engages said gasket, said shoulder portion of the stem having a hole therethrough which is adapted to be brought into and out of alignment with the passage through the gasket and valve seat by rotating the valve stem and which is always open at its lower end to a source of air supply.

1,463,189. TEMPERATURE-INDICATING DEVICE. CAREY W. BAKER, St. Catharines, Ontario, Canada, assignor to Packard Electric Company, Limited, St. Catharines, Canada. Filed May 17, 1922. Serial No. 561,773. 5 Claims. (Cl. 116—114.)

1. In a temperature indicating device, the combination of a rotatably mounted shaft; heat actuable means adapted to rotate said shaft; indicating means; a member rotatably mounted on said shaft and adapted to actuate said indicating means in one direction; and a second member connected with said shaft, said second mentioned member being adapted to engage and actuate the first mentioned member but being free to return to normal position without said first mentioned member.

1,463,190. METHOD OF MAKING BENZOIC ACID AND SALTS THEREOF. EDWIN O. BARSTOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Mar. 11, 1920. Serial No. 365,082. 5 Claims. (Cl. 260—108.)

3. In a method of making benzoic acid and salts thereof, the step which consists in oxidizing benzyl chloride to the acid by means of bleaching powder in the presence of water and excess lime, such oxidizing step being conducted under pressure.

1,463,191. WHEELBARROW-HANDLE GUARD. GIDEON C. BATTEN, Cincinnati, Ohio. Filed May 27, 1921. Serial No. 473,180. 4 Claims. (Cl. 280—150.)

1. As a new article of manufacture a guard for wheelbarrow handles extending from the handle bar at one end in a loop to the handle-bar at the guard's opposite end and provided at one end with a clamping member to be clamped upon the exterior of the handle bar.

1,463,192. SPRING WHEEL. WILLIAM JAKOB BEISEL, Port Richmond, N. Y. Filed Dec. 7, 1921. Serial No. 520,578. 7 Claims. (Cl. 152—50.)

1. A spring wheel comprising in combination a hub, a continuous rim and a series of flat metal spring spokes constituting the sole means connecting and preserving the relations of said hub and rim having radial inner end portions secured in the hub, and laterally curved near the hub on the arc of a circle for approximately 90° and beyond that point similarly curved on the arc of a circle of materially greater diameter and having outer end portions fitting longitudinally and secured to the rim, the said curved portion of each spoke being on one side of the radial plane of its inner end and extending in the same direction peripherally of the wheel.

1,463,193. COLLAPSIBLE AUTOMOBILE TOP. JACQUES BOTELLA, Paris, France. Filed Mar. 8, 1922. Serial No. 542,092. 6 Claims. (Cl. 296—116.)

1. In a hood for motor vehicle, a front hoop supporting the hood and the ends of which are connected by pivoted links to two uprights about midway of the height of

these uprights, said uprights being pivoted at their lower ends to the rear face of the back of the driver seat in order to be capable of being brought down parallel to the said rear face, rear door uprights the lower ends of which rest on the elbow rests and are connected with extensions movable about an axis at right angles to the side faces of the carriage body,—means for displacing the axis of rotation of the said extension in order to allow the rear door uprights to be brought down outside the carriage and below the plane of the elbow rests,—and means for connecting the skeleton work of the hood to the rear hoop supporting the latter, so as to permit the spacing of the said skeleton work at the same time as that of the rear door uprights.

1,463,194. FIGURE TOY. FRANK BOWEN, Monett, Mo. Filed Aug. 20, 1921. Serial No. 493,835. 1 Claim. (Cl. 46—40.)

A toy including a container, a partitioning member in the container dividing the same into compartments, crank arms supported at the base of the compartments, base members having connection with the crank arms and having grooves formed adjacent to their upper ends, figured members supported on the bases, and flexible securing means embracing portions of the figured members and lying in the grooves to prevent displacement thereof.

1,463,195. CASH REGISTER. ERNST BREITLING and EDUARD OSTMEYER, Essen, Germany, assignors to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed May 13, 1922. Serial No. 560,603. 3 Claims. (Cl. 235—6.)

1. A cash register comprising a plurality of groups of setting members and an operating mechanism, a member in the operating mechanism mounted for oscillatory setting movement, a shiftable member adapted to be moved into and out of the path of the said oscillatory member and to form a stop for the latter, the shiftable stop member being adapted to be moved into a position preparing its operative position with relation to the oscillatory member by actuating a member of one of the groups of setting members and allowed to be moved into its final operative position by actuating a member of another of the groups of setting members, the stop member when in its operative position being adapted to limit the setting movement of the oscillatory member of the operating mechanism.

1,463,196. ROLLER AND BALL BEARING AXLE STRUCTURE. FRED J. COCHRAN, Mount Vernon, Ill. Filed Aug. 30, 1922. Serial No. 585,303. 4 Claims. (Cl. 295—44.)

4. In a roller and ball bearing axle structure, an axle proper, a sleeve mounted thereon, bearing rollers interposed between the sleeve and the axle, a cap mounted upon the axle and having a body portion adapted to limit the longitudinal movement of the bearing rollers, bearing balls interposed between the cap and the sleeve, a band mounted upon the axle and provided at its edge with several sets of slots which vary in length, the inner face of the band bearing against the end of the cap and a pin passing through the axle and having its end portion received in oppositely disposed slots of the band.

1,463,197. IGNITION APPARATUS. OLIVER F. CONKLIN, Detroit, Mich., assignor to Remy Electric Company, Anderson, Ind., a Corporation of Indiana. Filed Sept. 19, 1917. Serial No. 192,057. 12 Claims. (Cl. 200—22.)

2. A timer for ignition apparatus comprising a rotatable cam, a breaker lever fulcrumed at an end remote from the timer cam and having a block at the opposite end disposed obliquely to the plane of the breaker lever, said block adapted to rub on said rotatable cam and extending substantially tangential thereto, a stationary contact, and a cooperating movable contact disposed on the breaker lever between the fulcrum and the block, and a retractile coil spring attached to the breaker lever intermediate the contacts and the fulcrum thereof for maintaining the rubbing block in proximity to the cam and the contacts normally closed except when opened by the cam, for maintaining the lever upon its fulcrum in either the open or closed position of the contacts; and a flexible strap connected to a fixed part and to the lever, said strap operating in conjunction with the operation of the cam upon the block to maintain the lever upon its fulcrum.

1,463,198. BOTTLE STOPPER. VICTORIA E. DANCE, Hamilton, Ohio. Filed Sept. 1, 1921. Serial No. 497,688. 3 Claims. (Cl. 215—51.)

1. A dish shaped imperforate bottle stopper having a tongue to project from one face thereof and to serve as a handle to remove the stopper, said tongue being

wider at its base than at its free end and being normally seated in a recess in the face of the stopper with its outer face flush with one face of the stopper and adapted to be lifted out of said recess and grasped to

remove the stopper from the bottle, the slit separating said tongue from the stopper being outwardly turned at the base of the tongue to substantially right angles to the axis of the tongue to cause the root of the tongue to be its point of maximum strength.

1,463,199. RINGING ARRANGEMENT FOR MULTIPLEX CIRCUITS. JOHN DAVIDSON, Jr., Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1919. Serial No. 325,823. 8 Claims. (Cl. 179-4.)

1. In a multiplex carrier system, a low frequency signaling circuit, a circuit for the transmission of alternating carrier currents, outgoing and incoming carrier channels for interconnecting said circuits, said channels including means for translating signaling currents into carrier currents, and vice versa, a relay responsive to ringing current incoming from the signaling circuit for applying signaling currents to the outgoing carrier channel associated with said circuit, a relay responsive to signaling currents transmitted from the carrier transmission circuit to the incoming carrier channel associated with said signaling circuit for applying ringing current to said signaling circuit, and means whereby when one of said relays is operated the other relay is prevented from operation.

1,463,200. RINGING ARRANGEMENT FOR MULTIPLEX CIRCUITS. JOHN DAVIDSON, Jr., Montclair, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 24, 1919. Serial No. 325,824. 8 Claims. (Cl. 179-4.)

2. In a multiplex carrier system, a signaling circuit, a circuit for the transmission of alternating carrier currents, outgoing and incoming carrier channels interconnecting said circuits, said channels including means for translating signaling currents into carrier currents, and vice versa, means responsive to ringing current incoming from said signaling circuit for applying ringing current to said outgoing channel, an amplifier in said incoming channel for amplifying signaling current, a

second amplifier associated with said channel for amplifying ringing currents, and means responsive to ampli-

fied ringing currents incoming from said carrier transmission circuit for applying ringing currents to said signaling circuit.

1,463,201. DRIVING MECHANISM FOR TRANSVERSE SUPPORTS OR SLIDES IN REVOLVER LATHES, SEMIAUTOMATIC LATHES, AND THE LIKE. FRITZ DEURING, Munchen-Gladbach, Germany. Filed Aug. 28, 1920. Serial No. 406,713. 3 Claims. (Cl. 74-14.)

1. In a mechanical movement of the class described, a reciprocating rack, a sleeve fixed to said rack, a cylindrical cam member within said sleeve, a driving member coupled with said cam member and means for intermittently coupling said sleeve with said cam member to actuate said driving member, said sleeve normally sliding over said cam member.

1,463,202. EXTENSION FILLER PIPE. WILLIAM J. DOUGLAS, Numa, Iowa. Filed Aug. 24, 1921. Serial No. 494,990. 1 Claim. (Cl. 220-86.)

The combination with a vehicle seat having a counter, and a fuel tank located beneath the seat and provided with a customary filling opening accessible when the seat is removed for filling the tank, of an accessory extension filler pipe connected to the tank without structural change therein and including a sectional tube comprising a short section having a terminal head threaded into said filling opening and another longer section extending through the counter mating with said first mentioned section whereby the tank may be filled through said tube without displacing the seat, and means detachably connecting said sections, said first mentioned section terminating short of the counter whereby the longer section may be disconnected from the shorter section and the shorter section individually rotated for connecting such section with the tank.

1,463,203. FILLING-END CONTROLLER FOR LOOMS.

CLARE H. DRAPER, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1921. Serial No. 510,489. 7 Claims. (Cl. 139—258.)

1. A filling replenishing loom having, in combination, a lay, weft replenishing mechanism, a filling end controller consisting of a slender rod supported at its rear end and extending forwardly and downwardly to a point less than the distance to which the filling is moved by the lay acting to lift the filling on the next backward movement of the lay to a position above the field of movement of the shuttle box.

1,463,204. WATER JACKET. LOUIS C. DREFAHL, Lakewood, and WHITFIELD R. CARSON, South Euclid, Ohio, assignors to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 6, 1919. Serial No. 343,095. 1 Claim. (Cl. 263—44.)

In a silicate of soda furnace the combination of a furnace chamber adapted to receive and melt a mixed charge of materials, said chamber having its walls about its upper and lower portions formed of refractory material, a narrow belt of water jackets disposed at an intermediate point in the inner walls of said furnace between said upper and lower sections of refractory material, said water jacketed section being disposed in contact with the material to be melted and at the normal flux line of the molten charge and extending a slight distance above and below the same.

1,463,205. BOBBIN. FRANK EDMANDS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 18, 1922. Serial No. 554,363. 3 Claims. (Cl. 242—120.)

1. A bobbin having a metallic bushing within its bore, the bore of the bobbin having inner and outer inclined

shoulders, and the bushing having a bevelled inner end and an outer inclined flange to fit said shoulders respectively, and the external periphery of the bushing having peripheral grooves and rows of angularly extending incisions, each incision having along one edge an outwardly projecting burr.

1,463,206. CATALYST AND PROCESS OF MAKING SAME. HARRY D. GIBBS, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed May 7, 1920. Serial No. 379,545. 5 Claims. (Cl. 23—28.)

1. A process of producing a catalyst which comprises impregnating infusorial earth with molten vanadic oxide.

1,463,207. LET-OFF MECHANISM FOR LOOMS. ROBERT H. GILFILLAN, New Holland, Pa., assignor to Storb, Snader & Company, New Holland, Pa., a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No. 493,291. 5 Claims. (Cl. 139—110.)

1. In a loom, a warp beam, a shaft extending lengthwise of the loom geared to the warp beam, a handwheel on said shaft at the front of the loom, a ratchet on the shaft between the handwheel and the warp beam for letting off, a lever pivoted on the shaft, pawls on the lever engaging the ratchet, a cam slidably mounted on said lever and adapted to render said pawls inoperative, and a hand lever at the front of the loom connected to said cam, substantially as set forth.

1,463,208. CONNECTION PROTECTOR. EDGAR C. GNAU, East Aurora, N. Y. Filed Dec. 3, 1921. Serial No. 519,729. 1 Claim. (Cl. 173—324.)

A shield for electric connections including a supporting wire, an upper section including a length of metal having one end thereof bent upon itself to grip the supporting wire, a cap forming a part of the upper section, the length of metal extending below the lower edge of the cap and having its lower extremity bent to grip a wire to secure the wire to the length of metal, a bell-shaped lower section having bayonet slots formed at a point adjacent to the upper end thereof, lugs extending inwardly from the cap and adapted to move into the slots for securing the lower section to the cap, the lower section having a shoulder engaging the lower edge of the cap to restrict movement of the lower section, and said lower section having an upper reduced extremity adapted to fit into the cap to provide a fluid-tight connection.

1,463,209. PROCESS FOR THE MANUFACTURE OF ACETIC ACID. JOHN E. HAGGENMACHER, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 16, 1922. Serial No. 607,423. 13 Claims. (Cl. 260—118.)

13. Process of making acetic acid which comprises successively distilling batches formed by mixing calcium acetate, hydrochloric acid and a solution of acetic acid under reduced pressure, cutting the distillate into a first concentrated acetic acid fraction and a later dilute acetic acid fraction, and using the said dilute acetic acid fraction from the distillation of each batch in the preparation of each next succeeding batch.

1,463,210. CALENDAR-PAD RETAINER. BLAINE H. HARRIS, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed June 23, 1921. Serial No. 479,858. 3 Claims. (Cl. 129—1.)

1. In combination with a desk pad holder having a cover hingedly secured thereto, a calendar pad pocket on said cover and means associated with said pocket adapted to hold the calendar pad therein against freely sliding out of said pocket.

1,463,211. ENGINE-STARTER GEARING. MAX L. HILLMER and LESLIE O. PARKER, Anderson, Ind., assignors to Remy Electric Company, Anderson, Ind., a Corporation of Indiana. Filed June 24, 1921. Serial No. 480,172. 3 Claims. (Cl. 74—7.)

1. In automatic gearing for engine starters, the combination with an engine gear and a motor pinion; of an idle gear meshing with the pinion; an idle gear shaft; guide rods over which said shaft may slide toward the engine gear and may move laterally with respect to said rods; buffer springs surrounding said rods for yieldingly limiting the motion of said shaft; and springs surrounding said rods and interposed between said shaft and a stationary part for yieldingly maintaining said shaft in normal position.

1,463,212. PROCESS FOR THE MANUFACTURE OF CONCENTRATED ACETIC ACID. HENRY HOWARD, Cleveland, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 15, 1922. Serial No. 607,201. 9 Claims. (Cl. 260—118.)

6. Process of making acetic acid which comprises, partially distilling the acetic acid content of a mixture formed by mixing calcium acetate, hydrochloric acid gas and water by indirectly heating said mixture, collecting a relatively concentrated acetic acid solution during said distillation, completing the distillation of the acetic acid content of said mixture by indirectly heating the same and blowing live steam therethrough, and separately collecting a relatively dilute solution of acetic acid while completing the distillation.

1,463,213. SUSPENDERS. WILLIAM M. HUESEMAN, Dillsboro, Ind. Filed Nov. 21, 1921. Serial No. 516,735. 2 Claims. (Cl. 241—27.)

1. A suspender tab comprising a closely wound coil spring bent double at the medial point to form a loop and two parallel shanks, a tie element passed through adjacent coils on said shanks to close the loop at the juncture of said shanks, the ends of the spring wire being bent to provide upstanding terminal eyes on said shanks.

1,463,214. WETTING MACHINE. ALBERT E. JOHNSON and MERTON E. JOHNSON, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 21, 1919. Serial No. 339,711. 37 Claims. (Cl. 91—47.)

3. A wetting machine comprising a stationary support, a covering for the support, means for supplying a fluid to the covering, and a conveyor arranged to move simultaneously a plurality of work-pieces in contact with the support-covering.

23. In a wetting machine, a receptacle, means for maintaining fluid at a constant level therein, a grating situated near the fluid level, absorbent material carried by the grating, and an endless conveyor arranged to move the work in contact with the absorbent material.

31. In a wetting machine, a fluid receptacle, means provided with spaced projections for separately engag-

ing and moving successive work-pieces into and out of the receptacle, and means arranged to raise each piece as it leaves the receptacle.

1,463,215. [WITHDRAWN.]

1,463,216. CONDENSER. NORMAN W. KRASE, Clarendon, Va., and VERNIE LESESSNE GADDY, Dillon, S. C. Filed Mar. 17, 1921. Serial No. 453,021. 2 Claims. (Cl. 23—13.)

2. A condenser, including a cylinder open at its lower end, means for admitting fluid to the cylinder, a closure for the upper end of the cylinder, a shaft journaled in the closure, a scraper blade secured to the shaft and contacting the walls of the cylinder, a cooling jacket surrounding the cylinder, a receptacle below the cylinder and a clamp secured to the cylinder and connecting the cooling jacket and receptacle to the cylinder.

1,463,217. MINIATURE PARKING SIGN. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed June 23, 1921. Serial No. 479,824. 2 Claims. (Cl. 40—146.)

1. A display article including a tubular seamed standard, a divided end formed on said standard, a display member adapted to be engaged by said divided end under tension, a base member and an annular depending flange within said base member adapted to engage the end of said standard to compress the same to hold it rigidly under spring tension to said base member in a vertical position.

1,463,218. SAFETY DEVICE AGAINST THE THEFT OF MOTOR CARS. ALFRED LAURITZEN and VICTOR LAURITZEN, Laeken-Brussels, Belgium. Filed Mar. 25, 1922. Serial No. 546,808. 3 Claims. (Cl. 180—82.)

1. In a safety device against motor-car thefts, the combination of: a stationary member constituted by a casing, adapted to be secured to the dash board of the car and to enclose a suitable switch for the sparking circuit; a hinged member constituted by a door adapted to open outwardly; inner discs secured on shanks pivotally carried by one of the said members, spring-controlled locking fingers slidably mounted against the inner wall of the other of said members and adapted normally to engage each one of the inner discs in such a manner as to prevent the opening of the aforesaid door; a notch cut in the periphery of the aforesaid inner discs and adapted to render the latter free of engagement by the corresponding fingers when caused to register with the latter; circumferentially graduated outer discs secured on the shanks of the inner discs; stationary indexes or pointers enabling an operator acquainted with the secret combination required to open the door to set the said outer discs in the position wherein the notches of the corresponding inner discs register with their respective fingers; means for altering the position of the outer discs on their shank in relation to the corresponding inner discs; and means exerting a resilient pressure on the aforesaid outer discs and adapted to cooperate with notches or radial grooves in the latter to prevent them from rotating too freely; all substantially as described.

1,463,219. SHOCK ABSORBER. HERBERT LUTZ, Hamilton, Ontario, Canada, assignor to George Morris, Hamilton, Ontario, Canada. Filed May 17, 1921. Serial No. 470,293. Renewed Dec. 26, 1922. 8 Claims. (Cl. 267—19.)

1. In a spring suspension for road vehicles wherein is provided a main spring, one end of which is adapted to be connected with a fixed part of the vehicle, said main spring and said fixed part of the vehicle constituting two elements; a rocker frame, means for pivotally sustaining said frame on one of said elements, a hanger frame,

means for pivotally sustaining said hanger frame to oscillate in the direction of the length of the main spring, means for coupling said hanger to the other of said elements, and an auxiliary spring that engages stop portions on the rocker and hanger frames and tends to normally oppose the rebound tension of the main spring.

1,463,220. TENT SHELTER. WILLARD E. MARSH,
Memphis, Tenn. Filed June 21, 1922. Serial No.
569,794. 4 Claims. (Cl. 135—1.)

4. In a shelter tent a center section of fabric, pockets attached to the said center section near the ends thereof, guy ropes attached to the opposite ends of the said center section, struts for each end of the said center section adapted to engage in the said pockets and extend downward to support the said center section, end sections of fabric securely fastened to the said struts and means for fastening the edges of the said center section.

1,463,221. TRAMPER. OLIVER MITCHELL, Brookline, Mass., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed May 4, 1921. Serial No. 466,828. 5 Claims. (Cl. 100—25.)

1. In a gravity tramper; a standard; a plunger movable longitudinally with relation to that standard and having an engaging device thereon; a rotatable wheel mounted at the lower end of the standard; a rotatable wheel mounted at the upper end of the standard; an endless belt member connecting the rotatable wheels; an actuating bearing mounted upon the endless belt member to engage the engaging device on the plunger by the upward moving reach of the endless belt; a detent to hold the plunger at the top of its stroke; means to release the plunger from the detent, to fall by gravity.

1,463,222. WINDOW LOCK. LEWIS A. MOLOGNE, Smith-
ton, Pa. Filed May 20, 1922. Serial No. 562,367. 3
Claims. (Cl. 292-343.)

3. In combination with the upper and lower sashes of a window, a bracket comprising a pair of adjustably connected arms, a bolt extending between and engaging

said arms, said bolt being adapted to urge the ends of the arms in engagement with a portion of the upper sash, a wedge member carried by said bolt, said wedge

member being arranged to extend between and engage the confronting faces of the rails of said upper and lower sashes.

1,463,223. SECTIONAL GRAIN SPROUTER. CALVIN C. NEWPORT, Des Moines, Iowa, assignor to Des Moines Incubator Company, Des Moines, Iowa, a Corporation of Iowa. Filed Nov. 10, 1921. Serial No. 514,418. 4 Claims. (Cl. 47—30.)

1. A grain sprouter, comprising a base section adapted to contain a heating device, a plurality of tray sections separately formed and adapted to be mounted in series upon said base section, grain trays mounted in said tray sections, said tray sections being formed with double walls the air spaces of which communicate with the air spaces of adjacent sections, the air spaces of the lowermost tray section communicating with the interior of the base section, and a movable top for the uppermost tray section, said top when closed forming a closure for the upper ends of said air spaces.

1,463,224. APPARATUS FOR TRUING UP COMMUTATORS, HIP RINGS, DRUMS, AND THE LIKE. ANDERS NORREL, Zurich, Switzerland. Filed Mar. 31, 1921. Serial No. 457,487. 4 Claims. (Cl. 51-244.)

1. An apparatus for truing commutators, hip rings, and the like, comprising a shaft, a grinding member, a holder for said grinding member secured to said shaft, means pivotally supporting said shaft and permitting a swinging adjusting movement of the holder and grinding member whereby the latter may be adjusted substantially radially of the work to be trued, means for maintaining

the grinding block in predetermined position with respect to said work regardless of irregularities in the surface of

the latter, and means for shifting said shaft to adjust the grinding block and the holder in the direction of the axis of the work.

1,463,225. **THREAD-PARTER MECHANISM.** JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed May 26, 1917. Serial No. 171,130. 14 Claims. (Cl. 139—302.)

1. A thread parter mechanism for looms having, in combination, a thread support located close to the selvage and substantially in the plane thereof, said thread support extending from the fell rearwardly a distance substantially equal to the length of the throw of the lay, and a thread parter located between the selvage and the thread support.

1,463,226. **TAKE-UP MECHANISM FOR LOOMS.** JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed July 20, 1922. Serial No. 576,291. 4 Claims. (Cl. 139—313.)

1. A loom having, in combination, a wind up roll, means for driving the same to wind up the cloth, means

for disconnecting said driving means, a friction strap resisting rotation of the wind up roll connected at its ends to springs, one of such springs tending to resist the rotation of the wind up roll and to wind back the cloth when permitted so to do.

1,463,227. **RAILWAY SWITCH.** JOHN J. RONDERS, Monongah, W. Va. Filed Oct. 26, 1922. Serial No. 597,016. 2 Claims. (Cl. 246—392.)

1. In a railroad switch, the combination with main and siding rails, of a supporting base arranged at the cross over of two of said rails and having a transverse recess in its upper side and having guiding faces alining with the respective rails, a frog shiftable in the recess and having channels for alinement with the respective rails, a key engaging the frog and the base to retain the frog in the recess in the base, and means for shifting the frog.

1,463,228. **METHOD OF MANUFACTURING WROUGHT IRON.** ALBERT SAUVEUR, Cambridge, Mass. Filed Jan. 31, 1922. Serial No. 532,937. 2 Claims. (Cl. 75—44.)

1. The method of manufacturing wrought-iron ball, characterized by the following operations: reducing the carbon content of molten pig iron to a low percentage by Bessemer action, retaining slag and iron oxide produced by said action, in the decarbonized iron; lowering the temperature of the mixture of decarbonized iron and slag, while subjecting it to continued cascade agitation and thereby maintaining mutual distribution of the said components.

1,463,229. **CUTTING MACHINE.** RALPH C. SIMMONS, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 15, 1920. Serial No. 396,435. 33 Claims. (Cl. 164—21.)

1. In a machine of the class described, a die member and a cutting block member relatively movable toward and from each other during cutting operations, manually

operable means for causing relative approaching movement of the die and cutting block members, an operating

connection between said means and one of the members, and power means for completing the movement of the operating connection to effect a cutting operation.

1,463,230. PUSH-KEY COMBINATION PADLOCK. CHESTER J. SQUIRES, Galesburg, Ill. Filed Sept. 13, 1920. Serial No. 409,870. 12 Claims. (Cl. 70-54.)

1. In a device of the character described, a lock body comprising two parallel circular disks, in axial alignment, spaced apart and held in said relation by shackle arms rigidly attached to a portion of the periphery of both of said disks; a second shackle arm rigidly attached to a portion of the periphery of an internally notched ring, said ring having an outside diameter substantially the same as that of the body disk and being of a thickness to fit revolvably between said disk; there being a circular series of radially extending slots piercing the two disks of the lock body; and in combination with said structure a push key for each of said slots adapted to be slidably inserted therein, each of the said push keys having a notch in its outer edge, a part of each of said notches being cut to a greater depth than the remainder thereof, substantially as described and for the purpose specified.

1,463,231. INTERNAL-COMBUSTION MOTOR. FRANK STONER, Corregidor Island, and CHARLES HENRY WM. AITKEN, Manila, P. I., assignors to William Maxwell Thebaut, Manila, P. I. Filed Nov. 18, 1919. Serial No. 338,982. 2 Claims. (Cl. 123-59.)

1. The combination with a multiple cylinder engine having spaced fuel passages and means for alternately opening and closing said passages at one end thereof, of a valve chamber arranged at the opposite end of the spaced fuel passages and in communication therewith, said fuel passages entering the chamber from the same side, a hollow cylindrical reversing valve mounted for rotation in said chamber and provided with a centrally disposed passage, one end of which is adapted to be reg-

istered with either of the spaced fuel passages, while the opposite end is in constant communication with the intake manifold of the engine, a pair of chambers D-shaped in cross section, one of which is arranged on each side of the centrally disposed passage, said cham-

bers are provided with ports alternately registering with either of the spaced fuel passages when the centrally disposed passage is in communication with the other spaced fuel passage and a manually operated lever for rotating the valve for changing the action of the engine.

1,463,232. ATTACHABLE HOPPER. MOSES L. TRIMMER, Craig, Mo. Filed Nov. 20, 1922. Serial No. 602,141. 6 Claims. (Cl. 193-5.)

1. An attachment hopper comprising spaced side members, a movable end member and an inclined bottom member, brackets carried by each side portion of the bottom, each bracket comprising a supporting arm disposed at an inclination to a support and adapted to be secured to the bottom of the hopper, a holding arm projecting from the lower end portion of the supporting arm, said holding arm extending at right angles to the support, the opposite end of the supporting arm having an adjustable extension, adjustable means carried by said extension for holding the arm in connection with a support, and an adjustable extension carried by the end of the holding arm and arranged to engage the adjacent face of the extension.

1,463,233. GRAPEFRUIT CORER. CARL J. ULRICH, Mankato, Minn., assignor of one-fourth to Wyman A. Miller and one-fourth to Simon R. Clark, both of Minneapolis, Minn. Filed Sept. 8, 1922. Serial No. 586,878. 15 Claims. (Cl. 146-6.)

1. A grapefruit corer including a holder and a knife blade-equipped head, one of which is rotatable, and means

for imparting a plurality of complete endwise reciprocatory movements to the knife blade obliquely to the axis

of rotation of the rotatable member, for each rotation of the rotatable member.

1,463,234. EXPRESSION DEVICE FOR PLAYER PIANOS. ORMOND EDGAR WALL, Honolulu, Territory of Hawaii. Filed Feb. 10, 1921. Serial No. 443,858. 14 Claims. (Cl. 84—39.)

1. An attachment of the character described for player actions including a controller box having suction connections and atmospheric ports, spring controlled valves normally under moderate tension of their springs for controlling the said suction connection and atmospheric ports, means engageable with and for moving the springs of said valves whereby to increase the tension on the valves, including suction controlled bellows and note sheet controlled means for exhausting the said bellows.

1,463,235. AUTOMATIC STOP RECORD. JAMES W. WHALEN, Richmond, Ind. Filed Jan. 31, 1922. Serial No. 532,936. 3 Claims. (Cl. 274—42.)

1. A phonograph record disc having a spiral impression in its face in the usual manner, and having a V-shaped channel formed at the inner terminus of said spiral impression, said channel being formed in the face of the disc and concentric therewith and being larger in cross section than the spiral impression, the walls of said

channel being at more acute angle with relation to each other than is the angle of the lower portion of the stylus, whereby the stylus will engage the walls of the

1,463,238. FRUIT CRUSHER. RAFFAELE BACCELLIERI, Philadelphia, Pa. Filed Sept. 14, 1922. Serial No. 588,103. 1 Claim. (Cl. 146—122.)

A fruit crusher of the class described including parallel side rails, cross bars between the side rails and having longitudinally recessed portions, connecting members mounted in the recesses, a hopper resting on the cross bars and portions of the side rails, said hopper having a discharge opening and provided with means of attachment to the cross bars, and crushing elements within the hopper at the discharge opening.

1,463,239. PILE-CUTTER KNIFE. THEODOR BACHOFEN, West Hoboken, N. J. Filed Apr. 4, 1922. Serial No. 549,389. 5 Claims. (Cl. 139—62.)

1. A pile cutting device comprising a U shaped holder; having an oblique front end, including a portion substantially parallel to its base, a pair of spaced support rods passing through said holder, a knife blade having an oblique cutting edge arranged in cooperative relation to the angle of said holder, said blade containing a recess engageable with one of said rods in such manner as to be supported by it, a flat bar disposed transversely over said blade, lugs on said flat bar journaled on the last named rod, and means for oscillating said bar whereby said knife is rocked upon its rod support.

1,463,240. SUSPENDED ARCH CONSTRUCTION FOR FURNACES. FRANK B. BIGELOW, Detroit, Mich., assignor to Murphy Iron Works, Detroit, Mich., a Corporation of Michigan. Filed Apr. 9, 1920. Serial No. 372,418. 1 Claim. (Cl. 110—99.)

In an arch-construction of the character described, the combination of a plurality of arch-bricks, a main supporting-structure, a hollow supporting-member slidably mounted on said structure, a furnace front-plate apertured in registration with said member, the latter being adapted to receive outer air through said front-plate aperture and deliver it into the space above the arch, a plurality of hangers supporting said bricks individually from said member, a back wall for the space above the arch apertured in register with said member and removable means normally closing said back wall aperture, the construction permitting the removal of any hanger and its injured brick by shifting the member longitudinally

sufficiently through one of said apertures to free the hanger of the injured brick therefrom and temporarily supporting the remainder of the bricks not sustained by the member in its new position by a follower introduced through the other aperture.

1,463,241. ARCH CONSTRUCTION FOR FURNACES. FRANK B. BIGELOW, Detroit, Mich., assignor to Murphy Iron Works, Detroit, Mich., a Corporation of Michigan. Filed Apr. 9, 1920. Serial No. 372,419. 11 Claims. (Cl. 110—99.)

1. In a suspended-arch construction for furnaces of the character described, the combination of a plurality of bricks constituting a portion of the arch, a plurality of independent hangers each supporting a brick of the arch from above, and a supporting-pipe above said arch and common to said hangers, substantially as described.

1,463,242. VENTILATOR ATTACHMENT FOR RANGES. BENJAMIN BIGGS, Seattle, Wash. Filed Dec. 15, 1921. Serial No. 522,475. 6 Claims. (Cl. 125—17.)

3. A ventilator hood attachment for ranges having an elevated shelf including independent vertically-extending wings adapted to be individually removably secured at the sides of the range, and a removable member extending forwardly from said shelf and supported upon said wings.

1,463,243. PACKER AND HITCH THEREFOR. JULIUS BLEY, Duval, Saskatchewan, Canada. Filed May 3, 1921. Serial No. 466,419. 3 Claims. (Cl. 97—6.)

1. The combination with a plow frame, the steering tongue therefor and a packer frame positioned rearwardly to the side of the plow frame, of a pair of

crossed rods adjustably and pivotally connecting the packer frame and to the plow frame and a steering con-

nection between the tongue and the packer frame designed in the swinging of the tongue to shift the inner end of the packer frame.

1,463,244. FLEXIBLE ATTACHMENT FOR TROLLEY POLES. FRANK T. BOGARD, Oakland, Calif., assignor to Rodney H. Marchant, Oakland, Calif. Filed Jan. 29, 1923. Serial No. 615,720. 7 Claims. (Cl. 191-64.)

1. A flexible attachment for trolley poles comprising a pair of separated stems, a spring whose ends project over the adjacent ends of the stems, a separate current conducting cable extending between the stems inside the spring, the ends of said cable being passed to the outside of the stems beyond the spring-ends through holes bored through said stems, the spring and cable ends being then welded to the stems, the welding-metal being placed about the corners formed between the spring-ends and the surface of the stems outwardly thereof.

1,463,245. TWO-PART PISTON FOR INTERNAL-COMBUSTION ENGINES. JAMES BOLAN, Boston, Mass. Filed Feb. 23, 1922. Serial No. 538,451. 18 Claims. (Cl. 74-108.)

1. A piston for internal combustion engines having, in combination, a body portion and a head portion and pivotal means concentric and in alignment with the median longitudinal line of said piston whereby said head portion is universally pivotally mounted on said body portion.

1,463,246. PARTITION. JAMES E. BRADY, New York, N. Y. Filed Aug. 12, 1922. Serial No. 581,309. 17 Claims. (Cl. 72-116.)

1. In a partition, in combination, two aligned supporting members, a plurality of spaced parallel means carried by the top and bottom of each supporting member each capable of carrying a continuous plaster support,

a continuous plaster support laced between the top and bottom carrying means of each supporting member and

upon the carrying means, the two extremities of the continuous plaster support being fixed and means for tensioning the continuous plaster support.

1,463,247. METAL MOLD. HAROLD H. BRAND, Cleveland, Ohio, assignor, by mesne assignments, to Aluminum Manufactures, Incorporated, Cleveland, Ohio, a Corporation of Delaware. Filed Apr. 25, 1921. Serial No. 464,254. 10 Claims. (Cl. 22-151.)

1. In a permanent mold for cup shaped castings in combination, a permanent mold body having a casting cavity, a sectional core supported on the mold body and extending into the casting cavity, open ended recesses in the side faces of certain of the said core sections for forming cross webs on the casting, and means engaging with and guiding certain of the said core sections during the removal of the said sections from contact with the said webs.

1,463,248. MEANS FOR EMPTYING WASHING MACHINES. ARTHUR C. BURLEIGH, Wollaston, and ALBERT C. GOWING, Braintree, Mass. Filed Feb. 24, 1921. Serial No. 447,476. 3 Claims. (Cl. 103-87.)

1. The combination with a receptacle having a discharge spout, of a pump unit comprising as a unitary structure a pumping element having an inlet and an

outlet and a motor for operating said pumping element, means associated with the inlet for detachably connecting the unitary pump unit to said discharge spout, said unit being supported entirely by the discharge spout, and a hose connected to the outlet of the pump.

- 1,463,249. SCALE BEAM. ERNEST E. BURROWS, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed July 9, 1921. Serial No. 483,386. 5 Claims. (Cl. 265—49.)

1. A scale beam having parallel metallic arms adapted to carry pivotal bearings for supporting the beam and scale parts, each arm having a stiffening flange providing a tension member for the arm extending along one edge thereof and having angularly disposed oppositely downwardly inclined sections, and a web rigid with said arms and extending therebetween, said web having a depending stiffening flange and presenting a smooth and unobstructed upper surface.

- 1,463,250. LOCOMOTIVE BOILER. JOHN J. CAIN Bayonne, N. J. Filed Sept. 25, 1920. Serial No. 412,806. 11 Claims. (Cl. 122—228.)

1. A locomotive boiler, comprising similar narrow hollow vertical sections, having supporting feet at their lower edges transversely arranged edgewise in pairs with their adjacent edges at the longitudinal central plane of the boiler and spaced apart to provide continuous vertical heating passage between them, the boundaries of the transverse faces of each pair being substantially equal to the vertical and transverse horizontal boundaries of the available space of the locomotive above its running gear, said duplex sections being in two sets longitudinally located in the boiler, the lower parts of the sides of the set of sections at the furnace end of the boiler being water legs and constituting the side walls of the fire box with their supporting feet at a lower level than those of the other set of sections, in combination with the main frame of the locomotive to the side girders of which the supporting feet of the sections are secured.

- 1,463,251. CHANGING BENDING ROLLERS IN SHEET-GLASS-DRAWING MACHINES. ROBERT P. CALLARD, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 27, 1922. Serial No. 547,138. 5 Claims. (Cl. 49—17.)

1. The method of substituting a new bending roller in a glass drawing apparatus without halting the drawing operation, consisting in positioning the new roller parallel to the old one but out of contact with the glass

sheet, revolving the two rolls simultaneously through 180° about a common center so that their positions become interchanged, and then removing the old roller.

2. In an apparatus for changing bending rollers in a sheet glass drawing machine without halting the sheet drawing operation, a pair of similar roller supporting devices, each comprising a supporting frame, a turntable mounted on the frame to rotate in a plane perpendicular to the axis of the bending roll, means to rotate the turntable, and means on the turntable for supporting the adjacent ends of a pair of parallel bending rollers.

- 1,463,252. CORSET AND ABDOMINAL SUPPORT. SAMUEL H. CAMP, Jackson, Mich., assignor to said Samuel Higby Camp and Edwin C. Reynolds, a Co-partnership, trading as S. H. Camp & Company. Filed Apr. 22, 1918. Serial No. 229,985. 2 Claims. (Cl. 2—73.)

1. In a device of the class described, the combination with a pair of separate sections having quick-detachment means at the front edges thereof, of a lacing connecting the adjacent rear edges of said sections, a pair of tab members movable over said sections near the adjacent rear edges thereof, one end of said lacing being secured to one of said tab sections, the opposite end of said lacing being secured to the other of said tab sections, the intermediate portions of said lacing freely movably engaging said tab members and the adjacent rear edges of said sections, buckles respectively carried by said tab members, and adjusting means permanently secured to the respective sections and return-bent through said buckles.

- 1,463,253. TIME SWITCH. JEROME F. CERMAK, Brooklyn, N. Y. Filed Nov. 24, 1920. Serial No. 426,193. 18 Claims. (Cl. 200—36.)

4. In a time switch, the combination of a gear, a clock time train means for connecting the gear to the clock time train to be driven thereby, a conducting sleeve

mounted for rotation with the gear and insulated therefrom, a plurality of conducting segments mounted to rotate on said sleeve, and having pin and slot connections between themselves so as to have a fan like expansion and contraction and thereby lengthen or shorten the effective peripheral distance along their combined outer edge, an insulating element mounted to rotate on said sleeve and also having a pin and slot connection with an end conducting segment, said insulating element having a cavity therein into which the segments can move when contracted, an arm carried by the other end segment, means for adjusting the arm and insulating element about the sleeve to expose any desired length of the periphery of the segments and secure them in adjusted position for rotation with the sleeve, a spring operated contact arm adapted to be cammed outwardly against the action of its spring by the insulating element and allowed to snap inwardly upon the exposed peripheral portion of the segments and then off of the end of the exposed segment, and a second contact arm in continuous engagement with the sleeve.

1,463,254. COMBINED TYPEWRITING AND COMPUTING MACHINE. FREDERICK U. CONARD, Brooklyn, N. Y., assignor to Underwood Computing Machine Company, New York, N. Y., a Corporation of New York. Filed Oct. 18, 1921. Serial No. 508,434. 22 Claims. (Cl. 235—60.)

1. In a combined typewriting and computing machine, the combination of a register, comprising computing elements, numeral-key-operated devices, settable indexing devices on said computing elements, said indexing devices being normally out of range of the key-operated devices, a main carriage, a sub-carriage connected to the main carriage to travel therewith, but in opposite direction, and a settable selector on the sub-carriage to cause the computing elements to be operated seriatim to move the indexing devices into settable relation with respect to said key-operated devices.

22. In a combined typewriting and computing machine, in combination, a set of denominational dials, a set of reciprocable denominational bars to actuate said dials, numeral-keys, digit-indexing devices on said bars settable in accordance with numeral-keys depressed, and means for advancing said bars seriatim to positions for setting said digit-indexing devices, comprising levers pivoted to swing about a common axis and arranged therealong at regular intervals less than the distances between said bars, the lower ends of said levers being flared outwardly progressively, so as to bring them opposite the rear ends of the bars, and a denomination-selector dog movable step by step past said levers to engage the same seriatim along their closer spaced portions and advance the bars to position for digit indexing.

1,463,255. PROCESS OF PREPARATION OF BENZOATES AND BENZOIC ACID FROM DIBENZYL. GEORGE OLIVER CURME, Jr., and HERMAN BUNSEN HEYN, Pittsburgh, Pa., assignors, by mesne assignments, to Union Carbide Company, New York, N. Y., a Corporation of Virginia. Filed Apr. 20, 1917. Serial No. 163,522. 8 Claims. (Cl. 260—108.)

1. Process of preparing benzoic acid or compounds thereof, comprising subjecting dibenzyl to the action of molecular oxygen in presence of an oxygen carrier.

1,463,256. COMPRESSOR ARRANGEMENT FOR THE MOTORS OF AUTOMOBILE VEHICLES. PAUL DAIMLER, Canstatt, Germany, assignor to the Firm Daimler-Motoren-Gesellschaft, Unterturkheim, Germany. Filed Sept. 10, 1921. Serial No. 499,849. 1 Claim. (Cl. 230—27.)

In a motor vehicle having a motor, a radiator spaced therefrom and a crank shaft projecting into the space between said motor and radiator, a casing rigidly secured to the motor casing and projecting into the space between the motor and radiator and surrounding said crank shaft, a disengageable clutch mounted upon said crank shaft within said casing, means to actuate said clutch mounted upon and projecting through said casing, a pump rigidly secured to said casing and contained within the space between said motor and radiator, and gearing connecting said pump and clutch entirely enclosed within said casings.

1,463,257. CAPPING APPARATUS. WILLIAM V. DERBY, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Sept. 24, 1920. Serial No. 412,523. 9 Claims. (Cl. 226—84.)

1. In a capping apparatus, and in combination, a capping plunger including a tubular member, a bottle

support, a transmitting element relatively movable with respect to the tubular member and comprising an abutment within the tubular member and a part slidable on

the tubular member, means acting on the slidable part to move the same towards the bottle support with a fixed stroke, and a spring between said abutment and the capping plunger.

1,463,258. GUIDE FOR SEWING MACHINES. JOHN J. DRAKE, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed June 16, 1921. Serial No. 477,870. 9 Claims. (Cl. 112—15.)

2. In a sewing machine, the combination with stitch-forming mechanism, of a device for guiding to said stitch-forming mechanism for attachment to a hat a sweat-band having a cross-bar edging at one side thereof, said device including a resilient finger supported to have a floating work-engaging free end capable of yielding in transverse directions for tensionally directing the free edging bead to said stitch-forming mechanism.

1,463,259. VANITY CASE. ANDREW B. FLAGG, Attleboro, Mass. Filed Dec. 15, 1921. Serial No. 522,652. 7 Claims. (Cl. 132—83.)

6. A vanity case comprising a shell formed of sections hinged together and adapted to have their front edges swing apart, a plurality of superimposed trays normally

housed between said walls each being pivotally connected to the one above, the upper one of said trays being fixed to one of said wall sections whereby when those below are swung forward each is opened and positioned to present its contents to the user, a lid adapted to close over and lock together the upper edges of said wall sections when closed to house said trays, a mirror in the inner face of said lid, and means for supporting said lid with its mirror in the desired operative position when open.

1,463,260. DEMOUNTABLE RIM. ALFRED L. FOUCHE, Atlanta, Ga. Filed Dec. 14, 1921. Serial No. 522,217. 1 Claim. (Cl. 301—35.)

A demountable rim comprising a pair of bands having attenuated lateral elements arranged in overlapping relation at their circumferential joints, cylindrical pins fixed in aligned pairs to extend from the inner surfaces of each band; clamp plates having round openings receptive of said pins to hold the plates in close relation, and bevelled extensions on the ends of said clamp plates facilitating their removal.

1,463,261. COMPRESSION COUPLING. JOHN H. FUNK, Louisville, Ky., assignor to Universal Car and Hose Coupler Company, St. Louis, Mo., a Corporation of Arizona. Filed Aug. 20, 1920. Serial No. 404,725. 4 Claims. (Cl. 285—24.)

1. In a device of the class described, a support having a front and rear bearing, a tubular member slidable in the bearings of said support, a collar removably fitted over said tubular member against said front bearing, said tubular member having a yieldable forward end face, a spring housed within the support between said bearings and arranged to urge the tubular member forward and means to limit the effective action of the spring tending to force said tubular member forward.

1,463,262. STRAPFORMING DEVICE FOR SEWING MACHINES. CHARLES F. GRAY, Sierra Madre, Calif., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed June 21, 1918. Serial No. 241,149. 12 Claims. (Cl. 112—2.)

12. A strap-forming device for sewing machines comprising, in combination, a strip-guide, means for diverting the initially emerging end of a strip in a direction substantially transverse to the direction of its lead through the strip-guide, a strip-supporting element disposed at the delivery end of said strip-guide in spaced relation

with respect to the strip-diverting means around which element the strip may be doubled on a line substantially transverse to its length, means for gauging the length of the doubled strip, cooperating strip-severing elements

disposed in advance of the receiving-end of said strip-guide, means for holding a severed end of said strip against retrograde movement, and means for engaging the doubled end of said strip to initially present the same to the action of the stitch-forming mechanism.

1,463,263. BURNER TIP. JOHN H. GRAYSON, Athens, Ohio. Filed Sept. 23, 1922. Serial No. 590,161. 4 Claims. (Cl. 158—116.)

1. A burner tip comprising an element having as an integral construction a lower ring portion and an upper portion defining a plurality of parallel bars and resulting slots, and a ferrule surrounding the upper portion, parts of the ferrule extending into the slots and providing braces for the bars.

1,463,264. REFRIGERATOR. KINE GROSS, Wellman, Iowa. Filed Sept. 11, 1922. Serial No. 587,378. 1 Claim. (Cl. 220—63.)

A refrigerator comprising a metallic casing body, a lining of hard material substantially as specified snugly fitting within the casing body, and a lining of quick-silver at the inner side of the casing body and between

the same and the first-named lining; the casing body and the first-named lining having inwardly-directed flanges at their upper ends, a cover of the same material as the first-named lining threaded into the flange of the same, and a metallic cap removably arranged over the refrigerator body.

1,463,265. PROCESS OF APPLYING LABELS TO CANNED GOODS. WILLIAM CLIFTON HART, Montague Bay, Tasmania, Australia. Filed June 29, 1921. Serial No. 481,367. 1 Claim. (Cl. 41—24.)

The process of applying descriptions to containers wherein the label is first impressed type high in the plate from which the can body is made and forming the can from said plate, the filled can being then passed over vari-colored parallel pads to apply parallel stripes or rings to said type high label.

1,463,266. CASTER. WALTER F. HEROLD, Newark, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 21, 1922. Serial No. 589,502. 6 Claims. (Cl. 16—38.)

2. In a caster, the combination of a cylindrical socket having an inwardly extending spring portion forming its upper end, and a pintle having a cylindrical portion of uniform diameter adapted to slidably fit in said socket from the lower end of the same to the base of the spring portion of the same, and having a portion of reduced diameter extending from said first portion to a point above the upper end of said socket spring portion, and having a head above the upper end of said spring portion, when the pintle is mounted in position, said pintle having a peripheral shoulder at its lower end and said socket having a leg supporting plate secured to the lower end thereof, the lower end of the socket bearing upon said shoulder, and the pintle, at the junction of said cylindrical portion and shoulder, having a snug rotative fit in the socket.

1,463,267. FOLDING AND TENT BED. RALPH B. HOSNER, San Francisco, Calif. Filed July 21, 1921. Serial No. 486,453. 2 Claims. (Cl. 5—113.)

1. In a tent bed structure, a frame having at its corners sockets to receive tent poles, and legs for supporting the

corners of the frame and provided with fixed slotted parts for passing down over and engaging a headed pin at the lower end of each pole.

1,463,268. FIREPROOF TANK. WILSON SYLVESTER HUFF, Oklahoma, Okla. Filed July 21, 1919. Serial No. 312,188. 13 Claims. (Cl. 220—26.)

11. A tank comprising a liquid container, a float adapted to be supported on the surface of the liquid, means providing a joint mounted on the float, the free side of said means slidably engaging the container wall and thus forming a pocket, said pocket containing a substance acting by its weight to maintain the said free side in wiping engagement with the tank wall.

1,463,269. GEAR-ASSEMBLING DEVICE. CLARENCE A. JOHNSON, Luther, Okla. Filed Dec. 14, 1920. Serial No. 430,633. 7 Claims. (Cl. 29—89.)

1. A gear assembling device including a frame, and means carried thereby for locking against rotation temporarily assembled gears confined by said means.

1,463,270. BRIEF CASE. SAMUEL H. LIFTON, Brooklyn, N. Y. Filed Nov. 13, 1922. Serial No. 600,577. 1 Claim. (Cl. 190—43.)

A brief case having a front wall, and a back wall provided with a flap overlapping the upper margin of the front wall, folding gussets secured at their edges to the edges of said walls by a row of stitching, a flat reinforcing band conforming in contour to that of the inner margin of said walls arranged within said case back of said inner margins, and a strip covering said band having one edge interposed between the edges of said gusset and walls and secured thereto by said row of stitching, and having its other edge stitched to the wall adjacent to said edge.

1,463,271. PARTY-LINE TELEPHONE SYSTEM. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1910, Serial No. 546,582. Renewed Sept. 20, 1916. Serial No. 121,313. 39 Claims. (Cl. 179—17.)

7. An a telephone system, a line, a plurality of substations on said line, means for selectively signaling the subscribers on said line, and a manual switchboard provided with means for receiving the signal when the call is for a subscriber whose telephone has been taken out or discontinued.

1,463,272. POWER PRESS. FREDERICK H. RAGAN, Detroit, Mich. Filed Aug. 12, 1921. Serial No. 491,703. 17 Claims. (Cl. 29—85.)

2. A power press including a longitudinally movable ram, means for rotating the ram, and a control member, said member being mounted upon the ram and capable of

rotary movement therewith and having means whereby it may be held stationary at the will of the operator, said ram and control member having cooperating parts whereby

the ram is moved longitudinally slowly in one direction for feeding purposes when such member is held stationary and is permitted to move rapidly in the opposite direction.

1,463,273. DRAWING CONTINUOUS SHEET GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor, by mesne assignments, to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 28, 1921. Serial No. 473,535. 11 Claims. (Cl. 49—17.)

2. In a sheet glass drawing apparatus, a tank containing molten glass, means for drawing a sheet of glass therefrom, a container within the molten glass for segregating that portion of the glass from which the sheet is drawn, the container being divided, substantially in the plane of the glass sheet, into two similar sections, and means for bodily moving the sections toward and from one another to vary the width of the passage therebetween.

1,463,274. MOUNTING AND OPERATING MECHANISM FOR RECIPROCATING BEDS OF PRINTING PRESSES. BURT D. STEVENS, Evanston, and EDWARD F. DUDLEY, Oak Park, Ill., assignors to Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 3, 1921. Serial No. 449,529. 2 Claims. (Cl. 101—282.)

1. In a printing-press, the combination of a frame, a printing-form bed mounted for reciprocation in guideways in said frame, an impression-cylinder cooperating with said bed, means to reciprocate said bed comprising a pair

of stationary racks with oppositely-inclined teeth mounted on said frame, a pair of similar racks fixed to and slidable with said bed, a pair of spiral gears secured together and each in mesh with one of each of said pairs of racks, means to effect the reciprocation of the bed by causing the bodily travel of the gears along the station-

ary racks, pitch-plane tracks in register with said racks, pitch-circle rollers registering and rigid with said gears and adapted to travel on said tracks to assure proper meshing of the gears and racks, and a plurality of backing-up rollers co-acting with the rear of said bed to relieve said guideways from at least a part of the strains imposed on the bed, substantially as described.

1,463,275. PNEUMATIC CONTROL DEVICE FOR PLAYER PIANOS. ORMOND EDGAR WALL, Honolulu, Territory of Hawaii. Filed Mar. 23, 1921. Serial No. 454,663. 3 Claims. (Cl. 84—48.)

2. In a player action having pneumatics for operating movable parts thereof, note sheet controlled means for independently collapsing said pneumatics, a valve for each pneumatic shiftable into closed position upon the collapse of said pneumatic to hold the same in collapsed position, tripping pneumatics for shifting the said valves to open position, note sheet controlled connections for simultaneously actuating the several tripping pneumatics, and means for normally holding each of the atmospheric valves during operation in open position until its respective operating pneumatic is collapsed.

1,463,276. ROAD SIGN. DALE WARREN, Sweetwater, Tex. Filed July 12, 1922. Serial No. 574,391. 11 Claims. (Cl. 40—145.)

3. A road sign, consisting of an automobile tire casing, and supporting and bracing means extending within said casing consisting of a post and one or more cross members, said post passing through a hole cut in the casing.

1,463,277. MUD DRUM. JACOB G. WHITLATCH and OSCAR R. WILLIAMSON, Iowa Falls, Iowa. Filed Oct. 14, 1920. Serial No. 416,869. 2 Claims. (Cl. 122—397.)

1. The combination with a steam boiler of a mud drum located below the lowermost water line therein, valve controlled communications between opposite ends of said mud drum and said boiler adjacent to the lowermost water line thereof, said communications differing in altitude in respect to opposite ends of said drum, means for raising the temperature of water in the mud drum consisting of a steam coil located within said drum, a steam dome on the boiler, a valve controlled pipe communicating between said dome and one end of said coil, a return steam pipe communicating between the opposite end of said coil and said boiler at a point below the dome thereof, and means of discharge from said mud drum.

1,463,278. SHOE. JOHN DAVID YEAGER, Philadelphia, Pa. Filed Nov. 19, 1921. Serial No. 516,447. 1 Claim. (Cl. 36—55.)

A shoe comprising a vamp, a vamp lining and a strip of fabric, glazed on both sides, extending over the top of the foot between the vamp and lining and between the vamp throat seam and the tip seam, secured at the former and free at the latter.

1,463,279. METHOD OF DRYING GASES. EDWIN H. ARNOLD, Coventry, and WILLIAM T. WAKEFORD, Providence, R. I., assignors to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 9, 1921. Serial No. 514,087. 11 Claims. (Cl. 183—118.)

1. The method of drying gases which comprises, passing the gases under low pressure into a chamber provided with a perforated wall and then upwardly through said perforated wall and into a second chamber where the said gases pass into contact with drying material contained in said second chamber, contamination of said gases by contact with the air while in said chambers being prevented by maintaining a constant supply of said drying material in comminuted form in said first named chamber.

1,463,280. AMMONIA SYNTHESIS AUTOCLAVE. EDWIN H. ARNOLD, Coventry, and WILLIAM T. WAKEFORD, Providence, R. I., assignors to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 9, 1921. Serial No. 514,088. 12 Claims. (Cl. 23—21.)

9. An ammonia synthesis autoclave comprising a body portion formed of a single metallic shell provided with

oppositely located openings, means for placing the interior of said autoclave under pressure, and inde-

pendently removable closures for said openings whereby the charge may be removed from said autoclave by the combined influence of gravity and pressure.

1,463,281. WIRE CHAIN LINK. ANDREW LANGSTAFF JOHNSTON, Jr., Richmond, Va., assignor, by mesne assignments, to Off'N'On Chain Corporation, New York, N. Y., a Corporation of Delaware. Filed June 11, 1920. Serial No. 388,287. 3 Claims. (Cl. 59—92.)

1. A chain link made of an integral length of stock having its free ends terminating in adjacent eyes, the stock forming said eyes being bent over in opposite directions, the end portions of the stock being bent transversely of the link adjacent the base of the eyes and terminating inwardly of the outside faces thereof with their extremities protected by said eyes and the inside faces of the eyes being in close contact throughout.

1,463,282. WIRE CHAIN LINK. ANDREW LANGSTAFF JOHNSTON, Jr., New York, N. Y., assignor, by mesne assignments, to Off'N'On Chain Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 8, 1920. Serial No. 429,072. 4 Claims. (Cl. 59—92.)

1. A chain link comprising a strand of material bent to form an elongated loop, the ends of said strand being separately looped in directions opposite to each other to form contiguous coils, and each end being bent to encircle the necks of both said coils.

1,463,283. METHOD OF BURNING PULVERIZED FUEL. HENRY KREISINGER, Pittsburgh, Pa., assignor to Combustion Engineering Corporation, a Corporation of New York. Filed Oct. 22, 1920. Serial No. 418,640. 9 Claims. (Cl. 110—28.)

1. The process of burning fuel in a combustion chamber which consists in admitting, igniting and burning the fuel within such chamber, and in creating and maintaining a cooling zone in such chamber, intermediate the flame and a recipient defining surface of such chamber, through which zone refuse particles leaving the flame in regular substantially continuous operation pass toward such surface and which zone is cooled and maintained cool enough to cool such refuse particles while in suspension below the point of coalescence by the indirect action of a cooling medium.

1,463,284. SHOCK ABSORBER. JAMES S. LANG, Watertown, Mass. Filed Jan. 8, 1921. Serial No. 435,936. 1 Claim. (Cl. 188—129.)

In a shock absorber, the combination comprising a friction blade, a friction shoe arranged to engage said blade, a carrier for the shoe with relation to which the shoe is retained to have a limited endwise movement, a keeper fixed to the carrier and occupying a position spaced from the outer side of said shoe, a tension member interposed between said keeper and said shoe adapted when actuated to exert pressure for pressing said shoe

against said blade, a bearing movable with said tension member, means for pivotally supporting said bearing, a bearing on said shoe, and a member interposed between said bearings, said bearings and interposed member presenting surfaces co-operating with one an-

other whereby said interposed member may have a determinate rolling contact with said bearings during the endwise movement of said shoe relatively to the carrier and simultaneously with such rolling contact said bearings be displaced laterally in relation to one another for actuating said tension to exert pressure as aforesaid.

1,463,285. RULING PEN. EMIL LAWRENZ, Detroit, Mich. Filed July 19, 1922. Serial No. 576,039. 2 Claims. (Cl. 120—109.5.)

2. In a ruling pen, a pair of blades rigidly connected at their inner ends and having aligned apertures, a bolt extending through the apertures in the blade and a nut on the outer end of the bolt, said nut consisting of an inner conical part threaded on the bolt and tapering toward the adjacent blade and an outer part having a conical recess to receive the inner part and adapted to turn the same when the parts are in engagement, said outer part of the nut being provided with a series of graduations to indicate its angular movements.

1,463,286. SHUTTLE. VICTOR LEDOUX, New Bedford, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Sept. 8, 1919. Serial No. 322,454. 3 Claims. (Cl. 139—223.)

1. A thread block for self-threading shuttles having, in combination, a longitudinal thread passage, means for guiding the thread to the delivery eye of the shuttle, and a scroll in the longitudinal thread passage in sub-

stantial alignment with the axis of the bobbin comprising a band of material length having its upper side edge overlapping the lower side edge and spaced a short distance therefrom, and a guard overhanging said upper side edge and extended downwardly from one wall of the

thread passage in the same direction as said upper side edge of the scroll, whereby during the threading operation the thread is guided downwardly and caused to pass around the upper side edge and thence over the lower side edge into the scroll.

1,463,287. VARIABLE-SPEED GEAR. JOHN ALEXANDER MILLER and WILLIAM DOUGLAS MILLER, Brighthouse, England. Filed Nov. 5, 1921. Serial No. 513,098. 4 Claims. (Cl. 74—58.)

1. An auxiliary gearing comprising a drive shaft, a driven shaft normally aligned therewith, a sleeve slidable on the drive shaft, a pinion carried by the sleeve, a carrier in which said sleeve is mounted to revolve, said carrier being mounted for rectilinear and oscillating movement, a pinion on the driven shaft adapted to mesh with the first mentioned pinion in the aligned position of the shafts, means for actuating said carrier to dispose the drive shaft and the pinion thereon in a position out of alignment with the driven shaft, and an intermediate gear element having drive connection with the said driven shaft and adapted to mesh with the gear on the drive shaft in the nonaligned position of the shafts.

1,463,288. MUSIC CUE SHEET FOR MOTION PICTURES. MOSES J. MINTZ, New York, N. Y. Filed Mar. 30, 1922. Serial No. 548,094. 5 Claims. (Cl. 283—47.)

MUSICAL CUE SHEET
FOR
A GUILTY CONSCIENCE
VITAPHONE PRODUCTION
COMPLETE
JOSEPH CARL BREIL

1. A music cue sheet for motion pictures, provided with an imprint of a partial musical strain for respec-

tive scenes or actions of the picture and an imprint of a main musical composition serving as the theme for the picture.

- 1,463,289. CONVERTIBLE DESK. ALEXANDER MITCHELL, Pueblo, Colo., assignor of one-half to Sam Dobin. Filed July 23, 1921. Serial No. 487,081. 9 Claims. (Cl. 45-6.)

1. In a convertible desk, a body, a fixed top thereon comprising a stationary section and a section movable to position in the same plane as the stationary section or to position overlying the stationary section, a bodily shiftable top movable to occupy a horizontal position resting upon the affixed top or to occupy an upright position at the rear of the body, and a cabinet structure upon the under side of the shiftable top arranged to occupy the space vacated by the movable section of the stationary top when the shiftable top is in horizontal position.

- 1,463,290. AMUSEMENT DEVICE. HARRY G. MOULDER, Kansas City, Mo. Filed Nov. 13, 1922. Serial No. 600,621. 2 Claims. (Cl. 46-56.)

1. An amusement device, comprising a housing member, a plate mounted on the upper end of said housing member and having a circular series of circular openings therein, a pivotally mounted disk wheel bearing upon its upper face a circular series of words or marks, a detent wheel associated with said disk wheel, a yielding pivotally mounted lever having a detent in engagement with said detent wheel to normally hold said disk wheel in position to present the circular series of words or marks thereon to the circular series of openings in said plate, a pinion associated with said disk wheel, a revolubly mounted shaft provided with a gear wheel enmeshed with said pinion and with a bell shaped member, a revoluble slidingly mounted clutch member vertically aligned with said shaft, said clutch member comprising a body portion provided with a horizontally dis-

posed pivoted lever adapted to be turned by centrifugal force to impinge upon the inner side of the bell shaped member, a spool associated with said clutch member, a pivotally mounted lever having a yoke engaging said spool to raise and lower said clutch member, a pinion associated with said clutch member, a revolubly mounted spur gear wheel enmeshed with said last mentioned pinion, and power receiving and power imparting devices for driving said spur gear wheel and thereby impart motion to said clutch member.

- 1,463,291. MEANS FOR SECURING TIRES TO VEHICLE WHEELS. JAMES M. MUNDY, Brooklyn, N. Y. Filed Oct. 7, 1920. Serial No. 415,425. 1 Claim. (Cl. 152-21.)

A wheel of the character designated, comprising a spoke disc formed with a flanged peripheral felloe rim and a fulcrum hole in its face, a flanged annular clamping plate fitted to the face of the spoke disc and formed with a pry hole positioned with relation to the aforesaid fulcrum hole in the spoke disc and also formed with a plurality of elongated concentric slots, shouldered attachment lugs protuberant from the face of said spoke disc and fitting in said elongated concentric slots in the annular clamping plate, the contactual surface engagement between said shouldered attachment lugs and the outer face of said annular clamping plate being wedgeable, and means for locking said annular clamping plate and shouldered attachment lugs on the spoke disc in wedged relationship, for the purpose described.

- 1,463,292. FEELER LOOM. JONAS NORTROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed May 26, 1917. Serial No. 171,129. 5 Claims. (Cl. 39-255.)

1. A thread extracting device for automatic looms having, in combination, a rock shaft, a tilting bobbin chute, connections between the rock shaft and the bobbin chute whereby the latter is held in inoperative position during regular weaving and moved to operative position upon an oscillation of the rock shaft, and a thread hook on the lay, the tilting bobbin chute being constructed and arranged to engage a filling end extending from the ejected bobbin through the shuttle eye, and upon being tilted back into its inoperative position to positively carry the filling to the mouth of the thread hook to effect a positive engagement therewith.

1,463,293. DETACHABLE ARMREST FOR AUTOMOBILES OR THE LIKE. LAWRENCE S. PADDOCK, Philadelphia, Pa. Filed July 1, 1922. Serial No. 572,161. 6 Claims. (Cl. 296—1.)

1. In an article of the class described, in combination, a carrying member having front and rear portions adapted to slip over and grip the back of a seat, said rear portion being adjustable on said front portion and a freely removable arm support attached to said front portion thereof.

1,463,294. VENTILATING APPARATUS FOR PULLMAN CARS. ELIZABETH A. ROBINSON, Scranton, Pa. Filed Feb. 25, 1922. Serial No. 539,193. 7 Claims. (Cl. 98—22.)

1. In a vehicle ventilator, the combination with a side wall of the vehicle having an opening formed therein, of a tube mounted within the opening, a regulator mounted within the tube for controlling the passage of air therethrough, and means stationary with respect to the vehicle wall disposed exteriorly of the vehicle, including a deflector directing air into the opening during movement of the vehicle in one direction, and a second deflector directing air into the opening during movement of the vehicle in the opposite direction.

1,463,295. AUXILIARY SPRING ATTACHMENT FOR SPRING BED BOTTOMS. SAMUEL ROSENBLOOM, Lowell, Mass. Filed Nov. 17, 1922. Serial No. 601,627. 4 Claims. (Cl. 5—229.)

1. The combination with a bed having side rails and a spring bed bottom having side bars, of an auxiliary spring attachment including parallel spacing bars having guide rod holes and adjusting slots, supporting dogs slidable on said spacing bars and having bolt holes which register with the adjusting slots and jaws which engage the side bars, the upper jaw having a nose which engages a side rail, adjusting bolts which pass through said bolt holes and adjusting slots, winged nuts for said adjusting bolts, adjustable guide rods which extend from the rigid bottom frame downwardly and pass through the rod holes in the spacing bars, auxiliary compression springs each surrounding a guide rod between a spacing bar and the bottom frame, a top frame bent up at each side to form a mattress holder, and helical springs carried by the bottom frame and supporting the top frame so positioned as to form a hollow rectangle.

1,463,296. RECEPTACLE. HARRY SIMON, New York, N. Y., assignor to Sitroux Importing Company, Inc., a Corporation of New York. Filed June 14, 1921. Serial No. 477,419. 2 Claims. (Cl. 206—46.)

1. A receptacle of the class described including a strip folded lengthwise, intermediate of its ends to form a receptacle, an auxiliary receptacle disposed between the folded portions of the main receptacle, said auxiliary receptacle having an opening to disclose the contents thereof, the main receptacle being provided with an opening upon one side whereby to display the contents of the auxiliary receptacle and interengaging means for detachably securing the ends of the strip to retain the side walls thereof in a folded position and whereby to retain the auxiliary receptacle in position within the main receptacle.

1,463,297. SAFETY DEVICE FOR ELEVATOR CARS. HERBERT S. SNEAD, Montclair, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 12, 1922. Serial No. 528,590. 11 Claims. (Cl. 187—31.)

9. In an elevator the combination of the elevator car, an electric hoisting motor, a car gate, a cam on the car affixed to the car gate and having two camming surfaces, a shaft door and a cam thereon, an electrical switch mounted on the car and in the controlling circuit of the motor, adapted to be closed by the car gate when closed, the cam on the car adapted to strike by either of its camming surfaces, in the travel of the car, the cam on the shaft door and result in camming the car gate open and the opening of the switch on the car to stop the car.

- 1,463,298. COVERING FOR BOILERS, PIPES, AND THE LIKE. EDWARD SPICER, Vancouver, British Columbia, Canada. Filed Nov. 23, 1921. Serial No. 517,301. 6 Claims. (Cl. 154—45.)

1. A covering for boilers comprising a layer of heat insulating material laid directly on and wrapped tightly around the boiler shell of a thickness designed to prevent heat radiation from the shell, flexible corrugated bands wrapped around said layer with the corrugations disposed longitudinally of it, and a metal casing surrounding the boiler and spaced from the heat insulating layer by the bands, said casing being capable of being tightened whereby the layer is frictionally held to the boiler shell and the layer, bands, and casing frictionally held one to the other.

- 1,463,299. BALL CAGE FOR RADIAL BALL BEARINGS. EMIL STAAKE, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Sept. 10, 1921. Serial No. 499,781. 4 Claims. (Cl. 64—59.)

4. A ball cage for ball bearings comprising opposing rings adapted to receive the balls between them, and lugs on one of the rings extending through holes in the other ring and engaged fixedly therewith to hold the rings together, said lugs consisting of portions of the ring separated from the metal thereof wholly between the edges of the ring and extending laterally to engage the other ring.

- 1,463,300. AUTOMATIC STOKER. LOYD R. STOWE, Maplewood, Mo. Filed June 16, 1919. Serial No. 304,534. 3 Claims. (Cl. 110—40.)

1. The combination in a stoker of spaced grate chains inclined downwardly at their forward portions, feeding troughs, pusher members coaxing therewith, said troughs being mounted between said spaced chains and having the sides thereof tapered to accord with the inclination of said chains, and substantially horizontal endless chains located at the extremity of each of said troughs between said first named chains adapted to retard the movement of the fuel at the forward end of the stoker.

- 1,463,301. STOKER. LOYD R. STOWE, Maplewood, Mo. Filed July 17, 1919. Serial No. 311,455. 16 Claims. (Cl. 110—40.)

1. The combination in a stoker of a grate comprising two series of grate chains, the upper surface of the chains of one series lying in a plane different from the plane of the upper surface of the chains of the other series, the chains of one series being arranged to alternate laterally across the grate with the chains of the other series.

- 1,463,302. CAR UNLOADER. FLOYD E. TOWNSEND, Berkeley, Calif., assignor of one-half to E. G. Palmer, San Francisco, Calif. Filed Nov. 29, 1920. Serial No. 426,913. 5 Claims. (Cl. 198—118.)

1. An apparatus of the character described comprising a truck, supporting posts carried thereby, a tilting frame, arms carried by said frame and movable parallel to its axis, means for tilting the frame, means for moving said arms, a swinging elevator leg supported by said arms, an elevator chain carrying buckets passing around said swinging elevator leg, means to adjust the position of the elevator leg and means to operate the elevator buckets independently of the adjusting mechanism.

- 1,463,303. SURFACING MACHINE. CHARLES T. ADAIR and CARL G. FREDERICK, Kansas City, Mo. Filed Mar. 31, 1922. Serial No. 548,306. 4 Claims. (Cl. 144—2.)

1. A surfacing machine comprising a base, means for clamping the base to the work to be surfaced, a plate having a swivel mounted in the base, a second plate fastened to the first plate, an arm comprising a skeleton frame consisting of side bars and end bars, the side bars being slidable in grooves in the two plates, a shaft journaled in the end bars and slidable between the two plates, the

shaft having a longitudinal groove, a pulley mounted in the plates and having a keyed connection with the groove in the shaft, a motor carried by one of the plates, a driv-

ing connection between the motor and the pulley, and a saw carried by one of the end bars and in driving connection with the shaft.

1,463,304. TRANSFORMER-CONTROLLING MEANS. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Feb. 20, 1922. Serial No. 537,743. 3 Claims. (Cl. 175—356.)

1. The combination of a transformer, an enclosing casing, leads from the windings of said transformer, sets of contacts within said casing in alignment with each other to which said leads are connected, a support having guiding means in alignment with each set of contacts, and a rod or rods adapted to engage said guiding means and engage said contacts.

1,463,305. PUMPING APPARATUS. SAMUEL DUNCAN BLACK and ALONZO GALLOWAY DECKER, Baltimore, Md., assignors, by mesne assignments, to The Maryland Trust Company, trustee, a Corporation of Maryland. Filed July 23, 1919. Serial No. 312,784. 6 Claims. (Cl. 230—6.)

1. A pumping apparatus consisting of a pumping cylinder, a piston, a crank and a crank shaft, a motor, means connecting the motor to the pump crank shaft to drive the same, suitable bearings for said parts, a fan connected to said members to move therewith, a casing enclosing said members, the casing having an opening adjacent one end to admit air and having a transverse partition near said end with an aperture in which the motor is set, the fan being immediately in line with said opening beyond the motor, a turret in the casing open at one end, the pump cylinder being set in the turret with the opening encircling the cylinder near the head,

the fan having the effect of drawing a current of air in at the opening at one end, passing it in contact with the

bearings through the motor to the fan and delivering it so that it sweeps the pump cylinder, passing out through the openings at the end of the turret.

1,463,306. UNIVERSAL JOINT. CHARLES L. BUSHNELL, Vacaville, Calif. Filed Apr. 15, 1922. Serial No. 553,119. 1 Claim. (Cl. 64—91.)

A universal joint comprising a primary ball and socket arranged in co-operative position, a secondary socket in the bottom of the primary socket, a single ball seated in said secondary socket, the primary ball having a square head intercepted by a groove shaped to present a curved abutting surface against the secondary ball, the curvature of said surface and secondary ball being the reverse with respect to each other, and ball bearing driving connections between the primary ball and socket.

1,463,307. STORAGE BIN. JOHN P. CASE, Chicago, Ill., assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio., a Corporation. Filed June 7, 1922. Serial No. 566,526. 5 Claims. (Cl. 20—1.2.)

1. A knockdown storage bin made up of the combination of a supporting frame, oppositely related bin-sustaining girders mounted thereon, a series of downwardly

extending substantially parabolic-shaped bar-members removably suspended from said girders, and a series of scantling-like members, fastened together side by side, upon the bottom and sides of said bar-members and cross-wise of the same, substantially as shown and described.

1,463,308. SPRING FENDER OR BUMPER. WILLIAM G. COX, Cleveland, Ohio. Filed Apr. 20, 1923. Serial No. 633,445. 8 Claims. (Cl. 293—55.)

1. A flexible fender or bumper for a vehicle, comprising a pair of striking members made of spring band metal, and a pair of brace springs secured together intermediate their ends and having offset extremities engaging the opposite ends of said striking members.

1,463,309. DEODORIZING AND IMPROVING THE QUALITY OF CREAM AND BUTTER FAT. ELMER M. DAVIS, Chicago, Ill., assignor to Swift & Company, Cook County, Ill., a Corporation. Filed Sept. 6, 1922. Serial No. 586,528. 7 Claims. (Cl. 99—11.)

1. Method of deodorizing cream and butter fat, which comprises heating the same in admixture with regulated amounts of a diluent, to a temperature of from about 170° to about 210° F., violently agitating the same by directing therethrough rapid current of finely divided air, and continuing the heating and the agitation until a considerable portion of the moisture has been removed by evaporation and desired deodorization has been effected, substantially as described.

1,463,310. DISPENSING PUMP. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed July 18, 1921. Serial No. 485,502. 7 Claims. (Cl. 103—11.)

1. In a dispensing pump, the combination with a single reciprocable pump-actuating means, of a plurality of

pump cylinders, a piston and piston rod for each cylinder, and a single member carried by the first named means and movable to engage with any one of said rods to connect the same to said actuating means.

1,463,311. PHONOGRAPH. BENJAMIN H. DIETZ and ALBERT E. HANSEN, Chicago, Ill. Filed May 21, 1921. Serial No. 471,384. 3 Claims. (Cl. 274—2.)

1. A phonograph, comprising a piano-like casing having a dummy keyboard provided with openings therein, a sound reproducing mechanism in the casing spaced from the keyboard, and means providing a sound chamber leading from the sound reproducing mechanism and terminating at the keyboard.

1,463,312. LEATHER CUTTER. THOMAS M. DILLINGER, Portland, Oreg. Filed Mar. 22, 1922. Serial No. 545,882. 3 Claims. (Cl. 164—36.)

1. In a cutting device, the combination of, a frame having a transverse horizontal opening and a vertical guide face, a knife carrier extending through and slidable in said frame opening, the carrier having a vertical knife secured in same, a vertical set pin positioned in the frame to allow it to engage the carrier beyond the guide face and act as a pivot for the carrier, and a horizontal set pin positioned in the frame to allow it to engage the edge of the carrier and move same radially until the cutting edge of the knife is arranged along a path of travel in parallel alignment with the opposing guide face, and the two pins to secure the carrier rigidly in such position.

1,463,313. JAPANNING APPARATUS. DAVID F. DOMIZI, Cleveland, Ohio. Filed Apr. 15, 1920. Serial No. 374,188. 18 Claims. (Cl. 91—46.)

1. In an apparatus for japanning articles, a conveyor for the articles to be japanned, means for immersing the

articles in a japanning solution comprising a pair of vertically movable receptacles beneath a portion of the con-

veyor, and means for raising and lowering said receptacles, said receptacles being connected so as to be simultaneously moved in opposite directions.

1,463,314. MACHINE FOR MAKING SHINGLES AND METHOD OF CLEANING AND LUBRICATING DIES. SILAS M. FORD, St. Paul, Minn. Filed Oct. 10, 1919. Serial No. 329,874. 11 Claims. (Cl. 164—28.)

1. In a machine for making shingles through the operation of dies carried in travelling die bars, the combination with, a frame, of multiple die bars, a stationary guide for said die bars carried by the frame, and a spring mounted guide for said die bars likewise carried by said frame for holding said die bars firmly against the material to be operated upon, while passing between said guides and means for causing said die bars to travel with respect to said guides.

1,463,315. STOVE. RICHARD FUTRAL, St. Louis, Mo., assignor to St. Louis Stove Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 11, 1922. Serial No. 587,346. 6 Claims. (Cl. 126—58.)

1. In a stove, the combination with a drum, of a grate, a top supported by the drum, a flue outlet from the top near the back thereof, a plate extending across approximately half of the drum near the top thereof thereby forming a compartment at the top of the combustion chamber, and a vertical plate connected with the front edge of said first-named plate, the ends of said last-named

plate being spaced from the drum thereby forming outlet openings whereby the products of combustion are deflected at the top of the combustion chamber.

1,463,316. UNDERREAMER. CHARLES L. GIEBELL, Pennsboro, W. Va., assignor of one-half to Charles L. Dunham, Pennsboro, W. Va. Filed Sept. 18, 1922. Serial No. 588,793. 5 Claims. (Cl. 255—76.)

1. A reamer comprising a body portion having its lower end provided with a central bore, cutters having shanks extended into said bore, said shanks having interengaging means for pivotally connecting said cutters to the body portion, a spring actuated expander vertically shiftable in said bore and adapted to engage said shanks for expanding said cutters, said expander formed intermediate its ends with a transversely extending opening having one of its walls oppositely bevelled, and means movable towards and pivotally connected at the upper end to said body portion and having the lower end provided with inwardly extending tapered arms engageable in said opening to coact with said bevelled wall to elevate said expander to permit of the contraction of said cutters.

1,463,317. GRADUATING APPLIANCE. HANS N. HALVERSEN, Vineland, N. J., assignor to Kimble Glass Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1920. Serial No. 371,194. 24 Claims. (Cl. 33—21.)

1. In a graduating-appliance of the character described, the combination of means to support the body to be graduated, scriber means for marking graduation lines on said body, means for moving said body and scriber relatively to one another to provide the spaces between the lines, and means to automatically control said scriber means to

mark the lines on said body normally partway around the same but with certain of such lines extending entirely around the body, substantially as described.

- 1,463,318. REGISTER WALL GUARD. EDWARD G. HEARTICK, Louisville, Ky. Filed Jan. 9, 1922. Serial No. 527,859. 5 Claims. (Cl. 98—50.)

1. In a device of the kind described, a hood formed of a single piece of sheet metal having its central portion bent to arcuate shape and its ends slit and bent at right angles to the body to provide strips having their free ends overlapping, and means to hold said free ends in overlapping relation and the free ends on one side in fixedly spaced relation to the free ends on the other side.

- 1,463,319. GUIDE RAIL. CHARLES J. HOHMAN, Sr., Elmhurst, Ill. Filed Aug. 17, 1922. Serial No. 582,349. 4 Claims. (Cl. 238—21.1.)

1. A spacer block constructed to be arranged between a guard rail and another rail, said block being provided with a portion which engages the under side of said rails and provides a support for said rails, said block having means whereby a clamping element which engages said rails and has a portion which is disposed below said rails is held against movement relatively to said block.

- 1,463,320. SWITCH. ERNEST H. JACOBS, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed June 20, 1918. Serial No. 240,942. 38 Claims. (Cl. 200—48.)

17. In combination, a switch having a pivoted blade, a shaft for operating the blade, gears connecting the blade and the shaft, an angularly adjustable coupling connected in said shaft and a handle for the shaft.

21. In a switch, a main movable member, a main contact, an auxiliary member, an auxiliary contact, means for

separating the auxiliary parts and a positive latch member independent of the main switch parts for holding said parts in engagement until a predetermined position in the opening of the main member is reached.

- 1,463,321. INDICATING DEVICE. PETER G. JACOBSON, Chicago, Ill. Filed Aug. 30, 1922. Serial No. 585,279. 3 Claims. (Cl. 116—124.)

1. In an indicating device, the combination with a pointing arm formed of spring metal and having a base angular thereto and formed integrally therewith, this base having a continuation spaced apart from the base and forming a U-fold therewith; of a knob for carrying the pointing arm; a shaft carrying said knob; and a headed screw passing through the sides of the U-fold into holding engagement with said knob and in abutting engagement with a side of said shaft, the head of the screw engaging and pressing upon the free side of the fold.

- 1,463,322. SEAL-PRESS IDENTIFICATION. MARSHALL H. JACKSON, Chicago, Ill. Filed Feb. 26, 1923. Serial No. 621,226. 2 Claims. (Cl. 101—3.)

2. The combination with a seal press having an adjustable member projecting at the front of the frame, of a tag holder arranged at the front of the frame and cooperating with the adjustable member to retain the tag.

- 1,463,323. BLANK CARRIER FOR HEADING MACHINES AND THE LIKE. AUGUST W. JANSSON, Kent, Ohio, assignor to The Kent Machine Company, Kent, Ohio, a Corporation of Ohio. Filed Feb. 18, 1920. Serial No. 359,599. 7 Claims. (Cl. 10—25.)

2. A carrier for use in connection with a reciprocating cutter and cutter bar comprising a carrier bar adapted to be supported on the cutter bar, a finger block pivotally

supported on the carrier bar, a carrier finger supported by said block and a device yieldable in a direction lengthwise of the carrier bar and yieldingly resisting the movement of the block in one direction.

1,463,324. POWER-DRIVEN GRINDER. WILLIS E. KIDNEY, Cleveland, Ohio, assignor to The Cleveland Electric Machine & Mfg. Co., Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 10, 1923. Serial No. 618,266. 3 Claims. (Cl. 146—182.)

1. A power driven grinder, comprising a supporting stand, a motor carried by said stand, a grinder casing detachably secured to the front end of said stand, a screw in said casing, a drive shaft for said screw extending through the supporting stand and journaled therein, said shaft being directly connected to said screw, said drive shaft having a reduced rear end portion providing a thrust shoulder, and said supporting stand having a bearing receiving recess at its rear end, gearing connecting said motor and shaft, and a removable thrust bearing upon the reduced rear end of said shaft and fitting within the recess at the rear end of the stand.

1,463,325. SEWING MACHINE. JOHN KIEWICZ, Boston, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Apr. 27, 1920. Serial No. 376,951. Renewed Jan. 20, 1922. Serial No. 530,725. 7 Claims. (Cl. 112—255.)

1. In a two-thread sewing machine of the type adapted to sew a short seam and then come to rest, the combination with a frame, of work-holding means carried thereby, means to give a feeding movement to the work-holding means, a rotary turret mounted in the frame and carrying the under-thread mechanism, a tension for the under thread carried by the turret, means to pull off a length of under thread through the tension at the end of each sewing operation, and means actuated thereby to release the tension on the under thread while such length is being pulled off.

1,463,326. DISPLAY SIGN. FRANK J. KRISTOFEK, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 24, 1921. Serial No. 455,068. 2 Claims. (Cl. 40—125.)

2. A display sign comprising a sheet metal backing, a celluloid covering for said backing, supporting members formed integral with the ends of said backing, an intumed marginal edge formed about the body of said backing and edge of said supporting ends adapted to clamp the celluloid covering over the same and notches formed in said marginal edge adapted to form weakening means to allow the ends to fold backward to form supports for the body of said sign.

1,463,327. POWER-TRANSMISSION CLUTCH. OTTO LEROY LEWIS, Chicago, Ill. Filed Feb. 8, 1922. Serial No. 534,998. 2 Claims. (Cl. 192—70.)

1. A power transmission clutch of the character described, including a driving member, a pair of friction plates attached to the driving member, friction linings attached to the inner surfaces of these plates, a pair of dished interlocking plates included between the friction linings and capable of making frictional driving contact with the same, springs for forcing the interlocking plates outwardly against the friction linings, a driven shaft, a hub concentric with the interlocking or driven plates and acting as a driver between the driven plates and the driven shaft, means for limiting the travel of the hub along the shaft, levers attached by hinge pins to one of the interlocking plates and by hinge pins through swinging links to the other interlocking plate, and means for operating said levers in a manner to permit or release the spring pressure between the interlocking plates.

1,463,328. GEAR-SHIFTING DEVICE FOR TRANSMISSIONS. OTTO LEROY LEWIS, Chicago, Ill. Filed Feb. 8, 1922. Serial No. 534,999. 4 Claims. (Cl. 74—37.)

1. In an apparatus of the character described, a clutch release member operated by a plunger, a plunger capable of reciprocating and rotary movements, means for impart-

ing reciprocating and rotary movements to the plunger, a plurality of gear shifting members, means for imparting

movement to the gear shifting members by the rotary movement of the plunger, means for locking the gear shifting members in predetermined positions and relations.

1,463,329. INDIVIDUAL SHEET AND ENVELOPE SEPARATOR FOR PNEUMATIC FEEDERS. CHARLES HUGH MARTIN, Los Angeles, Calif. Filed Apr. 18, 1922. Serial No. 555,004. 12 Claims. (Cl. 271—61.)

1. In a sheet separator, the combination with a barrier and pneumatic means adapted to lift a sheet from the top of a stack, and a spring operated tappet having a protuberance for loosening lifted sheets not in direct contact with the lifting means; of means operable by the lifting means to retract the protuberance from the path of the topmost sheet as it passes the protuberance, and adapted to allow the spring operated tappet to be returned to tap lifted sheets not in touch with the lifting means.

1,463,330. WATER-TREADING APPARATUS. HENRY MEYER, Detroit, Mich. Filed Sept. 26, 1922. Serial No. 590,569. 2 Claims. (Cl. 9—21.)

1. A water treading apparatus comprising a central hollow frame, footholds carried thereby, a plurality of buoyant elements attached to the ends of said frame, said buoyant elements decreasing progressively in diameter from the frame outwardly, means controlling the admission of air to said buoyant elements, sectional rails engaging the opposite sides of said elements, means at the point of said rails permitting breaking in one direction and holding rigidly in other directions, and means for detachably engaging the adjacent sections of said elements to said frame.

1,463,331. VEHICLE TURNING SIGNAL. HARRY MINER, Minneapolis, Minn. Filed Jan. 17, 1921. Serial No. 437,798. 4 Claims. (Cl. 177—327.)

1. A signal device having in combination, a bar adapted to extend substantially across the body of an automobile adjacent to the wind shield, a signal arranged for illumination carried at each end of the bar, said bar having longitudinal slots formed therein, retaining means passing through said slots, and means for sliding said bar on said retaining means to project the signals at one side or the other of the automobile, a circuit making contact below and engaging said bar and spaced contacts carried by said bar adapted to be brought into engagement with said contact as the bar is moved to one side or the other.

1,463,332. APPARATUS FOR APPLYING COATING. LEE H. PARKER, Boston, and HERBERT W. DAY, Wollaston, Mass., assignors to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Oct. 9, 1920, Serial No. 415,737. Divided and this application filed Mar. 1, 1922. Serial No. 540,116. 7 Claims. (Cl. 91—45.)

5. Means for applying coating comprising means to supply coating material, means to subject the same to the action of compressed air or other motive agent, thereby effecting the discharge of the coating material and means to discharge compressed air or other motive agent at opposite sides of the discharge of coated material and in a plurality of jets at each of said opposite sides.

1,463,333. LEVER. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 5, 1921. Serial No. 450,051. 4 Claims. (Cl. 74—29.)

1. A lever composed of two parts and having one of said parts pivotally mounted on a support, means for

connecting the two parts together, said means including a spherical segment rigidly secured on the pivoted part,

a spherical segment rigidly secured on the other part and superimposed on the first segment, and means to secure the segments together.

1,463,334. METHOD AND MEANS FOR MAKING UP-HOLSTERED FURNITURE. DAVID POPKIN, Malden, Mass. Filed Aug. 23, 1922. Serial No. 583,786. 5 Claims. (Cl. 155—184.)

1. A frame structure, having wing members provided with openings therein, and a cover member for said frame structure provided with wing pockets therein for fitting said wing members, said cover member being further provided with anchoring tabs at the juncture of said wing pockets therewith which are adapted to be drawn through the openings of said wing members for anchoring purposes.

1,463,335. GRINDING MACHINE. OTIS F. PRESBRY, Brooklyn, N. Y. Filed Oct. 27, 1921. Serial No. 510,792. 1 Claim. (Cl. 51—105.)

The grinding machine hereinbefore described comprising a supporting bed plate, a rotary grinding wheel mounted thereon, means for manually moving said wheel during the rotation thereof along the line of its

axis, a rotary self-closing chuck mounted on a tubular shaft at an angle to the peripheral face of said wheel and adapted to hold the work for presentation to said face, means for manually moving said chuck and its shaft along the line of the longitudinal axis thereof, and means for rotating said grinding wheel and chuck, the means for mounting said grinding wheel being a stationary axle held in a standard extending upwardly from said bed-plate and a tubular shaft mounted on said axle and upon which said grinding wheel, a pulley wheel and a threaded hub are secured in unitary relation so as to be bodily movable along and on said axle, the means for shifting said grinding wheel along the line of its axis consisting of a shipper frame pivotally mounted on a standard extending upwardly from said bed-plate and having arms engaging said hub and a lever for manually moving said frame on its pivotal support, and the means for rotating said grinding wheel and chuck being an electric motor having a belt connection with said pulley wheel and a belt connection with a pulley wheel on the tubular shaft of said chuck.

1,463,336. ELECTRIC SEALING DEVICE. WALTER REUSCH, New York, N. Y., assignor to Electric Sealing Machine Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 15, 1921, Serial No. 445,248. Renewed Jan. 2, 1923. 5 Claims. (Cl. 120—116.)

4. A device of the character described, comprising a frame provided with an upright slot and with a curved slot connected with said upright slot at its upper end, a receptacle rigidly secured to said frame and having an outlet, a valve for normally closing said outlet, means for opening said outlet, a receptacle holder adapted to contain a cooling medium, a die carried by said receptacle said receptacle and die being movable with respect to the frame and provided with pins adapted to move in said upright slot, one of said pins being also adapted to move in said curved slot, so as to swing the receptacle with respect to said frame, and means for moving said holder and bringing the die into contact with material previously delivered from said outlet, so as to make an impression thereon.

1,463,337. UNDERFEED STOKER. ROBERT SANFORD RILEY, Worcester, Mass., assignor to Sanford Riley Stoker Co., Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1919. Serial No. 315,166. 12 Claims. (Cl. 110—47.)

1. An underfeed stoker comprising a longitudinal retort, means to feed coal to said retort, a plurality of

lateral retorts communicating with said longitudinal retort and each formed in a plurality of parts extending

in the direction of the retort length, and means to move said lateral retort parts to assist lateral movement of the fuel.

1,463,338. SCREW-FEEDING DEVICE. SIMON E. SCHROEDER, Oak Park, Ill. Filed Jan. 3, 1919, Serial No. 269,510. Renewed Sept. 2, 1922. Serial No. 586,050. 9 Claims. (Cl. 10—162.)

9. In a device of the class described, a pair of members suitably spaced to engage the head of a screw and permit the stem of the screw to hang downwardly therebetween, said members having cut away portions to allow the head of the screw to pass between the members at the point of discharge, means for moving the screws along the members towards the cut away portions, a pair of fingers extending transversely of the members for restraining movement of the screws toward the point of discharge, means for withdrawing one finger to allow a screw to enter the space between the fingers and subsequently projecting such finger to separate said screw from the other screws and simultaneously withdrawing the other finger to allow said screw to pass to the point of discharge.

1,463,339. PROCESS OF BALLING SCRAP METAL. JOHN M. SELLERS, Downers Grove, Ill., assignor to Sellers Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 3, 1922. Serial No. 549,310. 9 Claims. (Cl. 75—50.)

1. Method of manufacturing wrought iron from metal scrap which comprises preheating the scrap without re-

ducing it to a molten state and then collecting a charge of the preheated scrap and balling it by rolling, while

subjected to a high temperature produced by the combustion of a fuel in suspension in immediate contact with such metal in the space in which the metal is balled.

1,463,340. BAND DATING STAMP. MORRIS SHERAS, Chicago, Ill., assignor to A. D. Joslin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 28, 1922. Serial No. 584,671. 7 Claims. (Cl. 101—111.)

1. In a stamp, in combination, revoluble type drums, adjusting wheels connected thereto, an adjusting lever movably associated with the wheels, and a manipulative member supported on the lever and movable to engage a wheel to transmit movement from the lever to the type drum, said lever being operable in opposite directions to advance or retract type with respect to the printing point.

1,463,341. HANDLE. WILLIAM A. SOMERS, Hamden, Conn., assignor to The Mt. Carmel Manufacturing Company, Mount Carmel, Conn., a Corporation of Connecticut. Filed Sept. 10, 1921. Serial No. 499,703. 15 Claims. (Cl. 292—348.)

1. A handle having a shank portion; an escutcheon rotatably mounted thereon; and means occupying a position that is at a right angle to the axis of said shank portion for applying internally, an outward lateral pressure to said escutcheon relatively to said handle.

1,463,342. TANK FILLER AND CONTENTS INDICATOR. ALBERT STANLEY, Indianapolis, Ind. Filed July 25, 1921. Serial No. 487,532. 6 Claims. (Cl. 73—82.)

1. A tank filler and contents indicator including a base plate having an inlet neck, the wall of the inlet neck having a thick portion provided with a vertical slot and a downwardly-extending hanger at one side of the plane of the slot, a closure for the inlet neck, a pointer pivotally connected to the hanger and extending into the slot, a controlling rod fixed to the pointer, a buoyant device fixed on the controlling rod, and a cover hinged to the base plate adjacent to the inlet neck to cover the neck and the vertical slot.

1,463,343. RAIL ANCHOR. HENRY STEPHENS, Cleveland, Ohio, assignor to The Interstate Railway Supply Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 23, 1922. Serial No. 596,369. 10 Claims. (Cl. 238—324.)

1. A rail anchor comprising a flat upright member formed with a U-bend intermediate the ends and adjacent one end, the top of said member being cut away to form two hooked ends adapted to engage over the base flange of the rail, and a wedge adapted to be forced between the base flange and one hooked end to secure said anchor to said base flange.

1,463,344. TIE-PLATE RAIL ANCHOR. HENRY STEPHENS, Cleveland, Ohio. Filed Mar. 21, 1923. Serial No. 626,527. 11 Claims. (Cl. 238—304.)

1. In a tie plate rail anchor, the combination of a tie plate having an abutment on one side and a slot on the gage side of the rail, such slot being narrower at the center than at the ends, and an anchor member provided with base flange engaging members mounted in such slot and adapted to pivot about the narrow center thereof.

1,463,345. SHIRT BAND AND CUFF BUTTON. JAMES C. STOCKS, Atlanta, Ga. Filed Dec. 5, 1921. Serial No. 519,981. 3 Claims. (Cl. 24—90.)

1. As an article of manufacture, a blank for use as a temporary button adapted to clamp several thicknesses of material, said blank being formed of a thin strip of pliable and shape-retentive material formed to provide a relatively short neck portion having circular enlargements at its opposite ends, the enlargements being adapted to be bent over into right angular relation to the neck and in parallel relation to each other and clamp against the material.

1,463,346. FOLDABLE CLOSURE. FREDERICK G. WALKER, Chicago, Ill. Filed Apr. 14, 1919. Serial No. 289,839. 7 Claims. (Cl. 20—20.)

1. In a door of the kind described, a closure consisting of a plurality of leaves, foldable together to open the door, posts laterally movable in substantially the plane of the opening to which alternate edges of pairs of leaves are hinged, a guide rail at the top of the opening, and a guide rigid with each post extending laterally beyond the post in one direction and having engagement with the rail at its free end to hold the post against rotation in both directions.

1,463,347. FOLDABLE CLOSURE. FREDERICK G. WALKER, Chicago, Ill. Filed Jan. 10, 1921. Serial No. 436,227. 4 Claims. (Cl. 20—20.)

1. In a device of the kind described, a support for a folding door comprising a pipe member, a support wheel secured at its lower end formed to engage a guide rail,

a vertically adjustable guide member at the upper end of the support one portion adapted to extend longitudinally of the door opening and to engage an upper guide to prevent rotation of the support, and relatively thin support brackets adapted to be clamped to the pipe member at suitable heights and adapted to extend between the adjacent edges of door leaves to engage door hinges.

1,463,348. PATTERN FOR CASTING STEEL WHEELS. GEORGE WALTHER, Dayton, Ohio. Filed June 16, 1921. Serial No. 478,133. 7 Claims. (Cl. 22—158.)

1. In a pattern, a master portion consisting of a rim and outer spoke end portions, an inner spoke end and hub portion, means to support a portion of the pattern to form the outside dimensions of the inner spoke ends and the portions uniting said spoke ends, and means to retain said last mentioned portions upon the master portion.

1,463,349. WHEEL. GEORGE WALTHER and FRANK H. WALKLEY, Dayton, Ohio, assignors to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 12, 1923. Serial No. 624,421. 7 Claims. (Cl. 295—11.)

2. In combination, a wheel, a cushion member mounted on the periphery member thereof, and means to inclose said cushion in sliding engagement with said wheel, said means being adapted to support a rim, and said means

being formed in two parts divided in the center of the periphery of the wheel having their ends adjacent to one another, the adjacent ends of said parts having their outer surfaces cutaway a portion of the depth of said parts.

1,463,350. SPARK-PLUG CLEANER. FREDERIC WAMBACK, Greenwich, Conn. Filed Mar. 3, 1922. Serial No. 540,751. 3 Claims. (Cl. 15—104.01.)

1. A cleaning device for spark plugs comprising a single length of metal bent intermediate its ends to provide a pair of spring arms, the end portions of which are extended diagonally and are provided with oppositely arranged cutting edges adapted to engage the interior of a spark plug shell whereby to remove the carbon from the same.

1,463,351. MERRY-GO-ROUND. WILLIAM H. WEASER, Pittsfield, Mass. Filed June 8, 1922. Serial No. 566,793. 2 Claims. (Cl. 46—27.)

1. An apparatus of the class described comprising a base, a tubular standard rising from the said base, a journal fixedly secured to the top of the said tubular standard, a carrier rotationally mounted on the top of the journal and a shaft depending from said carrier into the said tubular standard, ball bearings interposed between the shaft and the tubular standard, the shaft and the carrier and the shaft and the journal, a standard rising from the said carrier and a collar mounted thereon, a tubular circular member, clamps rigidly affixed thereto, radial bars depending from said collar and radial horizontal bars extending from the carrier to the said clamps, a circular foot board and seats arranged thereon, vertical side bars depending from said clamps and supporting said foot board, a fixed ratchet with respect to the carrying device, a pawl and spring to cooperate with said ratchet and movable about the latter, a carrying member for said pawl, said carrying member having a pulley rotationally connected thereon, a flexible wire passing around the said pulley, clamps and a spring on one of the horizontal radial bars, an operating lever pivoted on one of the horizontal radial bars by means of said clamps and held in position by means of said spring, said operating lever having an extension on the outer end which is provided with an eye to insert a pull rope to actuate the device, an actuating lever depending from the said operating lever and equipped with a handle to be used to actuate the device in place of the pull rope.

1,463,352. APPARATUS FOR THE ELECTRICAL PRECIPITATION OF SUSPENDED PARTICLES FROM GASES. CHARLES H. WEISKOPF, Santa Monica, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Sept. 19, 1921. Serial No. 501,840. 15 Claims. (Cl. 183—7.)

1. In an electrical precipitator, a vertical electrode, supporting means provided with means for engaging said electrode to support the same while permitting free upward movement of said electrode relative to the support, and means for jarring said electrode to produce such upward movement.

1,463,353. TOOL HOLDER. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 19, 1922. Serial No. 576,015. 7 Claims. (Cl. 55—96.)

1. In a cultivating implement having parallel tool supporting bars, the combination therewith of a tool holder disposed transversely of the bars, means on the holder to clasp one side of said bars, and means to secure a tool in the holder on the opposite side of said bars.

1,463,354. CONTAINER. RALPH WM. WILSON, New York, N. Y., assignor to Theodore W. Foster & Bro. Co., Providence, R. I., a Corporation of Maine. Filed Sept. 22, 1922. Serial No. 589,856. 2 Claims. (Cl. 132—83.)

1. The combination with a powder container, a cover hinged to said powder container, a rouge container of smaller size than the powder container mounted in said cover, an outer cover for said container cover rotatably secured to said cover, there being an aperture therein corresponding to the size of the rouge container.

1,463,355. POWDER AND ROUGE CONTAINER. RALPH WM. WILSON, New York, N. Y., assignor to Theodore W. Foster & Bro. Co., Providence, R. I., a Corporation of Maine. Filed Sept. 22, 1922. Serial No. 589,858. 3 Claims. (Cl. 132—83.)

2. A powder container, a cover therefor, a mirror in said cover, a powder puff in said container, a powder com-

pect in said container, a rouge compact mounted in the bottom of said powder compact, a revoluble cover for said rouge compact.

1,463,356. GEARLESS DIFFERENTIAL TRANSMISSION MECHANISM. EVERETT J. ZIEGLER, Hartford City, Ind. Filed Oct. 4, 1922. Serial No. 592,268. 3 Claims. (Cl. 74—7.)

1. A differential mechanism comprising in combination with aligned shaft sections a head member fixed to one shaft section and provided with oppositely disposed eccentrics and having a shoulder provided with a concentric peripheral surface, a barrel member receiving the head and having its side wall provided with openings some of which are opposite one of the eccentrics of the head and others opposite the other eccentric portion of the head, blocks slidably mounted in the openings, a casing member fixed to the other shaft section and having a side wall which receives the blocks, the said side wall being provided with an eccentric interior surface.

1,463,357. GAITER. HARRY P. BROWN, Boston, Mass., assignor of one-half to William E. Powers, Boston, Mass. Filed Nov. 1, 1922. Serial No. 598,243. 1 Claim. (Cl. 36—2.)

A gaiter composed of a continuous tube, having an enlarged non-adjustable lower end, formed to embrace and fit the instep portion of the wearer's shoe, and an adjustable major portion, having bellows folds extending from said non-adjustable end to the upper end of the gaiter, whereby said major portion is adapted to be contracted, fastening devices being provided whereby the major portion may be confined when contracted.

1,463,358. BRACKET FOR SUPPORTING OBJECTS AND ESPECIALLY FOR SECURING NUMBER PLATES. AUGUST W. CORDS, New York, N. Y. Filed Dec. 6, 1921. Serial No. 520,358. 1 Claim. (Cl. 40—125.)

A composite universal bracket for carrying articles adaptable to curved surfaces, comprising a screw bolt forming a common axle upon which separate members for

carrying the article and other members for fastening the brackets are hinged, the fastening members consisting of opposite legs placed at an angle to each other and acting as a trussed support for the axle, the legs having eyed lugs

fitting the base of a triangle formed by the base and the legs, the eyed lugs being tangentially adjustable to curved surfaces by reducing the angle between the opposite legs, the legs to be spaced apart by a separating member.

1,463,359. FLOOR PLATE. JAMES EDISON ERSKINE, Jacksonville, Fla. Filed Feb. 7, 1922. Serial No. 534,711. 1 Claim. (Cl. 280—164.)

A floor plate for running boards of vehicles comprising a substantially flat substantially rectangular body comprising a series of spaced parallel ribs on the upper face thereof, said ribs extending longitudinally of the body and terminating at their opposite ends short of the corresponding ends of the body, the remote ribs of said series being located at appreciable distances from the side edges of the body, the space between one of said remote ribs and the adjacent edge of the body being provided with slots adapted to removably receive brushes, and scraper means integral at its ends with said body and having the intermediate portion thereof disposed in substantially parallel spaced relation to the second side edge of the body.

1,463,360. SEALING RING. LEONARD FOOTE, Pedro Miguel, Canal Zone, Panama. Filed Apr. 19, 1922. Serial No. 555,645. 4 Claims. (Cl. 215—37.)

1. As a new article of manufacture, a sealing ring of the kind described comprising an annular unitary compressible member including a wall and an annular rib intermediate the top and bottom edges of the wall to

permit the wall to engage flatly the rim-adjacent peripheries of a pair of glass tumblers when such tumblers are arranged rim to rim with their rim edges resting on opposite sides of said rib.

1,463,361. SIGNAL SOUND INSTRUMENT. PAUL GEORGI and ROBERT GEORGI, Leipzig-Gohlis, Germany. Filed Dec. 20, 1920. Serial No. 432,163. 1 Claim. (Cl. 116—14.)

In an electric sounding instrument for motor-cars and the like, in combination, a casing consisting of two halves, a sounding funnel in front of said casing, a brass diaphragm interposed between said casing and said sounding funnel, a rear projection on said diaphragm, means co-acting with said projection to operate said diaphragm and located within said casing, one of said casing halves forming a resounding bottom for said diaphragm and having a central opening therein through which extends said rear projection, substantially as set forth.

1,463,362. COATING MACHINE. CHARLES L. HOOPER, ROBERT F. SUTHERLAND, and ALBERT W. PARKHOUSE, Rochester, N. Y., assignors to Vacuum Oil Company, New York, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,268. 11 Claims. (Cl. 91—37.)

1. A coating machine comprising a pair of rotary heads embodying a disk and a plurality of removable chime engaging members each formed with a curved chamfered face, and means for applying a coating to a barrel turned by said heads.

1,463,363. CEMENT-KILN SYSTEM. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 17, 1916. Serial No. 115,507. 17 Claims. (Cl. 183—120.)

1. Apparatus for treating dust-laden cement kiln gases, comprising a flue arranged to permit a current of dust-laden gases to flow substantially unobstructedly there-through without substantial change in the general direction of flow in its passage through said flue, said flue having refractory heated side walls exposed to the current of

gases for the collection of a caking material, and a plurality of baffles projecting a short distance from each of said side walls at spaced intervals along the length of the

flue and adapted to cause eddies in the current to bring different portions of the gases into contact with the side walls, said side walls being accessible for cleaning while the apparatus is in operation.

1,463,364. HUSKING MACHINE. FREDERICK H. KNAPP, Baltimore, Md. Filed Aug. 4, 1919. Serial No. 315,080. 27 Claims. (Cl. 130—5.)

1. In a husking machine, the combination of a carrier comprising an annular series of pairs of husking rolls having cooperating gears, a rotatable head having an internal annular gear adapted to simultaneously engage one of said gears of each pair of gears, said head being adjacent but spaced from one end of the carrier, and means for rotating the carrier and said head.

1,463,365. MEANS FOR PACKING ROTATING SHAFTS AND THE LIKE. HARRY E. LA BOUE, Chicago, Ill. Filed Feb. 24, 1921. Serial No. 447,609. 1 Claim. (Cl. 286—33.)

In combination, a casing having an annular outwardly projecting boss counterbored to provide an internal annular chamber, a shaft extending axially through said chamber, a packing fixed in said chamber and about said shaft against movement with excursions of the shaft, a gland plate bored to permit extension of the shaft therethrough, and counterbored from its casing face to receive a second packing about the shaft, a pair of diametrically opposite lugs formed integral with and projecting radially from the outer end of the casing boss, a pair of gland bolts extending through aligned openings in the gland plate and said lugs, said bolts having ball heads cooperating with said lugs and engaging at their outer ends in nuts having rounded surfaces cooperating with the gland plate, a gland ring loosely encircling the shaft between said first and

second packings and bearing at its opposite ends against said packings, said gland ring having an internal annular recess between its ends and an external annular enlarge-

ment, and means for delivering a lubricant to said internal annular recess, said lubricant delivering means comprising a tube threaded into the external annular enlargement of said ring, and a reservoir connected to said tube.

1,463,366. TRACTOR. THOMAS C. LEAKE, San Francisco, Calif. Filed Aug. 4, 1919. Serial No. 315,050. 6 Claims. (Cl. 305—9.)

6. In a tractor, a frame, an endless flexible track mounted on said frame, a series of three rollers engaging said track, a lever on the forward end of which one roller is mounted, a second lever on the rear end of which another roller is mounted, means on which the third roller is mounted connecting the other ends of the levers, blocks in which said levers are fulcrumed, means on the frame for guiding the movement of said blocks and springs interposed between the blocks and the frame.

1,463,367. TIMING MECHANISM. CARL AUGUST MAYER, Springfield, Mass., assignor to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed Feb. 18, 1921. Serial No. 446,140. 7 Claims. (Cl. 200—30.)

1. In an adjustable timing device for magnetos having an interrupter housing including a cam ring having a groove, the combination of a slitted timing arm having flexible portions adapted to engage said ring, a flexible strip surrounding said ring and secured to the flexible portions of said slitted arm, means for flexing said flexible portions for tightening said strap about said ring, and a projection on said flexible portions of said arm extending into and movable along said groove in said ring.

1,463,368. BANK-PROTECTING DEVICE. CHARLES A. MAZZIE, Detroit, Mich. Filed Apr. 4, 1921. Serial No. 458,585. 5 Claims. (Cl. 20—1.01.)

1. A bank protecting device comprising a grille for a bank cage consisting of a series of vertical shutters adapted to turn in a horizontal plane, the grille being provided with an opening, a pair of spring actuated doors for closing the opening, a shutter adjacent each door being provided with means for holding the doors in the open position when the shutters are open, a spring tending to close the shutters, releasable means for holding the shutters open against the tension of the spring, and means for actuating the releasing mechanism from any point within the cage, the closing of the shutters releasing the said doors to actuation by the respective springs.

1,463,369. RESILIENT WHEEL. AUSTIN A. MENDENHALL, Duluth, Minn. Filed June 11, 1919. Serial No. 303,363. 13 Claims. (Cl. 152—28.)

11. In a device of the character described, a rim, a hub, a set of radial spokes comprising pneumatic means adapted to resiliently resist radial forces, and another set of spokes fixed against pivotal movement and having a lost motion connection to limit the displacement of said rim with respect to said hub.

1,463,370. INTEGRAL STOP. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 4, 1919. Serial No. 335,683. 9 Claims. (Cl. 251—155.)

6. A fitting of the class described having a section of its wall thickened to give a substantial plug seat and having an orifice through said thickened section, a valve

seat below said thickened section, a threaded plug seat in the orifice in said thickened section and having an opening therethrough, a valve stem mounted in said plug for reciprocation, a valve on said stem adapted to engage said valve seat, a packing in said plug about said valve stem, a packing surrounding said plug and seated on the outer wall of said fitting, and a closure cap secured to the outer end of said plug and engaging said exterior plug packing.

1,463,371. MOTOR VEHICLE. ALDEN E. OSBORN, New York, N. Y. Original application filed Sept. 1, 1920, Serial No. 407,373. Divided and this application filed Aug. 13, 1921. Serial No. 491,960½. 5 Claims. (Cl. 180—33.)

1. In a motor vehicle the combination of a propelling motor, a main shaft in said motor, a second shaft at substantially a right angle to said main shaft and geared thereto, a gear rotatably mounted on said second shaft, a means for connecting said gear with said second shaft to transmit motion between them in one direction only, a segmental gear rotatably supported on said motor vehicle adjacent to the first named gear but normally held out of mesh therewith, and a manually operated means for rotating said segmental gear to bring said segmental gear into mesh with said gear on the second shaft to rotate said second shaft and the main shaft of the motor and start the motor.

1,463,372. SOUND-REPRODUCING INSTRUMENT. EGBERT A. REYNOLDS, Yonkers, N. Y., and DE ELBERT A. REYNOLDS, West Hoboken, N. J., assignors, by mesne assignments, to Audiphone Company of America, New York, N. Y., a Corporation of Delaware. Filed July 28, 1917. Serial No. 183,215. 9 Claims. (Cl. 179—108.)

6. A sound reproducing instrument comprising in combination a diaphragm, an arm carried by said diaphragm, a lever, pivotal means for an end portion of said lever, adjustable means for carrying said pivotal means, means for pivoting the opposite end portion of said lever to said arm, a link connected to an intermediate portion of said lever, the portion of said lever between said second mentioned pivoting means and said link being of constant length for different posi-

tions of adjustment of said adjustable means, an armature connected to said link and electromagnetic means controlling said armature, said electromagnetic means including a coil.

1,463,373. NAVIGATING INSTRUMENT. HARRY C. ROESER, Chicago, Ill. Filed Sept. 5, 1919. Serial No. 321,858. 2 Claims. (Cl. 33—1.)

1. A navigator's instrument comprising two superposed and relatively rotatable transparent members, the upper of said members having a compass card configuration depicted thereon and having parallel sides perpendicular to the North-South and East-West diameters of the compass respectively, said sides being graduated and said lower member having a single diametrical line with an index adjacent the divisions of the compass on said upper card, as and for the purposes set forth.

1,463,374. COMBINATION TOOL. HENRY SCHUETZ, Pittsburgh, Pa. Filed June 18, 1920. Serial No. 389,888. 5 Claims. (Cl. 33—95.)

1. In combination, a holder comprising a main arm having a channel, a second arm of U-shape in cross section pivotally connected to the main arm and adapted to embrace the main arm when turned into closed position thereon, a leaf spring within the channel of the main arm; and a rule comprising a main section adapted to slidably fit within the channel of the main arm and adapted to be frictionally held in adjusted position by said spring, and a second section pivotally connected to the main section, each of said sections being provided with graduations, and said second section having means to cooperate with the said second arm of the holder for supplementing the spring and preventing accidental displacement of the rule when the holder is closed.

1,463,375. COMBINATION TOOL. WILLIE ARTHUR SHIELDS, Birmingham, Ala. Filed Mar. 25, 1921. Serial No. 455,441. 3 Claims. (Cl. 33—143.)

1. In combination, a straight rule having at one end an notch and a beveled edge providing between them an end extension disposed at an angle to the rule and lying in the same plane therewith, and a slide block adapted to be mounted on the rule or on its angled element to form a T-square or angled rule.

1,463,376. WHEEL PLOW. WALTER H. SILVER, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Feb. 1, 1918. Serial No. 214,926. 6 Claims. (Cl. 97—127.)

1. The combination with the plow beam, the bottom secured thereto, the rear furrow wheel, and the crank axle therefor having an upward extending spindle, of the sleeve for the spindle, the link pivoted to the sleeve and to the beam, and the vertically swinging power arm pivotally connected to the sleeve, said parts being arranged relatively to each other as described whereby the lower end of the spindle and the furrow wheel are forced forward relatively to the beam and to the upper end of the spindle when the lever commences to apply lifting power.

1,463,377. NUT LOCK. MILROY G. STACKHOUSE, Tulsa, Okla., assignor to The Staset Company, a Corporation of Delaware. Filed Jan. 4, 1921. Serial No. 434,891. 2 Claims. (Cl. 151—24.)

1. As an article of manufacture, a nut having in its inner surface a radial kerf extending into communication with the bolt opening, and a blade fitted in said kerf with its outer end projecting beyond the periphery of the nut for impact by a driving tool, the length of the blade exceeding the length of the kerf by an amount equal to the distance of penetration of the blade into the bolt to which the nut is attached.

1,463,378. WHEELED PLOW. CARL G. STRANGLUND, Moline, Ill., assignor to Deere and Company, Moline, Ill., a Corporation of Illinois. Filed June 30, 1915. Serial No. 37,370. Renewed Aug. 24, 1917. Serial No. 188,065. 2 Claims. (Cl. 97—102.)

1. In a frameless plow of the class described the combination of the series of beams secured together as a frame structure, the bodies carried by said beams, a wheel at the front end of the beam structure, a vertically swinging crank axle carrying said wheel and journaled on the frame on a fixed axis, a second wheel at the front end of the beam structure on which the latter is adapted to be raised or lowered, means at the rear end of the beam structure for lifting and supporting it, a manual mechanism on the frame for adjusting the depth of plowing and for leveling the plow comprising two levers and locks therefor, an automatic optionally acting lifting mechanism on the swinging crank axle supplemental to said levers and adapted to be actuated independently thereof for applying traction power to the said crank axle to lift the front end of the plow structure, a crank arm rigid with and actuated by the swinging crank axle, and a power transmitting link actuated by and extending from the said arm to the said lifting mechanism at the rear end of the beam structure.

1,463,379. WHEELED PLOW. CARL G. STRANGLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed May 20, 1918. Serial No. 235,565. 6 Claims. (Cl. 97—72.)

1. In a wheeled plow of the class described the combination of the frame, the plurality of plow bodies carried thereby, the front furrow wheel, the axle holding said wheel in front of the plow bodies when at work, the rear furrow wheel, the lifting mechanism thereon for the rear end of the frame, the land wheel, the swinging crank axle therefore having a journal element on an axis at the rear end of the plow frame and also a bail element arranged to hold the land wheel in the transverse planes of the plow bodies and to push directly upward on the journal element when the axle swings, power transmitting devices connecting the two said axles and the rear lifter, and an axle-swinging power transmitter operated by the traction of the land wheel, said parts being arranged substantially as set forth, whereby power is transmitted from the land wheel to thrust upward directly against the rear end of the frame, and to simultaneously cause the front wheel to lift the front end thereof, and to cause, simultaneously with the rising of said front end, a variable lifting action on the rear wheel.

1,463,380. GARMENT SUPPORTER. JAMES STUART WALLINGFORD, Paris, Ky. Filed Feb. 24, 1922. Serial No. 538,825. 2 Claims. (Cl. 24—245.)

1. A clasp element for garment supporters comprising inner and outer straps having a common connection at their upper ends to each other and to a supporting element, a block carried by the outer side of the lower extremity of the inner strap, said block having an inwardly and downwardly beveled upper edge, a loop member carried by the lower end of the outer strap having upper and lower arms the relative spacing of which is less than the height of the outer side of the block, said loop member adapted to be engaged over the block when the portion of the garment is arranged thereover to provide in the garment at the rear of said block a pair of oppositely disposed bights whereby a downward pull exerted on the lower arm will impinge the upper bight in the receiving space formed at the juncture of the upper edge of the block with the inner strap.

1,463,381. ECCENTRIC HOOK. RILEY E. ANTHONY, Omaha, Nebr. Filed Apr. 13, 1922. Serial No. 552,086. 4 Claims. (Cl. 292—95.)

1. In a fastener for doors and the like the combination with a hook adapted to be carried by a door, a keeper plate having an opening therein for the reception of the bill of the hook, and a pivotal support for said keeper arranged eccentrically with respect to said opening whereby the keeper member may be swung on its pivotal support to move said opening toward and from the door for binding and releasing said hook.

1,463,382. MACHINE FOR USE IN MAKING BOXES. CHARLES HENRY BOMBARDIE, Chicago, Ill., assignor to Wirebounds Patents Company, Kittery, Me., a Corporation of Maine. Filed Sept. 30, 1919. Serial No. 327,391. 28 Claims. (Cl. 1—8.3.)

5. A machine for use in making boxes comprising, in combination, means including fastener-setting mechanism for applying binding-wire to box parts; a work-engaging

member; and means for causing relative progression between said mechanism and the work in controlled steps of varied lengths, comprising a series of adjustable driving members acting successively on said work-engaging member.

1,463,383. SHEET-METAL-BENDING MACHINE. CHARLES P. BUCK, Topeka, Kans. Filed Apr. 18, 1921. Serial No. 462,129. 6 Claims. (Cl. 153—16.)

1. A sheet metal bending machine, comprising a frame, a stationary clamping jaw, a movable clamping jaw, a driven clutch member, a shaft having a cam and a slidable clutch member, means tending to clutch said clutch members together, manually controlled means for holding the said clutch members declutched, and means operated by said cam in each revolution, for imparting clamping and unclamping movements to said movable clamping jaw.

1,463,384. STRIKER PLATE. SAMUEL D. BUTTERWORTH, Lansing, Mich. Filed Feb. 20, 1922. Serial No. 537,787. 10 Claims. (Cl. 70—15.)

1. A striker plate, having in combination, a pair of seats, a keeper plate bridging the gap between the seats, and adjustable means on the outside thereof in connection with each seat for advancing the socket portion more or less away from the seats.

1,463,385. LATCH. SAMUEL D. BUTTERWORTH, Lansing, Mich. Filed Aug. 25, 1922. Serial No. 584,167. 6 Claims. (Cl. 292—75.)

1. In a door latch, the combination of a latch provided with a latch head in the form of a roll and yield-

ingly projecting, and a latch striker therefor provided with a latch socket, having the rear wall of the socket

projecting beyond the front wall of the socket to form an abutment to arrest the roll in the roll socket.

1,463,386. RADIOTELEGRAPH SYSTEM. WENDELL L. CARLSON and EARL C. HANSON, Washington, D. C. Filed Apr. 22, 1920. Serial No. 375,693. 5 Claims. (Cl. 250—8.)

1. In a system of radio telegraphic reception means for receiving signals of a predetermined frequency, a telegraphone, a recording element therefor, a plurality of electromagnets associated therewith and spaced apart in proportion to the frequency of the signals to be received and the linear speed of the recording element.

1,463,387. SHACKLE FOR AUTOMOBILE WHEELS AND SPOKES. EARLE E. CHAPMAN, Los Angeles, Calif., assignor to Miller-Chapman Company, a Corporation of California. Filed Mar. 2, 1920. Serial No. 363,087. 4 Claims. (Cl. 70—90.)

1. A shackle for an automobile wheel comprising a bumping block; arms for securing said block upon the tread of said wheel; projections on said arms meeting inside the felly of the wheel; means for locking said projections together; a finger pivoted to turn freely on one of said projections and engage a spoke; and a second finger pivoted on the other projection and cooperating with said first named finger to entirely encircle a spoke.

1,463,388. GAME. CATHERINE F. CULLEN, New York, N. Y. Filed July 20, 1921. Serial No. 486,293. 3 Claims. (Cl. 46—41.)

1. A game apparatus, comprising a box, a plurality of separate angular blocks adapted to be shuffled in the box and subsequently distributed therefrom upon a surface, each block having on each of its faces different indicia which may include an inscription, the picture of

an object, a word, a letter of the alphabet or a numeral, all indicative of an event or person or date and the indicia of each block being different from the indicia of the other blocks, and a separate indicator adapted to

be shuffled in the box with the blocks for being intermingled with the blocks when emptied from the box on a surface whereby one of the blocks will be designated for selection.

1,463,389. POWER-TRANSMISSION-GEAR MECHANISM. WILLIAM B. FAGEOL, Oakland, Calif. Filed Dec. 15, 1920. Serial No. 430,868. 1 Claim. (Cl. 74—58.)

A transmission gearing comprising a driving and a driven shaft, clutch means for connecting said shafts for direct drive, a pair of countershafts, fixed gears on said countershafts and on said driving shaft for turning the countershafts at different speeds, a pair of forward drive gears fixed on the slower moving countershaft, a pair of gears slidable on said driven shaft and respectively engageable with said forward driving gears, a jack shaft, a reversing gear fixed on said jack shaft and adapted to be engaged by one of said driven shaft gears, a gear on said slower moving countershaft and in mesh with said reverse gear and a pair of gears slidable on the faster moving countershaft and respectively engageable with said driven shaft gears.

1,463,390. BREATH MASK. ANTONIO FERNANDES, Kansas City, Mo. Filed Nov. 1, 1920. Serial No. 420,945. 3 Claims. (Cl. 128—139.)

1. In a breath mask, a mask of plate formation shaped to fit over and inclose the nose and mouth of a person, a groove in the inner face of said mask and near the outer edge thereof, a resilient gasket resting in said

groove and protruding from the inner face of said mask, chambers opening to the inner side of said mask and extending from each side of said mask and presenting a hole opening rearwardly, an internally facing shoulder

around each of said holes, a resilient flexible tube with an annular flange on each end thereof and provided with holes intermediate the ends thereof, and the ends of said tube resting in said holes with said annular flanges bearing outwardly against said shoulders.

1,463,391. RADIOTELEGRAPH SYSTEM. EARL C. HANSON and WENDELL L. CARLSON, Washington, D. C. Filed Feb. 11, 1920. Serial No. 357,919. 7 Claims. (Cl. 250—8.)

1. In a radio telegraph system, the method of preparing an initial record on the moving wire of a telegraphphone, causing received telegraph signals to be amplified and rectified and caused to efface the record previously made on the telegraphphone.

1,463,392. THERAPEUTIC ELECTRODE. EARL C. HANSON and WENDELL L. CARLSON, Washington, D. C. Filed Nov. 30, 1920. Serial No. 427,439. 8 Claims. (Cl. 174—89.)

1. An electrode of the class described comprising an electrically conducting surface, a terminal rod connected thereto, and a condensation product of a phenolic body and formaldehyde molded about said conducting surface and terminal rod.

1,463,393. COUPON-CUTTING MACHINE. HENRY N. HEILMAN, St. Louis, Mo. Filed May 27, 1920. Serial No. 384,778. 1 Claim. (Cl. 164—57.)

In a coupon cutting machine, a base, a bracket projecting upwardly therefrom, a plunger mounted for vertical sliding movement through said bracket, means for moving said plunger downwardly, a block mounted for rotation in a horizontal plane on the lower end of the plunger, a blade removably carried by said block, which blade is provided with cutting edges disposed at right angles to each other, the lower portion of the plunger having four recesses disposed substantially 90 degrees apart, and a set-screw seated in the block adapted to be projected into any one of said recesses so as to lock the block in any one of four predetermined positions and means for holding the cutting block during the time when the set screw is loosened.

1,463,394. ADJUSTABLE STRAINER SUPPORT. WESLEY P. HEISNER and PAUL A. HEISNER, Rockville, Nebr. Filed May 31, 1922. Serial No. 564,911. 1 Claim (Cl. 248—30.)

A strainer supporter comprising a strainer receiving ring, said ring comprising hinged connected ring sections movable in the same plane, a sleeve carried by one end of one of the sections and having a tapernig chamber therein for the reception of the adjacent end of the adjacent section, set screw means for holding the ring sections in adjusted positions, sleeves slidably mounted on the ring sections, upwardly and outwardly extending arms hingedly connected to the sleeves adjacent their lower sides and in abutting engagement with the sleeves, one of said arms being provided with an outwardly and inwardly adjustable arm, downwardly extending flanges carried by the adjustable arm and the upwardly and outwardly extending arm and forming means for frictionally engaging opposite sides of a receptacle.

1,463,395. MOTOR SLEIGH. ABRAHAM A. KNOWLES, Canyon Ferry, Mont. Filed Oct. 14, 1922. Serial No. 594,449. 1 Claim. (Cl. 180—3.)

In a motor sleigh, a cross beam, runners secured thereto, a platform pivoted to the cross beam adapted to allow for play between the runners and platform, an extension

of the floor, a U-shaped plate secured to the platform and embracing the floor extension, a post secured to said U-shaped plate having a propeller and a vertical pivot pin carried by the platform and extending through the U-shaped plate and the extension of the floor whereby the said parts are pivotally mounted on the said floor extension.

1,463,396. ELASTIC OLDHAM COUPLING. FRANZ KRATZ, Stuttgart, Germany, assignor to Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed July 31, 1922. Serial No. 578,675. 4 Claims. (Cl. 64—100.)

1. An elastic Oldham coupling, comprising, in combination a driving coupling half, and transmitting lugs projecting from this half towards the driven coupling half; a driven coupling half, and transmitting lugs projecting from this half towards the driving coupling half; an intermediate transmitting member composed of a plurality of parts having gaps between them and containing each a portion of the cross-shaped double-slot of the coupling; elastic insertions in said gaps; and means for holding together the parts of the intermediate transmitting member, as set forth.

1,463,397. GARMENT-PRESSING MACHINE. CHARLES LAVIER, Syracuse, N. Y. Filed Aug. 22, 1922. Serial No. 583,620. 4 Claims. (Cl. 138—10.)

1. The combination with a stationary presser-head and a movable pressing buck, of a hydraulic cylinder disposed beneath and supporting said pressing parts, said cylinder being partially filled with fluid and having a concentric chamber in the line of the vertical axis of said pressing parts, a pedestal directly supporting said buck and being reciprocable in said chamber, and means for admitting fluid pressure into said cylinder for effecting the raising of said pedestal and said buck.

1,463,398. TOBACCO PIPE. HARRY LONGACRE, Brooklyn, N. Y. Filed May 2, 1921. Serial No. 466,075. 1 Claim. (Cl. 131—12.)

In a tobacco pipe, the combination with a bowl section having an integral reduced extension provided with a spiral groove on its surface communicating at one end

with the bowl, of a stem section having a cavity to fit around said grooved extension of the bowl section and detachably connected to said section, and a separate mouth-piece having a passage therethrough, the inner end of

said passage in the mouth-piece being enlarged to form a saliva chamber, and the outer edge of said chamber being internally threaded to detachably engage over the stem section.

1,463,399. MANUFACTURE OF REFRACTORY PRODUCTS FROM DOLOMITE. CHARLES ARTHUR LONG-BOTTOM, Worksop, and FREDERICK LINDLEY DUFFIELD, Brassington, England. Filed Dec. 1, 1922. Serial No. 604,417. 5 Claims. (Cl. 18—47.5.)

1. The herein-described process for the manufacture of refractory products from dolomite which consists in artificially mixing binding materials with the raw dolomite, shaping the products from the mixture, subjecting them to an intense shrinking heat, and finally dipping them in a medium having sealing properties.

1,463,400. COLLAR-BUTTON HOOK. CARL NEUMANN, New York, N. Y. Filed Aug. 29, 1922. Serial No. 584,949. 1 Claim. (Cl. 24—40.)

A device of the class described comprising a rigid metallic blade having a right angle twist intermediate of its length, enlarged substantially tapering portions at the ends of said blade, the smaller end of said portions having an opening which communicates with a larger opening, said latter opening adapted to have the head of a collar button inserted therein, a slit in said blade opening into the larger opening, said smaller opening being split and having overlapping projections in the region of said slit; lugs formed on said blade intermediate of said slit, one of said lugs having a right hand thread and the other lug having a left hand thread, a threaded stud adapted to engage said lugs and increase or decrease the area of said openings when manipulated.

1,463,401. MACHINE FOR AND METHOD OF UNITING THREADS OR CORDS. WILLIAM H. PEARSON and TIMOTHY J. KELLY, Passaic, N. J., assignors to Brighton Mills, a Corporation of New Jersey. Filed Apr. 12, 1921. Serial No. 460,725. 29 Claims. (Cl. 117—6.)

1. A mechanism for uniting threads or cords including in combination means for delimiting two equal lengths in

the ends of two threads, means for untwisting the strands of said lengths, and simultaneously winding another por-

tion of the thread and by the unwinding of said portion to restore the twist to the untwisted strands.

1,463,402. ADJUSTABLE BEDCOVER FASTENER. JULIUS A. PETZOLD, Kansas City, Mo., assignor to Children's Bed Cover Fastener Company, Kansas City, Mo. Filed Aug. 14, 1922. Serial No. 581,657. 2 Claims. (Cl. 5—319.)

1. In a bed clothes holder, a fastening means for the covering at opposite sides of a bed, and means supporting the fastening means yieldingly as regards up and down movement of the latter; the means supporting the foot ends of the fastening means tending to hold the latter yieldingly depressed and the means supporting the head ends of the fastening means being extensible to a locked position to prevent accidental lowering of such ends of the fastening means under the gravitative force of the latter.

1,463,403. ADHESIVE PASTE. BIRTRUN L. PICKARD, Los Angeles, Calif. Filed Aug. 29, 1922. Serial No. 585,057. 1 Claim. (Cl. 87—17.)

The herein described composition of matter, consisting of cactus liquid, glue, corn starch, shellac and alum, said cactus liquid being present in prepondering proportion over each remaining element.

1,463,404. CONDENSATION-METER COUNTERHOUSING. JOHN V. REDFIELD, Grosse Pointe, Mich., assignor to Central Station Steam Company, Detroit, Mich., a Corporation of Michigan. Filed July 5, 1921. Serial No. 482,385. 2 Claims. (Cl. 235—1.)

1. The combination with a condensation meter of a vacuum system, of an auxiliary casing having a transparent wall and provided with means for securing it to the meter casing in air-tight connection therewith over

the indicating means thereof with its interior in communication with the vapor system, and means for temporarily connecting the interior of the auxiliary casing

with the outside atmosphere to permit the outside atmosphere to clear the transparent wall of the auxiliary casing for taking a reading of the indicating means.

1,463,405. FLOTATION APPARATUS. JOSEPH P. RUTH, Jr., Denver, Colo. Filed Oct. 4, 1919. Serial No. 328,448. 3 Claims. (Cl. 83—85.)

1. Flotation apparatus having a mixing compartment and a separating compartment adapted to maintain a relatively quiescent body of pulp therein, a partition dividing the compartments and over the top of which pulp is adapted to flow, means to maintain the pulp level above said partition, a hollow member on the top of said partition, one wall of said member being porous, means for introducing gas into said member whereby it will pass thru said porous wall and into the overflowing pulp and means in the mixing compartment for introducing gas into the pulp, said pulp level being uninterrupted whereby pulp and froth may flow freely and uninterruptedly from the top of the mixing compartment over said member and across said separating compartment.

1,463,406. MOTOR SUPPORT. WILLIAM C. SERRELL, Syracuse, and CHARLES E. WIDMEYER, Beaver Falls, N. Y. Filed Nov. 13, 1922. Serial No. 600,776. 2 Claims. (Cl. 248—30.)

2. In a motor support, a relatively fixed base plate, a movable plate pivotally mounted on the base plate to rock vertically, means for adjusting the last named plate about the axis of the pivot and a motor supporting plate

pivoted to the second named plate to swing horizontally and means for adjusting the last named plate about the axis of its pivot.

1,463,407. ADJUSTABLE FORMING OUTLET NOZZLE. ALBERT SHARP and GEORGE SHARP, Bayonne, N. J. Filed June 9, 1921. Serial No. 476,249. 3 Claims. (Cl. 31—65.)

1. In a nozzle the combination of walls forming a passage therethrough, one of said walls comprising a stationary member having an inclined bearing face and an elongated opening therethrough, a threaded lug extended from the stationary member, an adjustable wedge shaped member with one face thereof bearing against said inclined bearing face, the said wedge shaped member having a face thereof parallel to the face of the wall of the nozzle, opposite thereto, a lug extending from the wedge shaped member, a screw having a shank, said screw in threaded engagement with said threaded lug, the shank supported in the lug extending from the wedge shaped member, means to maintain said shank in its lug, a screw extending through the wedge shaped member, a head for the screw located in a cavity of the wedge shaped member, said screw extending through the elongated opening in the stationary member and a nut for the screw to clamp the wedge shaped member to the stationary member.

3. In a nozzle the combination of walls forming a passage therethrough, one of said walls comprising a stationary member having a threaded lug formed therewith, a wedge shaped detachable member with one of its faces bearing against the stationary member and having a lug formed therewith, a screw with its shank rotatably maintained in said lug and its threads in engagement with said threaded lug, a screw extending from the wedge shaped member and extending through an elongated opening in the stationary member and a nut for the latter screw to clamp the members together.

1,463,408. SPEED-CHANGING MECHANISM. WILLIAM HENRY SWARTZ, York, Pa., assignor to The General Machine Works, a Corporation of Pennsylvania. Filed Sept. 14, 1920. Serial No. 410,313. 4 Claims. (Cl. 66—19.)

1. In a knitting machine, the combination with a rotary driven member, of means to drive said member at high speed and low speed, automatic means for shifting between high and low speeds, and hand-operated means to vary said low-speed for the purpose of adapting it to irregularities in the yarn.

1,463,409. EMBLEM HOLDER FOR AUTOMOBILE FENDERS. MARY E. THEISS, Warrensburg, Mo. Filed Jan. 14, 1922. Serial No. 529,279. 2 Claims. (Cl. 248—38.)

1. An emblem holder for automobile fenders comprising an upright clamp formed of a single narrow strip of sheet metal returned upon itself, with the doubled strip curved through the return portion and there slotted longitudinally, a clamp screw traversing the slot, and another clamp member comprising a narrow strip of sheet metal returned upon itself to constitute a flag-staff holder and capable of being made fast to the first named clamp in adjusted position.

1,463,410. RADIATOR STRUCTURE FOR FURNACES. WILLIAM H. WAHL, Des Moines, Iowa. Filed Oct. 16, 1922. Serial No. 594,757. 1 Claim. (Cl. 126—102.)

In a device of the class described, the combination of a furnace combustion chamber with a hot-air chamber having its walls spaced therefrom to leave an intervening compartment, a smoke conducting and radiator structure in said compartment, comprising a pipe extending across the top of the device having an enlarged portion communicating with the combustion chamber, pipes communicating with said first pipe at the forward portion thereof and extending downwardly and rearwardly, a curved hollow drum connecting the lower end of the last-described pipes, a pipe connecting the central portion of said drum with the rear portion of said first pipe, and a cold air duct communicating with said compartment below said drum.

1,463,411. LUNCH HEATER AND CARRIER. JOSEPH WEISS, Chicago, Ill. Filed Sept. 5, 1922. Serial No. 586,242. 2 Claims. (Cl. 126—261.)

1. A device of the type described comprising a frame consisting of top and side plates, and a hollow base adapted to hold water, an inlet pipe communicating

with said base and projecting through said top plate, said base having depressions therein, interlocking receptacles constituting a single unit when assembled, the

lowermost receptacle of each unit being disposed in one of the depressions, and strips carried by said frame for securing the upper receptacles to said frame.

1,463,412. SAFETY APPLIANCE FOR DRILL CHUCKS. DENVER BROWN WELLER, Washington, D. C. Filed Mar. 21, 1918. Serial No. 223,766. 3 Claims. (Cl. 279—9.)

1. In a rotary chuck, the combination with movable jaws, of a means for actuating said jaws consisting of an oscillatory sleeve provided with shoulders adjacent its ends and a contractible band carried on said sleeve between the shoulders and having sufficient inherent contractile force to remain there and constituting a means when grasped for operating the sleeve and then permitting slippage of said sleeve while the chuck is constantly rotated.

1,463,413. ENVELOPE FOR DISK RECORDS. WILLIAM WILBURGER, Brooklyn, N. Y. Filed Oct. 12, 1921. Serial No. 507,204. 5 Claims. (Cl. 129—20.)

1. The combination with an envelope for disk records having an opening to display the title of a record arranged therein, of means for restricting the width

of the envelope substantially midway between its mouth and bottom to correspond substantially to the diameter of the record whereby the title thereof will be properly centered in said opening, the mouth of said envelope being considerably wider than the diameter of the record for the purpose specified.

5. A double envelope for disk records formed from a substantially rectangular blank having lower portions separated by a slit and folded upon upper portions to form the two pockets, said pockets being folded upon one another with said lower portions inside and the inner margins of said lower portions being cut away along said slit to space them from the fold between the pockets for the purpose specified.

1,463,414. MACHINE FOR MANUFACTURING TOOTHED WHEELS, SCREW WHEELS, OR THE LIKE. SVEN GUSTAF WINGQUIST, Gottenborg, Sweden, assignor to Aktiebolaget Svenska Kullagerfabriken, Gottenborg, Sweden, a Corporation of Sweden. Filed Mar. 2, 1921. Serial No. 449,007. 5 Claims. (Cl. 90—3.)

1. In a machine for manufacturing gear wheels according to the principle set forth, the combination with a tool of a link system to cause a relative rolling movement between the tool and a wheel blank to take place at both sides of the normal position of the link system, the tool being placed at a distance from the starting point for the rolling movement as determined by the link system.

1,463,415. SANITARY DISPENSING APPARATUS. FRANK YOUNGER, Wallace, Calif. Filed July 15, 1921. Serial No. 485,019. 10 Claims. (Cl. 221—62.)

1. In a dispensing apparatus of the class described, a container, a base section including a vertical tubular extension provided with an internal funnel shaped member which constitutes the bottom for the container, the said member having a tapering outflow passage that constitutes a valve seat, means for coupling the container and the tubular extension of the base, the said container including a restricted neck, a normally closing plunger valve engaging the valve seat, a valve lifter device that includes a head having a hollow shank

that closely fits and has vertical movement within the container neck, the head constituting a finger grip for raising the valve from the valve seat to open the passage and a plunger for returning the valve to the closed position when the lifter device is released.

1,463,416. AIR CLEANING AND HEATING ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. FRANK H. ADAMS, Cleveland, Ohio, assignor, by mesne assignments, to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 12, 1917. Serial No. 201,714. 16 Claims. (Cl. 183—32.)

1. In combination with an internal combustion engine, an air cleaning attachment therefor, said attachment comprising a chambered device having an air inlet, and an air outlet which is connected to the engine, and means separate from the suction in the cylinders of the engine for creating a suction on the air passing from the inlet to the outlet so as to extract therefrom foreign particles.

1,463,417. MOTION-PICTURE-PROJECTING MACHINE. WILLIAM J. BLANKENBERG, Buffalo, N. Y., assignor to The Perfect Projector Machine Company, Buffalo, N. Y., an Unincorporated Stock-Issuing Company organized by a declaration of trust under the common law of New York. Filed Sept. 24, 1920. Serial No. 412,604. 3 Claims. (Cl. 88—18.7.)

1. In a motion picture projecting machine, the combination of projecting mechanism having an operating shaft, annular means for revolvably supporting a vertical coil, or film, said means being located in front of said mechanism and in a plane parallel to the focal axis and having an unobstructed side and an obstructed side, a support to which said means is hinged, stationary means effective in the operative position of said coil supporting means to prevent the displacement of the film from said unobstructed side, positively acting film feeding means located within said coil as supported by said supporting means and with which the inner convolution of the coil is en-

gaged, said film feeding means having an operating shaft projecting through the unobstructed side of said supporting means, and gearing operatively connecting the operating shaft of said projecting mechanism and said film feeding means to cause the latter to take film from the center of the coil, said annular supporting means being movable on its hinge toward and from the stationary means.

1,463,418. RATCHET SCREW DRIVER. HOWARD D. CHAPMAN, Baltimore, Md. Filed Dec. 21, 1921. Serial No. 523,975. 2 Claims. (Cl. 145—75.)

1. A ratchet screw driver of the class described, comprising a blade having a sectional handle secured to one end thereof, said handle including three (3) parts, spaced upper and lower sections rigidly secured to the blade, an intermediate power applying section freely rotatable on the blade, said intermediate section having a recess formed in its lower end, a ratchet wheel secured in said recess, said lower rigid section provided with a recess communicating with the first named recess, an operating dog mounted in the recess of the lower section, a spring surrounding said dog to normally urge it into engagement with the ratchet wheel of the power applying section, whereby upon applying rotary motion to said section it will be converted to the blade, and a ratchet dog operating means secured to the lower end of the ratchet dog and located exteriorly of the lower section, whereby the rotary motion of the blade may be governed.

1,463,419. REFRIGERATING APPARATUS. LLOYD G. COPEMAN, Flint, Mich., assignor to Edwin W. Atwood, Flint, Mich. Filed July 8, 1922. Serial No. 573,601. 6 Claims. (Cl. 257—2.)

1. In refrigerating apparatus, the combination of a chamber to be cooled, a water line passing in heat-exchanging adjacency to said chamber, a pressure-controlled pump for

supplying water to the water line, a storage tank, supplied with water from that portion of the water line that passes in such adjacency to the chamber to be cooled, and means for bleeding water to relieve the pressure in the storage tank at stated periods to cause the pump to supply a new charge of cold water to the portion of the water line in such adjacency with the cooling chamber.

1,463,420. TROLLEY-WIRE-HOLDING RAIL. KENNETH C. HALE, Detroit, Mich. Filed June 26, 1922. Serial No. 570,814. 5 Claims. (Cl. 191—40.)

1. The combination with a trolley wire, of a rail for supporting said wire while passing beneath a restricted clearance, said rail having a continuous web forming a rigid bearing for the wire.

1,463,421. LUBRICATING DEVICE FOR AUTOMOBILES, ETC. RALPH B. HANSCOM, Morristown, S. Dak. Filed Oct. 15, 1921. Serial No. 507,996. 4 Claims. (Cl. 184—13.)

1. The combination with an internal combustion engine having a crank shaft and a crank case, of a single metallic member fashioned and bent for part of its length to provide a relatively large straight conduit portion having a flange extending parallel with the longitudinal axis of the straight portion, and fashioned and bent for the remainder of its length to provide an upturned lubricant receiving portion, said flange being removably secured to said crank case at the bottom thereof, whereby said straight portion is arranged to lie in a plane parallel to said crank shaft adjacent the bottom of said crank case.

1,463,422. WINDOW REGULATOR. ERNEST E. HEINTZ, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 27, 1921. Serial No. 464,870. 1 Claim. (Cl. 268—4.)

In a window regulator, the combination of a pair of rotatable members, one of which is slidably supported, an endless flexible draft member running over the rotatable members, and arranged for connection with the window, means for yieldingly forcing said slidable rotatable member outwardly to tension the flexible draft member, and means for rotating one of said rotatable members including a clutch which, if uncontrolled, locks before the draft-tensioning means can return the draft member to taut relation after the draft-tensioning member has been collapsed

by continued driving effort on the rotating member after the window has been stopped, the said clutch provided with

devices for retarding the clutch action so that the clutch only locks after the draft-tensioning means has returned the flexible draft member to taut relation.

1,463,423. PIVOT MOUNTING. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 19, 1921. Serial No. 508,708. 6 Claims. (Cl. 74—104.)

1. In a device of the class described, in combination, a pivot retainer having a portion adapted to be passed through a lever, a shoulder at one end of said portion said shoulder adapted to engage one of the sides of the lever, means adapted to engage the other side of said lever for clamping the pivot retainer in position, and a knife edge pivot separably secured to said pivot retainer.

1,463,424. BUST CONFINER AND REDUCER. JOSEPHINE L. HOLT, Portland, Oreg. Filed Nov. 26, 1919. Serial No. 340,810. 4 Claims. (Cl. 2—73.)

1. In combination, a back section, a bust supporting element, and means for attaching the bust supporting element to the back section in different vertical positions thereon.

1,463,425. AUTOMOBILE TURNING SIGNAL. CARL REINHOLDT KOSITZKY, Bismarck, N. Dak. Filed Mar. 12, 1923. Serial No. 624,569. 3 Claims. (Cl. 116—47.)

1. A turning signal for automobiles comprising upright signal operating shafts and means for mounting them at the front and rear of a machine respectively, each of said shafts having a lateral crank arm, a longitudinal rod extending between and pivoted at its ends to said crank arms, and means connected to said rod for moving the same either forwardly or rearwardly to turn said shafts simultaneously in one direction or the other, and a yieldable connection between said rod and a fixed part of the chassis to normally retain the lever in a neutral position and prevent rattling.

1,463,426. CLOSURE PLUG. ERNEST L. LANFAIR, Sawtelle, Calif. Filed Nov. 18, 1921. Serial No. 516,064. 5 Claims. (Cl. 220—39.)

1. A closure plug comprising a screw plug, an annular projection formed in one side of the plug, a screw-threaded shank projecting from the projection, a washer mounted on the projection side of the plug, an operating nut having a socket which receives and is of the same shape as said projection, and a nut mounted on said shank and arranged to engage said operating nut.

1,463,427. DETACHABLE SHOE HEEL OF THE PLATE TYPE. CHARLES WILLIAM LAVERS, Halifax, Nova Scotia, Canada. Filed June 29, 1920. Serial No. 392,871. 2 Claims. (Cl. 36—36.)

2. A shoe heel having a permanent member, a base plate secured thereon, engagement means projecting from said plate and projecting stops carried by said plate, in combination with a detachable member and a plate embedded therein and formed with slots to receive said engaging means, the material at the entrance of the throat of each slot being deflected from the normal plane to guide said engaging means thereinto, said plate being further provided with slots, one wall of each of said last named slots being engaged by one of the aforesaid projecting stops on the aforesaid base plate, to limit the travel of the second named plate relatively to the first named plate to prevent over-run and engagement of the second plate by the engaging means at the time of this disengagement.

1,463,428. DETACHABLE SHOE HEEL OF THE EMBEDDED-WASHER TYPE. CHARLES WILLIAM LAVERS, Halifax, Nova Scotia, Canada. Filed June 29, 1920. Serial No. 392,872. 5 Claims. (Cl. 36—36.)

1. In combination with a detachable shoe heel of plastic material, an attaching element of box-like construction closed on all sides and provided in one side with an opening to receive a cooperating attaching means, said element being embedded in the plastic material of said heel and by its box-like construction excluding from its interior the plastic material of said heel.

1,463,429. TIRE SHOE. MALCOLM D. LOGAN, Los Angeles, Calif. Filed Jan. 23, 1923. Serial No. 614,505. 5 Claims. (Cl. 152—17.)

3. An overshoe for pneumatic tire casings comprising an outer body portion of rubber substantially crescent-shaped, and extending over the tread and down over the sides of the casing to a point below the transverse sectional center of the casing, and stitched thereto, a fabric breaker strip embedded within the rubber directly below the tread portion of the casing, fabric layer strips, to which the body portion of the shoe is vulcanized, rigid reinforcing rings or wires disposed along the opposite edges of the shoe and along which the fabric strips are wrapped, said strips being thereafter rigid within the rubber of the casing, the tread stitching passing through the breaker strip and into the fabric strips of the shoe, said stitch occurring at intervals throughout the length of the shoe and arranged across the tread portion thereof, and a crescent-shaped layer of plastic rubber within the shoe and adapted to permanently conform to the contour and irregularities of the casing over which the shoe is mounted.

1,463,430. AUTOMOBILE SIGNAL. ASHLEY L. McMURTRY, Dunnville, Ontario, Canada. Filed Mar. 4, 1920. Serial No. 363,225. 3 Claims. (Cl. 177—327.)

2. A signal device comprising a casing, hollow pivoted swinging arms secured to the casing, signal windows

in the arms, a single light in the casing intermediate the hollow arms, and a reflector adapted to reflect the rays

of said light into the hollow arms when they are in horizontal position.

1,463,431. PROTECTIVE CURTAIN. ISIDORE NEFT and HUGH P. NASS, Seattle, Wash. Filed June 27, 1921. Serial No. 480,857. 2 Claims. (Cl. 20—40.)

1. In a protective device for show windows, a foldable curtain having one end secured above the window, a bar secured to the free end of said curtain, an electromagnet arranged above said window adapted to attract said bar when energized to retain the curtain in a raised position, a weight carried by said bar and adapted to lower the curtain when the magnet is deenergized, and means for locking said curtain in lowered position.

1,463,432. VACUUM-TUBE APPARATUS. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 2, 1917. Serial No. 184,060. 21 Claims. (Cl. 179—171.)

1. The combination with a plurality of vacuum tubes, of a common input circuit therefor, an output circuit for each tube, a source of alternating current common to

said output circuits for supplying current to the tubes, signaling means associated with said input circuit and an oscillating current generator coupled to said output circuits.

1,463,433. SIGNALING. HAROLD W. NICHOLS, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 4, 1918. Serial No. 265,255. 29 Claims. (Cl. 179—171.)

10. In a signaling system, a modulating device, a source of multi-phase alternating electromotive force, and signal controlled rectifying means to impress from said source upon said device a unidirectional voltage which varies in accordance with signals.

1,463,434. WINDMILL. MOSES C. NIXON, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,754. 34 Claims. (Cl. 184—4.)

3. In a windmill, the combination with a supporting frame constructed to embody an incasement, of stud-shafts supported by said frame, anchors adapted to rigidly secure said shafts in position and permit their adjustment to alignment with each other without perforation of the incasement, gear wheels revolvably mounted upon said shafts, a container for lubricant, and means adapted to convey lubricant from the container to the stud-shafts for lubricating the bearings of said gears.

1,463,435. AUTOMATIC LOOM. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1918. Serial No. 223,097. 18 Claims. (Cl. 139—259.)

7. A loom having, in combination, a lay, weft replenishing mechanism, loom controlling devices, a shuttle box at the replenishing end of the lay having its front wall so constructed that when the shuttle is boxed the

eye of the shuttle is beyond the outer end of the front wall, means for clamping the outgoing filling end between the outer end of the front wall of the shuttle box and the shuttle eye, and means for severing the filling between the clamping means and the ejected bobbin.

14. A loom having, in combination, a lay, a self-threading shuttle having a threading block in its top side and an eye in its front side, weft replenishing mechanism, and means on the lay for guiding the incoming filling end down into the plane of the shuttle eye as the shuttle is picked following the replenishing operation.

1,463,436. ELECTRIC-GENERATOR-OPERATING MEANS. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splittorf Electrical Company, New York, N. Y. Filed Aug. 5, 1922. Serial No. 579,868. 11 Claims. (Cl. 123—195.)

1. Means for operating an electric generator from an engine consisting of; a bracket having arms with points of attachment to said engine, a brace having one end fastened to the engine and the other end to the bracket, devices on the brace for positioning the generator on the bracket, means for holding the generator in engagement with said devices and to the bracket, and means for driving the generator from the engine.

1,463,437. PAPER MILK BOTTLE. RUTH M. OLIVER, New York, N. Y., assignor to Mrs. Lydia B. Koch, New York, N. Y. Filed Dec. 11, 1922. Serial No. 606,133. 12 Claims. (Cl. 229—4.5.)

1. A bottle formed of sheet paper, its body comprising interfitting sections placed end to end and forming a lap joint at their meeting ends.

10. A paper bottle including a paper wall, and a neck ring of paper having an intumed edge portion engaging and secured to the wall, the free edge of said intumed

portion and the adjacent end of the wall co-operating to provide a disk supporting shoulder surrounded by the neck ring.

1,463,438. CARBONIZING FURNACE. NELS OLSEN, San Leandro, Calif. Filed Mar. 1, 1920. Serial No. 362,372. 4 Claims. (Cl. 266—5.)

1. In a device of the character described the combination of a closed non-rotatable cylindrical inner chamber, an enclosed outer chamber surrounding the inner chamber, a plurality of fuel nozzles extending into the annular chamber a spaced distance apart means for feeding fuel into the fuel nozzles, and means for placing pieces of metal therein for heat treating so that they will not touch each other.

1,463,439. SIGNAL. WILLIAM J. PECK, White River Junction, Vt., and ELLE R. CHASE, West Lebanon, N. H. Filed May 2, 1922. Serial No. 557,965. 2 Claims. (Cl. 116—30.)

2. A signal of the class described including a casing, a source of illumination in the casing, a shaft rotatable in the casing, a pair of diverging arms extending from

the shaft, members on said arms, each member comprising a pair of panels to be used as flags in daytime disposed at right angles to each other, and windows in the panels adapted to be moved with the panels in association with the source of illumination in the manner and for the purpose specified.

1,463,440. TESTING DEVICE. STEPHEN PICHLER, Detroit, Mich. Filed July 26, 1922. Serial No. 577,652. 3 Claims. (Cl. 33—1.)

1. Means for ascertaining the inaccuracies of a curvilinear surface on a piece of work comprising a plate having linear graduations and an opening to receive the piece of work, means for holding the piece of work in a defined position relative to the wall of the plate opening, and means having a constant radial relation to the piece of work and slidable on and circumferentially of the marginal edges of the plate opening, and adjustable to and from the axis of the plate opening adapted to engage the piece of work and permit of an inaccuracy in the piece of work being ascertained, said means including a pointer overlying said plate and movable relative to the graduations thereof.

1,463,441. PROPELLER. RICHARD PIKE, St. John's, Newfoundland. Filed Dec. 10, 1921. Serial No. 521,278. 3 Claims. (Cl. 170—165.)

1. A device adapted for use as a propeller, consisting of a rotary structure comprising a hub and pairs of blades extending therefrom, said pairs being spaced equidistant circumferentially, the two blades of the same pair forming portions of similar spirals and being offset along the axis of rotation by about half the width of said blades, so that one blade will be in front of the other, the longitudinal axes of all the blades forming the same angle with the axis of rotation, the rear blades having their corresponding points in the same planes perpendicular to

said axis, and the front blades likewise having their corresponding points in the same planes perpendicular to said axis, the rear blade of each pair being offset circumferentially relatively to the front blade of the same pair and, when viewed in a direction along the axis of rotation, overlapping such front blade by at least one-half of its area, the circumferential offset being in such direction that such rear blade will be the leading blade, during the rotation of the device in the normal direction, to secure an efficient consecutive contact of the fluid with the two blades of the same pair.

1,463,442. ENVELOPE, POSTAL WRAPPER, OR THE LIKE. ALBERT SAMUEL, Paris, France. Filed Aug. 19, 1921. Serial No. 493,655. 1 Claim. (Cl. 229—85.)

An improved envelope, capable of being opened without necessitating any special tool, the said envelope being provided on its inner face in a position parallel to the line along which the closing flap is folded with a narrow band on which a semi fluid substance or varnish is applied so as to render the paper thicker, the paper being formed opposite to this narrow band on one side with a protruding tongue.

1,463,443. OPENING DEVICE FOR CLOSED OR SEALED TINS AND CONTAINERS. WILLIAM SELBY-FAYERS and ERNEST RAYNER GATES, Surrey, England, assignors to The West Surrey Central Dairy Company, Limited, Guildford, England. Filed Dec. 28, 1921. Serial No. 525,364. 9 Claims. (Cl. 220—43.)

1. The combination of a sealed can with an opening device comprising a cutting wire extending through a hole in the can at a point near the junction of the side and end walls thereof, said hole being sealed around the wire, a body which is attached to the inner end of the wire and which is greater in at least one of its dimensions measured transversely to the axis of the wire than the width of the hole aforesaid and of the cut to be made by the wire, and means at the outer end of the wire to permit the device as a whole to be drawn bodily by hand to effect the cutting operation.

1,463,444. REMOVABLE WINDOW GUIDE. EMORY GLENN SIMPSON, Detroit, Mich., assignor to Fisher Body Corporation, Detroit, Mich., a Corporation of New York. Filed May 1, 1922. Serial No. 557,780. 8 Claims. (Cl. 296—44.5.)

2. In a body construction, the combination of a window well and a window post provided on its face with a channel member having one or more laterally offset grooves, and a channelled window guide that can be slid

into the channel and the offset groove or grooves from the top of the window well, a portion of the channelled guide interlocking in the groove or grooves offset from the

channel member on the face of the post, whereby the said window guide may be placed in the window well after the same has been closed.

1,463,445. POWER-TRANSMISSION MECHANISM. BENJAMIN C. SMITH, Westfield, N. J., assignor to Standard Motor Construction Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 25, 1922. Serial No. 603,150. 11 Claims. (Cl. 74—59.)

1. In a power transmission mechanism, a driving shaft, a motor clutch therefor, a driven shaft, a train of reversing gears leading from the driving to the driven shaft, said train being normally free of one of said shafts, a sliding clutch, shifting means for said sliding clutch for moving the latter into one position to connect said driving and driven shafts for like rotation and for moving said sliding clutch into another position for connecting said reversing gear train with both of said shafts for reverse rotation of said driven shaft, shifting means for said motor clutch, and a manually operable means co-acting with both of said shifting means and operating to release the motor clutch preparatory to releasing the sliding clutch and to cause the motor clutch to move into clutch engagement after the sliding clutch has been moved into either of its aforesaid operative positions, said manually operable means comprising a cam having two separate inclined portions for operating on the aforesaid shifting means, with two high neutral portions for holding one of said shifting means in a certain position for certain times while said cam is operating upon the other shifting means.

1,463,446. CAMERA. SCOTT SNOWDEN, Modesto, Calif. Filed Sept. 19, 1921. Serial No. 501,573. 6 Claims. (Cl. 95—15.)

1. In a camera support, a tripod having a ring rack on its head, a disk rotatably mounted on the tripod, a base

carried by the said disk, a rotatably mounted shaft carried by the base, a pinion on the said shaft engaging the

ring rack, a camera support, means for adjustably connecting the camera support to the said base at each end of the said camera support.

1,463,447. REDUCTION-GEAR MECHANISM. AMBROSE C. STAHL, Detroit, Mich. Filed Dec. 14, 1918. Serial No. 266,684. 1 Claim. (Cl. 74—34.)

In a reduction gear mechanism, a housing, a drive shaft extending in said housing, a driven shaft extending in said housing, a stationary internal rack in said housing, spiral gears supported from said driven shaft and bodily movable thereby about the axis of said driven shaft and meshing with a gear portion of said drive shaft, and means including a thrust gear shiftable on said drive shaft adapted to be operatively interposed between said spiral gears and said stationary internal rack to be held stationary relative to said drive shaft by said internal rack to effect a change in speed between said drive and driven shafts.

1,463,448. FOLDING BOX. EDGAR L. STERN, San Francisco, Calif. Filed Apr. 27, 1921. Serial No. 464,921. 4 Claims. (Cl. 229—35.)

1. A box comprising a rectangular body panel, end panels formed at the opposite ends of said panel, side

panels, tongues formed on the ends of the end panels, slots formed in the side panels for receiving the tongues, said slots permitting the side and end panels to be folded over the body panel and interlocked and instantly erected when interlocked without bending the tongues and co-operating means on the tongues and slots whereby the panels will be held rigid when interlocked and in their erect position and to resist collapsing thereof back to their positions.

1,463,449. ELECTRICALLY-CONTROLLED POWER TRANSMISSION. MAX TAIGMAN, New York, N. Y. Filed June 7, 1921, Serial No. 475,781. Renewed Apr. 21, 1923. 40 Claims. (Cl. 192—2.)

1. An article of manufacture complete in itself and constituting the controlling connection between a downwardly extending motor driven belt and an upwardly extending machine driving belt, said article comprising a supporting bracket adapted to be secured to the frame of the machine to be driven, a combined two-pulley clutch with one of the pulleys adapted to receive the driven belt and the other pulley adapted to receive the driving belt and a brake for braking the movement of the pulley carrying the driven belt, said brake and clutch carried by the bracket and a single control also carried by the bracket and adapted to be connected to a pedal for actuating the clutch, brake and circuit closer in proper operating sequence, said article being removable from the machine as a unit after the belts are slipped off their pulleys.

12. In a device of the class described the combination of a support, a lubricant receptacle mounted on one side of the support, a hollow shaft extending through the support with one end terminating in the receptacle and the other end projecting from the opposite side of the bracket, a pair of clutch pulleys carried by said projecting part of the shaft; a roller bearing carried by one of the pulleys adapted to be engaged by a shifter to move the pulleys into a driving relation and a wick in said hollow shaft with one end in said receptacle and the other end adjacent the roller bearing.

1,463,450. RECORDING SCALE. EDWARD G. THOMAS, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Mar. 29, 1918. Serial No. 225,478. 12 Claims. (Cl. 265—9.)

1. In a recording scale, the combination of a scale including a member positionable in accordance with the weight on the scale, a spring-propelled printing hammer, electrical means for retaining the printing hammer in inoperative position, a circuit breaker in the circuit of

said electrical means adapted to move in a line parallel to the line of motion of said member and having a part projecting into the path thereof, a type-carrying device

moving with the circuit breaker and adapted for cooperation with said hammer, and means for imparting motion to said circuit breaker.

1,463,451. GAS-REGULATING VALVE. LEO EUGENE TROSCLAIR, New Orleans, La. Filed Jan. 21, 1922. Serial No. 530,981. 6 Claims. (Cl. 236—26.)

6. The combination of a barrel having a valve seat, a valve adapted to engage the seat, abutable means carried by the barrel adapted to check the seating movement of the valve to leave a by-pass, means carried by the valve adapted to engage said abutable means, and means on said valve-carried means enabling adjustment thereof in respect to said abutable means to compensate for a grinding of the valve surface.

1,463,452. VAULT LIGHT. WILLIAM L. WALKER, New York, N. Y. Filed May 3, 1919. Serial No. 294,380. 11 Claims. (Cl. 94—29.)

1. A vault light, comprising a supporting member, a lens in said member having a circumferential groove, a gasket in said groove for the purpose of providing a water-tight joint between said member and said lens, and sealing material above said gasket and between said lens and said member.

1,463,453. DISTRIBUTOR BLOCK AND METHOD OF MAKING THE SAME. LEO J. WERNER, Arlington, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed July 22, 1918. Serial No. 246,177. 5 Claims. (Cl. 200—19.)

1. A distributor block for ignition generators having, an internal bore with electrical contacts arranged around the periphery of said bore and an external recess with

terminals on the block arranged around said recess with connectors extending to said contacts, said external re-

cess serving as a receptacle for electrical cables running to a portion of said terminals.

1,463,454. BOX-MAKING MACHINE. ERNEST D. ANDERSON and CARL BECKMANN, New York, N. Y., assignors to E. D. Anderson, Inc., New York, N. Y., a Corporation of New York. Filed May 19, 1921. Serial No. 470,935. 27 Claims. (Cl. 93—55.)

1. A box making machine comprising means to supply collapsed outer and inner box members, means to open said members separately, devices to bring opened outer and inner members into register, and means to insert the inner members into the outer members successively.

1,463,455. STEAM AND WATER BOILER. CHRISTIAN F. BACHLER, Philadelphia, Pa. Filed Apr. 30, 1919. Serial No. 293,777. 1 Claim. (Cl. 122—168.)

In a boiler of the character stated, a body having a water jacket, a dome having a fuel inlet therein, means for connecting said dome with said body, a central magazine,

a closure for said magazine mounted on the top thereof, means for operating said closure from the exterior of said dome, a fuel directing chute connected with said dome and extending inclined from said inlet to said magazine, a collar on the inner end of said chute with which said magazine is connected and by which it is sustained in said body, a baffle plate in the body around the upper end of said magazine, and connected therewith, and a series of U-shaped water receiving tubes between the base and dome of the boiler surrounding said central magazine below said baffle plate and communicating with said water jacket.

1,463,456. CLOTHESLINE FASTENER. EDWARD BEAR, New York, N. Y. Filed Jan. 12, 1922. Serial No. 528,699. 1 Claim. (Cl. 24—129.)

A clothes line clamp comprising a body part having a reduced end, a sleeve formed at the end of said body oppositely disposed to said reduced part, a lower hook on said sleeve, a perforated crown on the reduced end of said clamp adapted to allow the passage of one end of a line to be knotted behind said crown, two lateral hook portions in said crown for guiding the free end of the line passed through said sleeve around said lower hook, from below over one of the said lateral hooks and over the upper face of said body through the other of said lateral hooks, substantially as described and for the purpose set forth.

1,463,457. FEED REGULATOR. CARL BECKMANN, New York, N. Y., assignor to E. D. Anderson, Inc., New York, N. Y., a Corporation of New York. Filed July 30, 1920. Serial No. 400,055. 3 Claims. (Cl. 83—44.)

1. The combination of a hopper having an axially disposed delivery outlet, a worm axially disposed with relation to said outlet to deliver material from the hopper through the outlet, a receiving guideway having a side opening communicating with the outlet and disposed in the axis of the worm to receive material therefrom, a blade rotative in the guideway and disposed parallel with the axis of the worm and having an edge operative across said side opening adapted to cut charges of material as delivered by said worm in the guideway, said blade having

an outer edge operative along a wall of the guideway to push the material from the guideway, and gearing connecting the worm and the blade for rotating them in unison.

1,463,458. CUPPING GLASS. JAIME CATEULA, Buenos Aires, Argentina. Filed May 23, 1922. Serial No. 563,126. 1 Claim. (Cl. 128—297.)

A cupping device of glass or other suitable material and of any convenient size, provided with an annular groove in the interior thereof, either parallel or otherwise arranged with regard to the mouth thereof, at any suitable level of the same, for the purpose of gathering and retaining the slight excess of burning fluid which spreads over the inner walls of the cup as the latter is being turned into its operative position, all substantially as above described with reference to the accompanying drawings and for the purposes set forth.

1,463,459. PORTABLE CRIB. DOROTHY DEWEY COMSTOCK, Dedham, Mass. Filed Jan. 19, 1921. Serial No. 438,371. 2 Claims. (Cl. 5—58.)

1. A folding crib for use on a bed comprising sides and ends somewhat shorter than the sides and ends of the bed respectively, so as to rest on the bed coverings along the sides and foot of the bed with a space between the upper end of the coverings and the head of the crib, in combination with flexible fastening means adapted to hold the crib in place on the bed, the sides of the crib being approximately twice as long as the ends and being divided in the middle, the sections so divided being hinged together, thereby affording six light, rigid sections of approximately equal length, whereby the crib may be folded with the sections in parallel juxtaposition to fit into an oblong casing.

1,463,460. SEALING MACHINE. SIMON COOPER, Brooklyn, N. Y., assignor to Menasha Wooden Ware Co., Menasha, Wis., a Corporation of Wisconsin. Filed Nov. 21, 1919. Serial No. 339,757. 40 Claims. (Cl. 140—93.)

1. In a machine of the character described, a pail-holding device, means for cutting a measured length of wire means for bending the ends of said measured length

of wire radially toward the center of a pail on the pail-holding device the terminal ends of said bent wire ends

projecting beyond the bending means and means for advancing said bending means for driving said bent ends of the wire into the pail thus held.

1,463,461. SANITARY PIPING AND FITTING THEREFOR. WILLIAM J. DAVIS, Chicago, Ill. Filed Sept. 27, 1920. Serial No. 413,209. 9 Claims. (Cl. 137—75.)

1. In a device of the kind described and in combination, a pipe enameled on the interior and exterior surfaces, the enamel on one surface being spaced back from the end and the surface of the exposed part tinned, a fitting constructed to fit said pipe at said exposed tinned surface and tinned thereat, the pipe and fitting being sweated together at said tinned faces to produce a soldered and substantially permanent joint thereat, said fitting enameled on one surface thereof so as to be perfectly flush with the correspondingly enameled surface of the pipe.

1,463,462. DOFFING AND DONNING MECHANISM. HUGH P. EANES, Martinsville, Va., assignor, by mesne assignments, to William Ward Miller, Martinsville, Va. Filed Mar. 22, 1921. Serial No. 454,448. 9 Claims. (Cl. 118—18.)

1. Doffing and donning mechanism comprising a doffer adapted to engage a full quill preliminary to removal of the full quill from a spindle, a donner adapted to carry

an empty quill for application of the empty quill to such spindle, and cams whereby the doffer is actuated to effect such removal of the full quill and whereby the donner is actuated independently to place the empty quill upon the spindle.

1,463,463. SWITCH MECHANISM. LEWIS L. EVANS, Bridgeport, Conn., and GERALD M. HART, Wilkes-Barre, Pa. Filed May 10, 1920. Serial No. 380,063. 3 Claims. (Cl. 173—346.)

1. In a switch mechanism, a rotatable contact wheel the perimeter of which includes contacts and insulating material separating the contacts, insulating blocks supporting the rotatable contact wheel, upper and lower ratchets carried by the contact wheel, means for actuating the upper ratchet, cooperating means engaging the lower ratchet whereby the proper position of the contact wheel is insured, and a rotatable contact member having rolling connection with the contact wheel and adapted to alternately engage said contacts and insulating material.

1,463,464. SAFETY DEVICE FOR AIRPLANES. THOMAS HUNT FURMAN, Brooklyn, N. Y. Filed July 16, 1918. Serial No. 245,143. 3 Claims. (Cl. 244—21.)

1. The combination of an airplane having an opening in its top, a parachute attached thereto immediately over said opening and a cover for said parachute with means for locking said cover and manual means for releasing said locking means, said locking means comprising slats normally forming a part of the supporting plane of said airplane.

1,463,465. DEMOUNTABLE-RIM STAND. LOUIS J. GENETT, Marquette, Mich., assignor of one-half to John M. Longyear, jr., Marquette, Mich. Filed Apr. 12, 1920. Serial No. 373,182. 1 Claim. (Cl. 157—1.)

A rim adjusting device comprising a support, rim securing means fixed thereon, an adjusting member rotatably fulcrumed on the support, a pair of links eccentric-

ally pivoted to said member at opposite sides of its axis and terminating in pivotally attached clamps adapted to engage the rim at opposite sides of a separable joint, together with a deforming device fulcrumed on said sup-

port coaxially with the adjusting member and including a pivoted link terminating in a pivotally attached clamp positioned to engage the rim near its separable joint, said link being a rigid member adapted for moving the end portion of the rim inwardly or outwardly.

1,463,466. LAMP-BULB INSTALLING AND REMOVING DEVICE. HAROLD D. GRINNELL, Pittsfield, Mass., assignor to The G. C. A. Manufacturing Company, Pittsfield, Mass., a Corporation of Massachusetts. Filed May 22, 1922. Serial No. 562,684. 10 Claims. (Cl. 294—21.)

1. In a device of the class described, in combination, a support, means for holding a lamp bulb, means for holding the lamp shade and means for holding the lamp socket, all mounted in cooperative relationship on said support.

1,463,467. FREIGHT-CAR SIGNAL. NED EARL HAYWARD, Holyoke, Mass. Filed Mar. 26, 1923. Serial No. 627,647. 3 Claims. (Cl. 116—30.)

3. In combination with a freight car, a pair of spaced bearing collars upon one end of the car and adjacent one side thereof, a rod freely slidable within said collars, an indicating plate upon the upper end of the rod, an adjustable collar upon said rod between the uppermost bearing collar and said indicating plate, said adjustable collar adapted for support upon the uppermost bearing collar for limiting the downward movement of

the rod within the bearing collars, said rod being formed with an opening at a point adjacent its lower end, and a cross pin adapted for reception within said opening,

and for support upon the lowermost bearing collar for maintaining the rod in a raised position, whereby the indicating plate may be viewed.

1,463,468. CONDENSER. JAY G. HUNTER, Sabula, Iowa. Filed July 6, 1920, Serial No. 394,242. Renewed Jan. 13, 1923. 7 Claims. (Cl. 257—229.)

1. In a condenser of the kind described and in combination, a plurality of receptacles providing a plurality of chambers, one constituting substantially a cooling chamber and the other a chamber for the accumulation of condensed gas, means for conducting gas to be condensed into the cooling chamber, means for preventing the discharge of gas through said conducting means from said cooling chamber and means for conducting a cooling medium through the cooling chamber.

1,463,469. CHAIN-MAKING APPARATUS. JOSEPH JOHNSON, Lebanon, Pa. Filed Oct. 29, 1921. Serial No. 511,438. 6 Claims. (Cl. 59—22.)

1. Link stud inserting apparatus including a base; a movable and a fixed die block mounted on said base, and arranged for inserting a chain link therebetween; means slidably mounted on said base and having means

for engaging said movable die block; curved means for supporting a stud inserted in said link; and a lever pivoted on said base and swingable to move said slidable means

and with it the movable die block to force the sides of said link into locking engagement with the ends of said stud; substantially as described.

1,463,470. DISPLAY DEVICE. ROSS H. JOHNSON, St. Paul, Minn. Filed Dec. 8, 1919. Serial No. 343,219. 18 Claims. (Cl. 40—34.)

1. A display device, including a display window having two displays and means adapted to carry another display so as to be brought adjacent said display window at each of said displays to make a comparison of said display.

1,463,471. LANDING CARRIAGE FOR AEROPLANES. GEORGE W. KADEL, Dallas, Tex. Filed Oct. 6, 1921. Serial No. 505,115. 2 Claims. (Cl. 244—2.)

1. In an aeroplane, the combination of a fuselage, wings extending from the fuselage, wings extending from the fuselage and each having a recess in its underside, a pair of struts hinged in each wing recess, a ground wheel carried by one of the struts, a sliding shoe co-acting with each pair of struts, and a spring latch engaged by the shoe for locking the struts in landing position.

1,463,472. VANITY BOX. NATHAN KASDAN, New York, and DANIEL POLLACK, Brooklyn, N. Y., assignors to Majestic Machine & Tool Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1923. Serial No. 631,297. 6 Claims. (Cl. 132—83.)

1. A vanity box or case comprising a body portion having a rim and adapted to receive a powder compact and its pad, a cover having a skirt hinged to the rim of said body portion, a disk frame fitted within said cove and having a walled opening adapted to receive a rouge compact and its pad, a mirror and a link hingedly connecting the back of said mirror at a middle portion thereof to the forward portion of said disk frame, said mirror being between said disk frame and the body of the box and adapted when the box is closed, to close the outer ends of the chambers for said compacts, and said link permitting the mirror, when the box is open, to be lifted at its forward edge and drawn upwardly and forwardly to expose the rouge-compact and be given an inclined position against the link at the forward edge of the open cover.

1,463,473. BROACHING TOOL. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Dec. 2, 1921. Serial No. 519,500. 4 Claims. (Cl. 90—33.)

4. A device of the class described having a plurality of cutting members of the same diameter having cylindrical peripheries of different widths and front faces perpendicular to said peripheries.

1,463,474. TIMING DEVICE FOR INTERNAL-COMBUSTION ENGINES. ARTHUR A. LAZIER, Buffalo, N. Y. Filed July 19, 1920. Serial No. 397,206. 8 Claims. (Cl. 123—139.)

1. In a timing device for internal combustion engines, the combination of means for injecting fuel into the engine, a crank shaft, a cam shaft carrying a cam for

actuating said fuel injection means, transmission members on said shafts, respectively, for imparting motion from the crank shaft to the cam shaft, the transmission member on said crank shaft being slidable lengthwise thereof to rotate said other transmission member and change the angular position of said cam, and means for shifting said slidable transmission member.

1,463,475. THERMIONIC TRANSLATING DEVICE. SIEGMUND LOEWE, Berlin, Germany, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1921. Serial No. 453,842. 6 Claims. (Cl. 179—171.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat L., 1313.)

1. In combination, a source of direct current, a variable impedance element in circuit therewith, a second circuit inductively connected to said first-mentioned circuit whereby variations in the current flowing in said first circuit induces electromotive forces in said second circuit, and common means connected to said variable impedance element and to said second circuit for simultaneously controlling the impedances of said two circuits.

1,463,476. COATING DEVICE. CHARLES H. MACDONALD, Montclair, and LEROY L. SALFISBERG, Newark, N. J., assignors to Ivers-Lee Company, Newark, N. J., a Corporation of Delaware. Filed July 8, 1920. Serial No. 394,717. 6 Claims. (Cl. 91—44.)

1. A coating device for a strip bent transversely to form portions arranged in zig-zag relation, comprising a container for coating material, means for applying said material to opposed faces of said portions, and means for yieldingly resisting advance of the coated bent strip to effect adhering contact between said opposed coated faces of portions thereof.

1,463,477. WINDOW-POLISHING DEVICE. MARTIN MADSEN, Casimalia, Calif. Filed Oct. 6, 1921. Serial No. 505,784. 4 Claims. (Cl. 15—254.)

1. The combination with a window slidably supported in a casement member, of a cleaning element extending across the pane of said window and having contact with the same, one end of said element adapted to be rotatably journaled in a yieldable bearing support mounted in one side of said casement, the other end of the element having detachable non-rotatable engagement with a rotatable shaft mounted in the opposite side of said casement, mechanism for rotating said shaft, and means for actuating said mechanism from the inner side of said casement member.

1,463,478. MULTICOPY WRITER. ERNEST MAUVAIS, Seattle, Wash., assignor to Multi-Copy Writer Corporation, Ltd., Seattle, Wash., a Corporation of Washington. Filed May 6, 1922. Serial No. 558,958. 2 Claims. (Cl. 192—126.)

1. A device of the class described, comprising a frame attachable to the carriage of a typewriter, a pair of oppositely disposed racks mounted in the frame and slidable vertically therein, a gear wheel adapted to mesh with each rack, a shaft connecting the gear wheels, a second pair of oppositely disposed racks mounted in the frame and slidable vertically therein, a gear wheel adapted to mesh with each of the second racks, a sleeve mounted on the shaft and connecting the second gear wheels, a typewriter ribbon disposed between the lower ends of each pair of said racks, and means for imparting a rotary movement to said wheels, shaft and sleeve and a vertical movement to said racks, whereby each ribbon may be lowered to the printing point of the typewriter or raised therefrom independently of the other ribbon.

- 1,463,479. DOFFING AND DONNING MECHANISM. WILLIAM W. MILLER, Martinsville, Va. Filed Oct. 29, 1921. Serial No. 511,313. 38 Claims. (Cl. 118-18.)

18. Doffing and donning mechanism having combined with the doffing and donning devices thereof a conveyor which maintains empty bobbins at spaced distances apart, conveys them into position to be taken by the donning devices, receives the doffed bobbins from the doffing devices, and conveys them away.

- 1,463,480. SAW TOOTH. JAMES H. MINER, Meridian, Miss. Filed Nov. 21, 1921. Serial No. 516,647. 3 Claims. (Cl. 143-151.)

1. An insertable saw tooth for use in saw blades having substantially semi-circular tooth receiving recesses, comprising a tooth portion provided with a recess in its lower edge having a substantially straight wall, said recess terminating in a curved shoulder at its outer end and an abrupt shoulder at its inner end, said tooth having an arc-shaped outer edge to fit the tooth receiving recess which arc-shaped edge terminates in an outer shoulder, and an arc-shaped holder having a projection at its outer end to cooperate with said curved shoulder, and an inwardly facing abrupt shoulder to cooperate with the abrupt shoulder on the tooth, said projection being a rounded shoulder on which the curved shoulder of the tooth may rock and the abrupt shoulders being so shaped that the lower or inner end of the tooth may approach the holder during the preliminary insertion, the outer shoulder of the tooth causing it to rock back when fully inserted.

- 1,463,481. FUEL ECONOMIZER. VAUGHN E. MORRISON, Detroit, Mich., assignor of one-half to Carl F. Beckwith, Detroit, Mich. Filed Feb. 24, 1919. Serial No. 278,690. 2 Claims. (Cl. 277-70.)

1. A fuel economizer for internal combustion engines having an intake conduit comprising a chambered casing having an outlet opening into the air intake, a valve therein, a seat for the valve, a spring for holding the

valve off its seat, a conduit connected with the intake end of the case, and a foot-controlled device for the conduit consisting of a casing attachable to the foot-board of a vehicle, the casing having an aperture there-

through with which the conduit communicates, a plunger having an aperture registrable with the said aperture in the casing, and a spring for projecting the plunger upward to close the conduit.

- 1,463,482. SECURING SHINGLES TO ROOFS. WILLIAM J. MOUNTFORD, Macon, Ga., assignor of one-half to J. D. Bowden, Atlanta, Ga. Filed Dec. 29, 1922. Serial No. 609,773. 2 Claims. (Cl. 108-33.)

2. A shingle securing and spacing means comprising a body portion, shingle engaging means at the opposite ends thereof, and spaced upwardly extending spacing lugs formed on each side of said body, whereby spacing in three directions will be obtained.

- 1,463,483. PROCESS FOR THE MANUFACTURE OF ZINC WHITE. ARMAND NIHOUL, Villeneuve-le-Roi, and CAMILLE CLERC, Paris, France. Filed Nov. 9, 1920. Serial No. 422,857. 2 Claims. (Cl. 134-78.)

2. In the process of manufacturing zinc white, precipitating the zinc in the state of carbonate, re-dissolving said carbonate in an acid solution, and further precipitating the zinc in the state of sulphide by means of hydrogen sulphide gas.

- 1,463,484. AIR HEATER. BENJAMIN B. OLSEN, Marshalltown, Iowa. Filed Feb. 24, 1921. Serial No. 447,611. 2 Claims. (Cl. 257-241.)

1. An apparatus for the purpose described consisting of a heat chamber of cross sectionally hook shape for supporting engagement with an exhaust manifold and adapted for contact with the wall thereof, said chamber being provided with a reduced air intake port and a valved nozzle in communication with the intake manifold of the engine, said heat chamber having a longitudinally extended transversely arched upper portion and being reduced in area toward its point of communication with said nozzle.

1,463,485. AGRICULTURAL IMPLEMENT. HENRY PETERSON, Hamilton, Mont. Filed Jan. 22, 1921. Serial No. 439,113. 7 Claims. (Cl. 97—109.)

1. An agricultural implement comprising a beam, a runner, standards connecting said runner and beam, a digging member carried by said runner, a plate mounted in front of one of said standards and carried by said runner, a frame connected to said runner and extending upwardly and outwardly therefrom to either side of the aforesaid beam, and connections between the opposite sides of said frame and the corresponding ends of the aforesaid plate.

1,463,486. COIN-VENDING MACHINE. GEORGE C. REITH, Philadelphia, Pa., assignor, by mesne assignments, to National Sales Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 14, 1917. Serial No. 207,036. 3 Claims. (Cl. 194—102.)

1. In a coin vending machine, a merchandise delivering mechanism, means for holding a coin in a stationary position, and means for applying power to actuate said delivery mechanism, the operation of said means being determined by the thickness of the coin while in its stationary position.

1,463,487. MOUNTING STEERING WHEEL. JAMES N. RICHARDS, WILLIAM H. WESTMAN, and ALFRED D. WESTMAN, Chatham, Canada. Filed Oct. 17, 1921. Serial No. 508,402. 1 Claim. (Cl. 74—33.)

A sliding body having an auxiliary post projecting from its front, a forward projection at its top to engage the arm of a steering wheel, with means to fasten a

steering wheel thereto, sliding means to secure said body to a slide, said slide being mounted on the steering post of a vehicle, a draw pin and re-acting spring as means to fasten said body to said slide, and means to secure said slide to steering post of a vehicle.

1,463,488. PACKING. CHARLES F. SCHWENKEER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 16, 1921. Serial No. 522,910. 7 Claims. (Cl. 74—109.)

1. A packing comprising a member, U-shaped in cross section and formed from flexible material such as leather, and a plurality of independent, spaced spring clip expanding members U-shaped in cross section located between the sides of the sides of the annular member.

1,463,489. DEVELOPING APPARATUS. LEON W. SHANNON, Hiawatha, Kans. Filed Apr. 18, 1921. Serial No. 462,184. 4 Claims. (Cl. 357—4.)

1. In apparatus for developing photographic plates, a casing, tanks within the casing, one of the tanks having an overflow outlet, a pan arranged in the upper part of the casing and having an overflow discharging into the top of the said tank, a water supply pipe passing through the pan into the tank and discharging at the bottom of the tank, and a coil interposed in said pipe within the pan in spaced relation to the bottom of the pan and adapted to support a cooling medium.

1,463,490. CLUTCH MECHANISM. GEORGE SLIDEE, Baltimore, Md. Filed Nov. 16, 1921. Serial No. 515,496. 7 Claims. (Cl. 192—149.)

7. In a clutch mechanism, the combination with driven, driving and shifting shafts, a casing comprising bearings

for said shafts, a fixed gear on said driven shaft and a loose gear on said driving shaft, means operated by said shifting shaft for engaging said loose gear with said driving shaft and a pin for engaging said driven shaft to stop same, said shifting shaft engaging said pin to prevent its movement when said loose gear is engaged with said driving shaft.

1,463,491. COMBINED GOVERNOR AND COMMUTATOR SUPPORT FOR MOTOR VEHICLES. GENTRY L. TALLMAN and ALVA A. JONES, Shelbyville, Ill. Filed Dec. 29, 1919. Serial No. 348,233. 6 Claims. (Cl. 123—108.)

3. The combination with a tractor having an internal combustion engine, and a throttle valve controlling fuel supply thereto, of an upright governor shaft driven from a running part of the engine, a centrifugal governor carried by said shaft, a lever subject to said governor, a spring acting directly upon one side of said lever, a casing enclosing the shaft and said governor, and an operating rod connected to said throttle valve and provided with a connection to said spring pressed lever whereby said throttle valve will be automatically operated from the governor.

1,463,492. COMBINED MANURE LOADER AND SPREADER. HIRAM H. VARLAND, Des Moines, Iowa. Filed Nov. 15, 1920. Serial No. 424,258. 2 Claims. (Cl. 275—1.)

1. In a machine for handling manure, a bed frame supported for travel, a box mounted at a point intermediate its length upon the bed frame for bodily tilting movement independently of the bed frame whereby one of its ends may be brought to a lowered position, a conveyor within the box, a shaft mounted adjacent to the tilting point of the box, a drive shaft upon the bed frame, operative connection between the drive shaft and the first-mentioned shaft, and gear connection between the said first-mentioned shaft and the conveyor.

1,463,493. EGG BEATER. AUGUSTUS F. ANDERSON, Bangor, Me. Filed Apr. 10, 1922. Serial No. 551,116. 4 Claims. (Cl. 259—131.)

1. In an egg beater, the combination with a head, beater blades revolvably mounted thereon and provided with pinions; of a grip, a socket of rectangular cross sec-

tion being formed in said head for detachably connecting it with said grip, a gear wheel pivoted on the grip adapted to mesh with said pinions, and a lever on said gear

wheel, said grip being formed of a flat metallic band, the outer end of which is bent together until its flat sides contact and is secured by a rivet to form a looped handle.

1,463,494. STEAM CLEANSING DEVICE FOR LOCOMOTIVE BOILERS OR THE LIKE. JOHAN BORE and ALBERT SKOGLUND, Gottenberg, Sweden, assignors to Carl Axel Arvid Westerberg, Stockholm, Sweden. Filed Jan. 20, 1919. Serial No. 272,076. 8 Claims. (Cl. 122—391.)

1. A locomotive boiler, having a cab at its rear end, a furnace having a side wall, a set of boiler tubes extending lengthwise from the furnace, a tubular nipple extended through the wall with its axis extending across the axes of the tubes and a steam discharge pipe slidably and rotatably arranged within the nipple, said pipe having a nozzle, and means operable from the cab for turning the nozzle and sliding it transversely of the axis of the tubes for directing the steam into all of said tubes from said nozzle.

1,463,495. BARREL FOR LOCKS. ALBERT BORELLI, San Francisco, Calif. Filed Mar. 16, 1921. Serial No. 452,836. 4 Claims. (Cl. 70—47.)

2. A barrel for locks comprising an outer barrel having rows of apertures arranged in several planes radial to the axis of said barrel; an inner rotating barrel having a plurality of identical radial slots, certain of which are provided with apertures registering with the apertures in the outer barrel; locking pins mounted within the

registering apertures; and a key having one less leg than the number of slots, each leg being shaped to actuate

certain of the locking pins only whereby said inner barrel may be rotated only when the several legs of said key are in their respective slots.

1,463,496. REATOMIZER ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. JOHN D. BRIDGERS, Florence, S. C. Filed Feb. 13, 1922. Serial No. 536,212. 5 Claims. (Cl. 48—180.)

1. The combination with the carburetor and intake manifold of an internal combustion engine, of a reatomizing device therebetween, said device forming, with the manifold, a well for the collection of liquid fuel and having an auxiliary air duct leading downwardly from a point outside the passageway through said members and thence upwardly into said passageway and communicating with said well.

5. A device for the purposes set forth comprising a plate adapted to be clamped between the carburetor and intake manifold of an internal combustion engine and having an opening adapted to form a part of the passageway through said members, a tubular member fitting in said opening and projecting beyond the face of the plate and an auxiliary air duct extending through the wall of the tubular member, barriers in said latter member at the front and rear of said duct, said tubular member having a drain opening, and said plate having an orifice below said latter member extending from the face of the plate to said duct.

1,463,497. APPARATUS FOR THE INSERTION OF SCREW STUDS. ETTORE BUGATTI, Molsheim, France. Filed Aug. 25, 1921. Serial No. 495,296. 4 Claims. (Cl. 10—135.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An apparatus for the insertion of screw studs comprising a shaft, a sleeve surrounding the same, an elastic coupling device for actuating said sleeve, a socket wherein the screw stud is disposed, elastic means connecting the

socket and sleeve under normal resistance, automatic means provided for the rotation of said socket with re-

spect to said sleeve when the resistance exceeds the normal, and for the tight insertion of the screw stud into the piece of work at the end of the stroke.

1,463,498. ARMOR FOR GASOLINE TANKS OF AEROPLANES AND FOR OTHER PURPOSES. NORMAN W. BURGESS, Lexington, Va. Filed Sept. 24, 1918. Serial No. 255,518. 5 Claims. (Cl. 114—13.)

1. A projectile-resisting armor comprising a thin outer armor plate and a series of relatively large balls free to rotate and deflect such projectiles as may pass through the outer plate and an inner wall cooperating with the outer armor plate to hold the balls in place.

1,463,499. HAMMOCK. HARRY E. BURROUGHS, Boston, Mass., assignor to Louis Beckwith, Everett, Mass. Filed Jan. 26, 1921, Serial No. 440,090. Renewed Jan. 21, 1922. Serial No. 530,997. 2 Claims. (Cl. 5—127.)

2. Apparatus of the kind described comprising a hammock frame composed of two metallic U-shaped frame members with their ends in abutting relation and connected for folding, a flexible hammock body freely suspended from said frame, the outer portions of said frame members being substantially straight, and leg bar supports arranged in crossed relation in pairs at the ends of

said frame presenting at their upper extremities sockets frictionally and adjustably engaged with the frame ends for the purpose stated.

- 1,463,500. HAMMOCK. HARRY E. BURROUGHS, Boston, Mass., assignor to Louis Beekwith, Everett, Mass. Filed Jan. 26, 1921, Serial No. 440,092. Renewed Jan. 18, 1923. Serial No. 530,998. 1 Claim. (Cl. 5—1.)

The combination with an infants' hammock composed of a metallic frame foldable midway of its length and formed of two U-shaped bars pivoted for swinging with respect to each other and a flexible hammock body depending therefrom with a mattress fitted therein, of a flexible case conforming in length to the length of said frame when folded and adapted to receive said hammock body and frame with the mattress therein to constitute therewith a seat as set forth.

- 1,463,501. PISTON AND CYLINDER FITTING COM-
POUND. CHARLES C. BUTTENFIELD, Pittsburgh, Pa.
Filed Sept. 19, 1921. Serial No. 501,836. 3 Claims.
(Cl. 51—280.)

1. A piston and cylinder fitting compound composed of aluminum, lead carbonate, and graphite, substantially as set forth.

- 1,463,502. PISTON AND CYLINDER FITTING COM-
POUND. CHARLES C. BUTTENFIELD, Pittsburgh, Pa.
Filed Nov. 22, 1921. Serial No. 517,075. 2 Claims.
(Cl. 51—280.)

1. A piston-and-cylinder fitting compound composed of about three-fourths of silica graded to 5% of forty mesh, 5% of sixty mesh, 15% of eighty mesh, 50% of one hundred mesh, and 25% of two hundred mesh, and about one-fourth of lead carbonate.

- 1,463,503. DISPENSING PACKET FOR WAXED PA-
PER. WILLIAM B. COLLINS, Ben Avon Borough, Pa.
Filed Nov. 20, 1922. Serial No. 602,114. 3 Claims.
(Cl. 206—57.)

1. In a dispensing packet of sheets, the combination of an envelope with an opening at one end, a pile of sheets,

said pile folded transversely and inserted into said envelope with free edges of the pile adjacent the closed end of the envelope, and a suspension loop for the packet extending through holes in the closed end of the envelope and through the corresponding portion of the sheets.

- 1,463,504. PRINTING MACHINE. WALTER D. FRANK and FRANCIS M. CASE, Cleveland, Ohio, assignors to General Electric Company, a Corporation of New York. Filed Oct. 4, 1920. Serial No. 414,460. 4 Claims. (Cl. 101—35.)

1. A machine for printing thin glass articles, comprising a holder for receiving the article to be printed, said holder having an aperture therein through which the surface of the said article is exposed, a resilient stamp and a support therefor mounted in alignment with said aperture, and means continuously operated independently of said holder for reciprocating said stamp to and from said article through the said aperture.

- 1,463,505. LATHE. NATHAN F. FRETTER, Cleveland,
Ohio. Filed Feb. 10, 1919. Serial No. 275,992. 30
Claims. (Cl. 29—38.)

1. In a machine of the character set forth, the combination of opposed tool carriers, means for supporting a piece of work between and in operative relation to tools supported by said carriers, and further means for advancing the work into contact with one tool while moving the other tool into engagement with the work.

15. In a machine of the character set forth, the combination of a turret, work holders rotatably supported by the

turret, each work holder involving a driving member, a lock for securing each work holder against rotation, a tool carrier, a tool adapted to be supported in various positions by the carrier and into operative relation with which the successive work holders are adapted to be brought, a weight impelling the tool carrier toward the work, means for retracting the tool carrier against the action of the weight, a driving member with which the driving members of the work holders are adapted to cooperate when the work is in operative relation to the tool, means for unlocking the work holder, and mechanism for rotating the second mentioned driving member when the work is presented to the tool.

25. In a machine of the character set forth, the combination of an annular turret, opposed tools situated at stations about the course of the turret, work holders supported by the turret for movement radially thereof, means for moving the turret intermittently to present the work holders to the successive stations, means for driving the tools, that of certain of the tools being of variable speed, an actuating member situated centrally of the turret, and means for driving the actuating member, said member acting to move the inner tools outwardly into contact with the work and for shifting the work holders outwardly to present the work to the outer tools.

1,463,506. MATERIAL FOR FRICTIONAL AND WEARING PURPOSES. HERBERT FROOD, Chapel-en-le-Frith, England, assignor to Ferodo Limited, Chapel-en-le-Frith, England. Filed Mar. 21, 1923. Serial No. 626,641. 1 Claim. (Cl. 91—68.)

The process of manufacturing a friction fabric which consists in forcing a composition consisting of substantially two parts of dammar gum, substantially one part of rubber, substantially two parts of a drying oil, and substantially five parts of a solvent into a fabric by frictioning the composition into said fabric.

1,463,507. DEVICE FOR INCREASING THE SOUND ENERGY WITH SUBMARINE SOUND TRANSMITTERS. WALTER HAHNEMANN, Kitzberg, near Kiel, Prussia, Germany, assignor to the Firm Signal Gesellschaft m. b. H., Kiel, Werk Ravensberg, Germany. Filed Aug. 25, 1921. Serial No. 495,233. 7 Claims. (Cl. 181—0.5.)

1. In combination with an arrangement for producing sound under water, means for maintaining an artificial special static excess pressure in the liquid space nearest to the point where the sound is produced, whereby the sound energy is increased.

1,463,508. PROCESS OF RECOVERING SOLUBLE COMPOUNDS OF POTASSIUM AND ALUMINUM FROM SILICATES. BIRGER FJELD HALVORSEN, Christiania, Norway. Filed Mar. 26, 1921. Serial No. 455,823. 6 Claims. (Cl. 23—22.)

1. The process which consists in heating a mixture of alkali-metal aluminum silicates and cyanamide of calcium in the presence of water.

1,463,509. FOOT-OPERATED MUSICAL INSTRUMENT. FREDERICK T. INGERSOLL, Omaha, Nebr. Filed Nov. 15, 1921. Serial No. 515,218. 1 Claim. (Cl. 84—173.)

A foot operated key mechanism for sounding the vertically disposed string carried by a sounding board and a base, said key mechanism comprising a counterweight, said counterweight being pivotally mounted on an upwardly extending pivoted U-shaped member, a U-shaped spring upwardly bowed and having one of its vertically disposed arms anchored to the inner face of the counterweight adjacent the pivotal point thereof and its other arm anchored to the base below the pivotal point, a staff extending upwardly from the counterweight, a hammer carried by the upper end of said staff, a pivoted foot actuated lever disposed forwardly of the counterweight and pivoted at a point spaced from its ends, the inner end of said pivoted foot actuated lever terminating in substantially the same horizontal plane as the pivotal point of the counterweight, a flexible connection with the under side of the counterweight and the inner end of the foot lever, said flexible connection engaging the outer end of the counterweight intermediate the ends of the flexible connection.

1,463,510. TEMPERATURE REGULATOR FOR COOLING SYSTEMS OF INTERNAL-COMBUSTION ENGINES. LOUIS W. JONES, Baltimore, Md. Filed Mar. 21, 1923. Serial No. 626,716. 6 Claims. (Cl. 123—174.)

1. In the cooling system for the water of an internal combustion engine, the combination of an electric motor driven pump for circulating said water, a heater provided with heating coils for heating said water, a source of electrical energy, electric circuits including said motor, coils and source, a thermostat for closing the circuit through said motor when the temperature of said water reaches a predetermined limit, a second thermostat adapted to close the circuit through said coils when the temperature of said cooling system reaches a second predetermined limit lower than said first named limit, and rheostats in said motor and heater circuits.

1,463,511. CABINET. JOHN JOSEPH LANE, Baltimore, Md. Filed Sept. 19, 1921. Serial No. 501,640. 1 Claim. (Cl. 45—51.)

In a cabinet, the combination of a sheet metal box having side walls, top and bottom walls, and a back wall, the box being open at the forward side thereof, an overlying casing fitting the side, top and bottom walls of the box, a door normally closing the box at its open side, a skeleton frame secured against the rear edges of the casing reinforcing the casing and rigidly locking the walls thereof in fixed relative position to prevent cramping of the box by the casing, and means upon said frame for suspending the box having its back wall spaced by the frame away from the surface against which the box is hung, the frame functioning when the cabinet is suspended, to uniformly distribute weight upon the frame to the casing to prevent stressing of the box.

1,463,512. CRATE. WILLIAM W. LEACH, Mansfield, Ohio. Filed Apr. 20, 1921. Serial No. 462,787. 25 Claims. (Cl. 208—60.)

1. In a crate, separate supporting members, standards having corners provided thereon rigidly secured to the supporting members, standards having corners provided thereon slidably mounted on the supporting members, and means to adjust the movable standards lengthwise on the supporting members.

1,463,513. ELECTRIC FURNACE. CHARLES L. LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 13, 1921. Serial No. 460,924. 7 Claims. (Cl. 204—64.)

5. A rotatable electric furnace adapted to supply heat to a cylinder of an internal-combustion engine during the process of attaching cooling elements thereto and having a heat insulated casing for the cylinder assembly

comprising means for locating the cylinder assembly within the furnace; a plurality of electric resistors;

a holder for the resistors; means for locating the holder within the cylinder; and means for connecting the resistors to a source of electric current.

1,463,514. DETACHABLE SHOE SOLE AND HEEL. GUSTAV LILIENFELDT, New York, N. Y. Filed Feb. 3, 1921. Serial No. 442,090. 1 Claim. (Cl. 36—15.)

In a shoe, the combination with an upper and inner sole each having its marginal edge equipped with a plurality of metallic eyelets, each eyelet having its ends clamped to lap over both surfaces of the member in which is fastened, an outer sole having openings therein to align with the eyelets in the inner sole and upper, the marginal edge of the upper being disposed between the inner and outer soles whereby the metallic eyelets of the upper about the eyelets of the inner sole, and removable fastening elements extending through the aligned eyelets and openings, and means associated with the fasteners for drawing the metallic eyelets together to cause their flanges to be pressed more firmly into engagement with the inner sole and upper.

1,463,515. LEVELING DEVICE. JOHN E. LONG, Edgerton, Ohio. Filed July 5, 1921. Serial No. 482,393. 3 Claims. (Cl. 280—6.)

1. In combination, a vehicle body, a pair of wheel frames pivotally attached thereto, a wheel in each frame, a link attached to each frame, a rod attached to the

link and provided with a worm, a cog wheel having a centrally located threaded aperture in engagement with the worm, a pinion in engagement with the cog wheel, means for rotating the pinion.

1,463,516. RECEPTACLE OR PACKAGE. IRVINE McCOLL, Grand Rapids, Mich. Filed Aug. 28, 1922. Serial No. 584,800. 6 Claims. (Cl. 229—14.)

1. A package comprising a plurality of receptacles disposed one within another, the inner receptacle being adapted to receive the material to be packaged and having a double walled bottom providing a bottom air chamber, the enclosed receptacles being provided with conical flange-like bases constituting supporting and spacing members removably supporting the receptacles one within another with their walls in spaced relation, said receptacles being provided with independent covers.

1,463,517. MATCH-BOX ATTACHMENT. ALBERT G. MACKAY, Washington, D. C., assignor to The Automatic Company, a Corporation of Delaware. Filed May 29, 1922. Serial No. 564,378. 9 Claims. (Cl. 206—31.)

1. In combination with a support having a flanged side and end edge, and attaching means for the support including an arm, a match box holder including a body of substantially U-shape having a lateral wing extending from its inner side and interposed between the arm and the support, fastening means for the arm extending through the wing to secure both the arm and wing to the support, the body being disposed to have its outer side substantially aligned with the flanged side edge of the support to cause the box to be engaged by said flanged side edge of the support and to cause the outer end of the slide to be engaged by the flanged end edge of the support, and a stop on the inner end of the body to engage the box and slide.

1,463,518. GASOLINE GUN. EMORY M. THOMAS, Buckner, Mo. Filed Oct. 21, 1922. Serial No. 596,004. 3 Claims. (Cl. 42—1.)

1. In a device of the class described, a combustible fluid chamber, a spring pressed plunger therein adapted for expelling the fluid from the chamber, and means operable by the action of the plunger for igniting the fluid as it is expelled from the cylinder.

1,463,519. METHOD OF AND APPARATUS FOR GASKET LINING CAN ENDS. IVAN D. THORNBURGH, Berkeley, Calif., assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed Apr. 24, 1919. Serial No. 292,416. 17 Claims. (Cl. 113—80.)

1. The method of building up a gasket liner relative to a flanged can end for use in the hermetic sealing of containers for food products, which comprises applying an innocuous sizing liquid to the surface of the flange of the can end to be lined, thence covering the said sized surface with a powdered fiber lining material, rotating the can end on its axis during the applying of the liquid and then during the applying of said powdered material, and finally subjecting the can end so lined to the application of heat for the drying of the sizing liquid to leave deposited on the flange of the said end a built-up gasket liner.

1,463,520. RAILWAY-CROSSING GATE. JAMES B. VANDIVIER, Franklin, and GEORGE R. HUNT, Terre Haute, Ind. Filed Oct. 28, 1921. Serial No. 511,160. 6 Claims. (Cl. 39—60.)

1. A railway crossing gate including a gate arm pivotally supported to freely move to and rest in horizontal position, a toothed wheel and a pulley arranged together to independently turn on one and the same axis, a dog pivotally mounted on the pulley to engage and move the toothed wheel in one direction, means for gearing the toothed wheel with the gate arm, a weight element connected with the pulley to turn it in one direction, means connected with the pulley to turn it in the opposite direction, and means for automatically controlling pivotal movement of the dog.

- 1,463,521. CHECK-CONTROLLED MECHANISM. HARRY M. WALKER, Grayburg, Tex. Filed Aug. 6, 1921. Serial No. 490,238. 5 Claims. (Cl. 194-60.)

1. In combination with a member supported for movement in opposite directions, a dog pivotally supported adjacent to said member and provided with two arms, one of said arms engaging the member to hold the same against movement in one direction when the second arm is free of the member, the second arm engaging the member to hold the same against movement in the opposite direction when the first named arm is free of the member, check controlled means for swinging the dog in one direction, a spring arm carried by the dog and extending toward the member, an element carried by the member and contacting with the arm of the dog upon movement of the member in one direction for swinging the dog in one direction, and means for moving the member.

- 1,463,522. SPIDER FOR COTTON CLEANERS. FRENCH B. WILLIAMS, Lufkin, Tex. Filed Aug. 23, 1922. Serial No. 583,893. 1 Claim. (Cl. 19-97.)

A spider of the character described comprising a hub, webs radiating from the hub and disposed at an angle thereto, and with relation to each other, an arm supported by one edge of said web, with the latter merging into the arm adjacent the outer end thereof, the corresponding inner extremities of said arms terminating in spaced relation to the hub and supported at the point of juncture between the adjacent webs.

- 1,463,523. LIGHTNING PROTECTION APPARATUS FOR OIL TANKS. KINCHEN A. WYATT, Dallas, Tex. Filed May 24, 1921. Serial No. 472,296. 4 Claims. (Cl. 175-30.)

1. Means for the protection of oil tanks against lightning consisting in combination with a battery of tanks, of high tension lines disposed on opposite sides of the battery, transverse conductors interconnecting corre-

sponding sides of the high tension lines between individual tanks and at the ends of the battery, grounding

conductors, and lightning arresters interposed between the grounded conductors and both sides of the high tension line.

- 1,463,524. HEADLIGHT. WILLIAM F. DORAN, Philadelphia, Pa. Filed July 29, 1921. Serial No. 488,335. 3 Claims. (Cl. 240-41.)

1. As an article of manufacture, a rim adapted to replace the ordinary rim of a headlight, a smaller rim formed integral therewith, and means associated with and carried entirely by said smaller rim for forming therewith a complete unitary supplemental headlight lamp.

- 1,463,525. HEADLIGHT. WILLIAM F. DORAN, Philadelphia, Pa. Filed Feb. 21, 1922. Serial No. 538,316. 6 Claims. (Cl. 240-41.)

1. As an article of manufacture, a rim adapted to replace the ordinary rim of a headlight, a small head-

light casing formed integral with said rim and arranged outside it with its walls merging into the rim, end walls for said casing, and a lens in one of said end walls.

1,463,526. MECHANICAL COOKER. CHARLES H. FULSON, Trenton, Tenn., assignor to Buckeye Iron and Brass Works, Dayton, Ohio. Filed Feb. 25, 1921. Serial No. 447,738. 5 Claims. (Cl. 87—6.)

1. In a cooker, a kettle, means of supplying material to said kettle, means to control the supply of said material in said kettle, means of actuating said controlling means at predetermined intervals, means for permitting the controlling means to close when the meal has reached a predetermined height in said kettle, and positive means for effecting the closure of said controlling means independent of the actuating means, whereby a cooker may be filled with material.

1,463,527. CAN FEEDING AND TIMING DEVICE. HENRY L. GUENTHER, Los Angeles, Calif. Filed July 25, 1922. Serial No. 577,333. 15 Claims. (Cl. 198—22.)

1. The combination of two can carrying devices which respectively transport cans at a slow speed and at a faster speed, and an intermediate can timing and feeding device for transferring the cans from the slower carrier to the faster carrier, said feeding devices having yieldably cushioning means at the limit of their inward movement for spacing the cans and movable outwardly beyond the cushioning means for thereafter positively feeding the cans at a uniform speed of acceleration.

1,463,528. DEVICE FOR AND METHOD OF THE MANUFACTURE OF PROTECTED INNER TUBES FOR TIRES. ALBERT ENNIS HENDERSON, Toronto, Ontario, Canada. Filed Dec. 26, 1916. Serial No. 139,007. 11 Claims. (Cl. 154—5.)

1. A device of the character described, comprising a template adapted to be laid upon a sheet of rubber, slots being provided in the template for the insertion of fabric to contact the surface of the rubber, and means for forming the rubber and fabric into a tube.

1,463,529. DEVICE FOR THE MANUFACTURE OF PNEUMATIC TUBES. ALBERT ENNIS HENDERSON, Toronto, Ontario, Canada. Filed Jan. 27, 1917. Serial No. 144,910. 2 Claims. (Cl. 154—5.)

1. A device of the character described comprising a template provided with diagonal slots adapted to position fabric strips in oppositely disposed formation within the body of the tube.

1,463,530. SPARK INTENSIFIER. ARTHUR A. HUTCHISON, Harrisburg, Pa. Filed Dec. 31, 1921. Serial No. 526,275. 2 Claims. (Cl. 175—183.)

1. A spark intensifier comprising a substantially diamond shaped body formed of superimposed layers of insulating material and comprising a base plate, plates positioned upon the base plate and having centrally arranged registering openings therein to provide a sparking chamber, substantially triangular shaped conductor plates positioned between the insulating plates, spurs extending from one edge of each of the conductor plates and projecting into the sparking chamber to provide a spark gap, combined assembling and terminal eyelets extending through the insulating plates and conductor plates and a transparent cover for the sparking chamber.

1,463,531. SHOE ORNAMENT. GEORGE COLVIN KENNEDY, Waterloo, Iowa. Filed May 9, 1921. Serial No. 468,188. 4 Claims. (Cl. 41—10.)

2. An ornamental device, comprising ornamental objects mounted on opposite sides of a shoe, and a flexible strip crossing the shoe vamp with its ends releasably attached to said objects.

1,463,532. AUTOMATIC AIR VALVE FOR INTERNAL-COMBUSTION ENGINES. WILLIAM F. KRICHBAUM, Irvington, N. J. Filed Dec. 18, 1919. Serial No. 345,857. 3 Claims. (Cl. 123—124.)

1. In a device of the character described, the combination of a casing adapted to be attached to an internal combustion engine and having a valve chamber therein

opening through one end thereof, said valve chamber being adapted to communicate with the atmosphere and said engine, a valve reciprocable in said chamber and controlling communication therethrough, said valve pro-

jecting from the open end of said chamber, and a vane pivoted upon the exterior of said casing and connected to said projecting end of the valve, said vane being actuated by air currents to reciprocate said valve.

1,463,533. GOLF CLUB. CHRISTIAN A. KURZ, Jr., Dayton, Ohio. Filed July 2, 1919. Serial No. 308,095. 9 Claims. (Cl. 46—4.)

1. A wooden golf club head and an insert of phenolic condensation material molded in situ in the striking face of the club head.

1,463,534. FLUID-REGISTERING MECHANISM. CHARLES F. MACGILL, Cambridge, Mass. Filed Aug. 16, 1921. Serial No. 492,819. 1 Claim. (Cl. 235—94.)

In a registering and indicating device for liquids, the combination with a liquid container, of a float-controlled rotary shaft extending into said container, a stationary

dial above said container, an index hand carried by said shaft and movable over said dial to indicate the amount of liquid in the container at all times, a hub loosely surrounding said shaft and provided with a ratchet wheel, a second index hand carried by said hub and also movable over said dial, a spiral spring connected with said hub, a spring-pressed stop to hold said ratchet wheel and said second index hand stationary to indicate the amount of liquid in the container before a filling operation and while said first-named index hand is moved to indicate the amount of liquid supplied to said container at a filling operation, said spring, when said stop is released, served to move said second index hand to a position coinciding with the position of said first-named index hand, and means whereby said first-named index hand will move said second index hand with it against the stress of said spiral spring as liquid is withdrawn from said container.

1,463,535. TYPEWRITING MACHINE. EDWIN A. PETERSON, Madison, Wis., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 20, 1922. Serial No. 562,274. 6 Claims. (Cl. 197—139.)

1. In a typewriting machine, in combination, a rod fixed upon and extending transversely of the machine, a paper-engaging device mounted to be swung upon the rod to or from effective position, and also slidable along the rod for adjusting said device to different positions transversely of the machine, said rod being cut away longitudinally thereof to provide a holding-portion, and a spring-pressed detent carried by said device to be pressed against said holding-portion of the rod for yieldingly holding said device at its effective position, said rod also being cut away longitudinally thereof to provide a relief-portion to receive said spring-pressed detent for relieving the pressure of said detent against the rod when said device is swung to ineffective position, so that said device may slide freely along the rod to different positions of adjustment transversely of the machine.

1,463,536. NONSPASH BOTTLE OPENER. JOSEPH ODILON REMILLARD, Montreal, Quebec, Canada, assignor of one-third to Alphonsus Gorman and one-third to John Alexander Hugh Cameron, both of Montreal, Canada. Filed June 14, 1922. Serial No. 568,344. 2 Claims. (Cl. 65—47.)

1. In a bottle disk remover, the combination of a pointed cap-like member having an open end, an aperture at the base of the opening, a handle comprising a pin

adapted to seat in the cap opening and a finger hold attached to said pin, a flexible waterproof cord passing through the apertures at the base of the cap opening and connecting said cap with said pin member, all substantially as set forth.

1,463,537. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 5, 1921. Serial No. 489,990. 27 Claims. (Cl. 199—126.)

1. In combination, a typewriter-frame, a platen, a platen-carriage mounted to travel on said frame, said carriage comprising a platen-lifting frame, a carbon-carrier, a web-table or carbon-carrier-track having, for the purpose specified, its forward end elevated above the platen, and being inclined forwardly and downwardly to enable webs extending through said carbon-carrier and between the elevated platen and the web-table to be straightened sufficiently to permit retraction by the carbon-carrier of carbon-sheets attached thereto, means to support the rear end of the track to permit its front end to be swung upwardly and rearwardly, comprising a rail and rail-supporting brackets secured to the typewriter-frame at its back, and means on the carriage on which the forward end of the track rests when the carbon-carrier-track is in lowered position.

1,463,538. LIFTING TRUCK. JOSEPH G. TANGAU, Holyoke, Mass. Filed May 24, 1920. Serial No. 383,880. 3 Claims. (Cl. 254—10.)

1. A lifting truck comprising a wheeled body, a crank arm pivoted to the rear end of said body, a crank arm pivoted to the forward end of said body, an operating rod pivotally connected with said crank arms and holding said crank arms in parallel relation to each other, a draft pole pivoted on said body, a link having sliding connection with said draft pole and operating connection with said operating rod, and a platform supported by said crank arms and shiftable vertically on said body when said crank arms are shifted.

1,463,539. PHARMACEUTICAL PREPARATION. CHARLES G. WOLFE, Mount Vernon, Ohio. Filed Mar. 8, 1922. Serial No. 542,111. 4 Claims. (Cl. 167—10.)

1. A pharmaceutical preparation for treating the disease of fowls known as enterohepatitis consisting of calomel and rhubarb in approximately equal proportions, together with a small percentage of charcoal.

4. A pharmaceutical preparation for treating the disease of fowls known as enterohepatitis consisting of ap-

proximately equal proportions of powdered calomel and rhubarb mixed with powdered charcoal, in the proportions of about one part of charcoal to ten parts of each of the other two ingredients.

1,463,540. TEA TABLE. LORETO ALONZI, Chicago, Ill. Filed Jan. 8, 1923. Serial No. 611,245. 5 Claims. (Cl. 45—17.)

2. In a table, the combination with the legs, apertured frame and top of a disappearing handle adapted for sliding movement in a horizontal plane comprising a pull and side pieces projecting through the apertures in said frame, guide pieces secured to the inside surface of said frames, and a spring for retracting said parts.

1,463,541. HANDLE FOR TOASTERS AND THE LIKE. CHARLES ANDREWS, Jr., Rockford, Ill., assignor, by mesne assignments, to The Washburn Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 10, 1921. Serial No. 499,685. 6 Claims. (Cl. 53—5.)

1. The combination of an article having an inner and an outer wall, a handle formed of a single piece of wire bent upon itself providing spaced handle members, said inner and outer walls having registering holes for the reception of said handle members whereby the handle may be slid lengthwise in said holes to and from an inner and an outer position, the inner ends of said side members being diverged inwardly and each having a notch in its outer side, said diverging ends adapted to bear against the holes in the inner wall with increasing pressure when the handle is moved to its outer position and said notches adapted to engage in connection with the inner wall for holding the handle in said outer position.

1,463,542. METHOD AND APPARATUS FOR FINISHING LEATHER. ARNOLD A. ANGELL, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 510,010. 20 Claims. (Cl. 91—41.)

1. A combined apparatus for coating leather completely, comprising mechanical coating means, a conveyor arranged to take an article from said coating means and

carry it in horizontal position past an operator, where the coating can be perfected manually, and means for partially drying the article while still in horizontal position.

6. The method of coating leather, which comprises, in combination, applying a coating mechanically, laying the material flat so that the coating will not run, and drying the material while it remains in flat horizontal position.

12. In a leather finishing machine, in combination, coat-

ing means, an endless conveyor comprising a flat web arranged to receive an article from said coating means, means for blowing hot air on the article on the conveyor to dry it, said blowing means overlying the delivery end of said conveyor only, the remainder of said conveyor being open to permit manual operation on the article and a flat support for said web for supporting said remainder to permit hand swabbing of the articles before they reach the blowing means.

1,463,543. CONDIMENT HOLDER. GUSTAV A. BAEDER, Chicago, Ill. Filed July 31, 1922. Serial No. 578,701. 1 Claim. (Cl. 65-45.)

A device of the character described comprising a body portion having a pair of separate chambers therein, threaded inclined nipples communicating therewith, perforated shaker caps threaded on said nipples, a threaded tubular member projecting upwardly from said body portion, a perforated article gripping member of elastic material mounted thereon, and a flanged ring secured to said tubular member for clamping said elastic member against the end of said tubular member.

1,463,544. CYLINDER PAPER-MAKING MACHINE. GEORGE L. BIDWELL, Riegelsville, Pa. Filed June 23, 1922. Serial No. 570,490. 32 Claims. (Cl. 92-43.)

1. In a cylinder paper-making machine, mechanical means to produce a forced feed from the flow box to the vat, and gravity-return means from said vat to said box.

12. In a cylinder paper-making machine, a flow box, a

cylinder mold, and means to discharge by gravity the suction water from the inside of said mold into said flow box, the latter being located below the level of the discharge.

1,463,545. CUTTING MECHANISM. EDWARD CHESHIRE, Berlin Township, Waukesha County, Wis. Filed Jan. 21, 1921. Serial No. 438,813. 48 Claims. (Cl. 29-69.)

1. In a device of the class described, clamping means for retaining in place material to be treated, said clamping means including relatively movable members having interlocking portions, wedge means for forcing said interlocking portions into operative association, and means for moving said interlocking members out of operative association when released by said wedge means.

1,463,546. LIGHT REFLECTOR. CLIFFORD M. COLE, Los Angeles, Calif. Filed Sept. 28, 1920. Serial No. 413,420. 2 Claims. (Cl. 240-2.)

1. A construction wherein one or more indicators are mounted upon the cowl board of a motor vehicle outside the normal field of illumination of a source of illumination, likewise mounted upon the cowl board, characterized by a miniature reflector adjustably mounted upon the cowl board in position to intercept rays of light from the source of illumination and redirect them onto one of said indicators, and a universal mounting for the reflector by which it may be adjusted to illuminate the face of a desired indicator without causing glare objectionable to an observer within the vehicle.

1,463,547. STEAM SUPERHEATER. ALFRED COTTON, St. Louis, Mo., assignor to Heine Boiler Company, St. Louis, Mo., a Corporation of Missouri. Filed June 6, 1921. Serial No. 475,333. 16 Claims. (Cl. 122-478.)

3. A water tube boiler provided with an upright superheater chamber arranged so that gases from the combustion chamber of the boiler will enter the upper end of same, circulate downwardly through said superheater chamber and then return to the combustion chamber, a

superheater in said superheater chamber, and water tubes in said superheater chamber that form part of the heating surface of the boiler and which cause the gases that enter

said chamber to rapidly cool, contract and become of much greater density than the hot gases of the combustion chamber.

1,463,548. METALLIC DENTURE BACKING. ROBERT M. CRAIG, Wilksburg, Pa. Filed June 27, 1919. Serial No. 307,104. 5 Claims. (Cl. 32-9.)

1. A metallic denture backing comprising a single piece of pressed sheet metal of uniform thickness in parallel planes but of greater thickness at its opposite edges than intermediate thereof, and having a bendable locking flange intermediate of said edges.

1,463,549. WHEEL RIM. EDWARD DETTELBEACH, Cleveland, Ohio. Filed Oct. 15, 1920. Serial No. 417,195. 6 Claims. (Cl. 152-36.)

2. A rim for a vehicle wheel composed of inner and outer members, the inner member adapted to be fitted onto a wheel and having a web and a flanged outer portion, said outer member forming an enclosure composed of outer, side and inner portions which receive the flanged outer portion of the inner member, and cushioning means upon the outer side of the flanged outer portion of the inner member and enclosed by said outer member.

1,463,550. LOADING MACHINE. ROBERT P. GREENLEAF, Cleveland, Ohio, assignor to Frank Billings. Filed Jan. 17, 1917. Serial No. 142,789. 9 Claims. (Cl. 214-132.)

1. In a loading machine, a frame, a shovel, and means for causing the shovel to be positively and substantially

continuously moved through a fixed cycle of predetermined filling and dumping movements including a filling movement at the front of the frame and a movement of trans-

lation back toward and over the machine to discharge the material at the rear of the machine and a return movement to the front of the machine for the start of the next succeeding cycle.

1,463,551. SWITCH. VIRGIL S. HARDEY, Chicago, Ill. Filed Apr. 3, 1922. Serial No. 549,217. 10 Claims. (Cl. 200-67.)

1. In a switch for inching a meter, switch mechanism, a projecting finger piece shaped and positioned to be grasped between the thumb and forefinger of the hand and actuated thereby to operate said switch mechanism, and a casing enclosing the switch mechanism to extend through and be gripped in the palm of the hand with said finger piece grasped between the thumb and forefinger.

1,463,552. SHOCK ABSORBER. WILLIS E. HARMON, Worcester, Mass. Filed Dec. 27, 1921. Serial No. 525,041. 7 Claims. (Cl. 188-88.)

1. A shock absorber comprising; a fluid holding cylinder, means including an inner cylinder with a hollow piston therein adapted to transmit motion thereto from an external source and allow the fluid to flow freely through the inner cylinder when it is moved in one direction and retard fluid passing when moved in the opposite direc-

tion and means automatically acted upon prolonged fluid pressure to restrict the equalization of fluid pressure on both sides of the inner cylinder in proportion to said fluid pressure.

1,463,553. BELT. LURA A. LASATER, Houston, Tex. Filed Feb. 13, 1922. Serial No. 536,197. 1 Claim. (Cl. 2-142.)

A belt for skirts and the like including a comparatively narrow front section, and a rear section, said sections being secured together permanently at one end, interengaging means carried by the other end of said sections for releasably securing the belt around the body of the wearer, an elastic section belt on each side, said rear section being widened downwardly from end to end forming a supporting wing, which extends entirely around the back of the wearer and flared outwardly at its lower edge and forms a rear support for the skirt.

1,463,554. MOUNTING FOR STEMS OF CRYSTAL DETECTORS. ALEXANDER N. PIERMAN, Newark, N. J. Filed Feb. 4, 1922. Serial No. 534,180. 5 Claims. (Cl. 250-31.)

1. A mounting for stems of crystal detectors comprising a support with an opening therein, and a stem passing through the opening, the support having the opening through which the stem passes provided with substantially flat means for frictionally engaging the stem to hold it in various angular positions and also allow the rotation thereof.

1,463,555. YOKE-KEY SUPPORT. EDWARD POSSON, Chicago, Ill. Filed May 13, 1922. Serial No. 560,534. 3 Claims. (Cl. 23-70.)

1. In railway draft mechanism, the combination of a yoke, a coupler, a vertical key for connecting said yoke and coupler, said yoke having projections with laterally ex-

tending pocket portions, and a support for said vertical key releasably retained in said pocket portions, one of said projections having an opening through which said support may be passed into said pocket portions only when an end of said support is in a given angular position with respect to said opening.

1,463,556. AERONAUTICAL PROPELLER. SYLVANUS ALBERT REED, New York, N. Y. Filed May 26, 1920. Serial No. 384,293. 19 Claims. (Cl. 170-151.)

1. An aeronautical propeller having single piece blades constructed of material of such thinness as to require dependence partly but mainly upon the radial tension exerted by centrifugal force to maintain the blades in operative form or shape.

1,463,557. FIXTURE FOR BRAKE RODS. IRVING C. SHUSTER, Newark, N. J. Filed July 29, 1921. Serial No. 488,267. 4 Claims. (Cl. 188-196.)

3. A brake rod fixture comprising a clip having an open-ended barrel portion having means thereon for pivotally securing it to a brake lever, said pivot being out of line with the axis of the barrel, a brake rod slidably freely through the barrel, and means for adjustably securing the rod in the barrel.

1,463,558. FREIGHT-TANSFERRING SYSTEM. RICHARD C. SIBLEY, Boston, Mass. Filed Jan. 6, 1921. Serial No. 435,308. 18 Claims. (Cl. 104-29.)

1. In a freight-transferring system, in combination, a water-course, adapted to receive a floating vessel, a freight-receiving area, such as a warehouse floor or a freight yard, elevated above the high-water level in the water-course, and communicating with the latter, a vertical well communicating with the water-course and with the freight-receiving area and extending upwardly from below the low-water level in the water-course, and freight-hoisting means in said well, the arrangement being such that a vessel may be located in the water-course in cooperative relation with said well and hoisting means, to permit the elevation of freight taken from the vessel to the level of said area.

1,463,559. SECTIONAL ELECTRIC FURNACE. EDWIN L. SMALLEY, East Orange, N. J. Filed Aug. 6, 1920. Serial No. 401,718. 3 Claims. (Cl. 204—64.)

1. In an electrical furnace, in combination, a plurality of longitudinal furnace sections, composed of non-magnetic material, adapted for removable, endwise engagement, to permit variations in the furnace length, a resistor element common to the sections of the furnace, and individual traction means for the sections.

1,463,560. RAIL SWITCH. OWEN P. SMITH, Chicago, Ill. Filed July 5, 1922. Serial No. 572,983. 1 Claim. (Cl. 246—445.)

In a railway switch, the combination of main line and branch line rails, a pivoted section interposed at the junction of the rails and movable into alignment with either the main or branch line rails, a plate beneath tracks supporting the ends of the rails, guides on the plate at opposite sides of the rails, and an arcuate plate secured to the base of the pivoted section and slidable within the guides, the said guides acting as stops to insure proper alignment of the pivoted section with the rails.

1,463,561. TILE-PLACING ATTACHMENT FOR DITCHING MACHINES. JOHN SOMMER, Peoria, Ill. Filed June 21, 1920. Serial No. 390,471. 19 Claims. (Cl. 111—5.)

1. In a machine of the character described, in combination, power means for digging a ditch, movable means for supporting tile sections, means for utilizing

the power of the digging machine to push the tile sections into place, and other means for returning said pushing means to tile receiving position.

1,463,562. OFFSET PRINTING PRESS. BURT D. STEVENS, Evanston, and CARL HENDERSON and WILLIAM SAXON, Oak Park, Ill., assignors to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 4, 1917. Serial No. 166,504. 4 Claims. (Cl. 101—144.)

1. In a printing press, in combination, printing means, a normal delivery for the completed work at the feeder end of the press, inking mechanism at the opposite end of the press, and auxiliary delivery means for delivering inspection sheets at that end of the press at which the inking mechanism is located, whereby the operator may have ready access to both the auxiliary inspection sheet delivery means and the inking mechanism.

1,463,563. FIRELESS STOVE. GEORGE A. TAYLOR, Muncie, Ind. Filed Feb. 19, 1920. Serial No. 359,828. 5 Claims. (Cl. 220—9.)

1. A fireless stove, comprising a box-shaped body, a top plate, a tubular sleeve extending upwardly from the bottom plate to the underside of the top plate, a sheet metal disk electrically insulated, to fit in and slightly above the bottom of the said tubular sleeve, a fireproof insulation between the disk and the bottom plate of the body, heat insulating material surrounding the tubular sleeve, packing material stuffed between the insulating material and the body, a cylindrical container inside and of diameter less than that of the tubular sleeve and having its upper rim opening through the said top plate, and a closure plate for the said opening.

1,463,564. CLAMP. JAMES L. TAYLOR, Poughkeepsie, N. Y., assignor to James L. Taylor Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Apr. 1, 1918. Serial No. 226,016. 8 Claims. (Cl. 144—298.)

1. In a clamp of the character described, the combination of a bar having a laterally projecting head apertured transversely of the plane of said bar and head, and an arm pivoted in the aperture of said head and having its swinging limited thereby to positions in which said arm is always operative to engage with a cam action the side wall of a space into which the clamp is thrust and anchor the clamp.

1,463,565. PIN-FORMING AND BUTTON-PINNING MACHINE. JULES G. WEGMAN, Rochester, N. Y. Filed June 16, 1919. Serial No. 304,596. 17 Claims. (Cl. 79—3.)

1. In a button pinning machine, the combination of means for feeding buttons, means for feeding pins, means for bending a portion of each pin to conform to the shape of the button and means for bringing the button and pin together and inserting the bent portion of the pin within the button.

1,463,566. UNDERDRILLING BIT. EDWIN J. AKINS, Moundsville, W. Va. Filed Mar. 13, 1922. Serial No. 543,196. 3 Claims. (Cl. 255—73.)

1. An under-drilling tool consisting of a bit having in opposite sides thereof longitudinal channels defining a central web, said web being located intermediate a drill portion which has an approximately cylindrical

form and an irregular shaped opposite edge portion of said bit, said irregular portion having the lower end thereof extended outward and constituting a projecting

horn presenting a downwardly facing shoulder, and said drill portion being prolonged below said horn to form a center-finding pilot.

1,463,567. PASTEBOARD-BOX-MAKING MACHINE. ALBERT A. ARNOLD, Oak Park, Ill. Filed June 11, 1919. Serial No. 303,376. 11 Claims. (Cl. 93—41.)

1. In a box-making machine of the character described, the combination of a plurality of corner-forms stationary during the operation of the machine, means to simultaneously apply corner-staying strips to wings of a flat pasteboard box blank while the latter is in register with said forms leaving projecting tabs of such strips, means to simultaneously bend said wings about said forms to constitute the side-walls of the box, and means to simultaneously bend said tabs about the corners of the box and affix them in place, substantially as described.

1,463,568. FLEXIBLE MOTOR SUPPORT. WILLIAM I. BALLENTINE, Laporte, Ind., assignor to Advance-Rumely Company, a Corporation of Indiana. Filed Apr. 12, 1922. Serial No. 552,025. 13 Claims. (Cl. 186—64.)

1. In combination a transmission case and an engine supported therefrom and connected thereto by a plurality of connections, one of said connections being piv-

gear, the center of the pivotal support being slightly to one side of a straight line drawn between the centers of the two gears.

gear, the center of the pivotal support being slightly to one side of a straight line drawn between the centers of the two gears.

1,463,569. UNITARY TRANSMISSION AND PUMP FOR MOTOR-DRIVEN FIRE ENGINES. CHARLES E. BATHRICK, South Bend, Ind., assignor to South Bend Motors Company, South Bend, Ind. Filed Dec. 3, 1919. Serial No. 342,233. 4 Claims. (Cl. 169—24.)

1. In a transmission and pump assembly supported by the side rails of the motor driven vehicle frame, the combination of a transmission casing longitudinally disposed and having a transmission therein, said transmission casing being disposed below the pump casing and rails of the frame and entirely supported by the rails of the frame, said pump casing having upwardly and outwardly extending transversely disposed intake pipes, said intake pipes being disposed on the side rails of the motor driven vehicle and entirely supporting the pump casing and the transmission casing.

1,463,570. STOPPER FOR BOTTLES AND THE LIKE. HERBERT J. BRAGDON, Alton, Ill., assignor to The Chicago Stopper Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1919. Serial No. 328,407. 25 Claims. (Cl. 215—40.)

1. As a new article of manufacture, a container-stopper including, in combination, a circumferentially contractible body comprising a strip of material wound upon itself to a normal circumferential dimension, the

outer end of the strip being fixed from unwinding and inner windings of the strip being loose one from the

other, and means having connection with the strip for additionally winding the same to contractingly reduce the normal circumferential dimension of the body.

1,463,571. FOLDING SWING. GEORGE W. BRAMB, St. Louis, Mo. Filed Dec. 9, 1922. Serial No. 605,807. 2 Claims. (Cl. 155—58.)

1. The combination of a plurality of folding side supporting-standards which are pivoted together in pairs and sectioned about the center of their length; hinges secured to said sections; steel plates that are removably fastened to the said sections, to prevent the latter from folding when in use; top cross-bars; suitable L-shaped brackets secured to the opposite ends of said top cross-bars; braces having one of their ends pivotally and detachably mounted upon the upper portion of the said top cross-bars, and braces having their upper ends pivotally mounted in common screw-eyes, and having provided at their lower ends hooks adapted to engage common screw-eyes located adjacent the upper ends of said folding side supporting-standards.

1,463,572. BOLT. GEORGE E. CARTER, Circleville, Ohio. Filed Oct. 17, 1919. Serial No. 331,258. 1 Claim. (Cl. 151—5.)

As a new article of manufacture, a bolt including a threaded shank, said shank having its extreme outer end provided with a chamber extending longitudinally into said shank, said chamber being of sufficient size to produce a relatively thin circumferential wall upon the

end of the bolt, and said wall having a plurality of radially disposed circumferentially spaced openings formed therein and in registration with each other, the axes of said openings being substantially at right angles to the longitudinal axis of the bolt.

1,463,573. KNIFE. TINT CHAMPLIN, Little Valley, N. Y. Filed June 17, 1922. Serial No. 569,160. 4 Claims. (Cl. 7—11.)

1. A knife having a handle, a magnetized blade pivoted at one end thereof, a magnetized spring bearing against said blade fixed in said handle, and a compass embedded in said handle between said blade and said spring.

1,463,574. VEHICLE SUSPENSION. FREDERICK E. CLEMONS, Indianapolis, Ind. Filed Aug. 19, 1921. Serial No. 493,709. 7 Claims. (Cl. 267—60.)

1. In a vehicle, the combination with an axle, and a relatively rigid vehicle framework, of a plurality of radially extending yielding constructions connected to said axle at their inner ends for peripheral cushioning of the axle, and yoke means rigidly secured to said framework and connecting the outer ends of said constructions to said framework.

1,463,575. MOLD AND PROCESS FOR FORMING ARTICLES FROM PULP OR OTHER PLASTIC MATERIAL. SIMON COOPER, Brooklyn, N. Y., assignor to Vacuum Pulp Products Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 22, 1917, Serial No. 187,541. Renewed Dec. 29, 1922. 11 Claims. (Cl. 92—54.)

1. The process of forming articles from pulp material which comprises forcing the material into the mouth of a hollow-opened, porous mold while the mold is in an inverted position and then further forcing material into the mold with the mold positioned right side up.

1,463,576. COOKER ATTACHMENT FOR AUTOMOBILE RADIATORS. CHARLES M. DALY, East Elmhurst, N. Y. Filed Sept. 21, 1922. Serial No. 589,602. 5 Claims. (Cl. 126—20.)

3. In combination an automobile radiator, a filling neck, a vessel having a perforated bottom, a tubular member surrounding the perforations and fastened to the vessel, and means for rigidly fastening the member to the neck.

1,463,577. TIMING MECHANISM FOR BOILER SKIMMERS. FREDRICK EISERMAN, WILLIAM EISERMAN, and HERMAN EISERMAN, Cleveland, Ohio. Filed Sept. 6, 1921. Serial No. 498,943. 8 Claims. (Cl. 161—7.)

1. In a timing mechanism for valves, the combination of an electric motor, a controlling wheel driven thereby and operatively connected to the valve, a clock mechanism controlling the motor circuit, and means automatically actuated by the rotation of the wheel to control the operation of the clock mechanism.

1,463,578. MEASURING DEVICE FOR COLLAPSIBLE TUBES. FRANK L. DYER, Montclair, N. J. Filed Jan. 8, 1921. Serial No. 435,972. 5 Claims. (Cl. 221—60.)

1. A measuring device for attachment to a collapsible tube comprising a tubular body which screws upon the

neck of the tube, a tube rotatably mounted on said tubular body and having a discharge opening, and a plunger in the rotatable tube, substantially as set forth.

1,463,579. EASY-LACING DEVICE. LOUIS FUNCK, Bronxville, N. Y. Filed Oct. 20, 1922. Serial No. 595,740. 5 Claims. (Cl. 24-149.)

1. In devices for lacing together adjoining edges of leather or similar material, the combination of additional strips adjacent said edges, eyelets along said edges and strips, short cylindrical bearings in the eyelets, having flanges against the inside of said leather edges and strips, loose collars between said flanges, buttons removably mounted on the outside of the bearings to cover the eyelets, and means to hold the bearings in place.

1,463,580. APPARATUS FOR TESTING THE CONTOURS OF GEAR TEETH. CLARENCE J. HARTER, Syracuse, N. Y. Filed Sept. 20, 1921. Serial No. 501,873. 8 Claims. (Cl. 33-172.)

7. In an apparatus for testing the accuracy of form and position of the teeth of gears and analogous objects, the combination of means for supporting said object with the tooth to be tested in a certain position, a test block in fixed relation to the position of the tooth under test, and an indicator having a movable contact member, said indicator being movable to bring its contact member first into engagement with the test block and then into engagement with the part of the tooth to be tested.

1,463,581. AUTOMOBILE BUMPER. CHARLES H. HATHAWAY, West Allis, and WILLIAM A. STARCK, Milwaukee, Wis., assignors to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 23, 1921. Serial No. 494,647. 2 Claims. (Cl. 293-55.)

2. A bumper for attachment to an automobile frame having a traverse end bar, having, in combination, L shaped supporting brackets, each having an arm abutting the front of the transverse frame bar and the other arm projecting forwardly therefrom, means comprising U bolts and clamping plates for rigidly fastening the L shaped brackets to the frame end bar, a transverse impact bar provided with rearwardly extending supporting arms having the free ends thereof positioned adjacent the projecting arms of the L shaped brackets, a U shaped reen-

forcing bar rigidly fastened at its base to the transverse impact bar and having its free ends positioned on the other side of the free arms of the L shaped bracket, and

means extending through the free ends of the L shaped impact supporting arms, bracket arm and reinforcing bar and rigidly fastening the same together.

1,463,582. DRAWING GLASS SHEETS. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor of one-half to Hitchcock Experiment Company, a Corporation of New Jersey. Filed Dec. 23, 1919. Serial No. 346,845. 14 Claims. (Cl. 49-17.)

14. The process of drawing a glass sheet which consists in chilling a body of glass between the laterally extending walls of a pair of slot members, lying one above the other, in a melted bath of glass, anchoring the base of the glass sheet to said chilled body of glass, and drawing the sheet through the slot of the upper slot member, such upper slot member being of metal and acting as a die, and the lower slot member being of clay.

1,463,583. COMBINED BLAST AND SUCTION SWEEPER. CHARLES P. HOLLERAN, Chicago, Ill. Filed July 26, 1920. Serial No. 399,071. 6 Claims. (Cl. 15-14.)

1. A pneumatic sweeper for sweeping the space underneath an article of furniture, comprising a suction head, a blast nozzle spaced a substantial distance from said suction head, sufficient to receive the article of furniture between them, said blast nozzle being directed toward said suction head, whereby the dirt underneath said article of furniture may be blown toward said suction head by said blast nozzle and sucked up by said suction head.

1,463,584. HAY SWEEP. LOUIS J. JENSON, Fort Collins, Colo. Filed July 15, 1921. Serial No. 484,928. 7 Claims. (Cl. 15—252.)

1. In a hay sweep cleaner a rack adapted to ride on the tines of a hay sweep, a rearward extension therefrom, ground contacting elements secured thereto, a support adapted normally to hold said elements out of contact with the ground, a horizontal member along which said support rides in a path parallel with the normal path of travel of the sweep, yielding means for keeping said member normally in a raised position, means in opposition to said yielding means for depressing said support, and means for keeping it in a depressed position during a predetermined rearward travel of the hay sweep.

1,463,585. DISPLAY CARD. CHARLES B. KELLOGG, Chicago, Ill. Filed Aug. 10, 1922. Serial No. 581,013. 4 Claims. (Cl. 40—126.)

1. A display card made from a single blank, comprising a front member having top, front and side sections, a back member, a section intermediate the top of the front member and the back member adapted to be folded to lie parallel to the back member, and means for frictionally holding the front member in locked relation to the back member.

1,463,586. INTERNAL-COMBUSTION ENGINE. VICTOR W. KLIESRATH, East Orange, N. J., assignor of one-half to Caleb S. Bragg, Cincinnati, Ohio. Filed Aug. 30, 1919. Serial No. 320,806. 21 Claims. (Cl. 123—25.)

1. In an internal combustion engine provided with a cylinder and piston, and charge supplying and ignition mechanism, means independent of the normal charge sup-

plying mechanism for introducing into the cylinder at a point in the cycle of the engine between the instant of ignition of a normal charge and the end of the piston stroke effected thereby, a quantity of material capable of absorbing heat from the ignited charge, and increasing the pressure thereof, including adjustable means for varying the timing of the admission of said material with respect to the piston between its inner and outer positions, whereby the timing of the admission of said material may be advanced or retarded with respect to the power stroke of the piston.

1,463,587. BOILER-TUBE CLEANER. ALBERT F. KRAUSE, Buffalo, N. Y., assignor to General Specialty Company, Buffalo, N. Y., a Copartnership. Filed Mar. 18, 1921. Serial No. 453,311. 9 Claims. (Cl. 15—104.13.)

1. A boiler tube cleaner, comprising a rotatable head, a cutter, a member carrying the cutter and movably mounted on said head, said carrying member extending across and on opposite sides of the head, and controlling means for causing said carrying member to move in the direction of its length on the rebound of the cutter.

1,463,588. DEMOUNTABLE WHEEL RIM. KARL I. NUTTER, Martinsville, Ind. Filed June 4, 1921. Serial No. 474,913. 7 Claims. (Cl. 301—17.)

1. A vehicle wheel including a wheel felly having a recess in its inner portion, a gear case having a base member arranged in the recess and two side plates secured to opposite sides respectively of the felly, the case having also a cap secured to said plates, the base member having a journal bearing that extends to the periphery of the felly, a shaft rotatably supported by the journal bearing, a toothed operating wheel arranged in the gear case and fixed to the shaft adjacent to the inner end thereof, and a power device fixed to the outer end of the shaft.

1,463,589. PROCESS OF ADJUSTING MEASURING MACHINES. JOHANNES TH. PEDERSEN, Flushing, N. Y., assignor, by mesne assignments, to The Measure-graph Company, a Corporation of Missouri. Filed Dec. 9, 1919. Serial No. 343,635. 4 Claims. (Cl. 33—129.)

1. In the process of adjusting the size of a roll formed by rolling a measurement chart past a reference mark and upon a roller, the steps which consist in winding a shim within the roll and shortening the size of the shim until substantially correct measurement indications are obtained.

1,463,590. WINDSHIELD CLEANER. JULIUS PEDERSEN, Bridgeport, Conn. Filed Dec. 9, 1921. Serial No. 521,119. 3 Claims. (Cl. 15—252.)

1. A wind shield cleaner comprising a pair of elongated wiper members adapted to be positioned on opposite faces of a glass wind shield, a substantially U-shaped holder for supporting and connecting said wiper members, one end of said holder being rigidly connected to one of said wiper members, and the other end extending in spaced relation to the other wiper member, and a bow spring rigidly connected to said spaced end and having its end portions connected at spaced points to said other wiper member to yieldably support the one with relation to the other and to maintain them in aligned relation.

1,463,591. LIQUID-MEASURING DEVICE. OLIVER P. M. PRAFFENBERGER, Indianapolis, Ind. Filed July 14, 1922. Serial No. 574,930. 4 Claims. (Cl. 215—57.)

1. In a liquid measuring device, a tubular channel, including a measuring chamber, a plurality of valves for

controlling said channel for measuring the flow of liquid, said chamber being arranged to provide access thereto,

and a volumetric reducer receivable by said chamber for reducing purposes, but permitting the flow of liquid through said chamber.

1,463,592. GAS BURNER. WILLIAM V. ROBINSON, Owosso, Mich., assignor to The Independent Stove Co., Owosso, Mich., a Corporation of Michigan. Filed Feb. 27, 1922. Serial No. 539,364. 1 Claim. (Cl. 158—99.)

A one piece burner comprising a series of radially extending arms connected together at their inner ends, each of said arms having a rounded bottom and a flat top, the sides of each arm tapering gradually upward from the rounded bottom to the flat top and having a plurality of openings therein for directing the flames laterally.

1,463,593. TRACTOR-FRAME CONSTRUCTION. JAMES ROSS, Laporte, Ind., assignor to Advance-Rumely Company, Laporte, Ind., a Corporation of Indiana. Filed Apr. 17, 1922. Serial No. 553,722. 4 Claims. (Cl. 180—54.)

1. In a wheeled automotive vehicle a frame including in combination the transmission case of the driving engine and a plurality of frame members attached directly thereto said frame members forming the sole forward support of the vehicle frame and engine assembly in combination with a pair of axles, one adapted directly to support said transmission case and the other to support said frame members, said frame members forming the sole forward support of the vehicle frame and engine assembly, the engine being separate from the transmission case.

1,463,594. METAL-TWISTING MECHANISM. ROBERT R. RUST, New York, N. Y. Filed Oct. 11, 1919. Serial No. 329,893. 4 Claims. (Cl. 153—78.)

1. In a metal twisting machine, a twisting element and a pulling element, the pulling element comprising a tractive member having mounted upon it a pivoted support, a rotatable shaft in said support and means on the shaft for engaging a metal blank and pulling it through the twisting element, the support traveling

through a closed cycle, after disengagement from a metal blank, to return it to initial position, and means under

the control of a spring for aligning the means on the rotatable shaft in position for engaging a succeeding metal blank.

1,463,595. AIR-COOLED CYLINDER. SAMUEL R. SAUNDERS, Green Bay, Wis., assignor of one-half to Joseph Hendricks, South Kaukauna, Wis. Filed Nov. 17, 1921. Serial No. 516,004. 2 Claims. (Cl. 257—261.)

1. An air cooled cylinder having annular peripheral ribs, spindles extending through the ribs parallel to the axis of the cylinder and thin annular disks surrounding the cylinder between the ribs and loosely held by said spindles.

1,463,596. TRANSMISSION BELT. JAMES W. SCHADE, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 14, 1922. Serial No. 581,628. 2 Claims. (Cl. 74—62.)

2. An endless, side-driving transmission belt comprising a trough of bias, rubberized fabric, a core-band of longitudinally-extending threads within said trough, and an outwardly-free body of rubber overlying said core and substantially filling the outer space between the wings of the trough, all of said parts being vulcanized together.

1,463,597. ELECTRIC MEASURING INSTRUMENT. WALTER M. SCOTT, Lakewood, and RALEIGH E. TRESISE, Cleveland, Ohio. Filed Jan. 26, 1918. Serial No. 213,854. Renewed Jan. 10, 1922. Serial No. 528,205. 8 Claims. (Cl. 171—95.)

1. In an electric measuring instrument, in combination, a sheet-metal base plate, a rectangular frame integral therewith and projecting perpendicularly there-

from, said frame having an overhanging part and said base plate having an aperture, a pivot bearing in said overhanging part, a second bearing in the base plate opposite thereto, a staff journaled in said bearings, a pointer carried by said staff and passing through said aperture, a permanent magnet carried by said base plate,

an armature carried by said staff upon the opposite side of said magnet from said base plate, a bridge attached to said base plate, and a current coil carried by said bridge, said coil being made in two spaced parts which straddle said frame and embrace said armature but lie wholly at one side of the magnet.

1,463,598. CURTAIN SUITABLE FOR USE IN STORE FIXTURES. DAVID J. SEAMAN, Saginaw, Mich. Filed Oct. 28, 1921. Serial No. 511,230. 3 Claims. (Cl. 156—20.)

2. The combination with a bottom-slotted channel track having a bend, said track lying horizontally, curtain hangers having buttons slidable in said track, and a drawstring passed through said buttons within the track, of a large-diameter roller projecting downward at the inner side of the track to guide the top of the curtain around the bend.

1,463,599. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 27, 1922. Serial No. 571,154. 11 Claims. (Cl. 199—183.)

1. In a typewriting machine, the combination of a platen, a set of key operated type bars, and a coiled wire device arranged in the path of the type bars so as to be struck by said type bars as they near the ends of their printing strokes.

1,463,600. TELEPHONE SYSTEM. CHARLES SPARKS, Oak Park, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 5, 1918, Serial No. 248,281. Divided and this application filed July 9, 1919. Serial No. 309,553. 10 Claims. (Cl. 179-58.)

2. A telephone system including common battery and local battery telephone lines, a universal cord circuit for connecting said lines, automatic ringing means including a double-wound ringing relay for ringing a called one of said subscribers' lines, an operator-controlled key, and means controlled by said key for closing a circuit through one winding of said relay and for connecting an interrupter in circuit with the other of said windings.

1,463,601. METHOD OF FORGING INSULATOR CAPS. CLINTON W. STOVER, Canton, Ohio. Filed Dec. 21, 1921. Serial No. 523,931. 6 Claims. (Cl. 29-155.5.)

1. The method of making an insulator cap or the like from a blank bar which includes forging a cup and extruding an ear lug on its bottom, and then bending the edge of the rim of the cup inward.

1,463,602. ROLLER SIDE BEARING. ARNOLD STUCKI, Pittsburgh, Pa. Filed June 15, 1922. Serial No. 568,439. 4 Claims. (Cl. 64-64.)

1. A side bearing for railway cars comprising a housing having its bottom forming a bearing surface and provided with side and end walls, a roller in the housing resting on the bearing surface, a spring normally retaining the roller in centered position attached to the roller, the spring and roller forming a detached unit freely insertable and removable from the housing, the free detached ends of the spring contacting the bearing surface throughout a substantial extent and adapted to be flexed whereby to place the same under tension upon movement of the roller towards the said end walls.

1,463,603. CARTRIDGE-LOADING PRESS. PHINEAS M. TALCOTT, Branford, Conn. Filed Apr. 10, 1920. Serial No. 372,906. 10 Claims. (Cl. 86-23.)

2. A cartridge loading press, comprising a frame, tool operating means upon said frame, and a removable member mounted upon said frame, said member provided with

a socket for supporting said cartridge in an upright position extending above said member, said member provided with a different socket for supporting said car-

tridge in an inverted position extending below said member, said cartridge, when in both positions, being in alignment with said tool operating means.

1,463,604. LOCK FOR TIRE CHAINS. RAY C. WAGNER, Metamora, Ill. Filed Feb. 20, 1922. Serial No. 538,082. 5 Claims. (Cl. 24-69.)

1. A tire-chain lock comprising two members pivotally connected at one of their ends, one adapted to overlie the other and one of them adapted for attachment at its other end to the tire chain, there being a main slot in each member adapted to be brought into register and lying between the pivot of the members and the place of attachment to the said chain when the members are closed upon one another, there being a second slot in each member extending in a lateral direction from and communicating with the middle of said main slot and each opening through one edge of its respective member but in opposite directions, and one of them lying at an acute angle to the said main slot with which it communicates and extending in the general direction of the pivoted end of the members.

1,463,605. CARPENTER'S SQUARE. CHARLES A. WALTERS, Marion, Iowa. Filed Apr. 20, 1921. Serial No. 463,016. 3 Claims. (Cl. 33-113.)

1. A carpenter's square having stamped thereon a row of enclosing figures C, pointed at one end, whose points

coincide with the inch-marks on the square, a different roof-pitch being inscribed in each figure, and numerals with indexes to denote corresponding rafter-lengths and various roof measurements and angle cuts.

- 1,463,606. NECKBAND FORMER. CHARLES E. WAREAM, Cincinnati, and DANA H. BENJAMIN, Cleveland Heights, Ohio, assignors to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Original application filed July 2, 1917, Serial No. 178,286. Divided and this application filed July 22, 1921. Serial No. 486,778. 5 Claims. (Cl. 68—9.)

3. In a device of the character described, a neckband clamping means for operative engagement with the front of said former, a releasable lock for said clamping means, and means co-operating with said lock for tightening the clamping engagement of said clamping means.

- 1,463,607. BUILT-IN CABINET. CHARLES C. WHITE, Chicago, Ill. Filed Dec. 12, 1921. Serial No. 521,591. 10 Claims. (Cl. 20—1.11.)

1. In a built-in cabinet, the combination of a plurality of separately built self-supporting end-units adapted to be placed adjacent corners of a room and secured in spaced relation to form a utensil compartment between them, a separate base-board, a board separate from the units and extending over the top of the units, and vertical strips for closing the spaces between the units and the built-in walls.

- 1,463,608. SPARK INTENSIFIER. EMERY WINCA, Cleveland, Ohio. Filed Dec. 12, 1921. Serial No. 521,803. 1 Claim. (Cl. 175—183.)

A spark intensifier, comprising three superposed flat pieces having central registering openings and two of said pieces having stepped channels in their meeting faces, separate metal conductors having offset ends provided with sparking points extending into said central openings, and means pivotally uniting said pieces together.

- 1,463,609. CASTING OXIDIZABLE METALS. ADOLF BECK and KARL GERSBACH, Bitterfeld, and OSKAR HERMANN WEBER, Griesheim-on-the-Main, Germany, assignors to the Firm: Chemische Fabrik Griesheim-Elektron, Frankfurt-on-the-Main, Germany. Filed May 25, 1922. Serial No. 563,717. 2 Claims. (Cl. 22—189.)

1. The method of casting magnesium and alloys containing same, consisting in dusting the mould, prior to casting the metal, with a material capable of giving off, in contact with the molten metal, a gaseous substance, which is more easily oxidizable than magnesium.

- 1,463,610. DRIVING GEAR SPECIALLY APPLICABLE TO MOTOR-PROPELLED CYCLES. GERTRUDE MABEL CAMERON-COWBURN, Gosport, Hants, England. Filed Dec. 7, 1921. Serial No. 520,531. 1 Claim. (Cl. 74—34.)

Change speed gearing with a reverse drive comprising a driving member, a driven member encircling the driving member, a plurality of sets of sun and planet gearing for forward driving having the sun members formed by friction gears integral with the driving member, a series of pins carried by the driven member and extending laterally therefrom over the sun members, smooth faced rollers forming the planet members of said gearing mounted on said pins and engaging the sun members, a ring forming a drum encircling each set of sun and planet gearing and having an interiorly smooth face forming a friction gear engaging the respective planet member, braking means for each of said drum forming rings whereby said rings can be selectively held against rotation; and a set of sun and planet gearing for reverse driving of said driven member having the sun member formed by a friction gear integral with said driving member, a disc freely revoluble in relation to the driving or the driven member, means for holding said disc against rotation, a series of pins carried by said disc, and smooth faced rollers mounted on said disc carried pins and engaging said sun forming friction gear of the reverse driving gear set, the said reverse drive sun and planet gearing contained within the driven member which is interiorly formed to provide a friction gear engaging the reverse drive planet forming rollers.

- 1,463,611. ABSORBENT SHEET MATERIAL. ALBERT L. CLAPP, Marblehead, Mass., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed July 5, 1918. Serial No. 243,391. 3 Claims. (Cl. 154—51.)

1. A porous absorbent sheet of roofing felt, consisting of the fibers of "news" and chemical wood pulp, and an initially porous absorbent fireproof filler, all in intimate admixture.

1,463,612. POWER LIFT FOR GRAIN DRILLS. CALVIN R. DAVIS, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed Apr. 23, 1918. Serial No. 230,211. 5 Claims. (Cl. 97—243.)

1. In a seeding machine, the combination of a gang of drills, a wheel shaft, a rock shaft and connections therefrom to the drills so that upon rocking the shaft the drills will be raised and lowered, a driving gear loose on the wheel shaft, a driven gear in mesh with said driving gear and having a connection with said rock shaft constructed so that during a complete revolution of the driving gear the rock shaft will be operated to fully raise and lower the drills, a toothed driving member fixed to the wheel shaft, a pawl carried by the driving gear and adapted to engage said toothed driving member, a pawl control member adapted to oscillate about the wheel shaft and having circumferentially spaced surfaces for holding the pawl out of engagement with said toothed member and for allowing upon oscillation of the control member the pawl to operatively engage said toothed member.

1,463,613. POWER LIFT FOR GRAIN DRILLS. CALVIN R. DAVIS, Rockford, Ill., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed Dec. 8, 1920. Serial No. 429,208. 11 Claims. (Cl. 97—244.)

1. In a machine of the character described, the combination of a ground-breaking device, a rock shaft connected with said device, power-operated means for rocking said shaft to raise and lower said device, including an eccentric, an eccentric band, an arm fixed to said band and carrying a fixed abutment and an adjustable abutment, and an arm fixed to said rock shaft and having a part disposed between and adapted to be

operated by said abutments, said adjustable abutment adapted for determining the working depth of said device and said fixed abutment for lifting the device to a uniform height at each raising operation.

11. In an implement of the character described, the combination of a drive shaft, a rock shaft, an eccentric loose on the drive shaft, an eccentric band having a rigid translating arm extending therefrom, opposed abutments on the outer end of said arm, one of said abutments being adjustable outwardly and inwardly on said arm, a part fixed to the rock shaft having a lateral projection disposed between said abutments and adapted to be operated by throw of the eccentric, a clutch on the drive shaft adapted for intermittently connecting the eccentric thereto, and a clutch control lever pivotally mounted on said part.

1,463,614. LOOM ATTACHMENT. JOHN L. DAVIS and LOUIS D. COOLEY, Greenville, S. C. Filed Feb. 13, 1922. Serial No. 536,124. 5 Claims. (Cl. 139—149.)

1. The combination with a picker foot, said picker foot having an arm provided with a forwardly projecting bifurcated portion, of a picker stick extending through said bifurcated portion, a bracket having a forwardly projecting arm bearing against one side of said bifurcated portion, and having a rearwardly projecting arm offset outwardly beyond the plane of but parallel with said forwardly projecting arm, a bolt passing through said forwardly projecting arm of the bracket and the bifurcated portion of the picker foot and fastening said bracket to said bifurcated portion and pivotally connecting the picker stick therewith, a supporting member carried by the rearwardly projecting offset arm of the bracket and extending inwardly in rear of the bifurcated portion of the picker foot, a spring drum carried by said supporting member, and a strap connecting said drum with the picker stick.

1,463,615. CLOTHES DRIER. ELLIS O. DE CAMP, Cincinnati, Ohio, assignor to The Williamson Heater Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 11, 1922. Serial No. 581,067. 5 Claims. (Cl. 34—26.)

1. The combination with a casing and burners adapted to generate heat within the casing, of a deflector plate

mounted above the burners and dividing the casing into a drying chamber and a heating chamber, part of the deflector plate extending over the burners and having perforations formed in it, the perforations increasing in number as the plate recedes from the burner.

1,463,616. BAKER'S OVEN. WILLIAM DREDGE, Manchester, England. Filed Jan. 3, 1921. Serial No. 434,697. 3 Claims. (Cl. 107—57.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L. 1313.)

1. A baker's oven of the type referred to, comprising a casing composed of non-conducting walls, an oven chamber having means for heating the same internally, a flue extending longitudinally of the said chamber and a tube or tubes in the interior of the baking chamber having perforations or apertures through which the hot vapors or combustion products can be removed throughout the whole length of such chamber or a part of the length thereof.

3. A baker's oven of the type referred to, comprising a casing composed of non-conducting walls, a flue extending longitudinally of the baking chamber, an uptake at one end of the oven structure, perforated pipes extending across the interior of the baking chamber and arranged in groups located in a different position in the length of the baking chamber, each group being connected to a separate valve controlled main pipe leading to the collecting chamber or uptake, so as to enable any of the groups to be thrown into or out of operation, whereby the hot vapors can be drawn off in a body as they are created, or removed gradually or retained, or retained at the initial stage of the baking, but removed at the final stage or vice versa.

1,463,617. ELECTRIC LIQUID HEATER. FERDINAND E. GEORG EISEL, Chemnitz, Germany, assignor to Edmund Richter, Chemnitz, Germany. Filed July 7, 1921. Serial No. 483,113. 4 Claims. (Cl. 219—40.)

1. The combination, in an electric liquid heater, of a central electrode within a liquid receiving chamber surrounded by means of a cylindrical outer electrode, having at its inside an oblong depression extending upwardly

from the bottom end of the said outer electrode, with a nozzle extending through the bottom of the said liquid receiving chamber into the said depression and adapted to lead the liquid from the bottom upwardly to the said liquid receiving chamber, all substantially as set forth.

1,463,618. RAIL JOINT. FRANK B. ELLIOTT, Belle Plaine, Kans. Filed Nov. 10, 1922. Serial No. 600,044. 2 Claims. (Cl. 238—195.)

1. In a rail joint, a base adapted to underlie the bottoms of two abutting rails, an inclined brace extending upwardly from one side of said base, a wing spaced from said brace and adapted to lie against the webs of the rails, a seat resiliently-connecting the upper portions of the brace and said wing, and bolts extending through the rails, the brace and the wing to secure the joint to the rails and force the free portion of said brace towards the wing to create a nut-lock action on the bolts, substantially as described.

1,463,619. CARDCASE. PRINCE A. GARDNER, St. Louis, Mo. Filed June 6, 1921. Serial No. 475,239. 2 Claims. (Cl. 206—56.)

1. A receptacle containing a pocket and having a strap one end of which is fastened within the said pocket and the other end exposed exterior to the receptacle, the said strap being bent intermediate its end at a point located within its said pocket, the said pocket containing a slit through which the said strap passes and the said strap having a disk at its outer end to prevent its slipping through said slit and providing a finger grip for facilitating the drawing of said strap outward of said slit to effect the lifting of the contents upwardly of said receptacle, the means within the said pocket for attaching therein the other end of the said strap consisting of a cross-piece fastened transversely to the back of the main body between which and the said back the said end is held, said cross-piece serving to brace the said back.

1,463,620. FILM WINDING AND DELIVERY MEANS FOR MOTION-PICTURE DEVICES. LOUIS B. LARSEN and OSCAR J. HOLMES, Chicago, Ill. Filed Mar. 14, 1921. Serial No. 451,954. 11 Claims. (Cl. 88—18.7.)

1. A combined film-holder and casing for an endless film comprising walls forming a casing having an inlet and an outlet for the film, means within the casing for

operatively holding between normally substantially vertical planes touching the opposite edge portions of the ring a film ring comprising a plurality of convolutions of the film, a rotary film-pulling means for drawing the film from one convolution of said ring, and rotary film-delivering means for receiving and delivering the film from said

film-pulling means, the film-pulling means being operatively positioned substantially between the vertical planes substantially defined by the opposite edges of the film ring and having an axis of rotation at substantially a right angle to said planes, the film-delivering means being spaced from the film-pulling means.

1,463,621. FLOOR SLAB. FRED LICHTENBERG and MICHAEL M. MCCARTHY, Yonkers, N. Y. Filed Nov. 16, 1921. Serial No. 515,452. 2 Claims. (Cl. 72-66.)

1. Flooring slabs of cementitious material recessed along their upper edges to provide when the slabs are assembled with their lower edges in abutting engagement, troughs open at the top to receive plastic bonding material, layers of reinforcement near the upper and lower faces of the slabs, said layers being connected in spaced relation by ties, the lower reinforcement layers including reinforcement rods extending along the lower projecting abutting edges of the slabs and the upper reinforcing layers having extensions projecting past the recessed upper edges of the slabs, beyond the lower projecting edges thereof and across the troughs provided between adjoining slabs to thereby form a substantially continuous reinforcement and bond between the slabs.

1,463,622. CLAMP-BOLT LOCK. FRED LUMMER, Milwaukee, Wis. Filed June 30, 1922. Serial No. 571,847. 1 Claim. (Cl. 151-10.)

In a bolt lock, a bolt provided with longitudinally extending slots, a transversely disposed spring pressed plunger adapted to engage said slots to prevent retrograde movement of the bolt, a pin carried by the plunger adapted to cooperate with a slot in the member through which the bolt is threaded to restrain the plunger from

rotation, and a cap on the outer end of the plunger, said plunger being held out of engagement with the bolt by

moving said cap outwardly to disengage the pin from its slot and then partially rotating the cap to disalign said pin and slot.

1,463,623. LIGHT PROJECTING APPARATUS. DANIEL J. MCCARTHY, Elgin, Ill., assignor to Chicago Railway Signal and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1920. Serial No. 392,353. 2 Claims. (Cl. 240-41.)

1. A light projecting device comprising an inner reflector substantially parabolic in form and a cooperating outer reflector substantially elliptic 8 in form in which the focal points of the elliptical reflector and of the parabolic reflector coincide to project light in the same direction; a source of light at said focal point and an opposing reflector arranged to return the light proceeding from the elliptical reflector only, thru said focal point to the parabolic reflector.

1,463,624. ILLUMINATING DEVICE FOR THE EXAMINATION OF NEGATIVES. ELLIOTT B. MABEE, Brooklyn, N. Y. Filed Feb. 25, 1922. Serial No. 539,096. 10 Claims. (Cl. 88-14.)

1. The device herein described consisting of a hollow base member terminating at its upper end in a substan-

tially hemispherical part, and a second hollow member pivoted to the base member, the base member having an opening which adjoins a similar opening in said second member, said second member having a spherical part which is adapted to rotate over and upon the said substantially hemispherical part of the base member.

1,463,625. CREAM SEPARATOR FOR MILK CONTAINERS. JACOB MAIER, NICHOLAS LENZ, and CLARENCE E. RADMER, Milwaukee, Wis. Filed Sept. 30, 1922. Serial No. 591,662. 1 Claim. (Cl. 137—20.)

The combination of a rigid siphon tube, a disk positioned below the mouth thereof, means detachably securing said disk to the end of said tube, said tube having a bend 2 therein adapted to rest on the lip of a bottle, and a bend spaced from said disk and adapted to rest against the side of a bottle, said tube diverging outwardly from said bend for the feeding of liquid into a container, the contact of said bend with the side of the bottle operating to maintain said disk substantially centrally and horizontally disposed in said bottle, whereby on the removal of said disk, said tube may be inverted and inserted in the neck of said bottle to receive liquid by which the siphon action may be initiated.

1,463,626. AGITATING MACHINE. ANTONY MARBAZZO, New York, N. Y. Filed May 24, 1923. Serial No. 641,041. 8 Claims. (Cl. 259—72.)

1. An agitating machine comprising a mold retaining mechanism means for removably securing the mold thereto and means for imparting to the mold retaining mechanism a rotative motion about two axes.

1,463,627. CARTON-SEALING MECHANISM. MICHAEL J. MILMOE, Chicago, Ill., assignor to F. B. Redington Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1920. Serial No. 350,038. 46 Claims. (Cl. 93—6.)

1. The combination with means for moving a carton having a flap thereon, of a rotatory member having a convex inclined face arranged to engage said flap for closing said flap.

1,463,628. CHECK-VALVE CONTROL MEANS FOR PISTONS. FRANK L. MUMFORD, Toledo, Ohio. Filed May 25, 1922. Serial No. 563,656. 2 Claims. (Cl. 230—27.)

1. In combination, a cylinder, a piston mounted therein and having an opening longitudinally therethrough, a check valve seating in the piston opening and having a stem projecting therefrom through the piston and guided for limited reciprocatory movements longitudinally thereof, and means carried by the valve stem for movements therewith, said means having a friction ring in sliding coaction with the cylinder wall to cause an opening of the valve when the piston is moved in one direction and a closing of the valve when moved in the opposite direction.

1,463,629. METHOD OF AND APPARATUS FOR SMOKE PREVENTION. HARRY M. NOBIS, East Cleveland, Ohio. Filed Feb. 6, 1922. Serial No. 534,366. 14 Claims. (Cl. 110—55.)

1. The method of firing a furnace comprising stoking the furnace at intervals, directing fresh air over the fuel

in the fire pot immediately after stoking, using water to control the supply of air so directed, and sprinkling into the ash pit water so used.

1,463,630. ELECTRIC HEATER. WILLIAM A. RANKIN, Oak Park, Ill., assignor to Edison Electric Appliance Co., Inc., a Corporation of New York. Filed Apr. 12, 1921, Serial No. 460,726. Renewed Apr. 4, 1923. 8 Claims. (Cl. 219-25.)

1. The combination with an electric heater, of a body heated thereby, a thermostatic element attached to said body in direct heat conducting relation therewith, and co-operating insulated contacts in the circuit of said heater, one of which is carried by said thermostatic element, whereby the temperature of said body is controlled by the thermostatic element.

1,463,631. SUCTION SUPPORT FOR BOOTBLACK STANDS AND THE LIKE. GOTTLIEB SCHONSTEINER and THOMAS EDWARD MICHAEL, Pittsburgh, Pa. Filed Sept. 30, 1922. Serial No. 591,519. 6 Claims. (Cl. 15-265.)

1. A device of the class described comprising a stand having a cylinder at one end provided with a thread, a foot-support forming a cup and having a thread complementary to the first thread, and a resilient member having an opening communicating with said cylinder, and a piston working in said cylinder.

1,463,632. COMPOSITION SHINGLE. RICHARD S. SEVERNS, Delanco, N. J. Filed Sept. 29, 1922. Serial No. 591,283. 2 Claims. (Cl. 108-7.)

1. The combination of a shingle having a body portion with a plurality of integral spaced triangular tabs projecting from the lower edge thereof, each tab having a perforation near its lower end, and the body portion having slots at each side of each tab, the slots in the body portion of one row of shingles being adapted to register with the perforations in the tabs of the next superimposed row of shingles; with T-shaped metallic fastening clips having bases adapted to be inserted beneath the shingles in

the middle ply with their shanks bent upward and extending through the slots in such shingles, and also through the perforations in the tabs of the next superimposed row of shingles with their outer ends bent down over the ends of said tabs to lock said tabs to the body portions of the

underlying shingles; whereby the tabs of the upper ply of shingles are locked to the body portions of the middle ply and the imperforate lower ply of shingles under said fastening clips preventing seepage of water past the clips and into the roof.

1,463,633. RESTAURANT ROOM. ELLASSON R. SMITH, Dayton, Ohio. Filed Dec. 12, 1921. Serial No. 521,889. 3 Claims. (Cl. 20-1.1.)

1. The combination with a central service hall and exterior dining halls, the central service hall being separated from the dining halls by a wall crenelated in plan to provide three-sided service alcoves opening freely into the main part of the service hall, said wall being provided with three-sided dining alcoves opening freely into the respective dining halls, the wall of each service alcove having service openings in its several sides.

1,463,634. COOLING BED. GEORGE MARSHALL SMITH, Chicago, Ill., assignor to Interstate Iron and Steel Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1921. Serial No. 509,682. 5 Claims. (Cl. 80-42.)

5. In a cooling bed for metal bars, the combination of a series of inclined skid-beams forming the first section of the bed provided with skid-flanges on their upper faces, the flanges on each beam being staggered in different directions.

ent planes lengthwise thereof, means to feed the bars along the flanges, a series of racks forming the second section of the bed and provided with a series of pockets, flanges on a plurality of the pockets at the receiving end of each rack arranged in staggered relation in each pocket, and means to move the bars along the racks from one pocket to an adjoining one.

1,463,635. LIFTING JACK. ARTHUR L. STANFORD, Chicago, Ill. Filed Jan. 23, 1922. Serial No. 531,087. 19 Claims. (Cl. 254—106.)

1. In a lifting jack, the combination of a socket member, a lifting bar slidable within the socket member, clutch members for engaging the lifting bar, a lever head embracing the lifting bar, a hanger connecting the lever head with one of the clutch members, a fulcrum bar extending transversely through the center of the lever head, and a fulcrum bearing block supported on the socket member and presenting the centrally disposed portion of its upper edge for contact with the lower edge of the lever head and having an undercut shoulder on each side, the lever head having on each side a member adapted to rock beneath the proximate shoulder of the fulcrum bearing block, substantially as described.

1,463,636. AUTOMATIC FOOD MOLDING AND WRAPPING MACHINE. WILLIAM STRICKER, Kansas City, Mo. Filed Feb. 19, 1921. Serial No. 446,377. 10 Claims. (Cl. 93—7.)

1. In a machine of the character described, a rotary carrier, receivers spaced apart on said carrier to successively receive lengths of material and hold a wrapper

for each length, folding devices on said carrier for partly folding each wrapper around a length of material, a reciprocatory carriage associated with the carrier, means on said carriage for cooperating with the folding devices in folding the ends of the wrappers over the ends of the respective lengths of material, and grooved rollers for creasing the end folds of the wrappers.

9. In a machine of the character described, means for supporting a roll of paper, means for feeding the paper from the roll and partially folding it longitudinally, and knives having cutting edges to conform substantially to the shape of the partially folded paper to cut the same into wrappers.

1,463,637. HOIST FOR VEHICLE BODIES. HENRY C. STRUCHEN, St. Paul, Minn. Filed July 12, 1920. Serial No. 395,523. 2 Claims. (Cl. 298—21.)

1. The combination with a self-propelled vehicle having a dump body tiltably supported upon the frame thereof, of an arm depending from the body, a winding drum revolvable in the vehicle frame, the axis of said drum being at right angles with respect to the pivotal axis of said body, a lifting cable attached to said drum and connected with said arm, a power take-off device operatively connected with the propelling mechanism of the vehicle and power transmitting mechanism between said take off device and drum for turning the latter to wind said cable thereon and tilt the body, said arm, during the winding operation, being swung upon movement of the body to feed the cable longitudinally of said drum.

1,463,638. REVERSING GEAR. LUDWIG THALLMAYER, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed July 14, 1922. Serial No. 575,002. 5 Claims. (Cl. 74—34.)

1. In a reversing gear, a source of motive power, a rotatably supported shaft, a disk, rotatable thereon, but immovable in axial direction and suitable to transmit mechanical energy to machinery to be driven, said disk having a clutch member fixed to each of its sides, a first clutch drum located at one side of said disk and fixed to said shaft, said drum having a clutch face on the

side facing said disk and having at its other side a braking face, a fixed braking member adapted to engage said braking face when said drum is axially shifted in one direction said drum engaging said disk when being shifted in the other direction, a second clutch drum disposed at the other side of said disk and revolvable on said shaft, said second drum having a clutch face on the side facing said disk and on its other side a braking face, a fixed brake member adapted to engage said last-named braking face of the second drum when the drum is axially shifted in one direction, said drum being adapted to engage said disk when axially shifted in the other direction, means adapted to axially shift said two clutch drums simultaneously in one or the other direction to alternately bring one or the other drum into engagement with said disk and said braking members respectively, and means for alternately connecting the power source to one or the other clutch drum, when the drum so connected is axially shifted to engage said disk.

1,463,639. WRAPPING MECHANISM FOR PASTEBOARD BOXES. GEORGE J. THUST, Milwaukee, Wis. Filed Aug. 7, 1922. Serial No. 580,217. 8 Claims. (Cl. 93—54.)

1. A machine for wrapping multisided boxes, comprising a support for the wrapper and the box, a plate for each side of said box hinged to said support, a strip for each plate and hinged joined thereto, and a single movable member for each plate and its corresponding strip adapted to successively operate said plate and strip to force the wrapper against the side of the box and completely fold the wrapper over the edge of said box and against its inner side.

1,463,640. VEHICLE WHEEL. BENJAMIN F. WALKER, Bridgeport, Conn. Filed Mar. 17, 1921. Serial No. 452,916. 12 Claims. (Cl. 152—28.)

1. A vehicle wheel comprising overlapping central and peripheral portions movable relative to each other and provided respectively with opposed oppositely disposed substantially conical recesses having sockets at the apex thereof, and retaining members in said sockets.

1,463,641. WOOD AND OTHER PULLEYS. WILLIAM ERNEST WARD and MARIUS JULES BARRE, Birmingham, England. Filed Oct. 6, 1922. Serial No. 592,899. 6 Claims. (Cl. 287—52.)

3. A bush for securing wood and other pulleys upon shafting, comprising a bush formed in two complementary portions, longitudinal recesses in the inner face of the said portions, blocks located in the said recesses and having inwardly projecting cutting edges, and means for causing the said blocks to tilt within the said recesses, the cutting edges on the said blocks being provided by forming the blocks with concave inner faces, the radius of the concavity being less than the radius of the shafting upon which the bush is to be fitted.

1,463,642. FISHING REEL. JOHN T. WELCH, Dowagiac, Mich., assignor to James Heddon's Sons, Dowagiac, Mich., a Corporation of Michigan. Filed Oct. 8, 1921. Serial No. 506,333. 5 Claims. (Cl. 242—84.4.)

2. In a fishing reel, the combination of a spool shaft, a traversing shaft, driving connections therebetween, a carriage mounted for reciprocation on the traversing shaft, means for guiding the carriage with one side thereof facing the spool shaft, there being two parallel grooves formed on said carriage side, and a line guide in the form of a looped wire having its ends received within the groove and secured to the carriage, the looped end of the guide which extends away from the carriage being free, substantially as described.

1,463,643. LAMP FOR ROAD VEHICLES AND LIKE PURPOSES. ARCHIBALD CHARLES WHITEHEAD, Ipswich, England. Filed July 18, 1922. Serial No. 575,784. 1 Claim. (Cl. 240—41.)

A reflector of the class described consisting of upper and lower halves, the lower half having a reflecting surface of regular paraboloidal form, the upper half having a reflecting surface generated by the revolution of a parabolic segment about the major axis of the segment and simultaneously with said revolution tilting said major axis downwardly about a point displaced longitudinally of the axis of the lower half rearwardly from its focal point whereby the upper deformed half of the reflector is bodily displaced with reference to the lower regular half.

1,463,644. PISTON FOR INTERNAL-COMBUSTION ENGINES. ALEXANDER WINTON, Lakewood, Ohio. Filed Apr. 25, 1919. Serial No. 292,686. 2 Claims. (Cl. 123—171.)

1. In an internal combustion engine, a cylinder provided with inlet and discharge ports near one end, a piston within said cylinder, a wall in said piston forming a cooling chamber adjacent to the piston head, said piston having ports communicating with said chamber and adapted to register with said inlet and discharge ports, means for supplying cooling medium under pressure to the inlet port of said cylinder, means communicating with said discharge port for conducting the heated cooling medium to the atmosphere, and a baffle plate in said cooling chamber lying in a plane at an angle to a line connecting the piston ports.

1,463,645. COTTER-PIN-EXTRACTING PLIERS. JAMES OLBERT WRIGHT, Atlantic City, N. J. Filed Aug. 23, 1921. Serial No. 494,678. 3 Claims. (Cl. 29—86.2.)

1. In a device for extracting cotter pins, handles pivoted parallel with each other, coaxing jaws pivotally connected intermediate their ends and to the handles at their adjacent ends, said jaws being curved similarly for a portion of their length at an angle to their pivotal movement, said jaws having on their confronting

sides, pointed extremities, recessed portions adjacent the points for gripping rounded surfaces, and flat gripping surfaces adjacent the recessed portions.

1,463,646. APPARATUS FOR PERFORMING CYCLES OF COMPRESSION, EXPANSION, COMBUSTION, SUCTION, EXHAUST, AND THE LIKE. CONSTANTIN CHILOWSKY, Paris, France. Filed Mar. 6, 1923. Serial No. 623,275. 11 Claims. (Cl. 230—22.)

1. In a rotary apparatus, an external and an eccentric internal rotor having peripheral pockets thereon, a liquid held by centrifugal force in the external rotor and capable of entering the outer open ends of said pockets and working chambers in the internal rotor communicating with said pockets.

1,463,647. DOOR-OPENING APPLIANCE. THOMAS F. COSS, Mendota, Ill. Filed Mar. 18, 1922. Serial No. 544,779. 3 Claims. (Cl. 268—8.)

1. In a door opening device, the combination of a pair of sliding doors, a pivotally mounted tread bar normally standing in elevated relation with respect to the ground level of the runway, and provided at each end with a depending lever arm of greater length than the height of the tread bar, a roller journaled at the end of each lever arm, and a cable for each roller having one end secured to the associated door section and the other end secured to a fixed portion of the structure, the intermediate portion of the cable extending around the associated roller for the purpose of amplifying the movements of the door section occasioned by a swinging of the levers, substantially as described.

1,463,648. COMBINATION SWIVEL WRENCH PLATE AND HANGER. CHARLEY A. DULEY, Breckenridge, Tex., assignor of one-half to George G. Bowen, Breckenridge, Tex. Filed Mar. 15, 1922. Serial No. 543,831. 6 Claims. (Cl. 255—35.)

1. A wrench plate and hanger therefor comprising a frame provided with a central recess therein, a wrench

bers retained in abutting position by the diverging portions of the jaw members and presenting a grinding angle, and means to exert tension upon the jaw members.

1,463,654. PNEUMATIC JACK. ARTHUR E. McNULTY, Bangor, Me. Filed Mar. 18, 1922. Serial No. 544,706. 6 Claims. (Cl. 138—9.)

6. A jack comprising a cylinder having an air connection, a mounting ring fixed thereto and having a rib, a lifting member detachably connected to said ring and comprising a horizontally disposed lifting surface forked at its inner end to straddle said rib and having a depending bracing portion of inverted V-form, a hollow piston stem within said cylinder having a head closely fitting against the cylinder wall, a standard mounted within said stem and having screw threaded connection therewith permitting the standard to be lengthened or shortened upon rotation thereof relative to said stem, and a longitudinally disposed flange on said stem engaging said cylinder for preventing rotation of said stem within said cylinder.

1,463,655. CUSHION CONNECTION FOR VEHICLE SPRINGS. ALFRED F. MASERY and AUGUST H. LEIPERT, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 1, 1922. Serial No. 565,069. 7 Claims. (Cl. 267—30.)

1. In combination with the spring and frame of a motor vehicle, a wholly non-metallic mechanical connection and support interposed between one end of the spring and the frame and comprising a block of non-metallic yielding material engaged with the end of the spring and means secured to the frame and holding the end relatively fixed, within limits, with respect to the frame, and a wholly non-metallic support interposed between the other end of the spring and the frame and comprising a block of non-metallic yielding material engaged with the end of the spring, and means to secure the block to the frame, said block affording free elongation of the spring.

312 O. G.—64

1,463,656. INDEX FOR NUMBERS. OSBORNE LEE MOORE, Jefferson City, Mo. Filed Jan. 3, 1921. Serial No. 434,643. 4 Claims. (Cl. 283—36.)

1. A record sheet ruled to provide a series of columns numbered progressively from zero, each column being subdivided into a predetermined number of entry spaces also numbered progressively from zero, each space representing an identifying number the terminal integer of which is, designated by the number of the space and the next preceding integer designated by the number of the column, and a denominating number printed on the sheet and fixing the value of the column numbers.

1,463,657. BUCKLE. NELS T. NELSON, Attleboro, Mass., assignor to J. F. Sturdy's Sons Co., Attleboro Falls, Mass., a Corporation of Massachusetts. Filed Dec. 16, 1922. Serial No. 607,408. 6 Claims. (Cl. 24—265.)

1. A buckle comprising a frame adapted to receive a spindle, a cross-bar mounted in said frame, a readily-removable center bearing spindle therein connecting said cross bar and frame, a strap-engaging tongue mounted to swing on said bar, and an independent resilient gripping member in said bar for frictionally retaining said spindle in said bar.

1,463,658. STEAM-GENERATOR FITTING. JOHN C. PARKER, Philadelphia, Pa. Filed July 29, 1922. Serial No. 578,307. 5 Claims. (Cl. 251—123.)

1. In combination with a junction box and a tube set therein, a valve having a body disposed in said tube and a ring segment engaged in said tube and on said body so as to fix the latter in place.

1,463,659. FLYTRAP. JOSEPH M. PAUL, Rice Lake, Wis. Filed Nov. 25, 1921. Serial No. 517,767. 3 Claims. (Cl. 43—120.)

1. A fly trap adapted to form the cover of a garbage can, said fly trap comprising an upper section, a conical lower section which forms the lid of the garbage can, and an intermediate entrance ring provided with entrance trap cones for the flies, said entrance ring having also an annular plate the inner edge of which rests on the conical lower section and forms with it an inlet passage for the flies, said upper and lower sections being also provided with screened openings which permit the scent of the garbage in the can to ascend through the entrance ring and upper section.

1,463,660. SHOCK ABSORBER FOR AUTOMOBILES. ANDREW D. PIGEON, Chicago, Ill. Filed Jan. 26, 1922. Serial No. 531,859. 2 Claims. (Cl. 267—45.)

1. In an automobile shock absorber and snubber, a supplemental spring introduced between the axle and the main spring of the vehicle, said supplemental spring arranged to overlie the axle and contiguous thereto between two longitudinally separated points of attachment, two upstanding brackets rigidly associated with the said axle, said brackets each having an eye, a bolt there-through, said bolt arranged to secure a spring-holding clip; said clip being positioned in a plane above or vertically removed from the first mentioned attaching point; the supplemental spring extending upwardly from the said brackets and terminating at a point above both other said attachment points; said uppermost point providing means for supporting the main vehicle spring.

1,463,661. LUBRICATING DEVICE. EDWARD R. BALES, Centrafla, Ill. Filed July 23, 1921. Serial No. 486,963. 1 Claim. (Cl. 184—55.)

A lubricating system for two-stage air compressor cylinders, comprising an oil cup, a branched pipe line connecting the oil cup with the cylinders, a check valve located between the oil cup and the low pressure cylinder near the latter, a second check valve located between the

high pressure cylinder and the low pressure cylinder, the pipe line between said check valves being vertical so that gravity assists in feeding the oil toward the check

valve next the high pressure cylinder, and a T in vertical position connecting the pipe line between the valves, said T serving as a divider.

1,463,662. LIFE-SAVING BOAT. AUGUST BAUMGART, Lind, Wash. Filed Jan. 18, 1923. Serial No. 613,471. 3 Claims. (Cl. 9—4.)

1. In a device of the class described, a boat having an opening; a door for the opening; weight-actuated means for moving the door to closed position; a latch cooperating with the weight-actuated means to maintain the door in open position; float-actuated mechanism coacting with the latch to release the latch from the weight-actuated means; and a pendulum mounted for swinging movement and coacting with the latch to disengage the latch from the weight-actuated means.

1,463,663. CONTAINER. ARTHUR H. BOSWORTH, Wichita, Kans. Filed Apr. 14, 1921. Serial No. 461,178. 1 Claim. (Cl. 128—200.)

A container comprising a body portion in the form of an open-ended hollow cylinder made of a single piece of seamless metallic tubing, a bead formed integrally

in the body portion adjacent each end, the ends of the tubing being bent or curved to partly close the ends of the tubing and a pair of stamped metallic caps adapted to fit over the ends of the tubing and close the same, said caps adapted to bear against said beads.

1,463,664. FLUE TOP. LEWIS H. BOWMAN, Fenn, Idaho. Filed Feb. 11, 1922. Serial No. 535,860. 1 Claim. (Cl. 98—3.)

In a flue top, the combination with a flue, of a support mounted therein, said support comprising a pair of rectangular frames disposed one within the other and positioned at right angles to each other, the upper portion of one of said frames having laterally extending flanges adapted to engage the upper edge of the flue, said frames being arranged to frictionally engage the inner walls of the flue, a shaft extending through the end portions of said frames, a vane rotatably mounted on the shaft and comprising long and short arms, the short arm having lateral ears, a flue top of arcuate shape in cross-section fastened to the ears and disposed at an acute angle to the flue and overlying the upper end of the flue, a transverse brace secured to the vane and having its opposite ends secured to the opposite sides of the top, said top extending downwardly and laterally a substantial distance below the upper end of the flue, thereby inducing a draft in an upward direction over the upper end of the flue.

1,463,665. DISK-SHARPENING MACHINE. JOHN E. BRITTAIN, Guilford, Mo. Filed July 26, 1921. Serial No. 487,789. 5 Claims. (Cl. 76—85.)

1. A base for supporting a grinding machine; a grinding wheel rotatably mounted on said base; a table mounted on said base for slidable movement from and toward said grinding wheel; securing means whereby said table is secured in its various positions; bearing brackets formed with and projecting from one of the edges of said table; a vertically disposed disk shaft rotatably mounted in the extremities of said brackets; worm gear driving means mounted on said table and shaft whereby said disk shaft is slowly rotated; a square portion formed on the upper end of said shaft for receiving and loosely holding a disk thereon with the edge of said disk in contact with the peripheral surface of said grinding wheel; a rotatably mounted roller for pressing the contacted portion of the edge of said disk upon said grinding wheel; a spring for actuating said roller to press upon said disk; and adjusting means whereby the tension of said spring is adjusted.

1,463,666. SPRINKLER HEAD. WILLIAM A. BUCKNER, Fresno, Calif. Filed May 28, 1921. Serial No. 473,437. 1 Claim. (Cl. 299—119.)

A device of the character described comprising a body adapted for connection with a water conducting pipe and formed with a threaded bore, a disc threaded within said bore and formed with a plurality of slots inclined with respect to the longitudinal axes of the body, said slots being arranged in pairs and the slots of one pair being of greater length than the slots of the other pair whereby to extend nearer to the center of the disc, a reduced extension on one side of the disc having a flange, and a plug threaded within the upper end of the bore and having a central hole, said disc being disposable with said reduced extension extending upwardly whereby to produce a circular spray, and said disc being disposable with said reduced extension extending downwardly and with the plug in close engagement with the opposite side of the disc whereby to cover the shorter slots.

1,463,667. METALLIC PISTON AND PISTON-PACKING RING. JAY EDGAR BUTLER, Baltimore, Md., assignor to Victor Piston Ring Co., Baltimore, Md., a Corporation of Maryland. Filed June 6, 1921, Serial No. 475,415. Renewed July 31, 1922. Serial No. 578,847. 2 Claims. (Cl. 74—109.)

1. The combination with a cylinder, of a piston adapted to reciprocate therein, said piston being provided with an annular groove on the exterior thereof, rectangular in cross section, and a packing ring substantially rectangular in cross section mounted in said groove, said ring being provided with an annular cut in its rear face to form an annular scraping edge on its rear outer face, said cut having its outer wall in the form of a hollow truncated cone, and its inner wall cylindrical, the said inner wall being located radially exterior to the circumference of the piston immediately in rear thereof, whereby an outwardly projecting annular shoulder is provided, substantially as and for the purpose described.

1,463,668. BOOKHOLDER. MAURICE J. CAFFREY, New York, N. Y. Filed July 6, 1922. Serial No. 573,067. 1 Claim. (Cl. 45—82.)

A book support comprising in combination, an attaching means in the form of a clamp, a substantially triangular bracket carried by said clamp, said bracket having a plurality of openings in one of its walls and a projecting wall provided with a plurality of serrations, an arm adapted to be received in one of said serrations, said arm

having a right-angular extension adapted to be received in one of the openings of the wall of the bracket, a vertically disposed arm dependent from the free end of said first-mentioned arm and provided with a plurality of openings,

a rigid arm carried by said vertical arm and adapted to be secured in one of said openings, and a book-supporting member carried on the last-mentioned arm and adjustably secured thereto in a horizontal plane.

1,463,669. FOLDING SHOEBRUSH. GEORGE W. CAMPBELL, Fort Laramie, Wyo. Filed Aug. 25, 1920. Serial No. 405,799. 1 Claim. (Cl. 15—105.)

A blacking set comprising a two part casing, each part consisting of an elongated body having a complemental handle portion extending longitudinally from one end thereof, said two parts being hingedly connected together whereby the handle portions align and contact when the parts are arranged in closed position, one part having a recess in its face which registers with a corresponding recess in the face of the other part to provide a chamber to receive a can of polish therein, one of said parts having an instrument receiving recess therein communicating with its first named recess and extending longitudinally in its handle portion, and the handle portion of the other part being adapted to contact with an instrument received in the recess of said handle portion to prevent movement or vibration of the instrument when the two parts are closed.

1,463,670. CLOTHESPIN. PAUL CAMPBELL, San Antonio, Tex. Filed May 16, 1922. Serial No. 561,395. 3 Claims. (Cl. 24—139.)

1. A metallic clothes pin consisting of a single blank of wire doubled upon itself and coiled at its center to form a spring eye and having its sides extended radially from the eye and looped to form opposing jaws which are spring impelled toward each other by the eye, with the terminal of one of the sides angularly deflected from the plane of the eye to form an entrance throat to the loops constituting said jaws.

1,463,671. AUTOMATIC DRAFT REGULATOR. VERNON BEAUFORD CARR and SAMUEL HERBERT BROSHAR, Lebanon, Ind. Filed Dec. 8, 1921. Serial No. 520,977. 1 Claim. (Cl. 236—31.)

The combination with a furnace having a boiler, a draft door and a check door, of a casing having two compartments therein in communication with each other at their

lower ends and having a fluid therein, a pipe connecting said boiler with one of said compartments, a float in the other compartment, and means operatively connecting said draft and check doors to said float, said means comprising a bifurcated rod supported on said float, said rod having a plurality of spaced apart holes extending transversely

therethrough, a lever pivotally mounted intermediate its length on said casing and having an opening therethrough, a pin arranged to be received in the opening of said lever and in one of the openings in said rod, and cables connected at one end with said lever and with said check and draft doors respectively.

1,463,672. SANDAL. PHYLLIS CARRINGTON, New York, N. Y. Filed Feb. 16, 1922. Serial No. 536,939. 5 Claims. (Cl. 36—1.)

1. A sandal comprising a sole member, a foot-engaging padded surface, a marginal attaching strand fast to the sole, and pairs of strands located across the toe of the sole, then continued rearwardly across the instep and there interwoven, and from thence continued as two pairs of strands to the sides of the insole and forming a heel loop extending about the heel to retain the sandal from displacement.

1,463,673. MICROMETER GAUGE. CHARLES A. CLASE, Portland, Oreg. Filed Sept. 20, 1921. Serial No. 501,969. 6 Claims. (Cl. 33—164.)

5. In a micrometer gauge the combination of, a handle provided with a measuring head perpendicular to said handle and rigidly secured thereto, a micrometer screw

carried by said handle, a second micrometer screw extending longitudinally of said head, means for transmitting the rotary motion of said first mentioned screw to said second mentioned screw, a sleeve threaded on the latter screw, such sleeve carrying a contact point, and means for holding the sleeve against rotating.

1,463,674. COMPOSITION FOR IMPREGNATING WOOD AND PROCESS OF PREPARING IT. GEORGE COESTER, Brunswick, Ga., assignor to Georgia Vita Ligno Co., Brunswick, Ga. Filed Nov. 26, 1919. Serial No. 340,882. 5 Claims. (Cl. 134—78.6.)

5. A process for preparing a fluid mixture for the purpose of impregnating wood consisting in mixing coal oil, bone oil and crude carbolic acid together, boiling the mixture, and condensing the resulting vapors, said fluid when used as a primary coat leaving a heavy residuum in the condensing vat for use as a finishing coat over the dried primary mixture, said ingredients being combined in substantially the proportions stated.

1,463,675. CRUTCH SEAT. HAMILTON DUDLEY COLEMAN, near Biloxi, Miss. Filed Sept. 22, 1922. Serial No. 589,842. 4 Claims. (Cl. 135—49.)

1. A crutch, having spaced bands carried thereby; means whereby said bands are held against creeping on the crutch, a seat pivoted to the upper band, a brace pivoted to the lower band, and means for interlocking the seat and brace, substantially as described.

1,463,676. PEDAL LOCK. GEORGE E. CUSTER, Stoyestown, Pa., assignor to Custer Manufacturing Company, Stoyestown, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1921. Serial No. 446,631. 8 Claims. (Cl. 74—81.)

4. In combination with a clutch lever, a sleeve suspended for swinging movement toward and away from the lever, and a locking bar slidable through the sleeve and pivoted to the lever, the movement of the sleeve in one direction being limited.

1,463,677. AIRCRAFT LAMP. ALBERT LEWIS DAVIS, Kingsway, London, England, assignor to Vickers Limited, Westminster, London, England. Filed Aug. 8, 1922. Serial No. 580,480. 6 Claims. (Cl. 240—1.)

1. In a navigation light for aircraft, comprising a lamp, a transparent dome within which the lamp is enclosed, a lamp casing provided with a socket for the dome, a tubular mask carried by the lamp casing and a reduced portion thereof closely encircling the lamp, said portion being spaced from the socket, and water-tight means interposed between the dome and mask when the dome is in position in the socket.

1,463,678. AIRCRAFT LAMP. ALBERT LEWIS DAVIS, Kingsway, London, England, assignor to Vickers Limited, Westminster, London, England. Original application filed Aug. 8, 1922, Serial No. 580,480. Divided and this application filed May 26, 1923. Serial No. 641,758. 4 Claims. (Cl. 240—1.)

1. In a navigation light for aircraft comprising lights arranged one above the other, the upper light having a body piece carrying a dome and lamp, guide tubes carried by said body piece, a gauge ring secured to the guide tubes adjacent the lower ends thereof, and cables passing through said guide tubes for suspending the lower light.

1,463,679. AUTOMATIC TRAIN STOP. EMILIO DE LEON, Remedios, Cuba. Filed July 3, 1922. Serial No. 572,416. 6 Claims. (Cl. 246—170.)

1. In an automatic train stop, an element rigid with a truck of the train to partake of turning and tilting movements of the truck, a train pipe valve, and a longitudinally movable valve opening rod, the said element on the truck being turnable with the truck independently of the said rod and arranged to cause a longitudinal movement of the rod upon a tilting of the truck.

- 1,463,680. RAIL SCARF JOINT. JOZSEF DOKTOR, St. Clairsville, Ohio. Filed Mar. 15, 1923. Serial No. 625,264. 4 Claims. (Cl. 238—232.)

1. In a rail joint, meeting rail ends, each carrying a scarf extension having a pair of transverse openings through the web portions thereof, a shoulder and offset block carried by the inner face of the scarf extension adjacent the forward end thereof to be received in a cooperating opening of the other scarf extension, and means for locking the interlocked scarf extensions.

- 1,463,681. ANTISKID CHAIN. BERNARD J. DUEHR, Big Island, Va. Filed Feb. 13, 1923. Serial No. 618,773. 3 Claims. (Cl. 152—14.)

1. An anti-skid device including a plurality of flexible elements arranged to be engaged with the tire and spokes of a wheel and provided with terminal attaching means, and a hub encircling ring with which the said attaching means are detachably engaged.

- 1,463,682. RESILIENT WHEEL. MICHAEL JOHN DUFFY, Brooklyn, N. Y. Filed June 10, 1920. Serial No. 387,920. 1 Claim. (Cl. 152—8.)

A resilient wheel comprising in combination with a wheel body and its felly band, a plurality of members substantially L-shaped in cross section adapted to inter-engage each other to form a channel, a plurality of blocks mounted in the base of said channel, said blocks each having a centrally disposed open portion, a resilient member mounted in the open portion of each of said blocks, a resilient tread element mounted on said resilient members, and means carried by the felly band for maintaining said substantially L-shaped members in the channel-forming position.

- 1,463,683. LIQUID-FEEDING DEVICE. LEONID A. DUNAJEFF, New York, N. Y. Filed July 18, 1921. Serial No. 485,659. Renewed June 19, 1923. 19 Claims. (Cl. 137—101.)

1. In a liquid feeding device, the combination with a tank, a pipe connecting said tank with a source of a liquid, an intake valve on said pipe, a pipe connecting

the lower portion of said tank with a receptacle for said liquid, an exhaust valve on said pipe, an exhaust pipe for the elastic fluid inside of said tank, an intake pipe for

the compressed elastic fluid, and a means to control the connection of said pipes for said elastic fluid, said means being controlled by said exhaust valve.

- 1,463,684. TOBACCO PIPE. ALFRED DUNHILL, London, England. Filed Aug. 25, 1921. Serial No. 495,250. 1 Claim. (Cl. 131—12.)

A tobacco pipe comprising a bowl portion having a bore extending completely therethrough, a stem joined with said bowl having a smoke passage communicating with said bowl, a ring fixed in the lower end of said bore having slots in the inner periphery of said ring with cam surfaces on the upper edge of said ring, a removable fitting adapted to fit into said ring, said fitting comprising a base plate having an outer cylindrical wall forming a snug fit in said ring, pins on said wall engaging said slots and cam surfaces of the ring, a central shank extending up from the base plate, an apertured plate carried on said shank, the apertured plate being located in a plane above the smoke passage in the stem, substantially as described.

- 1,463,685. HEADLIGHT. CHARLES H. FISHER, Carrollton, Ohio. Filed July 27, 1922. Serial No. 577,960. 1 Claim. (Cl. 240—62.)

In a dirigible headlight, a bracket having a vertically disposed collar thereon, a post mounted in said collar, an annular stop flange formed on the post above the collar, oppositely disposed flanged bearing sleeves disposed in the collar against said post, the flanges of the bearing sleeves engaging the upper and lower ends of the

collar, washers disposed on the post below the collar, an expansion spring coiled about the post between the

washers, a crank arm connected to the post at the lower end thereof, and an adjustable nut threaded upon said post and engaging the lowermost washer.

1,463,686. BORING HEAD. JOHN H. FREY and JOHN N. KAISER, Erie, Pa. Filed Aug. 29, 1921. Serial No. 496,776. 2 Claims. (Cl. 279—8.)

1. An adjustable tool holder comprising a cylindrical casing, a ring arranged within said casing for rotation and having an elongated slot, a tool holder passed through said slot, means for associating the tool holder with the ring for rotation therewith, a plate arranged within the casing and having a spiral groove, a spring pressed dog carried by the tool holder and movable within said groove, whereby said tool holder is moved within said slot and across the ring in either direction incident to the rotation of the ring, and means for locking said parts fixed relatively in a set position.

1,463,687. VEHICLE DRIVING MECHANISM. LOU M. GARDINER, deceased, by May Durling Gardiner, administratrix, Oakland, Calif. Filed June 16, 1922. Serial No. 568,892. 7 Claims. (Cl. 74—36.)

draft tongue in its forward and rearward positions, an excavating bucket, means for suspending said bucket from said axle portion, whereby when the draft tongue is in

its rearward position the bucket will be disposed in excavating position and when the draft tongue is in its forward position the bucket will be disposed in load transporting position.

1,463,691. SAND-HANDLING APPARATUS. JOSEPH GRUNT, Cleveland, Ohio. Filed Jan. 6, 1922. Serial No. 527,491. 7 Claims. (Cl. 22—35.)

1. In a sand handling machine of the class described, a mold filling spout, means to deliver predetermined quantities of sand to said spout intermittently, sand sifting mechanism beneath said delivering means, means to elevate the sifted sand to said delivering means, and scooping mechanism to deliver unsifted sand to the sifting mechanism.

1,463,692. INVISIBLE PIPE JOINT. GUSTAV HAIL, Portland, Oreg. Filed Dec. 2, 1921. Serial No. 519,410. 1 Claim. (Cl. 285—118.)

In a conduit made in sections, the end of one section being tapered and then extended coaxially with the body portion of said section, the tapered portion being formed with annular grooves, the end of the opposite section being enlarged and provided with a receiving recess greater in diameter than the maximum diameter of the adjacent section and adapted to receive the tapered portion thereof, the end wall of the recess forming an abutment for the end of the adjacent tapered section and having an annular flange which overlies and is spaced

from the extended portion of said adjacent section, the enlarged portion of the section having a filling opening, and sealing material in the cavity formed between the tapered end and the enlarged end of the two sections to seal and hold the two sections together.

1,463,693. BRAKE IRON. SAMUEL L. HALL, Cushing, Okla. Filed Aug. 14, 1922. Serial No. 581,708. 3 Claims. (Cl. 188—221.)

3. The combination with a brake beam, an iron, a bracket on the iron, a pair of bolts securing the bracket on the beam, a pair of parallel tongues at the upper end of the iron, a pair of parallel tongues at the lower end of the iron, a brake shoe located against the iron and between the tongues and having an opening therein, one pair of said tongues having a series of openings therein, and a securing device projecting through openings in the said tongues and through the opening in the shoe whereby the position of the shoe may be adjusted relative to the iron.

1,463,694. AEROPLANE. GEORGES HAMEL, Les Aydes, France. Filed Apr. 4, 1922. Serial No. 549,576. 2 Claims. (Cl. 244—15.)

1. An aeroplane having fixed planes, a plurality of elevating devices operative in the body of such planes, with the line of thrust thereof arranged in a plane passing vertically through the center of gravity of the aeroplane, pressure shutters below said devices, suction shutters above said devices, each respective set of shutters forming a continuation of the adjacent surface of the plane when such shutters are closed, and means for controlling the degree of opening of said shutters at will.

1,463,695. DETACHABLE WHEEL AND THE LIKE. JOHN HANMAN, London, England, and GEORGE HAZELTON, Portadown, Ireland. Filed May 24, 1920. Serial No. 383,891. 2 Claims. (Cl. 301—9.)

1. A locking construction for detachable wheels including an outer ring-like shell having an abutment shoulder at its inner end, lugs carried by the shoulder

for engaging with recesses on the wheel hub, and an inner member concealed within the shell and having a sliding non-rotative engagement therewith, a spring arranged between the inner member and the ring-like shell

for maintaining the same in proper relative position and the said inner member being provided with a closed end wall carrying at its inner side an inwardly projecting cup-like member provided with mutilated threads on the outer face thereof.

1,463,696. WIRE REEL. HENRY J. HANSON, Thor, Iowa. Filed Sept. 23, 1922. Serial No. 590,149. 2 Claims. (Cl. 242-92.)

1. In a wire reel, the combination with a wagon including a bed and wheels, of a carrying box, rods extending through said carrying box and engaging the wagon bed, springs coiled about portions of said rods for establishing yieldable connection between the carrying body and wagon bed, means for tensioning said springs, a wire receiving reel carried by said carrying body, and means for rotating said reel by rotation of the wagon wheels.

1,463,697. CHANNEL BRICK. ARTHUR HARDONCOURT, New York, N. Y. Filed Dec. 8, 1922. Serial No. 605,663. 4 Claims. (Cl. 72-41.)

1. A channel-brick having two substantially parallel channels which are relatively deep and leave only webs between the bottom of the channels and the bottom of the channel brick, corrugations on the channel brick at the inner sides of the channels, the channel brick at the outer sides of the channel being curved downwardly and inwardly to the inner sides of the channels so that the channel brick at the channels will be strong and the channels at their upper portions will be relatively narrow while sufficient to permit a mason to introduce his fingers while partially closed into one of the channels without striking his knuckles against the outer walls of the channels, the channel brick having load-bearing portions between and at the outer sides of the channels.

1,463,698. OIL STILL. PHILIP HEFFLER, Pittsburgh, Pa., assignor of one-half to Harry C. Simmons, Craf-ton, Pa. Filed Jan. 28, 1922. Serial No. 532,352. 5 Claims. (Cl. 110-56.)

1. In an oil still, a casing provided with an opening for entrance of the products of combustion from a furnace, a container supported in the casing and above

said opening, checkers within the casing beneath the container, and means for causing the products of com-

bustion to flow through either of the checkers, selectively, and for causing air to flow upwardly through the other checker.

1,463,699. TOWING TONGUE. WILLIAM D. HENRY, Greenville, Ill. Filed Feb. 25, 1922. Serial No. 539,175. 3 Claims. (Cl. 280-33.55.)

1. In a towing tongue, a pole, a clevis adjustably connected to one end of said pole, axle engaging clamping means carried by the opposite end of said pole, a sheave pulley adjustably connected to said pole, a flexible member extending about said pulley and adapted for connection with a vehicle to be towed.

1,463,700. WINDOW-OPERATING DEVICE. AUGUST HEYMAN, New York, N. Y. Filed Mar. 14, 1922. Serial No. 543,615. 2 Claims. (Cl. 268-4.)

1. The combination with a window frame and a pair of vertically slidable sashes in the frame, of vertically aligned brackets fixed to the upper ends of the sashes, an arm fixed to the upper bracket, a depending threaded socket member integral with the arm, an operating rod having its upper end screwed into the socket, a handle at the lower end of the rod, and means integral with the other bracket guiding the movement of the operating rod.

1,463,701. KITCHEN TABLE. ABNER T. HOLTON, High Point, N. C. Filed Oct. 4, 1920. Serial No. 414,547. 7 Claims. (Cl. 68—10.)

1. A table having legs and a top, the latter comprising a fixed portion and a movable leaf, a stationary rod extending transversely of the leaf and pivotal and sliding connections between the rod and the leaf whereby the leaf may have sliding and swinging movement relative to the rod, substantially as set forth.

1,463,702. COMBINED CURTAIN SUPPORT AND SHADE HOLDER. JOSEPH W. JOHNSON and JOHN W. NOLDE, Newburgh, N. Y. Filed Nov. 1, 1921. Serial No. 511,991. 1 Claim. (Cl. 156—24.)

A bracket comprising a frame engaging section consisting of an L-shaped member forming an inner and an outer arm, a rearwardly extending supporting member having an apertured bow-shaped portion intermediate its ends and an apertured inner terminal, means for slidably connecting said supporting member to said inner arm, said outer arm having its outer terminal portion folded upon itself, a vertically disposed member secured between said folded outer terminal portion and having its upper terminal portion bent upon itself to provide a support for the reception of one end of a curtain support.

1,463,703. COMPOSITE CAR FRAMING. BYERS W. KADEL, Baltimore, Md., assignor to The T. H. Symington Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 26, 1921. Serial No. 495,636. 7 Claims. (Cl. 105—405.)

1. In a railway car, the combination with a metallic load carrying frame, of wall members, said wall members including a plurality of plate like elements each of which comprises a single metallic frame section and a composite filler, said composite filler terminating short of the surrounding marginal edges of said metallic frame section.

1,463,704. WINDSHIELD. LESLIE HARCOURT KENT, Stanmore, and SAMUEL AUGUSTINE DE NORMANVILLE, London, England. Filed Apr. 16, 1920. Serial No. 374,443. 4 Claims. (Cl. 20—40.5.)

1. A clear view windshield for an aeroplane or other fast moving vehicle, including a transparent disc and a wind mill operatively connected therewith for rotating the same, said disc and said wind mill being mounted for rotation about a common axis.

1,463,705. BRUSHING MACHINE. HENRY M. KEITH, West Frankfort, Ill. Filed Mar. 27, 1922. Serial No. 547,052. 7 Claims. (Cl. 15—7.)

2. A machine of the character described comprising a base, a casing rising therefrom and open at one side, a rotatable shaft operating in said casing, a flexible brush wound spirally about said shaft, and means for rotating said shaft for the purpose specified.

1,463,706. SWIVEL. W LE ROY KETCHUM, Bridgeport, Conn. Filed Jan. 20, 1921. Serial No. 438,806. 5 Claims. (Cl. 90—59.)

1. A device of the character described, comprising a base having a beveled, circumferential face and provided with an opening arranged concentrically with respect to said beveled, circumferential face, a holder having a correspondingly beveled, circumferential face and provided with a threaded stud adapted to rotatably and slidably fit said opening, a hand wheel located in the base and adapted to engage the thread of said stud, and upper and lower bearing surfaces for said hand wheel.

- 1,463,707. STREET-CLEANING MACHINE. WESLEY N. KOGER, Philadelphia, Pa. Filed May 4, 1920. Serial No. 378,887. 1 Claim. (Cl. 15—11.)

A street cleaning machine comprising a vehicle, a conduit passing through the rear end of the vehicle and being obliquely disposed with its upper end rearwardly inclined, an extension secured to the lower end of the conduit, a blower mounted for operation on the chassis of the vehicle, a discharge pipe establishing communication between the blower and the conduit through the medium of the extension, a hood flexibly secured to the extension, a flexible shaft mounted for rotation in said hood, a pair of converging brushes rotated from the flexible shaft, means for raising or lowering the flexible shaft and the hood simultaneously and a rotary fan carried in the lower end of the conduit as and for the purpose specified.

- 1,463,708. METHOD FOR MAKING REENFORCED INNER TUBES FOR TIRES. JOSEPH A. McLANE, Morgantown, W. Va., assignor to The Armco Rubber Company, Morgantown, W. Va., a Corporation of West Virginia. Filed June 12, 1920. Serial No. 388,491. 14 Claims. (Cl. 154—14.)

1. A method of fabricating tire tubes, including applying about a mandrel a sheet of rubber having substantially parallel cords embedded therein, by arranging said sheet to have the cords therein extend substantially transversely from one side of the tread zone, about the rim portion and terminating at the opposite side of the tread zone, and in applying a layer of material about the mandrel to complete the tube.

- 1,463,709. VALVE-SPRING LIFTER. FREDERICK T. MARTIN, Merion, Pa., assignor of one-half to John J. Gallagher, Merion, Pa. Filed Jan. 5, 1922. Serial No. 527,073. 8 Claims. (Cl. 29—86.3.)

1. A tool of the character described comprising relatively movable means for adaptation to different valve

spacings, and means for forcibly and simultaneously moving said means subsequent to adaptation, for the purpose set forth.

- 1,463,710. PHOTOGRAPHIC FILM AND PLATE HOLDER. RALPH CHARLES MATSON, Portland, Oreg. Filed Apr. 25, 1921. Serial No. 464,149. 5 Claims. (Cl. 95—100.)

1. A photo plate and film holder comprising a rectangular frame, an intermediate adjustable cross-bar movably supported on the two sides of the frame, extension arms carried by one end of said intermediate adjustable cross-bar and the corresponding end of the cross-bar constituting one end of the frame, and holding clamps on the extremities of said extension arms.

- 1,463,711. ADJUSTABLE CURTAIN CARRIER. HAROLD N. MAY, New Orleans, La. Filed July 24, 1922. Serial No. 577,113. 2 Claims. (Cl. 296—47.)

1. In a device for the purpose set forth, the combination of telescoping sections having rails formed therein, a carriage adapted to rest between the rails and comprising upper and lower bars, rollers secured to the bars, a post extending from one to the other of the bars, a compression spring surrounding the post and bearing at its ends against the bars to force the rollers against the rails, and a clip permanently secured to the lower bar and adapted to receive a storm curtain.

- 1,463,712. PRIMING DEVICE. ALBERT R. MEAD, Newark, N. J. Filed May 28, 1921. Serial No. 473,454. 3 Claims. (Cl. 123—180.)

1. In a priming device, a priming charge heater, a casing having an inlet and an outlet, the latter communicating with the priming charge heater, a valve nor-

mally preventing communication between the inlet and outlet, means for shifting the valve to permit such com-

the coupling means will become effective subsequent to the opening of the circuit; and a chain pressing device

munication, means operated by the shifting of the valve for admitting air to the casing and for energizing the priming charge heater.

connected operatively with the driven element and operating whilst the chain is in the field of the heating mechanism.

1,463,713. ELECTROMAGNETIC SEPARATION OR CONCENTRATION OF MINERALS. WILLIAM MORRIS MORDEY, Westminster, England. Filed Apr. 2, 1920. Serial No. 370,865. 13 Claims. (Cl. 83—71.)

1,463,715. BASE FOR POSTS, FLAGSTAFFS, AND THE LIKE. JÖNS MÖHLOW, Malmö, Sweden. Filed May 10, 1922. Serial No. 559,885. 14 Claims. (Cl. 72—84.)

1. The herein described method of effecting the electro-magnetic separation or concentration of finely divided mineral matter, said method consisting in causing such matter to pass longitudinally over a relatively long and narrow support arranged adjacent to the longitudinal and parallel poles of an alternating current multiphase electro-magnet and subjecting the stream to the action of the multiphase moving magnetic field set up by the said electro-magnet transversely to the said stream and support, the said support being of such length that material that is responsive to the action of such a magnetic field will become separated from the material that is not responsive to such field, and be gradually swept in a lateral direction by such moving magnetic field to one longitudinal side portion of the said support whilst the inert matter will be caused gradually to move in the opposite lateral direction to another longitudinal portion of the said support, the responsive matter and the inert matter being divided into separate streams that are separately discharged from said support.

2. A base for posts, comprising a sleeve formed with a tapered interior at the upper end for receiving the tapered end of a post and also formed with channels communicating with the atmosphere below the end of the post extending along the tapered portion and opening through the upper end thereof.

1,463,714. CHAIN-WELDING MACHINE. JACOB LUDWIG MUELLER, York, Pa. Filed Apr. 22, 1921. Serial No. 463,439. 29 Claims. (Cl. 219—5.)

1,463,716. PACKAGE-WRAPPING MACHINE. WILLIAM B. MUNN, Memphis, Tenn., assignor of one-half to Merrill Jacobs, Memphis, Tenn. Filed Jan. 3, 1922. Serial No. 526,651. 9 Claims. (Cl. 93—2.)

12. In a chain welding machine, an electrical heating mechanism; a circuit for said mechanism; a driving element; a driven element; means for coupling said elements together; means under the control of an operator for opening the circuit; a lost motion connection between the last specified means and the coupling means, whereby

1. The combination with a table having a depressed shelf to receive a paper sheet, of a pair of longitudinally reciprocable slide leaves adapted to be positioned above said shelf to receive and temporarily support a load, and means for supporting said load as the leaves are withdrawn from supporting position.

- 1,463,717. CONVERTIBLE WORKTABLE. WILLIAM B. MUNN, Memphis, Tenn, assignor of one-half to Merrill Jacobs, Memphis, Tenn. Filed May 16, 1922. Serial No. 561,326. 3 Claims. (Cl. 211—11.)

3. The combination with a table top having an opening and a removable panel, a lifttable panel and operating means therefor, of a cutter supported on the lifttable panel, a paper roll supported below said table top, the paper of said roll passing through a slot between the table and the removable panel, and means located within the lifttable panel for retaining the free end of said paper roll.

- 1,463,718. STAMP PAD. WHITNEY K. MUNSON, Los Angeles, Calif., assignor to Mun-Kee Products Corporation, Los Angeles, Calif., a Corporation of California. Filed Dec. 3, 1921. Serial No. 519,649. 5 Claims. (Cl. 91—54.5.)

3. A stamp pad comprising a container, a flange formed on the container and arranged to provide a pad receiving pocket, a retention member removably embracing the flange and having a portion thereof projecting from the inner edge of the flange adapted to retain the pad within the pocket, and a cover hingedly supported on the member.

- 1,463,719. LACE ATTACHMENT FOR KNITTING MACHINES. ERNST OSCAR NEBEL, Philadelphia, Pa. Filed Nov. 16, 1921. Serial No. 515,560. 12 Claims. (Cl. 66—28.)

1. In a knitting machine, the combination with a movable lace finger having needles adapted for cooperation with the knitting needles to form a lace design in

the knitted fabric, means for reciprocating said finger toward and from the knitting needles, and mechanism for reciprocating said finger longitudinally of the row of knitting needles comprising an adjustable member having a plurality of means individually operative in different adjusted positions of the member for positioning the said finger longitudinally of the row of knitting needles, mechanism for reciprocating said member, and variable means adapted for reciprocation with respect to said member for determining the adjusted position of the latter.

- 1,463,720. UNIVERSAL CUTTING AND KNEADING MACHINE. LUIGI NEGRO, Bucharest, Rumania. Filed Jan. 29, 1921. Serial No. 441,093. Renewed June 16, 1923. 2 Claims. (Cl. 259—84.)

1. A cutting and kneading machine, comprising a revolvably mounted receptacle, and two kneading and cutting cylinders mounted in the receptacle to rotate independently thereof and adjacent the inner peripheral face of the receptacle, the cylinders each being provided with a plurality of peripheral annular cutting members, the cutting members being of equal thickness and spaced apart and the cutting members of one cylinder extending between the cutting members of the other cylinder.

- 1,463,721. PULP DEHYDRATOR. RAY ADNA NORTH, Green Bay, Wis., assignor to E. Payson Smith, Green Bay, Wis. Filed July 1, 1921. Serial No. 481,821. 7 Claims. (Cl. 100—47.)

1. In a pulp dehydrator the combination with a casing, and an imperforate arcuate pressure plate therein, of a drum having a perforated periphery and revolvably mounted in said casing with its periphery eccentric to said plate, whereby a comparatively wide mouth is formed at one side of the dehydrator between the drum and plate and a comparatively narrow pulp exit is formed at the other side of the dehydrator, an inlet pipe in communication with the said mouth, a spray pipe within the drum adapted to direct a spray outwardly through the perforated periphery of the drum above the said mouth, and a spray pipe outside of the drum adapted to direct a spray through the perforated periphery into the drum above the outlet between the drum and plate, and an apron to receive the dehydrated pulp as it falls from the periphery of the drum of said outlet and direct it to a suitable receptacle.

1,463,722. PANEL FOR LAMP SHADES. HUGH J. O'BOYLE, San Antonio, Tex. Filed July 18, 1922. Serial No. 575,819. 2 Claims. (Cl. 41-21.)

1. A display panel for lamp shades including a sheet of semi-transparent material containing the matter to be displayed, a sheet of transparent material forming a mat upon which said semi-transparent material is placed, a sheet of flexible material placed over said mat sheet for decorative purposes, and a frame for interchangingly supporting said sheets.

1,463,723. STORING AND PRESERVING CABINET. KISABURO OTSUKI, Fulton, Calif. Filed Apr. 7, 1922. Serial No. 550,527. 3 Claims. (Cl. 217-7.)

1. In a receptacle of the character described, the combination with an outer receptacle, of an inner receptacle, a door adapted to close said inner receptacle, means for spacing said receptacles one from the other, and means for producing a vacuum between said receptacles and within the interior of said inner receptacle.

1,463,724. GRAIN-CAR DOOR. ANTON POKORNY, Wyndmere, N. Dak. Filed June 30, 1922. Serial No. 571,899. Renewed June 18, 1923. 1 Claim. (Cl. 20-32.)

In a door for grain cars, a car provided with side door openings, guide strips for each side door opening extending inwardly at their upper ends and engaging the roof of the car, a panel door slidable in the guide strips, a shaft journaled adjacent the car roof, a drum secured to each end of the shaft, a crank handle secured to one end of the shaft, cable connections between the drums and the upper panel of the door, and said car roof having a trap door opening therein overlying the crank handle carried by said shaft.

1,463,725. EXTENSIBLE, REVERSIBLE, AND SELF-SHARPENING DIPPER TOOTH. JOSEPH F. PRIOR, Houghton, Mich. Filed Apr. 3, 1922. Serial No. 549,068. 9 Claims. (Cl. 37-142.)

1. A dipper tooth having a longitudinally extending passage, a cutter extending through the passage and projectable beyond the forward end of said tooth, means connected with the cutter for projecting the cutter forwardly, and releasable means for securing said means in adjusted positions with a predetermined portion of the cutter extending beyond the forward end of the tooth.

1,463,726. RICOCHET BALL GAME. ERNST RUTTMANN, Stuttgart, Germany. Filed Aug. 24, 1921. Serial No. 494,848. 2 Claims. (Cl. 46-59.)

1. A device for playing ricochet ball comprising the combination of two hand-levers, a slack ricocheting surface of mesh material secured at its respective ends to the upper ends of said levers, means for pivotally connecting said levers to each other near their lower ends, handles at the lower ends of said levers, limiting means to prevent the upper ends of the levers coming into too close proximity with each other, and spring means to return the levers to their initial position when the handles are released, the pivotal connecting means being at such distance from the lower ends of the levers that the handles may be gripped with one hand.

1,463,727. MACHINE FOR MAKING BOXES AND CRATES. JOHN SHELLINGER, Rome, Ga., assignor to Sealed Case Company, a Corporation of New York. Filed Feb. 21, 1919. Serial No. 278,368. Renewed June 9, 1921. Serial No. 476,337. 47 Claims. (Cl. 1-8.3.)

1. Apparatus of the character described comprising an endless conveyor for box or crate blanks, a series of hoppers for battens arranged above said conveyor

and parallel to the movement of said conveyor, each hopper being provided with an opening at one side of its base of sufficient depth to permit the ejection of a single batten laterally therethrough, and feed chains movable transversely of the conveyor for simultaneously and laterally ejecting the lowest batten from each of said hoppers, substantially as described.

1,463,728. VEHICLE TRANSMISSION GEAR. PETER D. SINCLAIR, Marion, N. C. Filed June 15, 1921. Serial No. 477,720. 1 Claim. (Cl. 305—3.)

The combination with a vehicle having driving wheels, a transmission shaft communicating motion thereto and a driving motor, of a differential countershaft carried by the vehicle, and having sprockets on its extremities, endless traction element engaged with the driving wheels and with the sprockets, a clutch interposed between the transmission shaft and the motor, a pinion carried by one of the elements of said clutch, a pinion operatively connected with the differential countershaft, and means for operating the pinion carrying the clutch element to move it toward and away from the complemental element whereby when the clutch elements are engaged the pinion is moved laterally to mesh with the pinion connected with the countershaft, reengagement of the pinions being effected by the disengagement of the clutch elements.

1,463,729. POCKETBOOK. BERNARD STEMMER, New York, N. Y. Filed Nov. 1, 1921. Serial No. 512,034. 1 Claim. (Cl. 150—28.)

A pocket book comprising a main frame, a pocket formed on said main frame, a bellows pocket mounted on the front of said first-mentioned pocket, a collapsible pocket mounted on the back of said first-mentioned pocket, a partition separating said bellows pocket from the front wall of the first-mentioned pocket, a pocket formed on said partition and between the partition and the rear wall of the bellows pocket, a flap carried by said partition and adapted to overlap the rear wall of the bellows pocket to close the pocket formed between the rear wall and the partition, a second flap carried by the first-mentioned pocket and adapted to overlap the bellows pocket to form a closure therefor, and a flap forming an extension of the rear wall of the collapsible pocket to close the entire open side of all of the pockets, substantially as described.

1,463,730. HEATER. EDWARD DUMONT STOUT, New Rochelle, N. Y., assignor to Wm. H. Jackson Company, New York, N. Y., a Corporation of New York. Filed Jan. 7, 1922. Serial No. 527,639. 1 Claim. (Cl. 219—34.)

As an article of manufacture a permanent heater adapted to be attached to the wall of a room, said heater comprising a housing having an open side, a grill for closing the open side of the housing, a plurality of brackets carried by and projecting from the rear wall of the housing and insulated with respect thereto, and a plurality of heating elements carried by said brackets substantially as described.

1,463,731. SHEAVE BLOCK. ERVIN D. SWAN, East Orange, N. J., and DUFF G. MANGES, Maryville, Tenn., assignors, by direct and mesne assignments, of one-half to Lidgerwood Manufacturing Company, New York, N. Y., a Corporation of New York, and one-half to United Steel Block Corporation, Chester, Pa., a Corporation of Delaware. Filed Apr. 23, 1921. Serial No. 463,760. 3 Claims. (Cl. 64—26.)

3. In a sheave block, a cylindrical bearing member, a sheave having a cylindrical bearing aperture surrounding said member and provided with a chamber adapted to contain lubricating material and an inwardly enlarged annular passage leading from said chamber to said bearing member, and a felt ring compressed within said passage for conveying lubricating material from said chamber to said bearing member.

1,463,732. DEVICE FOR RIVETING HALF SOLES ON PNEUMATIC RUBBER TIRES. RALPH C. TURNER and EDWARD T. ALSTON, Seattle, Wash.; said Turner assignor to said Alston. Filed May 13, 1922. Serial No. 560,845. 5 Claims. (Cl. 78—3.)

1. An anvil of a rubber tire shoe riveting machine having a hard-metal surface area adapted to support a rivet when being upset and also having a soft-metal surface area adapted to receive the sharp end of a rivet-hole punch.

1,463,733. DESK ORGANIZER. ROY J. TURNER, San Francisco, Calif., assignor to Efficiency File Co., a Copartnership, Chicago, Ill. Filed Sept. 8, 1921. Serial No. 499,223. 1 Claim. (Cl. 129—15.)

A desk organizer comprising a rigid base plate, a block mounted at one end of the same having a slanting upper surface descending toward the base frame; a strip of flexible material secured to the lower end of the block surface and alternately led away from and back to the block so as to form a plurality of double leaves secured to the block in ascending and spaced relation with the leaves made of substantially equal size so as to present a correspondingly inclined formation at the opposite end, and a cover of relatively stronger material than the leaves secured to the back of the block and adapted to overlie the upper leaf.

1,463,734. TREE HOLDER. JOHN ULLRICH, Salt Lake City, Utah. Filed Oct. 11, 1921. Serial No. 507,006. 1 Claim. (Cl. 248—38.)

A tree holder of the class described comprising a base, a standard having its lower end bent to provide a U-shaped hook, said lower end of hook being pointed and passed through an opening formed in said base, a thumb-screw threaded to the pointed end portion of said hook and engaging said base to hold the standard to the base, curved jaws arranged end to end and having their meeting ends overlapping and formed with openings to receive the upper end of said standard, a thumbscrew threaded onto the upper end of the standard to hold the jaws in place thereon, the inner surfaces of said jaws being formed with teeth to engage the trunk of the tree.

1,463,735. COMBINED CLOSURE AND FAUCET FOR LIQUID CONTAINERS. HENRY OZA VARRIEUR, Placerville, Calif. Filed Mar. 18, 1922. Serial No. 544,961. 2 Claims. (Cl. 251—137.)

1. A combined closure and faucet comprising a hollow body having an external polygonal portion near one end, and portions adjacent and upon opposite sides of the poly-

gonal portion externally screw threaded, and provided in a side with a lateral discharge opening, a valve closing the

end of the body adjacent the polygonal portion, and a pressure piece at the opposite end of the body having connection with said valve to effect unseating thereof.

1,463,736. WHIP FOR MIXING MACHINES. PAUL S. WARD, Cincinnati, Ohio, assignor to The Triumph Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 2, 1923. Serial No. 622,234. 6 Claims. (Cl. 259—102.)

1. A whip of the character described comprising a head, a stem depending therefrom, and wires between the lower end of said stem and said head inclined about the axis of said stem, and the lower portions of said wires located in relatively stepped positions.

1,463,737. POSITIVE-FILMS-PRINTING MACHINE. ANDRÉ LÉON VICTOR CLÉMENT DEBRIE, Paris, France. Filed June 16, 1922. Serial No. 568,829. 4 Claims. (Cl. 95—75.)

1. A positive film printing machine comprising a casing, an electric lamp disposed therein an aperture in said casing before which the negative film and the positive film to be printed are caused to travel, an electro-magnet whose armature is controlled by the motion of the negative film, a drum adapted to be actuated when the electro-magnet armature is attracted, a perforated band disposed upon said drum, a first set of spring contacts cooperating with said perforated band and connected to the incoming circuit, a second set of spring contacts cooperating with said perforated band and connected to one terminal of the lamp, a rheostat having two sections in series, one set of

contacts being connected to one section, and the other set of contacts being connected to the other section, and means for combining any of the contacts of the first set with

any of the contacts of the second set for inserting in the circuit of the lamp a different resistance for each combination.

1,463,738. LEVEL. WALTER M. DICKINSON, Middlesex, N. C. Filed Apr. 17, 1922. Serial No. 553,391. 1 Claim. (Cl. 40—1.6.)

A level comprising a pair of standards, a beam connecting the standards, vertically spaced brackets upon the outer face of each standard, a scale extending between the said brackets and reading in opposite directions from its center, a transparent gage tube disposed in front of the scale upon each standard and supported by the brackets projecting from said standard, a vent cock at the upper end of each gage tube, a pipe carried by the beam and the standards and having upturned portions aligned with the respective gage tubes, flexible coupling sleeves encircling the meeting ends of the pipe and the respective gage tubes, clamps around said sleeves, U-shaped brackets secured to the respective standards and projecting outwardly therefrom, and handles projecting from said brackets.

1,463,739. BADGE AND ANALOGOUS DEVICE. HAROLD W. DRAPER, East Orange, N. J., assignor to The Whitehead & Hoag Company, Newark, N. J. Filed July 24, 1922. Serial No. 577,105. 1 Claim. (Cl. 40—1.6.)

In a badge of the character described, a main supporting plate having a sight opening therethrough, a display plate removably seated in said opening, a transparent cover

plate secured to the main plate and extending across the front face of the display plate for limiting the forward movement thereof in said opening and for displaying said display plate therethrough, and means for holding the display plate in said opening including a locking member having one end hinged to the main plate at one side of the opening to swing to and from a position across and against the back of the display plate and its other end returned toward the hinged end to form a loop for attachment to a button hole or pocket, and a keeper on the main plate at the side of the opening opposite the hinge for engagement by the adjacent portion of the locking member.

1,463,740. DISPLAY DEVICE. JAMES EDWIN GEE and FREDERICK SAMUEL GEE, London, England. Filed Nov. 25, 1922. Serial No. 603,329. 4 Claims. (Cl. 40—14.0.)

1. A display device comprising a plate of magnetic material, a detachable tablet of desired shape and character formed of para-magnetic material and a plurality of pairs of feet formed integrally with said tablet and constituted by portions bent over at the margins of said tablet, said feet being adapted to form pairs of magnetic poles for the attachment of the said tablet to the surface of the said plate.

1,463,741. STOP MOTION FOR KNITTING MACHINES. EDSON S. HINELINE, Apponaug, R. I., assignor to Hine-line Engineering Company, Providence, R. I., a Corporation of Rhode Island. Filed Aug. 31, 1921. Serial No. 497,219. 6 Claims. (Cl. 66—7.)

1. Stopping mechanism for knitting machines comprising in combination, a rock shaft having a disk, an electro-magnet having an armature adapted to hold said disk

from rotation until energized, means whereby yarn break or impaired tension effects energization of said magnet, a driving pulley, shipper means therefor, a brake adapted to be applied directly to said pulley, a lever carrying said brake, and a cam upon said rock shaft and controlling the movement of said lever.

1,463,742. INNER TUBE. GEORGE A. LANE, Lorain, Ohio, assignor of one-half to Isaac A. Chappell and one-half to John C. Hayes, both of Lorain, Ohio. Filed Oct. 5, 1922. Serial No. 592,505. 1 Claim. (Cl. 152—13.)

As a new article of manufacture, an inner tube comprising an inner lamination of rubber the same being initially molded in tubular form, a textile lamination cut on the bias and spirally disposed around the inner lamination, said textile lamination being of a length and width to surround the rubber lamination, the ends of the textile lamination being obliquely cut and in overlapping relation, the longitudinal marginal portions of said fabric lamination being in slight overlapping relation, and an outer lamination of sheet rubber wrapped around the textile lamination, the opposite ends of the structure being spliced.

1,463,743. DUMP-BODY VEHICLE. WALTER D. LANKSTON, Robinson, Ill. Filed Dec. 1, 1921. Serial No. 519,190. 2 Claims. (Cl. 298—38.)

1. In a vehicle, the combination of longitudinal chassis bars, a rear frame bar carried by said chassis bars, a dump body having longitudinal parallel bottom bars hingedly connected at intermediate points of their length to said rear frame bar, a transverse beam superimposed on and fixed to the longitudinal chassis bars and spaced in front of the rear frame bar, and manually-operable means carried by the said transverse beam and constructed and arranged when the body is restored to carrying position to automatically and detachably engage the longitudinal bottom bars of the body and secure the body in carrying position, and also constructed and arranged to impart an upward impulse to the forward portion of the body after the release thereof.

1,463,744. MIXING MACHINE. FRANK X. LAUTERBUR, Sidney, Ohio. Filed June 4, 1921. Serial No. 475,137. 5 Claims. (Cl. 259—70.)

1. A mixing machine of the class described including a column, a plurality of bowls or receptacles grouped around and supported by the column, an adjustable head also supported by the column and movable around the

same for carrying beater operating mechanism to operative position with relation to any one of the bowls or

receptacles, and cooperating means on the head and the column for securing the head in position over the bowls or receptacles.

1,463,745. SCRAPER. JAMES W. LAYNE, Danville, Va. Filed June 17, 1921. Serial No. 478,384. 1 Claim. (Cl. 145—47.)

A scraping tool comprising a supporting bar and handle structure having an opening adjacent the upper end thereof, scraping blades having different scraping edges outwardly thereon each including a blade portion and a relatively longer attaching portion extending at a substantial angle to the blade, the attaching portions of said blades having apertures thereon immediately adjacent their free end edges adapted for alignment with the aperture of said supporting bar upon the opposite sides of the latter, and detachable clamping means inserted through the aligning apertures of the scraping blades and bar whereby said attaching portions of said scraping blades extend upwardly from the top marginal edge of the supporting bar for their major lengths providing a space therebetween.

1,463,746. HAIR CURLER. GEORGE C. LEWIS, Philadelphia, Pa. Filed Aug. 31, 1922. Serial No. 583,519. 2 Claims. (Cl. 132-44.)

1. A hair curler comprising a cigar-shaped body portion, a bail pivotally secured thereto, and a length of elastic material also secured to said body portion.

1,463,747. DETONATING FUSE. ROY L. LOWMAN, Buckhannon, W. Va., assignor of one-half to Harry C. Dodge. Filed June 18, 1921. Serial No. 478,739. 7 Claims. (Cl. 102-39.)

3. A detonating fuse comprising a detonating charge and an igniting charge, a passage therebetween, an interrupter operating across the passage and provided with a bore, a spring within the bore, said interrupter having at one end a transverse passage which at times is aligned with the first said passage to provide unrestricted communication between the two said charges, said interrupter also having an enlarged weighted portion, a detent at times bearing against the under side of said enlarged portion and at other times bearing against the upper side of said enlarged portion, substantially as set forth.

1,463,748. BIB OVERALLS. WALTER C. MASTIN, San Antonio, Tex. Filed Mar. 25, 1921. Serial No. 455,692. 1 Claim. (Cl. 2-140.)

The combination with an adjustable shoulder strap for garments of the type indicated having means for adjustably connecting the terminal of the strap with the body portion thereof and a button loop for engagement with the suspender button on the garment, of a protective tongue provided with a transverse slot through which the shoulder strap extends and having a button hole for engagement with the button of the garment and disposed at the rear of said loop.

1,463,749. DEVICE FOR PREVENTING LEAKS. CHARLES POLLAK, Hancock, Mich. Filed June 3, 1921. Serial No. 474,722. 1 Claim. (Cl. 24-19.)

A device of the character described comprising pair of similar substantially semi-cylindrical clamping members hingedly connected at one edge and adapted to be engaged upon a flexible conductor in embracing relation thereto, flanged members on said clamping members in spaced relation to the other edges thereof, said flanged members having their flanges converging longitudinally and turned outwardly, and a clamping device formed as a trapezoidal shaped body having converging side flanges engageable upon said first named flanges whereby when said last named clamping member is moved longitudinally in one direction with respect to said semi-cylindrical clamping members, the latter will be drawn into compressing engagement with the conductor, the spacing of said flanged members from the edges of the semi-cylindrical clamping members permitting the free edges of the latter to be drawn closely together whereby substantially the entire periphery of the flexible conductor will be compressed.

1,463,750. MOP WRINGER. EDWARD PETER POULSEN, Mendham, N. J. Filed July 25, 1922. Serial No. 577,289. 4 Claims. (Cl. 15-262.)

1. A mop wringer including a pair of mop engaging elements arranged side by side, means adapted to embrace the upper edge of a bucket, a connection between one end of each mop engaging element and the portion of the bucket edge embracing means disposed at the inner side of the bucket for permitting universal turning and swinging movements of said mop engaging elements, and a foot engaging element depending from said means and connected thereto for respectively holding said means in embracing engagement with the upper edge of the bucket and for preventing accidental turning movement of the bucket, said foot engaging element having adjustable connection with the bucket embracing means.

1,463,751. MECHANICAL IGNITER. ALVAH L. POWELL, Miles City, Mont., assignor to The A. L. Powell Power Co., Inc., Miles City, Mont., a Body Corporate. Filed Feb. 2, 1921, Serial No. 441,979. Renewed Dec. 22, 1922. 2 Claims. (Cl. 67-6.)

1. In a mechanical igniter, a frame, a bored hole in said frame, a piston operable in said bored hole, an inlet valve, an outlet valve, means for holding said outlet valve to resist a pre-arranged pressure, communicating means from said valves to said bored hole, a lever, means for supporting said lever on said frame, a slot in said lever, a pin on said piston, means for operating said piston by said lever, and means for fastening said frame to a supporting surface, substantially as described.

1,463,752. SEPARATING DISKS IN CENTRIFUGAL SEPARATORS. LUDVIK RASCH, Christiania, Norway, assignor to Aktieselskapet Turbo-Separator, Drammen, Norway. Filed Jan. 24, 1922. Serial No. 531,506. 4 Claims. (Cl. 233-41.)

2. A centrifugal separator disk having a fold provided with tongues, the folding line of the disk being internal to the base line of the tongues.

1,463,753. SHOE-LAST STAND. WILLIAM A. REED, Springfield, Ohio, assignor of one-half to Sumner Lathey, Springfield, Ohio. Filed June 19, 1919. Serial No. 305,304. 1 Claim. (Cl. 12-123.)

A shoe last stand having a standard bifurcated at its upper end to provide relatively yieldable jaws, a head disposed between the flanges of said jaws and having

radial arms having terminal last members, a pivot bolt connecting said jaws and extending axially through said head to revolvably mount the same on the standard, and a clamping nut engaging said bolt for actuating the jaws to secure them in frictional engagement with the interposed head.

1,463,754. METHOD OF MANUFACTURING TIRES. CARL E. RETT, Akron, Ohio, assignor to Lambert Tire & Rubber Co., Barberton, Ohio, a Corporation of Arizona. Filed Sept. 9, 1922. Serial No. 587,141. 6 Claims. (Cl. 18-59.)

1. The method of tire building which consists in taking a rim of any usual cross sectional shape, building up a tire base in the rim and partially curing the same; building up a tire body separately from the rim base and partially curing the same; subsequently stretching the tire body and placing it over the base portion on the rim; then vulcanizing the whole together.

1,463,755. IDENTIFICATION DEVICE. VICTOR E. WEST, McKeesport, Pa. Filed Jan. 6, 1923. Serial No. 611,077. 3 Claims. (Cl. 40-19.)

1. In a device of the character described, a member adapted to be secured about an umbrella rod, a sheet of transparent material secured to said member, identifying means positioned between the member and said sheet of transparent material, and means for securing the ends of the sheet of transparent material together.

1,463,756. RENEWABLE FUSE. WILLIAM M. WETTER, Williamsport, Pa., assignor of one-half to Louis G. Huling, Williamsport, Pa. Filed July 13, 1922. Serial No. 574,738. 3 Claims. (Cl. 200-121.)

1. A circuit cut-out comprising a body, a self-acting indicator carried by said body, a fuse connected detachably with said indicator at a point within the body and normally holding said indicator against operation,

said fuse being also detachably connected with said body, and a detachable connection separate from the fuse connecting said indicator with said body and releasable only when the fuse has blown.

- 1,463,757. PHOTOPRINT DRIER. ALDEN H. WYATT, Knoxville, Iowa. Filed Oct. 27, 1922. Serial No. 597,322. 3 Claims. (Cl. 34—19.)

3. A photo print drier, comprising a box having a door closing its front, and having inlet and outlet openings in opposite ends of its bottom, a partition in the rear portion of the box terminating short of the top thereof, the space between the partition and rear of the box being in communication with the air inlet, a drum beneath the box in communication at opposite ends with the inlet and outlet openings of the box and having an opening in its bottom opposite the outlet of the box for the reception of warm air from a suitable source, and a fan for circulating the warm air through the drum and box.

- 1,463,758. RAILWAY-CROSSING SIGNAL. EVERETT M. BOCK, Elkhart, Ill. Filed Aug. 25, 1922. Serial No. 584,234. 1 Claim. (Cl. 246—299.)

In a signaling device, the combination of a stationary vertical standard, a tubular semaphore staff rotative on the upper end of the standard; a coiled spring surrounding said standard and having one end attached to the standard and the other end attached to the staff; a frame secured on the staff and having outwardly extended arms; levers and connections pulling on the arms of said frame to rotate the staff to stress said coiled spring; a latch plate attached to the staff and provided with a stop; a latch pivoted on a stationary support and adapted to engage the stop on said latch plate, and levers and connections effective to retract said latch to permit said coiled spring to rotate said staff.

- 1,463,759. WALL CONSTRUCTION. GEORGE C. CARSON and EDWARD COLL, San Francisco, and THOMAS S. Christensen, Nashmead, Calif. Filed Apr. 17, 1922. Serial No. 553,625. 2 Claims. (Cl. 72—41.)

2. A hollow building block formed of molded material having parallel sides laterally displaced and a plurality

of ends lying in displaced parallel planes at right angles to said surfaces, and a brace member between each pair of parallel ends and forming an acute angle therewith.

- 1,463,760. VEHICLE LOCK. CHARLES A. CONGER, Oakland, Calif., assignor to National Auto Devices Company, San Francisco, Calif., a Corporation of California. Filed June 3, 1920. Serial No. 386,201. 5 Claims. (Cl. 70—129.)

5. In a lock for a vehicle steering wheel and column, comprising a body having two parts adapted to interlock in hinged relation on one side and an inset screw to secure the two parts on the other side of said column, a shank slidable in said body and having a member adapted to engage the steering wheel on one end thereof, a barrel lock set flush within said body and constructed and adapted to lock said shank when the member engages the steering wheel.

- 1,463,761. GARBAGE AND SEWAGE INCINERATING APPARATUS. JASPER C. CURRY, Pineville, La. Filed Nov. 6, 1920. Serial No. 422,290. 2 Claims. (Cl. 110—11.)

1. A device of the character described comprising a heating element, a bowl to be heated thereby, an airtight closure for said bowl, a discharge leading from the bowl and having a controlling valve therein, a branch pipe leading from the discharge pipe between the valve and the bowl, a condensing coil to which the branch pipe leads a bodily removable lining for said bowl constituting a receptacle and means for supplying air to the interior of said bowl and receptacle above the top of said receptacle.

1,463,762. MANUFACTURE OF RETURN CONNECTIONS. JACQUES LENTÉ, Paris, France, assignor to Société Anonyme d'Escaut & Meuse, Paris (Seine), France, a Company of France. Filed Sept. 27, 1921. Serial No. 503,674. 2 Claims. (Cl. 29—157.6.)

1. A process for the manufacture of a return connection, particularly intended to form an element of a tubular superheater, consisting in providing a tube with a thickened portion intermediate its ends, curving said tube into the form of an elbow, placing said elbow in a press and exerting pressure on the elbow to shape the metal of the elbow, and inserting mandrels in the ends of said elbow before exerting pressure on the same.

1,463,763. BOTTLE-CLEANING APPARATUS. CHARLES H. LOEW and JOHN R. GRUETTER, Lakewood, Ohio. Filed Mar. 17, 1917. Serial No. 155,422. 35 Claims. (Cl. 15—60.)

11. In an apparatus of the character described, the combination, with bottle-treating means, of a conveyor extending in operative relation to said means, means for moving the conveyor intermittently, a bottle receiving and charging device cooperating with the receiving portion of the conveyor and movable into and out of operative relation thereto, a bottle receiving and removing device cooperating with the delivery portion of said conveyor and movable into and out of operative relation thereto, and means for moving the said devices into operative relation to the conveyor while the latter is at rest.

1,463,764. MACHINE TOOL. RICHARD C. MONAHAN, Watertown, Mass., assignor to National Machine & Tool Company, Boston, Mass., a Corporation of Maine. Filed Apr. 10, 1920. Serial No. 372,956. 7 Claims. (Cl. 90—4.)

1. In a machine of the character described, the combination of a hob cutter, a work support, a spindle mounted on said work support for rotating a gear blank to be

acted upon by the hob cutter, a worm gear fast on said spindle, a worm meshing with said gear, a shaft mounted on said work support, spiral gears for imparting rotation from said shaft to said worm, an index gear detachably mounted on said shaft, a carrier fulcrumed on the axis of said index gear and adjustable to different positions, a driving gear, an intermediate gear on said carrier and adapted to mesh with said driving gear and index gear, and means for rotating said hob cutter and driving gear at the same speed.

1,463,765. LUBRICATING DEVICE. RICHARD T. NEWTON, New York, N. Y. Filed Dec. 8, 1919. Serial No. 343,213. 7 Claims. (Cl. 267—29.)

1. In a shock eliminator, a casing, a hollow nut at the top thereof forming an oil reservoir, members arranged within said casing, and means for lubricating said members from the reservoir in the nut.

1,463,766. SHOCK ELIMINATOR. RICHARD T. NEWTON, New York, N. Y. Filed June 2, 1920. Serial No. 385,919. 8 Claims. (Cl. 267—54.)

1. The combination with a chassis side bar having a spring bolt and a main spring having an eye adapted to receive said spring bolt, of a shock eliminator comprising a bracket adapted to be mounted on the end of the chassis side bar and engaged by said spring bolt, and a C-shaped leaf spring rigidly secured at one end to said bracket, and pivoted at its other end to the eye of the main supporting spring.

1,463,767. AIR-BRAKE EMERGENCY CHECK VALVE. MICHAEL H. RYAN, San Bernardino, Calif., assignor of one-tenth to Julius J. Peyron, San Bernardino, Calif. Filed Aug. 7, 1922. Serial No. 580,240. 5 Claims. (Cl. 303—42.)

4. In combination, a casing having a straight passageway therethrough, and a chamber, flanges formed on the walls of the passageway, a valve for controlling the pas-

sage of fluid through the passageway and adapted when in closed position to abut said flanges, and a second valve

for controlling the passage of fluid from the passageway to said chamber, said valves being mounted for simultaneous movement.

1,463,768. LOCK. GEORGE E. M. WIELAND, Baltimore, Md., assignor of one-half to Frank Boehmer, Baltimore, Md. Filed Aug. 28, 1922. Serial No. 584,637. 4 Claims. (Cl. 70-107.)

1. A lock comprising a case, a cylinder revolubly secured in said case and projecting above the top thereof, a locking arm within said case and carried by said cylinder, a key-barrel mounted in said cylinder, a key-hole cylinder mounted in said first named cylinder and surrounding the upper end of said key-barrel, and means for turning said key-barrel and said first named cylinder.

1,463,769. FLUID SEPARATOR. CLARENCE P. WOOD, Philadelphia, Pa. Filed Mar. 8, 1922. Serial No. 542,158. 3 Claims. (Cl. 183-113.)

1. In a device of the class described, the combination with a cylindrical casing operatively closed at each end and having an inlet and an outlet, of a vertical partition within and extending diametrically of said casing and normal to the axis of the inlet, said partition having a plurality of vertically spaced, inverted V-shaped ridges on each of its sides and its upper extremity curved in the direction of said inlet, and a substantially horizontally disposed shelf extending beneath said partition provided with an upwardly curved transversely extending lip along its edge adjacent the inlet.

1,463,770. RECORDING SCALE. ADELMER M. BATES, Chicago, Ill. Filed Oct. 24, 1921. Serial No. 509,943. 16 Claims. (Cl. 234-1.)

1. In combination with a scale, means for recording each weighing, comprising a record strip and means for marking said strip once during each weighing, said recording means being adapted to indicate the variation of the weight weighed from a pre-determined norm by the variation in the location of the recording mark from a pre-determined norm.

1,463,771. MEANS TO COMPRESS INGOTS. ALVIN A. CLAASSEN, Chicago, Ill. Filed Apr. 17, 1922. Serial No. 553,694. 4 Claims. (Cl. 22-67.)

1. An ingot mold, a plurality of compression bars constructed to extend into the upper end of the mold and to cover the central portions of its sides, releasable means to hold the bars tight against the sides of the mold, and wedges constructed to be driven between the mold and bars to move the bars inwardly toward the center of the mold when their holding means are released.

1,463,772. GRAIN-CAR DOOR. WILBUR M. COMBS, Lyons, N. Y., assignor of one-half to Alton H. Sherman, Lyons, N. Y. Filed Jan. 17, 1922. Serial No. 529,829. 8 Claims. (Cl. 20-27.)

1. In a grain car having an opening in one side, a frame hinged to and within the car permanently at said side of the opening to swing toward and from the roof,

and a sectional door flexibly connected to the interior of the car to swing from the opening to the frame and vice versa independently of said frame, said frame having means to support the door sections to swing therewith wholly at that side of the opening.

1,463,773. CAR-END CONSTRUCTION. IRA EVERETT, Sayre, Pa. Filed Oct. 16, 1917. Serial No. 196,939. 15 Claims. (Cl. 105-411.)

1. A car frame comprising, in combination, a substantially vertical beam of Z-shaped cross-section, a diagonal brace of Z-shaped cross-section, and a substantially horizontal beam, a shoe arranged on said horizontal beam, and a projection on said shoe of double Z-shaped cross-section projecting upwardly with respect to said horizontal beam, and means for clamping said projection to the ends of said vertical beam and said brace.

1,463,774. ELECTRIC HEATING ATTACHMENT FOR CARBURETORS. JOHN E. GODMAN and JOSEPH M. GARR, Lafayette, Ind.; said Garr assignor to said Godman. Filed Mar. 13, 1920. Serial No. 365,410. 3 Claims. (Cl. 219-38.)

1. An electric heater for the intake of an internal combustion engine, comprising a body portion provided with a central intake opening therethrough for the passage of fuel to the engine, an annular electrical heating element surrounding said central opening and secured to the inner wall thereof, said element being arranged to extend partially into said opening and leave a central free passage therethrough.

1,463,775. COMBINED TILE STRUCTURE AND TOILET-PAPER HOLDER. HARRY N. GOLDSMITH, Philadelphia, Pa., assignor to Golco Sanitary System, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 19, 1921. Serial No. 523,413. 3 Claims. (Cl. 72-18.)

1. In a tile faced wall structure in which the tiles are laid in a prearranged order, a box-like structure covering a space on the wall of greater area than the space covered by a single tile, and a tile connected to said box laid between other tiles of the wall whereby said box is supported, the tile on the box being of the proper shape and size to form a portion of a prearranged design formed by the tiles.

1,463,776. HOG HOLDER AND PIG PULLER. EDWARD G. KNUDTSON, Stanton, Nebr., assignor to William Becker, Sidney, Nebr. Filed Aug. 25, 1921. Serial No. 495,198. 2 Claims. (Cl. 119-153.)

1. A device of the class described comprising a tubular member, a plunger therein comprising a head member slidably mounted in said tubular member, a rod engaged with said head member, a handle carried at the outer end of said rod, a flexible loop carried on said head member and adapted to project beyond the one end of said tubular member, a guide bar in the said tubular member, a ratchet formed on said rod adjacent the handle member and a spring operated pawl carried on said guide bar adapted to engage said ratchet to retain the plunger and loop in various adjusted positions.

1,463,777. PERCENTAGE FEEDER. ANGUS D. MACLELLAN, Owensboro, Ky., assignor to MacLellan Mixer Company, Owensboro, Ky., a Corporation of Kentucky. Filed Feb. 17, 1922. Serial No. 537,213. 7 Claims. (Cl. 83-44.)

1. In a feeder of the class described, the combination of a pair of spaced hoppers, a trough connecting said hoppers, a shaft extending transversely through said hoppers, cylindrical sections having complementary ribs and oblique pockets mounted on said shaft in each of said hoppers, said rib sections being movable relative to the pocket section, a guide rod journaled in each of said hoppers, a lever secured to said rod and engaging the rib sections for varying the width of said pockets, and means in said trough for commingling the stock as it issues from said hoppers.

1,463,778. TYPEWRITING MACHINE. WILLIAM H. HULSE, Brooklyn, N. Y., assignor to Underwood Type-writer Company, New York, N. Y., a Corporation of Delaware. Filed June 22, 1920. Serial No. 390,853. 21 Claims. (Cl. 197—83.)

20. In a typewriting machine, the combination with a traveling carriage, of letter-feeding type-keys, silent-keys, a letter-feed-controlling member universal to all of said keys to be operated thereby, a lock independent of said member for locking the latter in actuated position when the lock is made effective, means universal to the silent-keys but not to the letter-feeding keys for making the lock effective, and means universal to the letter-feeding keys but not to the silent-keys for making the lock ineffective.

1,463,779. ALTERNATING-CURRENT RECTIFIER. VERNON FRANKLIN KING, Tonawanda, N. Y., assignor to King Electric Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Feb. 5, 1921. Serial No. 442,677. 6 Claims. (Cl. 175—365.)

1. In an alternating current rectifier, the combination with a magnetic core, having pole pieces, of a support carrying the core and pole pieces, a separable vibratory unit arranged across the pole pieces and detachably carried by the support, the vibratory unit com-

prising a casing, a member secured to the casing, a second member carried by and insulated from the first member, a vibrating armature carried by the second member, contact means connected with the casing and

the armature, and means carried by the support for electrically connecting the members of the unit with the electric circuits of the rectifier.

1,463,780. COMPOSITION FOR COATING AND BONDING FABRICS. HERBERT PROOD, Chapel-en-le-Frith, England, assignor to Ferodo Limited, Chapel-en-le-Frith, England. Filed Mar. 21, 1923. Serial No. 626,642. 3 Claims. (Cl. 134—17.)

2. A composition for coating and bonding fabric consisting of substantially two parts of dammar gum, substantially one part of rubber, substantially two parts of prepared linseed oil, and substantially five parts of a mineral hydrocarbon solvent.

1,463,781. FILLER AND ACCELERATOR FOR RUBBER COMPOUNDS. AUGUSTUS WARREN GOULD, Mount Angel, Oreg.; Hazel Phelan executrix of said A. Warren Gould, deceased. Filed June 6, 1921. Serial No. 475,528. 1 Claim. (Cl. 106—23.)

A composition consisting of rubber and a filler consisting of calcined tuffaceous breccia which has been ground to a powder.

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

- Acorn Refining Company, The, Cleveland, Ohio. Water-proofing compound for building roofs. 169,931; July 3.
- Actien-Gesellschaft für Anilin-Fabrikation, Berlin, Germany. Preparations for protecting animal substances against the noxious effects of chemicals. 169,799; July 3; Serial No. 170,232; published Mar. 27, 1923.
- Advance Manufacturing Co., St. Louis, Mo. Two-wheeled children's coaster vehicles. 169,871; July 3; Serial No. 174,684; published Apr. 3, 1923.
- Alice-Louise Co. (See Lynch, Alice L.)
- American Plant Company. (See Head, Broadus J.)
- Anthony Company, Streator, Ill. Vehicle bodies and parts. 169,915; July 3.
- Ashaway Line & Twine Manufacturing Company, Ashaway, R. I. Fishing line. 169,935; July 3.
- Associated Publishers of Iowa, The, Waterloo, Iowa. Periodically-issued literary supplements. 169,796; July 3; Serial No. 169,741; published Mar. 27, 1923.
- Atlantic Refining Company, The, Philadelphia, Pa. Petroleum grease. 169,869; July 3; Serial No. 174,814; published Mar. 20, 1923.
- Baker Paint & Varnish Co., Jersey City, N. J. Paints, varnishes, putties, dry colors, white lead, etc. 169,872; July 3; Serial No. 174,605; published Apr. 3, 1923.
- Baker Paint & Varnish Co., Jersey City, N. J. Paint enamels. 169,873; July 3; Serial No. 174,604; published Apr. 3, 1923.
- Barrett Company, The, New York, N. Y. Ready-mixed paint and paint thinner. 169,829; July 3; Serial No. 173,269; published Apr. 3, 1923.
- Bela Company, The. (See Yorita, George.)
- Benson, Thomas L., doing business as Shreveport Chemical Company, Shreveport, La. Material used to hasten the setting and lower the freezing point of cement. 169,922; July 3.
- Bersted Manufacturing Company, Chicago, Ill. Locking door handles. 169,904; July 3; Serial No. 171,060; published Apr. 3, 1923.
- Bissell, Lloyd, doing business as Star Piston Pin Co., Buffalo, N. Y. Piston pins. 169,888; July 3; Serial No. 155,427; published May 16, 1922.
- Blakely, Harry C., New Britain, Conn. Potato chips. 169,773; July 3; Serial No. 168,913; published Apr. 3, 1923.
- Bobwhite Chemical Corporation, New York, N. Y. Insecticides, bactericides, fungicides, etc., for plants. 169,791-2; July 3; Serial Nos. 168,953-4; published Mar. 27, 1923.
- Boiler Scale Dissolvent Corp., Buffalo, N. Y. Compound for dissolving and removing scale and rust from boilers, etc. 169,780; July 3; Serial No. 172,318; published Mar. 27, 1923.
- Bossard, Jean, doing business as Institut de Beaute (Castiglione, Paris, France. Perfume, toilet water, face powder, rouge, etc. 169,909; July 3; Serial No. 170,618; published Mar. 6, 1923.
- Bradford Dyers' Association, Limited, The, Bradford, England. Dyed cotton piece goods. 169,782; July 3; Serial No. 122,624; published Mar. 20, 1923.
- Bradford Dyers' Association, Limited, The, Bradford, England. Cotton, artificial-silk, silk, and woolen piece goods and admixtures of same. 169,783; July 3; Serial No. 122,625; published Mar. 27, 1923.
- Broome, Ernest L., New York, N. Y. Hydraulic gates. 169,858; July 3; Serial No. 172,028; published Apr. 10, 1923.
- Buczkowski, John J., doing business as Hoosier Cleanser Mfg. Co., South Bend, Ind. Water-softening compound. 169,900; July 3; Serial No. 171,571; published Feb. 27, 1923.
- Burke, Frank G., doing business as Manhattan Soap Company, New York, N. Y. Soap for toilet, bath, laundry, etc. 169,781; July 3; Serial No. 172,508; published Mar. 27, 1923.
- Cameron, Will J., doing business as Cameron's Surgical Specialty Co., Chicago, Ill. Outfit of surgical and dental appliances. 169,893; July 3; Serial No. 160,928; published Mar. 27, 1923.
- Canton Cutlery Co., The, assignor to The Canton Cutlery Company, Canton, Ohio. Pocket cutlery and razors. 19,480; renewed May 12, 1921.
- Capitola Tonic Comb Co., New York, N. Y. Fountain combs capable of containing a liquid for passage through the hair. 169,827; July 3; Serial No. 173,463; published Apr. 3, 1923.
- Caron Corporation. (See Daltroff, E., and Cie.)
- Certified Laboratories, Inc., Newark, N. J. New fuel intensifier and carbon remover. 169,821; July 3; Serial No. 168,632; published Mar. 13, 1923.
- Chappell, Alexander W., doing business as Dr. R. H. Kline Co., Red Bank, N. J. Medicinal preparation acting as a system cleanser and regulator. 169,834; July 3; Serial No. 173,030; published Mar. 6, 1923.
- Chemische Fabriken vorm. Weiler-ter Meer, Uerdingen, Germany. Impregnating material for use as a preservative. 169,759-61; July 3; Serial No. 170,124-6; published Mar. 6, 1923.
- Chicago Nipple Manufacturing Co., Chicago, Ill. Metal pipe nipples. 169,805; July 3; Serial No. 163,502; published Apr. 10, 1923.
- Chicago Thrift Company, Chicago, Ill. Portable banks. 169,930; July 3.
- Clares Chemical Works. (See Smith, J. Elmer.)
- Clark Tractor Company, Buchanan, Mich. Tractors. 169,868; July 3; Serial No. 175,135; published Apr. 10, 1923.
- Clarke Chemical Co., The, Kansas City, Mo. Medicine for the treatment of ulcerative and diseased conditions of the mouth and throat. 169,767; July 3; Serial No. 169,283; published Mar. 13, 1923.
- Cleveland Twist Drill Company, The, Cleveland, Ohio. Metal-working small tools. 169,822; July 3; Serial No. 174,358; published Apr. 10, 1923.
- Coleman and Company Limited, Norwich, England. Liquor or liquid preparation containing malt. 169,877; July 3; Serial No. 140,917; published Apr. 3, 1923.
- Colgate & Company, Jersey City, N. J. Perfumes, perfume powders, and toilet waters. 169,757; July 3; Serial No. 171,201; published Mar. 27, 1923.
- Collegian, The, Minneapolis, Minn. Neckties, cravats, scarfs, hats, caps. 169,881; July 3; Serial No. 148,973; published Apr. 3, 1923.
- Columbian Steel Tank Company. (See Kramer, Andrew A.)
- Congoleum Company. (See Salem Manufacturing Company, assignor.)
- Connolly, Ira, doing business as Empire Chemical Co., Hanna, W. Va. Liniment. 169,901; July 3; Serial No. 171,485; published Mar. 13, 1923.
- Cory, Chas. & Son, Inc., New York, N. Y. Ships' mechanical telegraph transmitter-indicator equipment. 169,921; July 3.
- Crete-Petrol Company. (See Neiswender Lisle W.)
- Daltroff, E., & Cie., doing business as Parfumerie Caron, Paris, France, assignor to Caron Corporation. Perfume, toilet water, rouges, etc. 169,938; July 3.
- Dare, Charles F., & Son, Inc., Bridgeton, N. J. Medical compound for diseases of the stomach. 169,779; July 3; Serial No. 172,265; published Mar. 27, 1923.
- Dealers Supply Company, Indianapolis, Ind. Motor oil. 169,944; July 3.
- Delta Chemical Company. (See Harrison, Wilford.)
- Dewma Company. (See McAllister, William E.)
- Dixie Laboratories, Atlanta, Ga. Hair tonic. 169,885; July 3; Serial No. 154,015; published Nov. 28, 1922.
- Dorfman & Miller, New York, N. Y. Coats for children, juniors, misses and ladies. 169,765; July 3; Serial No. 169,396; published Apr. 3, 1923.
- Du Pont, E. I., de Nemours & Company, Wilmington, Del. Fungicide, seed disinfectant, general disinfectant. 169,853; July 3; Serial No. 172,263; published Mar. 13, 1923.
- Dyer, B. H., Company, Philadelphia, Pa. Hot bottles for medical purposes. 169,772; July 3; Serial No. 169,053; published Apr. 3, 1923.
- Eagle Picher Lead Company, The, Cincinnati, Ohio. Pure white lead. 169,906; July 3; Serial No. 170,757; published Apr. 3, 1923.
- Elmer & Amend, New York, N. Y. Beaker tongs. 169,870; July 3; Serial No. 174,691; published Apr. 10, 1923.

Peanuts and peanut butter, Salted. F. M. Hoyt.

171,320; July 3.

Pineapple glacé, glacé assorted fruits, and crystallized

ginger. Causse Manufacturing & Importing Co.

177,274; July 3.

Pop corn, Canded. Mercier Bros. 175,150; July 3.

Pork and beans and canned concentrated strained toma-

toes. Edward V. Stockham, Inc. 158,689; July 3.

Prunes, Fresh. W. C. Stone. 166,020; July 3.

Rennet, junket tablets, and lactic ferment. N. Kjaer-

gaard Jensens Tekn. Kem. Fabrik. 154,654; July 3.

Roast, spaghetti, potted beef, tripe stew, etc., Pot. C.

Molinelli. 176,354; July 3.

Sausage and sausage meat. Keane Provision Co.

175,085; July 3.

Sausage, boiled ham, etc. Schaffner Brothers Company.

169,931; July 3.

Sea food, Star Fish & Oyster Co. 174,156; July 3.

Sirup, Bakers'. Adolph Coors Company. 166,591;

July 3.

Sirup, Grape-flavored. Queen City Extract Company.

163,595; July 3.

Sirups and extracts for flavoring food. Walker Bros.

Co. 173,261; July 3.

Sugar tablets, Flavored. Mills Novelty Company.

175,260; July 3.

Tomato hot sauce, canned vegetables, fruits, and fish.

Bayside Canning Company. 165,339; July 3.

Vegetable and mineral compound for neutralizing lactic

acids in whipping cream and eggs. J. H. Lewis,

175,253; July 3.

CLASS 50.

Asbestos mats. Gillen-Cole Co. 171,312; July 3.

Bottles, jars, etc., Caps or closures for. George A.

Haynes, Inc. 180,762; July 3.

Decorating outfits. R. F. Johnston Paint Company.

176,631; July 3.

Furniture moving pads, tents, tarpaulins, and awnings,

etc. A. Bruns & Sons. 177,544; July 3.

Rubber matting. Paine & Williams Company. 178,060;

July 3.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 3d DAY OF JULY, 1923.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

- A. C. Gas Register Company, The. (See Collins, W. T., and Adams, assignors.)
 Abbott, Claude H., Lisbon, N. Dak. Draft regulator. 1,460,634; July 3.
 Abbott, Franklin E., Buffalo, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company of New York, Inc. Splice bar for rail joints. 1,460,742; July 3.
 Abbott, Richard H. S., and J. B. Close, London, England. Apparatus for molding plastic substances. 1,460,933; July 3.
 Abraham, Herbert, New York, N. Y., assignor to The Ruberoid Company. Packaging shingles. 1,460,833; July 3.
 Absmeier, Carl, Grand Rapids, Mich. Pool-table register. 1,460,527; July 3.
 Actien Gesellschaft für Anilin Fabrikation. (See Kaltwasser, O., and Kirberger, assignors.)
 Adams, Claude B. (See Collins, W. T., and Adams.)
 Adams, Joseph H., Flatbush, N. Y., assignor to The Texas Company, Houston, Tex. Apparatus for the conversion and transformation of liquids, fluids, and oils. 1,461,017; July 3.
 Addograph Company. (See Crawley, Mansfield C., assignor.)
 Adsit, George, assignor to Benjamin Eastwood Company, Paterson, N. J. Beam support. 1,460,468; July 3.
 Aktiebolaget Arca Regulatorer. (See Carlstedt, Ragnar, assignor.)
 Albrecht, John, Kewaunee, Wis. Box-making machine. 1,460,693; July 3.
 Alchemic Gold Company Inc. (See Satenstein, Sidney, assignor.)
 Allen, David, New York, N. Y. Coin-changing mechanism. 1,460,878; July 3.
 Allen, David, New York, N. Y. Vending machine. 1,460,879; July 3.
 Allwright, Sidney E., Houston, Tex. Gauge. 1,460,563; July 3.
 Alton, Isaac S., Oxford, Kans. Elevator dump. 1,460,635; July 3.
 American Radiator Company. (See Mertzano, André M., assignor.)
 American Road Machinery Company. (See Polk, William D., assignor.)
 Amdursky, Samuel S., assignor to Taylor Instrument Companies, Rochester, N. Y. Automatic valve. 1,461,010; July 3.
 American Telephone and Telegraph Company. (See Darrow, Leo H., assignor.)
 American Telephone and Telegraph Company. (See Parker, Raymond D., assignor.)
 Anderson, Carl L., et al. (See Swenson, Carl E., assignor.)
 Anderson, Harry B., et al. (See Ashley, Erle G., assignor.)
 Anderson, Harold N., Cleveland, Ohio. Apparatus for rolling gears by a new method. 1,460,528; July 3.
 Anderson, Ulrich, Wausau, Wis. Grinding machine. 1,460,934; July 3.
 Ansart, Louis L., assignor to Underwood Computing Machine Company, New York, N. Y. Computing machine. 1,460,469; July 3.
 Arbuckle, Samuel F., Connersville, Ind., assignor to Monogram Lens Corporation, New York, N. Y. Head-light construction. 1,460,834; July 3.
 Arbuckle, Samuel F., Detroit, Mich., assignor to Monogram Lens Corporation, New York, N. Y. Making light distributors and manufacturing the same uniformly in quantities. 1,460,835; July 3.
 Arbuckle, Samuel F., Detroit, Mich., assignor to Monogram Lens Corporation, New York, N. Y. Glass-mold-burnishing process and apparatus. 1,460,836; July 3.
 Armagnat, Pierre J., Paris, France. Wavemeter. 1,460,636; July 3.
 Arnaud, Benjamin A., assignor to Societe Lyonnaise de Compteurs d'Eau, Lyon, France. Water meter. 1,460,880; July 3.
 Arzinger, William F., Jersey City, N. J. Luminous pendant. 1,460,694; July 3.
 Ashley, Erle G., Memphis, Tenn., assignor of one-third to H. B. Anderson and one-third to D. E. Thomas, Memphis, Tenn. Woodworking machinery. 1,460,780; July 3.
 Ashley, Raymond T., Reno, Nev. Draft means. 1,460,564; July 3.
 Askins, Joseph, Lima, Ohio. Vaporizer and mixer for internal-combustion engines. 1,460,470; July 3.
 Augensen, August M., Grand Junction, Colo. Can-rap-seaming apparatus for varnish cans, etc. 1,460,398; July 3.
 Auletta, Alfred, assignor of one-third to P. Paris, Bayonne, N. J. Shuttle-operating mechanism. 1,460,637; July 3.
 Automatic Electric Company. (See Homrighous, John H., assignor.)
 Automatic Electric Company. (See Martin, Talbot G., assignor.)
 Automatic Refrigerating Company, The. (See Lundgaard, Ivar, assignor.)
 Autosales Corporation. (See Coseglia, Anthony, assignor.)
 Azcona, Alberto, Magdalena, Mexico. Combined ruler and blotter. 1,460,935; July 3.
 Bailey, Percy T., Middletown, R. I. Fencepost attachment. 1,460,936; July 3.
 Bain, Charles W., Indianapolis, Ind. Pneumatic-tire protector. 1,460,781; July 3.
 Baird-Daniels Company Incorporated, et al. (See Popper, Joseph, assignor.)
 Baird, Dudley, Berkeley, Calif., assignor to General Chemical Company, New York, N. Y. Rabbling arm for roasting furnaces. 1,460,658; July 3.
 Balmer, Robert, Toronto, Ontario, Canada. Apparatus for the destruction of refuse. 1,460,565; July 3.
 Balmer, Robert, Toronto, Ontario, Canada. Refuse-disposal plant. 1,460,566; July 3.
 Bancroft, Frank H., assignor to P. Derby & Co., Inc., Gardner, Mass. Upholstery. 1,460,399; July 3.
 Bangert, Adolph, and F. May, New York, N. Y.; said F. May assignor of his entire right to C. May, Jersey City, N. J. Wrench. 1,460,837; July 3.
 Bannon, Frank A., assignor of two-thirds to R. Keller and one-third to W. A. Thornton, Dallas, Tex. Lubricating, cleaning, and painting apparatus. 1,460,695; July 3.
 Barks, Frank S., assignor to Lincoln Steel and Forge Company, St. Louis, Mo. Mine car. 1,460,696; July 3.
 Barnard, Thomas H., Toronto, Ontario, Canada. Strain clamp. 1,460,567; July 3.
 Barron, Andrew J., Cincinnati, Ohio, assignor to Cincinnati Horse Shoe & Iron Company. Automobile spring-supporting mechanism. 1,460,782; July 3.
 Barrs, Edward, London, England. Process and apparatus for coking the discharged material from low-temperature distillation apparatus. 1,460,638; July 3.
 Bassett, Robert S., Buffalo, N. Y. Liquid meter. 1,460,471; July 3.
 Bastheim, Gustave, Pittsburgh, Pa. Wrist-watch casing. Des. 62,598; July 3.
 Bauman, Arthur E., Akron, Ohio. Resilient wheel. 1,460,783; July 3.
 Bean, Roscoe, Berea, Ohio. Refacing tool. 1,460,838; July 3.
 Beavan, James F., Binghamton, N. Y. Timer brush. 1,460,937; July 3.
 Belknap, Charles B., Detroit, Mich. Dishwashing apparatus. 1,460,400; July 3.
 Benckenstein, Charles H., Vinton, La. Tubing spider. 1,460,401; July 3.
 Benckenstein, Charles H., Vinton, La. Tubing spider. 1,460,402; July 3.
 Bendlin, Alfred W., Milwaukee, Wis. Adjustable bracket. 1,460,697; July 3.
 Benjamin Eastwood Company. (See Adsit, George, assignor.)
 Benjamin, John M., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Actuating mechanism for work supports. 1,460,362; July 3.
 Benjamins, Israel, Brooklyn, N. Y. Means for securing window sashes in position. 1,460,361; July 3.
 Benson, Thomas W., assignor to Miller Lock Company, Philadelphia, Pa. Detachable keyhole seal for padlocks. 1,460,472; July 3.
 Berenstein, Frank, Chelsea, assignor to Panther Rubber Manufacturing Company, Stoughton, Mass. Shoe heel. Des. 62,599; July 3.
 Berger Bros. Company. (See Rigby, Thomas, assignor.)
 Berger, Frank P., et al. (See Carey, Bert C., assignor.)
 Berlin, George C. (See Sebree, C. H., and Berlin.)
 Bernard, Pierre J. H., Montreal, Quebec, Canada. Radiator. 1,460,881; July 3.

- Berry, Herbert H., Springfield, Mass. Distributing-box connection for electrical conductors. 1,460,698; July 3.
- Bethel, Albert R., Mintola, assignor to Illinois Glass Company, Bridgeton, N. J. Valve mechanism for glass machines. 1,460,363; July 3.
- Bethlehem Steel Company of New York, Inc. (See Abbott, Franklin E., assignor.)
- Betts, William, Johnson City, N. Y. Vending machine. 1,460,882; July 3.
- Bickel, Henry F., Plainfield, N. J., assignor to New York Air Brake Company. Train-pipe connector. 1,460,364; July 3.
- Biggam, Harry F., assignor to The Biggam Trailer Co., Milwaukee, Wis. Trailer coupling. 1,460,839; July 3.
- Biggam Trailer Co., The. (See Biggam, Harry F., assignor.)
- Binn, Edward H. and R. H., Pittsburgh, Pa. Holder. 1,460,743; July 3.
- Binn, Ralph H. (See Binn, Edward H. and R. H.)
- Bishop, George E., Cleveland, Ohio. Automobile inclosure. 1,460,529; July 3.
- Bishop, John A., Clearwater, Fla. Fluid-fuel burner. 1,460,473; July 3.
- Blackmore, Henry S., deceased, Mount Vernon, N. Y.; I. Blackmore and S. L. Tingley, administrators. Pigment and paint. 1,460,699; July 3.
- Blackmore, Isabelle, et al., administrators. (See Blackmore, Henry S.)
- Blair, J. C., Company. (See McSheehy, Bartholomew E., assignor.)
- Blake, C. C., Incorporated. (See Small, Lewis F., assignor.)
- Blaw-Knox Company. (See Lehman, Irvin F., assignor.)
- Blevans, James L. D., Dallas, Tex. Boot and liner for automobile and similar casings. 1,460,659; July 3.
- Bogart, Edward, et al. (See Lemoigne, William, assignor.)
- Bondi, James, Buffalo, N. Y. Mold for cement blocks. 1,460,403; July 3.
- Bonsall, Charles D., Pittsburgh, assignor to P. H. Murphy Company, New Kensington, Pa. Car roof. 1,460,568; July 3.
- Boomershine, Adam, assignor of one-half to J. C. Slager, Dayton, Ohio. Oil retainer for journal boxes. 1,460,809; July 3.
- Bougher, Samuel C., Philadelphia, Pa. Rotary brush. 1,460,883; July 3.
- Boutte, Octave J., assignor of one-half to J. D. McCall, Beaumont, Tex. Nut lock. 1,460,884; July 3.
- Bowen, David R., and C. F. Schnuck, assignors to Farrel Foundry and Machine Company, Ansonia, Conn. Mixing or masticating heavy plastic material. 1,460,938; July 3.
- Bowles, Joseph P., West New Brighton, N. Y. Button. 1,460,840; July 3.
- Boyd, John S., and T. F. Boyd, assignors to John S. Boyd Co. Inc., Williamstown, Mass. Textile fabric. Des. 62,600; July 3.
- Boyd, John S., and T. F. Boyd, assignors to John S. Boyd Co. Inc., Williamstown, Mass. Textile fabric. Des. 62,601; July 3.
- Boyd, John S., and T. F. Boyd, assignors to John S. Boyd Co. Inc., Williamstown, Mass. Textile fabric. Des. 62,602; July 3.
- Boyd, John S., Company Inc. (See Boyd, John S. and T. F., assignors.)
- Boyd, Thomas F. (See Boyd, John S. and T. F.)
- Boyer, George A., assignor of one-half to M. I. Heron and one-half to N. C. Heron, Los Angeles, Calif. Grease retainer for journal bearings. 1,460,939; July 3.
- Boyle, Hugh, Brooklyn, N. Y. Apparatus for conditioning couch rolls. 1,460,365; July 3.
- Boysen, Iwer, New York, N. Y. Taking pictures. 1,460,744; July 3.
- Braddick, Bernard L., Washington, D. C. Combined field oven and cooking utensil. 1,460,639; July 3.
- Bradley Pulverizer Company. (See Gibson, W. A., and Needham, assignors.)
- Braisted, Harry P., Woodmont, assignor to The John Hug Manufacturing Company, New Haven, Conn. Toy. Des. 62,603; July 3.
- Brand, Adolph L. (See Phelps, Byron, assignor.)
- Brandenberger, Heinrich, Vienna, Austria. Method and machine for planing helical teeth, more particularly for bevel gears. 1,460,640; July 3.
- Brenne, Richard, assignor to Kaestner & Hecht Company, Chicago, Ill. Guide shoe for elevators. 1,460,404; July 3.
- Brewer, Oscar Z., Spokane, Wash. Timing mechanism. 1,460,405; July 3.
- Brewer-Titchener Corporation, The. (See Conine, Ernest E., assignor.)
- Briddy, Bernard, Chicago, Ill., assignor to Truscon Steel Company, Youngstown, Ohio. Contraction joint for roadways. 1,460,841; July 3.
- Brockney, James L., and E. George, Detroit, Mich. Spark plug. 1,460,745; July 3.
- Brodesser, Peter H., Milwaukee, Wis. System of control for electric elevators. 1,460,569; July 3.
- Bronander, Wilhelm B., Montclair, N. J. Internal-combustion engine. 1,460,474; July 3.
- Bronander, Wilhelm B., Montclair, N. J. Internal-combustion engine. 1,460,475; July 3.
- Brooks, Howard K., New York, N. Y. Golf-stroke counter. 1,460,842; July 3.
- Broome, Ernest L., Tarrytown, N. Y. Detachable cigar band. 1,460,641; July 3.
- Brosius, Edgar E., Pittsburgh, Pa. Automatic replay and record shift for phonographs. 1,460,940; July 3.
- Broughton, Walter C., Kansas City, Mo. Knockdown concrete building. 1,460,941; July 3.
- Brown & Bigelow. (See Kristofek, Frank J., assignor.)
- Brown & Sharpe Manufacturing Company. (See Parker, John W., assignor.)
- Brown, Francis H., Glen Olden, Pa., assignor to Petroleum Heat and Power Company, Boston, Mass. Apparatus for regulating combustion. 1,460,866; July 3.
- Brown Instrument Company. (See Brown, R. P., and Frey, assignors.)
- Brown, Jeremiah E., Brooklyn, N. Y. Swing. 1,460,843; July 3.
- Brown, Max. (See Currier, Andrew E., assignor.)
- Brown, Richard P., and C. P. Frey, assignors to Brown Instrument Company, Philadelphia, Pa. Method of and apparatus for measuring electrical resistance. 1,460,530; July 3.
- Buck, Fred, assignor to The Lufkin Rule Company, Saginaw, Mich. Folding rule. 1,460,784; July 3.
- Buckeye Brass and Manufacturing Company, The. (See Selker, Harry, assignor.)
- Buckley, John, Mattapan, Mass. Control mechanism. 1,460,785; July 3.
- Buehner, William F. A., Detroit, Mich. Outboard motor. 1,460,570; July 3.
- Buffalo Specialty Company. (See Learman, Frank J., assignor.)
- Buffington, Eliza, Madison, N. J. Combined picture book and puzzle. 1,460,700; July 3.
- Bullis, Franklin H., Brooklyn, N. Y. Wave turner. 1,460,844; July 3.
- Bulman, William V., Philadelphia, Pa. Diestock. 1,460,786; July 3.
- Burch, Julius G., Bartlesville, Okla. Jar coupling for oil-well casings. 1,460,787; July 3.
- Burger, Martin. (See Wolf, J., and Burger.)
- Burgess-Norton Manufacturing Company. (See Thompson, Herbert L., assignor.)
- Burroughs, George, Monessen, Pa. Case. 1,460,942; July 3.
- Burton, Isaac F., Philadelphia, Pa., assignor to Victor Talking Machine Company. Supporting frame for talking-machine motors. 1,460,406; July 3.
- Buten, William C. (See Hay, Harry C., assignor.)
- Butter, Adolf, Clifton, N. Y. Direction indicator. 1,460,701; July 3.
- Cadenhead, Luther D., McKinney, Tex. Bookrack. 1,460,642; July 3.
- Cadman, Addi B., assignor to Warner Manufacturing Company, Beloit, Wis. Dumping vehicle. 1,460,810; July 3.
- Caleno, Ernest S., Dayton, Ohio. Explosive-engine attachment for bicycles. 1,460,811; July 3.
- California Packing Corporation. (See Opperman, Hugh F., assignor.)
- Callahan, John F., Brockton, Mass. Hemostatic forceps. 1,460,531; July 3.
- Caltrider, Samuel P., and P. P. Sauble, Westminster, Md. Poultry fountain. 1,460,702; July 3.
- Cameron, Donald A., Houghton, Mich. Body for children's vehicles. 1,460,944; July 3.
- Campbell, James R., and J. L. Reynolds, Scottsdale, Pa. Welding compound. 1,460,476; July 3.
- Campbell, John A., Quincy, Mass. Surfacing machine. 1,460,407; July 3.
- Campbell, Thomas L., Berlin, Pa. Mine-car skid. 1,460,885; July 3.
- Campbell, Wyant & Cannon Foundry Co. (See Wickland, Algot A., assignor.)
- Canine, Chester W., Cincinnati, Ohio. Conveyor device for laundry assorting and marking booths. 1,460,660; July 3.
- Capen, Fred L. (See Wood, G. H., and Capen.)
- Capstaff, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic reversal process. 1,460,703; July 3.
- Caracristi, Virginius Z. (See Muhlfeld, J. E., and Caracristi.)
- Carey, Bayton F., et al. (See Carey, Bert C., assignor.)
- Carey, Bert C., assignor of one-fourth to F. P. Berger and one-fourth to B. F. Carey, Sioux City, Iowa. Concrete mixer. 1,460,571; July 3.
- Carille, Frank S. (See Doughty, L. A., and Carille.)
- Carling Tool & Machine Company, The. (See Hokanson, Alexander, assignor.)
- Carlstedt, Ragnar, assignor to Aktiebolaget Arca Regulatorer, Stockholm, Sweden. Steam trap. 1,460,746; July 3.
- Carman, Frank J., San Francisco, Calif. Drilling wells. 1,460,788; July 3.
- Carmean, James H. (See Carmean, Samuel M., and J. H.)
- Carmean, Samuel M. and J. H., Kansas City, Mo. Electric cut-out. 1,460,943; July 3.
- Carroll, Henry R. (See Crider, Walter R., assignor.)
- Carter, William H., Needham Heights, Mass. Seamless stocking and making same. 1,460,477; July 3.

- Case, J. I., Threshing Machine Company. (See Davies, David P., assignor.)
- Casey-Hedges Co., The. (See Stimmel, Frederick C., assignor.)
- Cassidy, Louis G. (See Darnell, E., & Cassidy.)
- Celler, Arthur, Brooklyn, N. Y. Soap dissolver and agitator. 1,460,704; July 3.
- Chabot, Joseph O., assignor to George L. Paine Company, North Attleboro, Mass. Separable button. 1,461,009; July 3.
- Chaplin, Claire, New York, N. Y. Window dog kennel. 1,460,945; July 3.
- Chapman, Charles E., assignor of one-half to J. Goodfellow, Fort Edward, N. Y. Priming device for internal-combustion engines. 1,460,886; July 3.
- Charling, Lewis H., Kenosha, Wis. Automobile signal. 1,460,572; July 3.
- Christ, Alfred W., Chicago, Ill. Roll-retaining device. 1,460,946; July 3.
- Church, Edgar D., F. S. Lash, and J. W. Van Brunt, assignors to Jackson & Church Company, Saginaw, Mich. Automatic measuring device. 1,460,573; July 3.
- Cibles Automatiques Michoud Societe Anonyme. (See Michoud, Arnold, assignor.)
- Cincinnati Horse Shoe & Iron Company. (See Barron, Andrew J., assignor.)
- Clark, Henry F., Oakmont, assignor to Window Glass Machine Company, Pittsburgh, Pa. Burner for furnaces. 1,460,947; July 3.
- Clarke, Harry D., Plattsmouth, Nebr., assignor to The Ohio Tractor Company, Columbus, Ohio. Double-reduction drive for motor vehicles. 1,460,532; July 3.
- Close, James B. (See Abbott, R. H. S., and Close.)
- Clough, Percy, Keighley, England. Flier for spinning, twisting, doubling, and analogous machines. 1,460,887; July 3.
- Colby, George R., Portland, Oreg. Compression inner tube for tires. 1,460,533; July 3.
- Collignon, William C., Chicago, Ill. Speed governor for pneumatic motors. 1,460,705; July 3.
- Collins, James E. (See Koon, A. J., Hoogerhyde, and Collins.)
- Collins, Walter H. (See Moore, Max J., assignor.)
- Collins, Wesley T., and C. B. Adams, assignors to The A. C. Gas Register Company, Colorado Springs, Colo. Pump-controlled recording apparatus. 1,460,867; July 3.
- Commercial Furniture Company. (See Stringe, Alfred H., assignor.)
- Comstock, Daniel F., Cambridge, assignor to Kalmus, Comstock & Wescott, Inc., Boston, Mass. Production of complemental images. 1,460,706; July 3.
- Conine, Ernest E., assignor to The Brewer-Titchener Corporation, Cortland, N. Y. Luggage carrier. 1,461,008; July 3.
- Consolidated Car-Heating Company. (See Hynes, Lee P., assignor.)
- Continental Motors Corporation. (See Mills, James P., assignor.)
- Cook, Frederick D., Fairmont, W. Va. Continuously melting vitreous enamels. 1,460,888; July 3.
- Cook, Grant L. (See Wexley, Walter W., assignor.)
- Cooper, Arthur S., Santa Monica, Calif. Tank. 1,460,999; July 3.
- Cornwall, Frederick R., St. Louis, Mo. Monorail transportation system. 1,460,534; July 3.
- Cortés, Salustio V., Valparaiso, Chile. Aerial propelling machine. 1,460,948; July 3.
- Coseglia, Anthony, West Hoboken, N. J., assignor, by mesne assignments, to Autosales Corporation. Coin-controlled vending machine. 1,460,574; July 3.
- Cotono Corporation. (See Wadsworth, Philip C., assignor.)
- Crawford, William E., Havre, Mont. Spring wheel. 1,460,889; July 3.
- Crawley, Mansfield C., Rutherford, N. J., assignor to Addograph Company, Los Angeles, Calif. Power typewriter. Re15,640; July 3.
- Crider, Walter R., Indianapolis, assignor of one-half to H. B. Carroll, Evansville, Ind. Internal-combustion engine. 1,460,789; July 3.
- Critchett, James H., Niagara Falls, N. Y., assignor to Union Carbide & Carbon Research Laboratories, Inc. Welding rod. 1,460,790; July 3.
- Crook, Charles M., Chicago, Ill. Timing apparatus. 1,460,707; July 3.
- Crook, Jere L., jr., Jackson, Tenn. Calf feeder. 1,460,890; July 3.
- Crowell, Henry W., Glen Ridge, N. J. Machine for shucking vegetable ivory nuts. 1,460,747; July 3.
- Cummings, John M. (See Hill, John E., assignor.)
- Cunningham, E. T. (See Danielson, Ernest G., assignor.)
- Cunningham, Ralph C., Tacoma, Wash. Game-piece support. 1,460,791; July 3.
- Curme, George O., jr. (See Haynes, P. E., and Curme.)
- Currier, Andrew E., Millis, assignor to M. Brown, Boston, Mass. Paper-reinforcing machine and method thereof. 1,460,949; July 3.
- Curtis, Charles F., London, England. Cementitious compositions suitable for flooring, paving, and so forth. 1,460,643; July 3.
- Cutler-Hammer Mfg. Co. (See Hunter, Richard B., assignor.)
- Cutler-Hammer Mfg. Co., The. (See Stevens, William C., assignor.)
- Cutler-Hammer Mfg. Co. (See Yerger, Charles W., assignor.)
- Danielson, Ernest G., assignor to E. T. Cunningham, San Francisco, Calif. Rheostat. 1,460,408; July 3.
- Darnell, Eugene, and L. G. Cassidy, Wichita, Kans. Combination ladder. 1,460,792; July 3.
- Darrow, Leo H., New York, N. Y., assignor to American Telephone and Telegraph Company. Electric signaling system. 1,460,368; July 3.
- Davies, David P., assignor to J. I. Case Threshing Machine Company, Racine, Wis. Piston. 1,460,535; July 3.
- Davies, Phil, Woollahra, New South Wales, Australia. Device for replacing fuse wire and for indicating blown-out electric circuits. 1,460,478; July 3.
- Davis, Arthur P., assignor to E. A. Sperry, Brooklyn, N. Y. Feeding and rotating means for electrodes. 1,460,793; July 3.
- Dean, Anthony C. (See Winters, Robert E., assignor.)
- Dean, Lyndon, Taloga, Okla. Spoke. 1,460,536; July 3.
- De Coninck, Marcel, Le Havre, France. Flexible gearing. 1,460,661; July 3.
- De Guire, Georges A., Montreal, Quebec, Canada. Mixing chamber for fluid-fuel burners. 1,460,369; July 3.
- Dehn, William M., Seattle, Wash. Manufacturing diazodinitrophenol. 1,460,708; July 3.
- De Laval Separator Company, The. (See Hapgood, Cyrus H., assignor.)
- Denney, William H., South Orange, N. J. Vanity case. 1,460,950; July 3.
- Dentists' Supply Company, The. (See Williams, James L., assignor.)
- Derby, P., & Co. (See Bancroft, Frank H., assignor.)
- De Shields, Julia W., Riverdale-on-Hudson, N. Y. Foot rest. Des. 62,604; July 3.
- De Voe, Albert H., Westfield, N. J., assignor to The Singer Manufacturing Company. Sewing machine. 1,460,891; July 3.
- Dewar, Robert L., Grand Rapids, Mich. Engine piston. 1,460,537; July 3.
- Diegel, John F. W., Manitowoc, Wis. Automobile signal. 1,460,709; July 3.
- Dieter, William, Newark, N. J. Air-leak vent for torpedoes. 1,460,370; July 3.
- Dyvelbiss, Newton C., San Francisco, Calif. Automobile brake. 1,460,892; July 3.
- Dyvelbiss, Newton C., San Leandro, Calif. Automobile brake. 1,460,893; July 3.
- Dix, Arthur, Taft, Calif. Casing cutter. 1,460,894; July 3.
- Dixen, Laue F. J., Frederiksberg, near Copenhagen, Denmark. Machine for preparing buttered bread. 1,460,371; July 3.
- Dixon, Albert S., Los Angeles, Calif. Folding ladder. 1,460,479; July 3.
- Dobbs, Willis. (See Rowan, John C., assignor.)
- Dochnal, Mathias, St. Louis, Mo. Burial vault. 1,460,409; July 3.
- Dollison, James M., and C. E. Smith, Columbus, Ohio. Changeable-color spotlight. 1,460,644; July 3.
- Donovan, William J., Philadelphia, Pa. Curtain and drapery support. 1,460,575; July 3.
- Dorman, Harley A. (See Weiske, W. C., and Dorman.)
- Dornier, Claudius, assignor of one-half to Dornier-Metallbauten, Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Hollow sheet-metal structure. 1,460,372; July 3.
- Dornier-Metallbauten, Gesellschaft mit beschränkter Haftung. (See Dornier, Claudius, assignor.)
- Dornseif, Hugo, Bergerhof, Germany. Means for preventing fowl from escaping. 1,460,748; July 3.
- Doscher, Carl F. (See Thompson, R. S., and Doscher.)
- Doughty, Leon A., Glenside, and F. S. Carlile, Philadelphia, Pa. Battery terminal. 1,460,895; July 3.
- Dräger, Alexander B., H. W. C. Schröder, and E. W. Kunzmann, Lubeck, Germany; said Schröder and said Kunzmann assignors to said Dräger. Burner for the autogenous cutting of metals. 1,460,662; July 3.
- Drake, John J., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Guide for sewing machines. 1,460,812; July 3.
- Draper Corporation. (See Knight, Need, assignor.)
- Ducas, Charles, assignor to C. Ducas, A. W. Whiteford, and D. W. Pye, trustees, New York, N. Y. Tender tank. 1,460,710; July 3.
- Ducas, Charles, et al., trustees. (See Ducas, Charles, assignor.)
- Dudley, Carrie D., Chicago, Ill. Receptacle for flowers. Des. 62,605; July 3.
- Dudley, Howard A., Hagerstown, Md. Loose leaf binder. 1,460,663; July 3.
- Dudley, Howard A., Hagerstown, Md. Loose-leaf binder. 1,460,712; July 3.
- Dull, Raymond W., assignor to Link Belt Company, Chicago, Ill. Securing wrist pins for chain links. 1,460,749; July 3.
- Duncan, Joseph S., Chicago, Ill. Printing and addressing machine. 1,460,711; July 3.
- Duncan, Lee W., Fort Wayne, Ind. Window protector. 1,460,645; July 3.
- Dunlap, Paul, Richmond, Calif. Combined muffler and vaporizer. 1,460,664; July 3.
- Duntley, J. W. (See Osborn, Jesse C., assignor.)

- Durfee, Ben, Wichita, Kans. Signboard. 1,460,951; July 3.
- Eastman Kodak Company. (See Capstaff, John G., assignor.)
- Eastman Kodak Company. (See Fritts, Edwin C., assignor.)
- Eastman Kodak Company. (See Hopkins, Marcus C., assignor.)
- Eastman Kodak Company. (See Kroedel, Robert, assignor.)
- Eastman Kodak Company. (See Webb, William R., assignor.)
- Easton, Lucian F., La Crosse, Wis. Locking device for motor valves. 1,460,538; July 3.
- Edwards, Bruce V., Newark, N. J., assignor to W. L. Leary, Chicago, Ill. Conveying apparatus. 1,460,539; July 3.
- Ektrom, Eric S., et al. (See Swenson, Carl E., assignor.)
- Electric Auto-Lite Company, The. (See Gilchrist, Clarence F., assignor.)
- Electric Controller & Manufacturing Company, The. (See Stratton, Harry F., assignor.)
- Elledge, Percy J., Cleveland, Mo. Dirigible headlight. 1,460,540; July 3.
- Ellis Drier & Elevator Company. (See Ellis, Hubert C., assignor.)
- Ellis, Hubert C., Evanston, assignor to Ellis Drier & Elevator Company, Chicago, Ill. Condensation trap. 1,460,410; July 3.
- Ellis, Hubert C., Evanston, assignor to Ellis Drier & Elevator Company, Chicago, Ill. Tilting trap. 1,460,411; July 3.
- Ellis, Ridsdale, Oak Park, Ill. Ice manufacture. 1,460,646; July 3.
- Elyria Iron & Steel Company, The. (See Tilden, Charles S., assignor.)
- Emerson-Brantingham Company. (See Traphagen, Harry R., assignor.)
- Emery, James H., Inwood Park, N. Y. Artificial fruit and producing same. Re15,641; July 3.
- Emery, Sidney S., Denver, Colo. Lubrication record. 1,460,576; July 3.
- Eppler, John, Philadelphia, Pa. Machine for making paper cones. 1,460,750; July 3.
- Ericson, Emile, Pelham, and R. Weiss, New York, N. Y., assignors to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,606; July 3.
- Eustis, Samuel L., jr., Onaga, Kans. Conveyer. 1,460,952; July 3.
- Fairbanks, Carl A., Wichita, Kans. Controlling device for electric signs. 1,460,953; July 3.
- Fairbanks, Carl A., Wichita, Kans. Educational sign. 1,460,954; July 3.
- Falk, John L., Spokane, Wash. Fuel chute. 1,460,713; July 3.
- Fallada, Frank J., Chicago, Ill. Crowning machine. 1,460,577; July 3.
- Farrel Foundry and Machine Company. (See Bowen, D. R., and Schnuck, assignors.)
- Fausser, Gustave M., Ardley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,607; July 3.
- Fausser, Gustave M., Ardley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,608; July 3.
- Fausser, Gustave M., Ardley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,609; July 3.
- Fausser, Gustave M., Ardley, N. Y., assignor to The Pennsylvania Textile Mills Inc., Glen Riddle, Pa. Textile fabric. Des. 62,610; July 3.
- Faust, Levin, et al. (See Swenson, Carl E., assignor.)
- Fay, Albert E., et al. (See Johnson, Alvin L., assignor.)
- Finigan, Charles, Gibsonia, Pa. Feeding mechanism for tin-plate lithographing machines. 1,460,373; July 3.
- Fischer, Felix M., Kewaunee, Ill. Tractor hitch. 1,460,578; July 3.
- Fischer, Frederick W., Milwaukee, Wis. Machine for treating wicks. 1,460,955; July 3.
- Fischer, Frederick P., Chicago, Ill. Smoke consumer. 1,460,956; July 3.
- Fischer, Walter. (See Young, Harry W., assignor.)
- Folkes, George E. (See Harvey, Albert E., assignor.)
- Foot, James H., Cincinnati, Ohio. Sheave-bearing housing. 1,460,541; July 3.
- Forbes, Sumner, Brookline, assignor to Union Industrial Company, Boston, Mass. Spinning ring. 1,460,751; July 3.
- Fort Morris. (See Mackenzie, R. W. R., Robinson, Fort, and Lumsden.)
- Foundation Oven Corporation. (See Schrader, Lloyd F., assignor.)
- Freeman, James J., Bradford, Pa. Gas breaker. 1,460,896; July 3.
- Frey, Charles P. (See Brown, R. P., and Frey.)
- Fricke, William A., Chicago, Ill. Phonograph. 1,460,579; July 3.
- Fritts, Edwin C., Urbana, Ill., assignor to Eastman Kodak Company, Rochester, N. Y. Enlarging camera. 1,460,714; July 3.
- Froeschle, Waldemar W., assignor to C. J. Gregory, St. Louis, Mo. Anatomical support. 1,460,957; July 3.
- Fruchter, Israel H., New York, N. Y. Device for perforating paper. 1,460,647; July 3.
- Ftykio, Andy, Braznell, Pa. Nut lock. 1,460,412; July 3.
- Fuller, Ernest L., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Making inner tubes. 1,461,000; July 3.
- Fuller Mfg. Co., The. (See Tremper, Charles W., assignor.)
- Fulton, Frederick J., Saginaw, Mich. Supporter. 1,460,752; July 3.
- Funke, Hans, Zittau, Germany. Stove. 1,460,374; July 3.
- Gahlert, Franz, jr., Welpert, Bohemia. Gear. 1,460,958; July 3.
- Gaines, Henry W., Bowling Green, Ky. Spring wheel. 1,460,413; July 3.
- Gallaudet, Edson F., East Greenwich, R. I. Tennis racket and the like. 1,460,865; July 3.
- Garland, Claude M., Chicago, Ill. Apparatus for devolatilizing coal, shale, etc. 1,460,414; July 3.
- Garrett, Robert E., Nashville, Tenn. Underwear. 1,460,959; July 3.
- Garver, Joseph L. (See Howe, C. W., and Garver.)
- Gaskill, John E., St. Louis, Mo. Purifying garlicy wheat. 1,460,648; July 3.
- Geist Manufacturing Company. (See Wiederwax, Robert W., assignor.)
- Gelarie, Saul, Brooklyn, N. Y. Reenforced bloomers. 1,460,666; July 3.
- General Chemical Company. (See Baird, Dudley, assignor.)
- General Fire Extinguisher Company. (See Haussler, C. F., and Park, assignors.)
- General Fireproofing Company, The. (See McPike, H. C., and Schmitz, assignors.)
- George, Charles E. (See Brockney, J. L., and George.)
- Gerber, Martin, Iowa City, Iowa. Radiator repair machine. 1,460,480; July 3.
- Gerrard, Alec J., Chicago, Ill. Wire stretching and tying machine. 1,460,649; July 3.
- Gibson, William A., and C. E. Needham, Allentown, Pa., assignors to Bradley Pulverizer Company, Boston, Mass. Air separator. 1,460,960; July 3.
- Gilchrist, Clarence F., assignor to The Electric Auto-Lite Company, Toledo, Ohio. Current cut-out. 1,460,961; July 3.
- Gillespie, Scott, and F. L. Shelor, Salem, Va.; said Shelor assignor to International Filler Corporation, Petersburg, Va. Corking machine. 1,460,650; July 3.
- Glushak, David A., Washington, D. C. Fountain pen. 1,460,481; July 3.
- Golden, Charles F., Denver, Ind. Drafting instrument. 1,460,482; July 3.
- Good Inventions Co. (See Good, John, assignor.)
- Good, John, Brooklyn, assignor to Good Inventions Co., New York, N. Y. Combustion-engine charge-forming device. 1,460,667; July 3.
- Good, John, Brooklyn, assignor to Good Inventions Co., New York, N. Y. Internal combustion engine. 1,460,668; July 3.
- Goodfellow, John H., Buffalo, N. Y. Boiler-tube cleaner. 1,460,669; July 3.
- Goodfellow, Joseph. (See Chapman, Charles E., assignor.)
- Goodyear Tire & Rubber Company, The. (See Fuller, Ernest L., assignor.)
- Gorton, Walter T., U. S. Army. Operating slide and handle for machine guns. 1,460,415; July 3.
- Granberg, Albert J., assignor to The Granberg Meter Company, San Francisco, Calif. Liquid meter. 1,460,715; July 3.
- Granberg Meter Company, The. (See Granberg, Albert J., assignor.)
- Greenlaw, Frank L., Los Angeles, Calif. Hose reel. 1,460,897; July 3.
- Greer, Butler F., San Francisco, Calif. Book-form savings bank. 1,460,716; July 3.
- Gregory, Charles J. (See Froeschle, Waldemar W., assignor.)
- Griffin, Patrick J., Dorchester, Mass. Pneumatic-tire wheel. 1,460,753; July 3.
- Griswold, Andrew E., Seattle, Wash. Switch. 1,460,542; July 3.
- Griswold, Marius E., Burlington, Iowa. Automatic stop for phonographs. 1,460,543; July 3.
- Gronos, Arthur A., Pontiac, Mich. Self-locking shore. 1,460,375; July 3.
- Groth, Charles H., Rochester, Pa. Cooper's sun plane. 1,460,717; July 3.
- Grube Auto & Tire Specialties Corp'n. (See Grube, John H., assignor.)
- Grube, John H., Los Angeles, Calif., assignor to Grube Auto & Tire Specialties Corp'n, Phoenix, Ariz. Tube casing. 1,460,794; July 3.
- Gunson, Thomas R. (See Kohout, J. J., and Gunson.)
- Guttridge, Loammie A., and F. M. Mosier, assignors of one-third to said Guttridge and two-thirds to G. N. Slonaker, Columbus, Ohio. Switch attachment for folding machines. 1,460,544; July 3.
- Haack, Gustave, Madison, Wis. Life buoy. 1,460,483; July 3.
- Hagemann, Carl W., administrator. (See Werbeck, Walter G.)

- Hall, Robert F., Moseley, near Birmingham, England. Cam. 1,460,651; July 3.
- Hall, Seth M., Portland, Oreg. Axle. 1,460,962; July 3.
- Halleck, Frank A., Oak Park, Ill., assignor to Sullivan Machinery Company. Forging machine. 1,461,011; July 3.
- Hampel, Heinrich, Halle, Germany. Making nitrates. 1,460,898; July 3.
- Hampson, John. (See Mackinnon, F. A., and Hampson.)
- Hanseman, Richard A. (See Kucharski, Stanislaus, assignor.)
- Hansen, John S., Brockton, Mass. Adjustable shoe-tree. 1,460,963; July 3.
- Hapgood, Cyrus H., Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y. Purifying and dehydrating switch oil. 1,460,718; July 3.
- Harper, John T., Leoti, Kans. Lace eyelet. 1,460,899; July 3.
- Harrington, Albert G., Birmingham, Mich. Combined pail and stand. 1,460,484; July 3.
- Harris, Hollis H., assignor to The Thew Shovel Company, Lorain, Ohio. Control mechanism of excavating machines or the like. 1,460,813; July 3.
- Harris, Hu M., assignor to Lucey Manufacturing Corporation, Chattanooga, Tenn. Well elevator. 1,460,852; July 3.
- Harris, Joseph G., and G. D. Jaquett, Jacksonville, Fla. Automatic pressure valve. 1,460,900; July 3.
- Harris, Rhys D., Seven Sisters, Wales. Apparatus for use in blasting. 1,461,012; July 3.
- Harshberger, Norman P., assignor to Tee-Lok Shingle Company, Chicago, Ill. Shingle. 1,460,795; July 3.
